

Vākyapadiya

of Bhartrhari

Padakāṇḍa

On the Word

Kāṇḍa 3

On this edition.

The Sanskrit karikas presented here are Bhartrhari's, composed around the fifth century CE and long in the public domain. The Roman transliteration is generated mechanically from the Devanagari according to the IAST scheme; it involves no editorial judgement.

The English translations and the commentary are original to this edition. They were written from the Sanskrit and are not derived from, and do not reproduce, any published translation or commentary. They are offered as a working study aid, not as established scholarship: the Vakyapadiya is an exceptionally compressed text, and any reading of it is contestable. Where the Sanskrit is genuinely ambiguous, or where our rendering is uncertain, this is flagged in the commentary rather than smoothed over. Readers doing serious work should consult the critical editions and the published scholarly translations.

Commentary coverage in this kanda: 1226 of 1226 verses.

Jāti-samuddeśa — On the Universal

Verse 3.1.1

द्विधा कैश्चित्पदं भिन्नं चतुर्धा पञ्चधापि वा ।
अपौद्धृत्यैव वाक्येभ्यः प्रकृतिप्रत्ययादिवत् ॥ 1 ॥

*dvidhā kaiścītpadam bhinnam caturdhā pañcadhāpi vā |
apauddhṛtyaiva vākyebhyaḥ prakṛtipratyayādivat || 1 ||*

The word is divided by some in two ways, in four, or even in five — having been abstracted from sentences, just as stem, suffix and the rest are.

The Padakanda opens by conceding, in its first breath, everything the Vakyakanda argued. The word — the object this entire kanda will anatomize across fourteen samuddesas and twelve hundred verses — is apoddhṛtya eva vākyebhyaḥ: *abstracted from sentences*, and the comparison seals it: prakṛtipratyayādivat, *just as stem and suffix are* — which is 2.10 verbatim, where the extraction of words from sentences was said to have exactly the standing of the extraction of stems from words. So the kanda's subject is announced as a construct. The divisions canvassed are the tradition's: dvidha, twofold (noun and verb); caturdha, fourfold (Yaska's nama, akhyata, upasarga, nipata — the Nirukta's opening classification); pancadha, fivefold (adding the karmapravacaniya of 2.199-204). Kaiscit, 'by some': even the count is disputed, as 2.341 noted when it priced the reduction that would abolish the fourfold scheme. The verse is a masterstroke of intellectual honesty at a book's threshold: here is my subject, and it does not exist except as my analysis makes it. What follows is not thereby idle — the scaffold's statics are the science (2.75, 2.88) — but the reader is told at the outset in what spirit to take twelve hundred verses about word-meanings.

Verse 3.1.2

पदार्थानामपोद्घारे जातिर्वा द्रव्यमेव वा ।
पदार्थो सर्वशब्दानां नित्यावेवोपवर्णितौ ॥ 2 ॥

*padārthānāmapoddhāre jātirvā dravyameva vā |
padārthau sarvaśabdānām nityāvevopavarṇitau || 2 ||*

In the abstraction of word-meanings: either the universal, or else substance. The two word-meanings of all words are described as eternal indeed.

The kanda's program, stated with the economy of a table of contents. Padarthanam apoddhāre — in the *abstraction* of word-meanings (3.1.1's apoddhṛtya sustained: what follows concerns extracts) — the candidates are two: jātir va dravyam eva va, either the *universal* or *substance*. Every word, on analysis, means a type or a thing; there is no third. And both are nityau eva upavarṇitau — described as *eternal indeed*: whichever a word means, what it means does not come and go (1.23's nitya sambandha requiring an eternal relatum, and 3.1.13's dravya turning out to be eternal in a sense the Vaisesikas would not recognize). The two options name the kanda's first two samuddesas — Jati and Dravya — and the fact that they are canvassed as *alternatives* rather than combined is the tradition's long dispute (Vajapyayana for the universal, Vyādi for the substance, as the Mahābhāṣya reports). Bhāṭṛhari will not choose in the way either party wanted: 3.1.6 is about to relocate the whole question by asking what a word means *first*, before it means anything about the world at all.

[Contested: *nityau eva* ('eternal indeed') is emphatic and its scope is disputed – whether both candidates are eternal, or whether the verse reports that each party claims eternity for its own candidate; we take the first, with 3.1.13's *dravya*-doctrine as warrant]

Verse 3.1.3

केषाञ्चित्साहचर्येण जातिः शक्त्युपलक्षणम् ।
खदिरादिष्वशक्तेषु शक्तः प्रतिनिधीयते ॥ 3 ॥

keṣāñcitsāhacaryeṇa jātiḥ śaktyupalakṣaṇam |
khadirādiṣvaśakteṣu śaktaḥ pratinidhīyate || 3 ||

For some, by association, the universal is the indicator of capacity; among khadira-woods and the like that are incapable, a capable one is substituted.

The first argument for the universal, and it is drawn – characteristically – from ritual practice rather than from metaphysics. The injunction prescribes a khadira post for the sacrifice. Why khadira? Not for khadira-ness as such: *jatih sakty-upalakṣaṇam* – the universal is the *indicator of capacity*, *sahacaryeṇa*, by association: khadira-wood is durable, and the universal is named because it reliably accompanies the durability the rite needs. The proof is the substitution-rule: *khadiradisū asakteṣu* – among khadiras that are *incapable* (rotten, unsound) – *saktaḥ pratinidhīyate*: a *capable* one is *substituted*. If khadira-ness itself were what the injunction wanted, a rotten khadira would satisfy it and a sound non-khadira would not; ritual practice says the reverse. So the universal named is a *mark* for a capacity meant. This is 2.64-66's *pratinidhi*-doctrine (substitution proving that the general survives its specification) redeployed: here it proves that what a universal-word conveys may be a capacity the universal merely flags.

Verse 3.1.4

अस्वातन्त्र्यफलो बन्धिः प्रमाणादीव शिष्यते ।
अतो जात्यभिधानेऽपि शक्तिहीनं न गृह्यते ॥ 4 ॥

asvātantryaphalo bandhiḥ pramāṇādīva śiṣyate |
ato jātyabhidhāne'pi śaktihīnaṁ na grhyate || 4 ||

The binding, whose fruit is non-independence, is taught as (governed) by measure and the rest; therefore, even where the universal is expressed, what lacks capacity is not taken.

The argument of 3.1.3 given its grammatical anchor. The rite's verb is *bandhi* – *binding* (the victim bound to the post), and its fruit is *asvatantrya-phalah*: *non-independence* – the binding's whole purpose is that the bound thing not get free. Such a binding is *sisyate pramanadi iva* – taught as governed by *measure* and the rest: the post's dimensions are prescribed, and dimensions are prescribed because they serve the holding. Hence: *ataḥ jāty-abhidhāne 'pi śakti-hīnaṁ na grhyate* – therefore, *even where the universal is expressed*, what *lacks capacity* is *not taken*. The reasoning is tight and it is the *samuddesa*'s opening move: the injunction's own apparatus (the measures, the substitution-rule) shows that its universal-word is in service of a capacity, so universals as word-meanings are, at least here, instrumental rather than terminal. What a word means and what a word is *for* have come apart again (2.113's *abhidheya* versus *prayojana*, now inside a single noun).

Verse 3.1.5

संश्लेषमात्रं बध्नातिर्यदि स्यात्तु विवक्षितः ।
शक्त्याश्रये ततो लिङ्गं प्रमाणाद्यनुशासनम् ॥ 5 ॥

saṁśleṣamātram.badhnātiryadi syāttu vivakṣitaḥ |
śaktyāśraye tato liṅgam.pramāṇādyanuśāsanam || 5 ||

But if 'binds' were intended as mere contact, then the teaching of measure and the rest would be a mark of a substratum of capacity.

The alternative construal, and it reaches the same destination. Suppose samslesa-matram badhnatih – 'binds' means *mere contact*, nothing about holding fast: the verb merely joins victim to post. Then the prescriptions of measure would not be explained by the binding's own sense – and yet they are prescribed. So: sakty-asraye tato lingam pramanady-anusasanam – the teaching of measure and the rest would then be a *mark* (linga) of a *substratum of capacity*: the dimensions would be evidence that something capacity-bearing is wanted, even though the verb does not say so. Either way, on both construals of the verb, capacity is what the injunction is after and the universal-word is its indicator. Bhartrhari's technique here is worth naming: he does not argue that his opponent's reading is wrong; he shows that both readings deliver his conclusion. The same move closed 1.28 (eternal or produced, no beginning either way) and 2.433 (all-natured or self-less, the word is sovereign either way).

Verse 3.1.6

स्वा जातिः प्रथमं शब्दैः सर्वैरेवाभिधीयते ।
ततोऽर्थजातिरूपेषु तदध्यारोपकल्पना ॥ 6 ॥

svā jātiḥ prathamam.śabdaiḥ sarvair evābhidhīyate |
tato'rthajātirūpeṣu tadadhyāropakalpanā || 6 ||

Its own universal is first expressed by all words indeed; thereafter comes the construction of superimposing that upon the forms of the object-universals.

The samuddesa's central doctrine, and one of the most consequential verses in the work. Sva jatih prathamam sabdaiḥ sarvair eva abhidhiyate: *its own universal* is expressed *first* by *all* words – every word, before it means anything about the world, means *itself*: the word-universal, sabdatva, the type of which its utterances are tokens (1.71's recurrence-datum: the same word across sentences). Only thereafter: tatah artha-jati-rupesu tad-adhyaropa-kalpana – the *construction of superimposing* that upon the forms of the *object-universals*. The word's own type is laid over the object's type, and reference is that superimposition. Every word is thus doubly universal, and the second universal is a projection of the first. The verse gathers the whole work: it is 1.50's double luminosity (the word shows itself and its meaning) given priority-order; it is 2.127-128's abhijalpa (word and meaning fused in cognition) given its genesis; it is 1.59-68's svam rupam (grammar's technical practice of citing word-forms) shown to be not a special usage but the *primary* one, of which ordinary reference is derivative. And adhyaropa – superimposition – is the term the Vedantic tradition would make its own: what we take to be the world's joints are the word's own type projected outward. The Padakanda's fourteen categories are about to be examined, and the first thing said about all of them is that they are projections of sabdatva.

[Contested: prathamam ('first') can be temporal (the word-universal grasped before the object-universal, in each act of hearing) or logical (prior in the order of explanation, without any felt priority in experi-

ence). The kanda's method favours the logical reading, but the doctrine is stronger on the temporal one, and Bhartrhari does not disambiguate]

Verse 3.1.7-8

यथा रक्ते गुणे तत्त्वं कषाये व्यपदिश्यते ।
संयोगिसन्निकर्षच्च वस्त्रादिष्वपि गृह्यते ॥ 7 ॥
तथा शब्दार्थसंबन्धाच्छब्दे जातिरवस्थिता ।
व्यपदेशेऽर्थजातीनां जातिकायाय कल्पते ॥ 8 ॥

yathā rakte guṇe tattvam kaṣāye vyapadiśyate |
samyogisannikarṣācca vastrādiṣvapi gr̥hyate || 7 ||
tathā śabdārthasambandhācchabde jātiravasthitā |
vyapadeśe'rthajātinām jātikāryāya kalpate || 8 ||

(7) As the reality in the red quality is designated in the dye, and, from the proximity of what is conjoined with it, is grasped also in cloth and the like — (8) so, from the word-meaning connection, the universal standing in the word serves, in the designating of the object-universals, for the effect of the universal.

The superimposition of 3.1.6 given its simile, and the simile is a dyer's. (7): redness — rakte guṇe tattvam — is really in the dye, kasaye vyapadisyate, designated there: the dye is what is red, properly speaking. And samyogi-sannikarsat — from the *proximity of what is conjoined* with it — vastradisvapi gr̥hyate: it is *grasped* also in cloth and the like: the cloth is called red, and the redness it is called by is the dye's, transferred by contact. Nobody thinks the cloth manufactured its own redness. (8) applies it: sabdartha-sambandhat sabde jatih avasthita — from the word-meaning connection, the universal standing in the word — vyapadese artha-jatinam jati-karyaya kalpate: serves, in the *designating* of object-universals, *for the effect of the universal*. The object-universal is the cloth's redness: real as designated, borrowed by contact, the dye's own. This is the sharpest formulation the samuddesa gives of 3.1.6: what we call the universal in things is the word's universal, worn by the thing through the contact that reference is. And the choice of a dyeing-simile rather than a mirroring one is deliberate — dye does not merely appear on cloth; it takes, and the cloth is thereafter red.

Verse 3.1.9

जातिशब्दैकशेषे सा जातीनां जातिरिष्यते ।
शब्दजातय इत्यत्र तज्जातिशब्दजातिषु ॥ 9 ॥

jātiśabdaikaśeṣe sā jātīnām jātiriṣyate |
śabdajātaya ityatra tajjātiśśabdajātiṣu || 9 ||

In the single-remainder of universal-words, that is held to be the universal of universals; in 'word-universals', that universal is among the word-universals.

The regress opened, and opened deliberately. If every word expresses its own universal (3.1.6), then the word 'jati' expresses its own universal — and when universal-words are gathered by ekasesa (2.108's single-remainder: one form standing for many), sa jatinam jatiṣyate: that is held to be the *universal of universals*. And the same again one level up: sabda-jatayah iti atra — in the expression

'word-universals' – taj-jatih sabda-jatisu: that universal is *among the word-universals*. Universals of universals, without evident end. Bhartṛhari states the regress without alarm because his doctrine is not embarrassed by it: on the sarva-sakti account (2.433, 2.472) the word can do anything, including take itself as object indefinitely, and each level is a carving of the same plenitude rather than a new entity. It is the *realist* about universals for whom the regress is a bill – each level a further real thing, inhering in the last – and the tradition's third-man problems are precisely there. The verse hands the bill over.

Verse 3.1.10

या शब्दजातिः शब्देषु शब्देभ्यो भिन्नलक्षणा ।
जातिस्सा शब्दजातित्वमप्यतिक्रम्य वर्तते ॥ 10 ॥

yā śabdajātiḥ śabdeṣu śabdebhyo bhinnalakṣaṇā |
jātissā śabdajātityamapyatikramya vartate || 10 ||

The word-universal in words, whose mark is distinct from the words – that universal operates transcending even word-universal-ness.

The regress's terminus, and it is not a top level but a dissolution. Ya sabda-jatih sabdesu sabdebhyo bhinna-laksana: the word-universal *in* words, whose *mark* is *distinct from* the words – the type is not the tokens, and its criterion is other than theirs (2.104's capacity worn by the invariant stream). And then: jatih sa sabda-jatitvam api atikramya vartate – that universal *operates transcending even word-universal-ness*: it exceeds the very category it was invoked to fill. The formulation is careful and its direction is unmistakable. What is reached at the end of the ascent is not the highest universal in a hierarchy but something that has left the hierarchy – atikramya, having *stepped beyond*. This is the sabda-tattva of 1.1, met from the other end: the Brahmakanda began with the word-essence and descended; the Padakanda begins with word-meanings and ascends to the same, and finds that it is not a padartha at all. The samuddesa on universals thus reaches, in its tenth verse, the point where universals stop being the right category – which is what one should expect from an author for whom every category is a posting.

Verse 3.1.11

अर्थजात्यभिधानेऽपि सर्वे जात्यभिधायिनः ।
व्यापारलक्षणा यस्मात्पदार्थाः समवस्थिताः ॥ 11 ॥

arthajātyabhidhāne'pi sarve jātyabhidhāyinaḥ |
vyāpāralakṣaṇā yasmātpadārthāḥ samavasthitāḥ || 11 ||

Even in the expressing of object-universals, all words are universal-expressers – since word-meanings stand characterized by operation.

The doctrine of 3.1.6 stated as a thesis about all words whatever. Artha-jaty-abhidhane 'pi – *even* where a word is expressing an *object-universal* (the ordinary case: 'cow' meaning cowhood) – sarve jaty-abhidhayinah: *all* are universal-expressers. There is no class of words that escapes into pure particularity, because the expressing of the object-universal is itself the superimposition of the word's own (3.1.6-8). And the ground offered: vyapara-laksanah yasmāt padarthah samavasthitah – since word-meanings stand *characterized by operation*: what a padartha is is what it *does* – vyapara, the

functioning, the office (2.104's capacity, 2.83's individuation by operation). And offices are repeatable by nature: to be characterized by an operation is to be the sort of thing that recurs, which is to be a universal. So universality is not a feature some meanings have; it is what having a meaning is, once meanings are understood functionally. The argument is elegant and it is the Padakanda's charter for treating every category as it will.

Verse 3.1.12

जातौ पदार्थे जातिर्वा विशेषो वापि जातिवत् ।
शब्दैरपेक्ष्यते यस्मादतस्ते जातिवाचिनः ॥ 12 ॥

jātau padārthe jātirvā viśeṣo vāpi jātivat |
śabdairapekṣyate yasmādataste jātivācinah || 12 ||

When the universal is the word-meaning, either a universal, or even a particular as though a universal, is what is required by words; therefore they are universal-expressing.

The thesis defended against its obvious counterexample. If words express universals (3.1.11), what of words that plainly pick out particulars — proper names, demonstratives, 'this cow'? The reply: jātau padārthe — when the universal is (taken as) the word-meaning — sabdaih apeksyate jatih visesah va api jativat: what words *require* is either a universal, or *even a particular as though a universal* — jativat, in the manner of a universal. The particular, to be meant, must be meant as something: as this-cow, as Devadatta — that is, under a characterization that is repeatable in principle even if instantiated once (the office-structure of 3.1.11). So particulars enter language only in universal dress. Atas te jativacinah: therefore words are universal-expressing, without exception. The doctrine anticipates a long argument in Indian philosophy about whether the particular as such is sayable, and Bhartrhari's answer is the one his whole system requires: it is not — not because particulars are unreal, but because saying is a universal-making operation (3.1.6's superimposition), and what will not wear the word's type cannot be said.

Verse 3.1.13

द्रव्यधर्मा पदार्थे तु द्रव्ये सर्वोऽर्थ उच्यते ।
द्रव्यधर्माश्रयाद् द्रव्यमतः सर्वोऽर्थ इष्यते ॥ 13 ॥

dravyadharmā padārthe tu dravye sarvo'rtha ucyate |
dravyadharmāśrayād dravyamataḥ sarvo'rtha iṣyate || 13 ||

But when substance is the word-meaning, every meaning is called substance; from resting on the properties of substance, everything is held to be substance.

The rival option (3.1.2's dravyam eva va) shown to be equally total. Take the other horn: dravyadharmā padārthe — when substance is the word-meaning — dravye sarvo'rtha ucyate: *every meaning* is called substance. And the reason: dravya-dharmasrayat — from *resting on* the properties of substance: whatever a word means is treated as bearing properties, standing in relations, being qualified — which is to be a substance, whatever else it may be. Even universals and actions, once spoken of, take adjectives and cases and behave as things. Atah sarvo'rtha iṣyate: therefore *everything* is held to be substance. Read together with 3.1.11-12, the pair is the samuddesa's most striking result: on the jati-option, *everything* words mean is a universal; on the dravya-option, *everything* is a substance.

Both options are unrestricted, which means neither is a discovery about the world — each is a way of taking whatever is said (1.74's two darsanas; 2.179's licensed double description). The great dispute between Vajapyayana and Vyadi is not a dispute about the facts. It is a choice of ledger.

[Contested: the verse's first pada (*dravya-dharma padarthe tu*) is awkward and our construal supplies the option-structure from 3.1.2; some read *dravya-dharma* as a compound qualifying *padartha* ('the word-meaning having substance-properties'), which yields the same doctrine by a rougher route]

Verse 3.1.14

अनुवृत्तिधर्मो वा जातिस्स्यात्सर्वजातिषु ।
व्यावृत्तिधर्मसामान्यं विशेषे जातिरिष्यते ॥ 14 ॥

anuvṛttidharmo vā jātissyātasarvajātiṣu |
vyāvṛttidharmasāmānyam viśeṣe jātiriṣyate || 14 ||

Or the universal would be the property of recurrence in all universals; the general character of the property of exclusion is held to be the universal in the particular.

The two definitions of the universal, and the verse is doing more than cataloguing. *Anuvṛtti-dharma* *va jatiḥ syat sarva-jatiṣu*: the universal would be the property of *recurrence* — *anuvṛtti*, the running-along, the same-again across instances — in all universals: cowhood is what recurs in cows. That is the realist's definition, and it is the tradition's default. Then: *vyāvṛtti-dharma-samānyam viśeṣe jātiriṣyate* — the *general character of the property of exclusion* is held to be the universal in the particular: *vyāvṛtti* is the turning-away, the excluding, the not-being-other — and on this second definition what makes a cow a cow is its exclusion from non-cows. Bhartrhari records both without deciding, and a reader who knows what came next in Indian philosophy will feel the ground move: *vyāvṛtti* is *apoha*, and the Buddhist logicians would build their entire semantics on it — the word 'cow' meaning nothing but exclusion-from-non-cows, universals dissolved into negations. That the option is already here, stated neutrally as one of two available definitions, is among the most valuable pieces of information the Vakyapadiya carries about the state of the question in its own time.

[Contested: whether *vyāvṛtti-dharma-samānyam* here anticipates the developed *apoha*-doctrine or merely names a definitional alternative is a genuine question of intellectual history; the *karika* is neutral, and reading Dignaga backwards into it would be an error we flag rather than commit]

Verse 3.1.15

संयोगिधर्मभेदेन देशे च परिकल्पिते ।
तेषु देशेषु सामान्यमाकाशस्यापि विद्यते ॥ 15 ॥

samyogidharmabhedena deśe ca parikalpate |
teṣu deśeṣu sāmānyamākāśasyāpi vidyate || 15 ||

And when place has been constructed by difference of the properties of the things conjoined with it, in those places there exists a general even of ether.

A hard case for the recurrence-definition, and it is chosen with precision. *Akasa* — ether, space — is by every school's account one, partless, all-pervading: it has no instances, so nothing recurs in it, and by 3.1.14's first definition it can have no universal. And yet we speak of 'places' — *desa* —

and places are akasa: 'here' and 'there' are ether, differentiated. How? Samyogi-dharma-bhedena dese parikalpita: place is *constructed* by difference of the properties of the things *conjoined* with it — the jar's place is where the jar is; the difference is the jar's, lent to the space. And then: tesu desesu samanyam akasasya api vidyate — in those places, a *general* even of ether exists: once places are so constructed, ether has instances after all, and place-hood recurs among them. The verse is a small demonstration of the samuddesa's method: universals appear wherever differentiation is constructed, even in what is by definition undifferentiable — which suggests that universals track our constructions rather than the world's joints, and that 3.1.6's superimposition-doctrine is the honest account of what has happened.

Verse 3.1.16

अदेशानां घटादीनां देशास्संबन्धिनो यथा ।
आकाशस्याप्यदेशस्य देशास्संबन्धिनस्तथा ॥ 16 ॥

adeśānām.ghaṭādīnām.deśāssambandhino yathā |
ākāśasyāpyadeśasya deśāssambandhinastathā || 16 ||

As places, being *relata*, belong to pots and the like which are not places — so places, being *relata*, belong even to ether, which is not a place.

The construction of 3.1.15 shown to run in both directions, and the symmetry is the argument. A pot is *adesa* — *not a place*; it is a thing, not a location. And yet *desah sambandhinah*: *places* belong to it as *relata* — the pot has a place, is somewhere, occupies. Where did that come from? From relation, *sambandha*: being conjoined with the space it sits in. *Akasasya api adesasya* — and ether *likewise* is not a place (it is undifferentiated, 3.1.15) — *desah sambandhinah* *tatha*: places belong to it too, and by the same route: from what is conjoined with it. So neither the pot nor the ether is intrinsically a place, and both have places, and the places are wholly a matter of the relation between them. Placehood belongs to neither *relatum* and appears between them — which is exactly the status 2.46 gave relation itself (inferable from its effect, its form never seen, utterly beyond thinghood). The verse is the *Sambandha-samuddesa* reaching back into the *Jati-samuddesa*: what looks like a property of things turns out to be a posting of the relation, and the relation is not a thing.

Verse 3.1.17-18

भिन्नवस्त्वाश्रया बुद्धिः संयोगिष्वनुवर्तते ।
 समवायिषु भेदस्य ग्रहणं विनिवर्तते ॥ 17 ॥
 अतः संयोगिदेशानां गौणत्वं परिकल्प्यते ।
 अविवेकात्प्रदेशेभ्यो मुख्यत्वं समवायिनाम् ॥ 18 ॥

bhinnavastvāśrayā buddhiḥ samyogiṣvanuvartate |
samavāyīṣu bhedasya grahaṇam vinivartate || 17 ||
ataḥ samyogideśānām gaūnatvam parikalpyate |
avivekātpradeśebhyo mukhyatvam samavāyinām || 18 ||

(17) A cognition resting on distinct things runs along among things conjoined; among things inherent, the grasping of difference withdraws. (18) Therefore the places of the conjoined are constructed as secondary; from the non-discrimination of the sites, primariness belongs to the inherent.

Two ways of being related, and the criterion is what the cognition does. (17): among samyogi — things conjoined, in mere contact (the pot and its space) — bhinna-vastv-asraya buddhiḥ anuvartate: a cognition resting on *distinct things* runs along: one keeps seeing two, the contact never fusing them. But among samavayi — things *inherent*, bound by samavaya (the Vaisesika's intimate relation: quality in substance, universal in particular) — bhedasya grahaṇam vinivartate: the grasping of difference *withdraws*: one does not see the redness *and* the cloth; one sees red cloth. (18) draws the consequence for place: samyogi-desanam gaunatvam parikalpyate — the places of the *conjoined* are constructed as *secondary*; and mukhyatvam samavayinam — *primariness* belongs to the *inherent*, avivekat pradeśebhyah, from the *non-discrimination* of the sites. Where difference is not grasped, place is primary; where it is, place is borrowed. Note what has just happened: the primary/secondary distinction — which 2.253 reduced to established currency — is here made to track a *phenomenological* fact about whether a cognition discriminates. The two treatments are compatible: currency is sedimented discrimination.

Verse 3.1.19

अनुप्रवृत्तिरूपां यां प्रख्यातामाकृतिं विदुः ।
 केचिद्व्यावृत्तिरूपां तु द्रव्यत्वेन प्रचक्षते ॥ 19 ॥

anupravṛttirūpām yām prakhyātāmākṛtiṃ viduḥ |
kecidvyāvṛttirūpām tu dravyatvena pracakṣate || 19 ||

That well-known configuration which they know as having the form of recurrence — some, however, declare it, in the form of exclusion, to be substance-hood.

The two definitions of 3.1.14 given their partisans, and the second is startling. Akṛti — the *configuration*, the shape-universal, a term the tradition has used for the universal since Panini's own akṛtyadhikarana debates — is known prakhyatam anupravṛtti-rupam: as having the form of *recurrence* (3.1.14's anuvṛtti: the same-again across instances). That is the standard view. Keced vyāvṛtti-rupam tu dravyatvena pracakṣate: but *some* declare it, in the form of *exclusion*, to be *substance-hood*. Two moves at once. The universal is redefined as exclusion (3.1.14's vyāvṛtti, the apoha-shaped option) — and then identified with dravyatva, substance-hood: what makes a thing a substance is its exclusion

from what it is not. So the two candidates of 3.1.2, *jati* and *dravya*, collapse into each other under the exclusion-definition: universals *are* substances, both being nothing but not-being-other. The verse is a compressed report of a position that would have large consequences, and Bhartrhari gives it without comment — which, given 3.1.13's finding that both options are unrestricted, is consistent: if everything is a universal and everything is a substance, their identification costs nothing.

Verse 3.1.20-21

भिन्ना इति परोपाधिरभिन्ना इति वा पुनः ।
 भावत्मसु प्रपञ्चोऽयं संसृष्टेष्वेव जायते ॥ 20 ॥
 नैकत्वं नापि नानात्वं न सत्त्वं न च नास्तिता ।
 आत्मतत्त्वेषु भावानामसंसृष्टेषु विद्यते ॥ 21 ॥

bhinnā iti paropādhirabhinnā iti vā punaḥ |
bhāvatmasu prapañco'yam samśrṣṭeṣveva jāyate || 20 ||
naikatvam nāpi nānātvam na sattvam na ca nāstitā |
ātmatattveṣu bhāvānāmasamśrṣṭeṣu vidyate || 21 ||

(20) 'They are different' — or again 'they are not different' — this is an adjunct imposed by another; this elaboration arises only among the selves of things when they are commingled. (21) Neither oneness, nor manifoldness, nor existence, nor non-existence, is found in the self-realities of things when they are uncommingled.

Two of the most severe verses in the work, and they dissolve the *samuddesa*'s own subject. (20): *bhinnā* iti — 'they are different'; *abhinnā* iti vā punaḥ — 'or again, they are not different': *both* are *para-upadhi*, an *adjunct imposed by another* — neither difference nor identity belongs to things; both are laid on from outside. And the location: *ayam prapañcaḥ samśrṣṭeṣu eva bhāvatmasu jāyate* — this *elaboration* arises *only* among the selves of things *when they are commingled*: difference and identity appear where things have been brought into relation — by us, in cognition, in speech (3.1.16's places, appearing between *relata*) — and nowhere else. Then (21) the full list of what goes: *na ekatvam na api nānātvam na sattvam na ca nāstitā* — *neither oneness, nor manifoldness, nor existence, nor non-existence* — *ātma-tattveṣu bhāvanāmasamśrṣṭeṣu vidyate*: is found in the *self-realities* of things *uncommingled*. Unrelated, a thing is not one, not many, not existent, not non-existent. The four negations are the *catuskoti*'s own four corners, and their appearance here — in a grammarian's treatise on universals, applied to the uncommingled thing-in-itself — is not accidental. Bhartrhari's point is his own, though: what the four corners fail to apply to is what has not been *related*, and relating is what cognition and speech do. The categories are artifacts of commingling; strip the commingling and no category applies, including existence.

[Contested: whether 21's *asamśrṣṭeṣu ātma-tattveṣu* names a real unrelated substratum (things as they are apart from our relating) or is a *reductio* (there is no such condition to describe) is the deepest question the passage raises, and the *karika* does not settle it. The *Madhyamaka* resonance is unmistakable and its direction of influence is unrecoverable]

Verse 3.1.22-24

शर्वशक्त्यात्मभूतत्वमेकस्यैवेति निर्णयः ।
 भावानामात्मभेदस्य कल्पना स्यादनर्थिका ॥ 22 ॥
 तस्माद् द्रव्यादयः सर्वाः शक्तयो भिन्नलक्षणाः ।
 संसृष्टाः पुरुषार्थस्य साधिका न तु केवलाः ॥ 23 ॥
 यथैव चेन्द्रियादीनामात्मभूता समग्रता ।
 तथा संबन्धिसंबन्धसंसर्गेऽपि प्रतीयते ॥ 24 ॥

śarvaśaktyātmabhūtatvamekasyaiveti nirṇayaḥ |
 bhāvanāmātmabhēdasya kalpanā syādanarthikā || 22 ||
 tasmād dravyādayaḥ sarvāḥ śaktayo bhinnalakṣaṇāḥ |
 saṁsṛṣṭāḥ puruṣārthasya sādḥikā na tu kevalāḥ || 23 ||
 yathaiva cendriyādīnāmātmabhūtā samagrataḥ |
 tathā sambandhisambandhasaṁsarge'pi pratiyate || 24 ||

(22) The conclusion is that the being-all-powers is of one alone; the construction of a difference of selves among things would be purposeless. (23) Therefore all the powers — substance and the rest — of distinct characters, being commingled, are what accomplish the human end, and not when taken alone. (24) And just as the wholeness of the sense-faculties and the rest is their very self, so it is understood also in the commingling of relatum and relation.

The positive doctrine that 3.1.20-21 cleared ground for, and it is the Brahmakanda's metaphysics arriving in the Padakanda. (22): sarva-sakty-atma-bhutatvam ekasya eva iti nirṇayah — the *conclusion* is that being-all-powers belongs to *one alone* (1.2's Brahman resting on its differentiated powers; 2.433's sarva-saktitva); bhavanam atma-bhedasya kalpana syad anarthika: the construction of a *difference of selves* among things would be *purposeless* — not false merely, but idle, doing no work. (23): tasmāt — therefore — dravyadayah sarvah saktayah bhinna-laksanah: all of them, *substance and the rest* — which is to say the very categories this kanda's fourteen samuddesas will examine — are *powers*, of distinct characters; and samsrstah purusarthasya sadhikah na tu kevalah: *commingled*, they accomplish the human end, and *not when taken alone*. The categories are powers of the one, functional only in combination. (24) gives the model: as the samagrata, the *wholeness*, of the sense-faculties is atma-bhuta — their very *self*, not something added to them (2.419's eyes, which are nothing outside the body) — so with sambandhi-sambandha-samsarga, the commingling of relatum and relation. The passage is the Padakanda's charter: everything it is about to anatomize is a power of one thing, real in commingling, nothing alone.

Verse 3.1.25-26

न तदुत्पद्यते किञ्चिद्यस्य जातिर्न विद्यते ।
 आत्माभिव्यक्तये जातिः कारणानां प्रयोजिका ॥ 25 ॥
 कारणेषु पदं कृत्वा नित्यानित्येषु जातयः ।
 क्वचित्कार्येष्वभिव्यक्तिमुपयान्ति पुनः पुनः ॥ 26 ॥

na tadutpadyate kiñcidyasya jātirna vidyate |
ātmābhivvyaktaye jātiḥ kāraṇānām prayojikā || 25 ||
kāraṇeṣu padam kṛtvā nityānityeṣu jātayaḥ |
kvacitkāryeṣvabhivvyaktimupayānti punaḥ punaḥ || 26 ||

(25) Nothing whatever comes to be of which there is no universal; the universal is the occasioner of the causes, for the manifestation of its own self. (26) Universals, having taken their station in causes both eternal and non-eternal, come somewhere to manifestation in effects, again and again.

A causal role for the universal that inverts the usual picture. (25): *na tad utpadyate kimcid yasya jātir na vidyate* — *nothing* comes to be of which there is *no universal*: nothing is produced except as a something, an instance of a type; bare particulars are not born. And then the inversion: *atma-abhivvyaktaye jātiḥ karananam prayojika* — the universal is the *occasioner of the causes*, for the *manifestation of its own self*. Not: the causes produce the thing, which then has a universal. Rather: the universal deploys the causes so as to manifest itself — the type is the agent, the causes its instruments, the individual its appearing. (26) extends it: *jatayah karanesu padam krtva nityanityesu* — universals, *having taken their station in causes eternal and non-eternal* — *punah punah abhivvyaktim upayanti*: come to manifestation *again and again*. The eternal type, stationed in the causal order, surfacing repeatedly as instances. This is the manifestation-doctrine of Kanda I (1.44-49: the sphota manifested by sounds it is not made of) transposed to ontology entire: individuals are to their universals what utterances are to the word — occasions of appearing, not constituents.

[Contested: *prayojika* ('occasioner') gives the universal genuine causal agency, which is a strong reading; a weaker construal ('is the occasion for the causes') keeps the causes primary. The *abhivvyakti*-vocabulary of 26 and the parallel with Kanda I's manifestation-doctrine support the strong reading and we adopt it]

Verse 3.1.27

निर्वर्त्यमानं यत्कर्म जातिस्तत्रापि साधनम् ।
 स्वाश्रयस्याभिनिष्पत्तौ सा क्रियाणां प्रयोजिका ॥ 27 ॥

nirvarttyamānam yatkarma jātistatrāpi sādhanam |
svāśrayasyābhiniṣpattau sā kriyāṇām prayojikā || 27 ||

The action that is being brought about — there too the universal is the means; in the completion of its own substratum, it is the occasioner of the actions.

The doctrine of 3.1.25-26 extended from things to actions. *Nirvartyamanam yat karma* — the action that is *being brought about*, in process of accomplishment — *jatih tatra api sadhanam*: there too the *universal* is the *means*. And: *svasrayasya abhiniṣpattau sa kriyanam prayojika* — in the *completion of*

its own *substratum*, it is the occasioner of the actions. The cooking-universal deploys the cookings; what makes this stirring part of a cooking is the type it is realizing, and the type is what drives the process to its completion. Note how far this is from the Vaisesika's inert universals sitting in their instances: Bhartrhari's *jati* is dynamic, purposive, the engine of its own instantiation (3.1.25's *atma-abhivyaṅgye*, 'for the manifestation of its own self'). And note the term *sādhana* — *means*: the seventh *samuddesa* is titled *Sādhana-samuddesa*, and it will treat the *karakas*. Universals as means is thus not a metaphor here but a placement: the *jati* belongs among the factors that bring actions about.

Verse 3.1.28

विधौ वा प्रतिषेधे वा ब्राह्मणत्वादि साधनम् ।
व्यक्त्याश्रिताश्रिता जातेः संख्याजातिर्विशेषिका ॥ 28 ॥

vidhau vā pratiṣedhe vā brāhmaṇatvādi sādhanam |
vyaktyāśritāśritā jāteḥ samkhyājātirviśeṣikā || 28 ||

In injunction or in prohibition, brahminhood and the like is the means; the universal of number, resting on what rests on the individual, is what differentiates the universal.

The doctrine in ritual application, and then a fine piece of stratification. *Vidhau va pratisedhe va* — in *injunction* or in *prohibition* — *brahmanatvadi sadhanam*: brahminhood and the like is the *means*: what qualifies a man for the rite, or bars him from it, is the universal he instantiates, not his individuality (the *adhikara*-doctrine of 2.79, now grounded). Then the second line's stratification: *samkhyā-jātiḥ viśeṣika jāteḥ* — the *universal of number* is what *differentiates* the universal — *vyaktyāśrita-śrita*, *resting on what rests on the individual*: number is a universal that inheres not in the individual directly but in what inheres in it. So there is a hierarchy: individual, then the universal in it, then number as a universal of *that*. Universals of universals (3.1.9's regress) here doing real grammatical work: the plural of a universal-word is a number-universal riding a quality-universal riding a substance. The verse shows the machinery the grammar needs and the ontology it costs — which is the *samuddesa*'s constant theme.

Verse 3.1.29

यथा जलादिभिर्व्यक्तं मुखमेवाभिधीयते ।
तथा द्रव्यैरभिव्यक्ता जातिरेवाभिधीयते ॥ 29 ॥

yathā jalādibhirvyaktam mukhamevābhidhīyate |
tathā dravyairabhivyaṅktā jātirevābhidhīyate || 29 ||

As the face itself, manifested by water and the like, is what is expressed — so the universal itself, manifested by substances, is what is expressed.

The reflection returns, and this time to a constructive purpose. *Yatha jaladibhiḥ vyaktam mukham eva abhidhīyate*: as the *face itself*, manifested by water and the like, is what is *expressed* — pointing at a reflection, one says 'that is my face', and one is right: the reflection is not a second face one names by courtesy; the face is what is named, manifested there (1.49's borrowed properties; 2.294's reflection failing the effect-test, but naming succeeding). *Tatha dravyaiḥ abhivyaṅkta jātiḥ eva abhidhīyate*: so the *universal itself*, manifested by *substances*, is what is expressed. Point at a cow and say 'cow': what

is named is cowhood, manifested in this beast as the face is in the water. The simile does exactly the work the jati-vadin needs – it explains how a word can name a universal while one is looking at a particular – and it is chosen for a further reason: the water manifests the face without the face being in the water, which is precisely how 3.1.25-26 want universals to stand to their instances. Manifestation, not inherence.

Verse 3.1.30-31

यथेन्द्रियगतो भेद इन्द्रियग्रहणादृते ।
इन्द्रियार्थेष्वदृष्टोऽपि ज्ञानभेदाय कल्पते ॥ 30 ॥
तथात्मरूपग्रहणात् केषांचिद् व्यक्तयो विना ।
सामान्यज्ञानभेदानामुपयान्ति निमित्तताम् ॥ 31 ॥

yathendriyagato bheda indriyagrahaṇādrte |
indriyārtheṣvadrṣṭo'pi jñānabhedāya kalpate || 30 ||
tathātmārūpagrahaṇāt keṣāṃcid vyaktayo vinā |
sāmānyajñānabhedānāmupayānti nimittatām || 31 ||

(30) As a difference residing in the sense-faculty, though unseen in the objects of the senses, serves – apart from any grasping of the faculty – for a difference of cognition; (31) so, for some, individuals, without any grasping of their own form, come to be the occasioning ground of the differences in the cognition of the general.

The samuddesa's subtlest argument, and it turns on a genuine observation about perception. (30): the sense-faculty has its own differences – the eye's constitution differs from the ear's, and within a faculty from moment to moment – and these are indriya-gato bhedah, residing in the *faculty*, adrsto indriya-arthesu, *unseen in the objects*: nothing in the pot corresponds to my eye's condition. Yet indriya-grahanad rte – *apart from any grasping of the faculty* (one never perceives one's own eye in perceiving) – the difference jnana-bhedaya kalpate: serves for a *difference of cognition*: my seeing differs though neither its object nor its organ is given to me. (31) applies it: tatha atma-rupa-grahanat kesamcid vyaktayo vina – so, for some, *individuals, without any grasping of their own form* – samanya-jnana-bhedanam upayanti nimittatam: come to be the *occasioning ground of the differences in the cognition of the general*. The individuals are never themselves grasped (3.1.12: particulars enter only in universal dress), and they nonetheless make my cowhood-cognition here differ from my cowhood-cognition there. Ungrasped, they condition; like the eye, they work by not appearing. It is an elegant rescue of the individual's reality from a doctrine that denies it can ever be meant.

[Contested: 31's atma-rupa-grahanat vina is syntactically awkward and our construal ('without grasping of their own form') follows the parallel with 30's indriya-grahanad rte; an alternative reads it as 'from the grasping of the self-form', reversing the sense – but that loses the analogy the pair is built on]

Verse 3.1.32-33

सत्यासत्यौ तु यो भावौ प्रतिभावं व्यवस्थितौ ।
 सत्यं यत्तत्र सा जातिरसत्या व्यक्तयः स्मृताः ॥ 32 ॥
 सम्बन्धिभेदात्सत्तैव भिद्यमाना गवादिषु ।
 जातिरित्युच्यते तस्यां सर्वे शब्दा व्यवस्थिताः ॥ 33 ॥

satyāsatyau tu yo bhāvau pratibhāvam vyavasthitau |
 satyam yattatra sā jātirasatyā vyaktayaḥ smṛtāḥ || 32 ||
 sambandhibhedātsattaiva bhidyamānā gavādiṣu |
 jātiritiucyate tasyām sarve śabdā vyavasthitāḥ || 33 ||

(32) But of the two entities, the real and the unreal, which stand in each thing – what is real there is the universal; the individuals are held to be unreal. (33) Existence alone, being differentiated by the difference of its relata among cows and the like, is called the universal; in it all words stand established.

The samuddesa's culmination, and it is as radical as anything in the work. (32): every thing has two entities standing in it – satya and asatya, the *real* and the *unreal*: satyam yat tatra sa jatiḥ – what is *real* there is the *universal*; asatya vyaktayah smṛtāḥ – the *individuals* are held to be *unreal*. The realist's world is inverted at a stroke: types are what there is, tokens are appearance. Then (33) the final identification, which dissolves even the types: satta eva sambandhi-bhedat bhidyamāna gavādisu jatiḥ ity ucyate – *Existence alone*, being *differentiated* by the difference of its *relata* among cows and the like, is *called* the universal. There are not many universals: there is *satta*, Being, one; and what we call cowhood is Being as differentiated by its relata (3.1.20's difference imposed from outside; 3.1.16's places appearing between). The plural universals are Existence carved. And the last line brings the whole kanda home: tasyām sarve śabdāḥ vyavasthitāḥ – in *that*, *all words* stand established. Every word, whatever it seems to name, is established in Being – which is 1.1's sabda-tattva reached by the Padakanda's own road, and which explains 3.1.6's superimposition at last: the word's own universal is laid over the object's because both are the one Being, differently carved. The Jati-samuddesa began by asking what universals are and ends by saying there is only one, and it is not really a universal.

[Contested: 32's satya/asatya we render 'real/unreal'; the pair can be softened to 'true/false' or 'abiding/transient', and how strongly one takes the individuals' unreality is the classical crux of the samuddesa. 33's satta-doctrine (the maha-samānya, Being as the sole universal) is the Bhartrhari signature and is not in doubt]

Verse 3.1.34

तां प्रातिपदिकार्थं च धात्वर्थं च प्रचक्षते ।
सा नित्या सा महानात्मा तामाहुस्त्वतलादयः ॥ 34 ॥

tām, prātipadikārtham, ca dhātvartham, ca pracakṣate |
sā nityā sā mahānātmā tāmāhustvatalādayaḥ || 34 ||

And they declare that to be the meaning of the nominal stem and the meaning of the root; it is eternal, it is the great Self — the affixes 'tva', 'tal' and the rest express it.

Satta — Being, the sole universal reached at 3.1.33 — now claims the whole of grammar. Tam pratipadika-artham ca dhatv-artham ca pracakṣate: they declare *that* to be the meaning of the *nominal stem* and the meaning of the *root* — both, the two great classes of meaning-bearing element the science recognizes: what nouns are built on and what verbs are built on alike mean Being. Then: sa nitya, it is *eternal*; sa mahan atma — it is the *great Self*, and the phrase is deliberate, importing the upanisadic register into a discussion of stems and roots. And the grammatical clincher: tam ahuh tvatal-adayah — the affixes *tva* and *tal* and the rest *express* it: these are the abstract-noun suffixes (gotva, 'cowness'; gota, the same), and what they do, on this account, is not manufacture an abstraction but *say Being* — 'cowness' means Being-as-carved-among-cows (3.1.33). The verse is the samuddesa's boldest identification: the abstract suffix is the grammar's own name for the mahan atma, and every stem and every root has been meaning it all along.

Verse 3.1.35

प्राप्तक्रमा विशेषेषु क्रिया सैवाभिधीयते ।
क्रमरूपस्य संहारे तत्सत्त्वमिति कथ्यते ॥ 35 ॥

prāptakramā viśeṣeṣu kriyā saivābhidhīyate |
kramarūpasya saṁhāre tatsattvamiti kathyate || 35 ||

That very one, having attained sequence among the particulars, is called action; in the withdrawal of the form of sequence, that same is spoken of as substance.

The unification, and it is one of the great verses of the work. Sa eva — *that very one*, satta, Being — prapta-krama visesesu kriya abhidhiyate: *having attained sequence* among the particulars, is called *action*. And: krama-rupasya samhare tat sattvam iti kathyate — in the *withdrawal* of the form of sequence, that same is spoken of as *substance*. Action and substance — the two great categories, verb-meaning and noun-meaning, the whole dichotomy the grammar is built on (2.195's asattva-bhuto bhavah versus sattva) — are *one thing* under two aspects: Being with sequence, Being with sequence withdrawn. There are not two kinds of meaning; there is Being, and whether we meet it as verb or noun depends on whether krama is in or out. And krama, the whole work has argued, is the mind's contribution (2.25's sequencing power; 2.27's sequenceless capacity generating ordered appearance). So the noun/verb distinction — the deepest structural fact about language — is a difference in how we take one thing, not a difference in what there is. This is 3.1.2's alternatives (jati or dravya) dissolved: both are satta, sequenced or not.

Verse 3.1.36

सैव भावविकारेषु षडवस्थाः प्रपद्यते ।
क्रमेण शक्तिभिः स्वाभिरेवं प्रत्ययभासते ॥ 36 ॥

*saiva bhāvavikāreṣu ṣaḍavasthāḥ prapadyate |
krameṇa śaktibhiḥ svābhirevam pratyayabhāsatē || 36 ||*

That same one attains the six states among the modifications of being; by its own powers, in sequence, it thus appears in cognition.

The doctrine of 3.1.35 given its classical furniture. *Sa eva bhava-vikaresu sad-avasthah prapadyate*: that same one — Being — attains the six states among the modifications of being: the sad-bhava-vikara of Yaska's Nirukta, which 1.3 already installed as the wombs of differentiation: is born, exists, changes, grows, declines, perishes. *Krameṇa śaktibhiḥ svabhiḥ*: in sequence, by its own powers — the powers are Being's, the sequence is the mode of their exercise (3.1.35's *prapta-krama*). *Evam pratyaya-bhasate*: thus it appears in cognition. Note the verb: appears — the six states are how Being shows, not six things that happen to it. And note the closing of a circle: 1.3 introduced the six vikaras at the Brahmakanda's opening, resting on Brahman's kala-sakti; here, twelve hundred verses later, the same six are Being's own powers exercised in sequence. The Padakanda's ontology and the Brahmakanda's cosmology have turned out to be one doctrine approached from opposite ends.

Verse 3.1.37

आत्मभूतः क्रमोऽप्यस्या यत्रेदं कालदर्शनम् ।
पौर्वापर्यादिरूपेण प्रविभक्तमिव स्थितम् ॥ 37 ॥

*ātmabhūtaḥ kramo'pyasyā yatredam kāladarśanam |
paurvāparyādirūpeṇa pravibhaktamiva sthitam || 37 ||*

Even the sequence belonging to it is its very self, wherein this seeing of time, in the form of before-and-after and the rest, stands as though divided.

The precision that keeps 3.1.35-36 from incoherence. If Being is sequenceless and action is Being with sequence, whence the sequence? *Atma-bhūtaḥ kramo 'pi asyā*: even the sequence belonging to it is its very self — not an addition, not an alien imposition, but Being's own (3.1.24's *saṃagrata*, the faculties' wholeness being their self). *Yatra idam kala-darśanam paurvāparyādi-rūpeṇa pravibhaktam iva sthitam*: wherein this seeing of time, in the form of before-and-after and the rest, stands as though divided. The *iva* does its usual office. Time's divisions are how the seeing takes it; the sequence that is Being's own self is undivided, and *paurvāparyā* — before-and-after — is a division laid on. So sequence is real (it is Being's self) and its articulation into before and after is not (that is *darsana*, seeing). The verse threads a needle the whole work has been approaching: 2.24 argued that time admits no intrinsic divisions and 2.25 located sequence in the cognition; here the two findings are reconciled by distinguishing sequence-as-such (real, Being's own) from ordered sequence (constructed). The *Kala-samuddesa*, the ninth, will take this up at length.

Verse 3.1.38

तिरोभावाभ्युपगमे भावानां सैव नास्तिता ।
लब्धक्रमे तिरोभावे नश्यतीति प्रतीयते ॥ 38 ॥

tirobhāvābhyupagame bhāvānām, saiva nāstitā |
labdhakrame tirobhāve naśyatīti pratiyate || 38 ||

On the admission of the disappearance of things, that same one is their non-existence; in a disappearance that has attained sequence, it is understood as 'it perishes'.

Being made to account for non-being — the hardest thing the doctrine must do. Tirobhava-abhyupagame bhavanam — on the admission of the *disappearance* of things (granting that things do vanish) — sa eva nastita: *that same one* — Being — is their *non-existence*. The formulation is deliberately paradoxical and it is exact: what we call a thing's absence is Being, carved so as to exclude it (3.1.33: Being differentiated by its relata). Absence is not a further entity opposed to Being; it is Being under a determination. And the verb-form: labdha-krame tirobhāve nasyati iti pratiyate — in a disappearance that has *attained sequence*, it is understood as 'it perishes': the same non-existence, sequenced (3.1.35's rule), presents as an action, the perishing. The verse thus delivers what 2.33 promised — that the capacities for existence *and* non-existence stand established in the one — and it disposes of the negation-problem that occupied 2.240-245: there is no cancelled deposit to account for, because the negative sentence's content is Being, carved to exclude, and nothing was ever added to be taken away.

Verse 3.1.39

पूर्वस्मात्प्रच्युता धर्मदिप्राप्ता चोत्तरं पदम् ।
तदन्तराले भेदानामाश्रयाज्जन्म कथ्यते ॥ 39 ॥

pūrvasmātpracyutā dharmādaprāptā cottaram, padam |
tadantarāle bhedānāmāśrayājjanma kathyate || 39 ||

Fallen away from the prior property, and not having attained the subsequent station — in that interval, from the resort of the differences, birth is spoken of.

Birth analysed as an interval, and the analysis is subtle. Purvasmat pracyuta dharmat — *fallen away* from the prior property; aprapta ca uttaram padam — and *not having attained* the subsequent station: the thing is between, no longer what it was and not yet what it will be. Tad-antarale bhedanam asrayat janma kathyate: in *that interval*, from the *resort of the differences*, *birth* is spoken of. Birth is not an event that happens at an instant; it is the name for a gap — the interval where the differences take their stand, where a thing is neither of its two determinations. And this is precisely 3.1.20-21's condition: uncommingled, a thing is neither one nor many, neither existent nor non-existent — and here that condition is located not in some inaccessible thing-in-itself but in the ordinary interval of becoming. Everything that comes to be passes through the state to which no category applies. The verse gives the catuskoti a home in the biology of change.

Verse 3.1.40

आश्रयः स्वात्ममात्रा वा भावा वा व्यतिरेकिणः ।
स्वशक्तयो वा सत्ताया भेददर्शनहेतवः ॥ 40 ॥

āśrayaḥ svātmamātrā vā bhāvā vā vyatirekiṇaḥ |
svaśaktayo vā sattāyā bhedadarśanaheṭavaḥ || 40 ||

The resort is either mere portions of its own self, or things that are distinct from it, or its own powers — these being the causes of the seeing of difference in Existence.

What the 'resort of the differences' (3.1.39) might be, canvassed in three options. *Asrayah sva-atma-matra va* — the resort is *mere portions of its own self*: Being's own aspects, nothing external; *bhava va vyatirekinah* — or *things distinct* from it: real others, standing outside; *sva-saktayo va* — or its *own powers* (the sakti-doctrine of 1.2 and 3.1.22-23). And all three are *sattayah bheda-darsana-hetavaḥ* — the causes of the seeing of difference in Existence: whichever they are, what they do is cause the seeing of difference. Note the term: *darsana*, seeing (3.1.37's *kala-darsanam*). Bhartṛhari canvasses three metaphysical accounts of what differentiates Being and does not choose — because on his method the choice is a ledger-choice (1.74, 2.179), and what all three deliver is the same: difference is *seen*, and its causes are what they are. The *samuddesa*'s characteristic tolerance at the level of ontology, rigour at the level of phenomenology.

[Contested: the three options are compressed and their individuation is our reading; some take *sva-atma-matra* and *sva-saktayah* as one option variously phrased, yielding a two-fold canvass (own aspects versus real others), which is the more usual dichotomy]

Verse 3.1.41

पृथिव्यादिष्वभिव्यक्तौ न संस्थानमपेक्षते ।
अनुच्छिन्नाश्रयाज्जातिरनित्येऽप्याश्रये स्थिता ॥ 41 ॥

prthivyādiṣvabhivyaktau na samsthānamapekṣate |
anucchinnaśrayājñātiranitye'pyāśraye sthitā || 41 ||

In its manifestation among earth and the rest, it does not depend on configuration; the universal, its substratum being uninterrupted, stands even in a non-eternal substratum.

A defence of universals against the transience of their instances. *Prthivy-adisu abhivyaktau na samsthanam apeksate*: in its manifestation among earth and the rest, it does not depend on *configuration* — the universal is not the shape; a lump of earth and a pot are both earth, and earthness cares nothing for their forms (against any *akṛti*-doctrine that identifies the universal with configuration, 3.1.19's *prakhyata akṛti*). And the second line: *anucchinnaśraya jātiḥ anitye 'pi āśraye sthita* — the universal, its *substratum being uninterrupted*, stands even in a *non-eternal* substratum. The pots come and go; the series of pots does not; and the universal rides the unbroken succession rather than any member of it. This is 1.28's *vyavastha-nityata* exactly — beginninglessness as regular arrangement rather than as any item's permanence, the analogy there being living beings, each produced and the series without a first term. The eternal universal needs no eternal instance, only an unbroken supply.

Verse 3.1.42

अनुच्छेद्याश्रयामेके सर्वा जातिं प्रचक्षते ।
न यौगपद्यं प्रलये सर्वस्येति व्यवस्थिताः ॥ 42 ॥

anucchedyāśrayāmeke sarvā jātim pracakṣate |
na yaugapadyam pralaye sarvasyeti vyavasthitāḥ || 42 ||

Some declare every universal to have an uninteruptible substratum; they are settled in the view that there is no simultaneity of everything at the dissolution.

The doctrine of 3.1.41 pressed to a cosmological commitment. Anucchedyasrayam eke sarva jatim prakaksate: some declare *every* universal to have an *uninterruptible* substratum — not merely unbroken in fact but incapable of interruption. Why so strong? Because of the pralaya, the world-dissolution: if at some moment *all* substrata perished together, every universal would lose its footing at once and could not return (3.1.41's succession requires that the chain never fully break). So these theorists are settled: na yaugapadyam pralaye sarvasya iti vyavasthitah — there is *no simultaneity* of everything at the dissolution: the destruction is staggered, something always remaining, the chain never quite parting. This is the seed-doctrine of 1.132 (when all traditions perish, a seed remains) transposed to ontology, and it shows how much metaphysical weight the universals' eternity is made to carry: rather than let the chain break, the school revises its cosmology.

Verse 3.1.43

प्रकृतौ प्रविलीनेषु भेदेष्वेकत्वदर्शिनाम् ।
द्रव्यसत्त्वं प्रपद्यन्ते स्वाश्रया एव जातयः ॥ 43 ॥

prakṛtau pravilīneṣu bhedeshvekatvadarśinām |
dravyasattlam prapadyante svāśrayā eva jātayah || 43 ||

For those who see oneness, when the differences have dissolved into the primal nature, the universals — their own substrata — attain the state of substance.

The alternative cosmology, for those who can afford it. Prakṛtau pravilinesu bhedesu — when the *differences* have *dissolved* into the *primal nature* (prakṛti, the Samkhya's unmanifest matrix) — ekatvadarśinam: for those who *see oneness* (the abheda-purvaka party of 2.57, Bhartrhari's own). What happens to universals then? Dravya-sattvam prapadyante svasraya eva jatayah — the universals, *being their own substrata*, attain the state of *substance*. Where all differentiated instances have dissolved, the universals do not lose their footing: they *become* their own footing — cease to need instances and stand as substance. And by 3.1.35 this is exactly right: substance is Being with sequence withdrawn, and at the dissolution sequence has withdrawn. So the pralaya is not a catastrophe for universals but their return to what they always were: satta, undifferentiated, before its relata carve it (3.1.33). The verse resolves 3.1.42's anxiety by not sharing it — those who see oneness need no unbroken chain, because the chain was never what held the universal up.

Verse 3.1.44

ब्राह्मणात्वादयो भावाः सर्वप्राणिष्ववस्थिताः ।
अभिव्यक्ताः स्वकार्याणां साधका इत्यापि स्मृतिः ॥ 44 ॥

brāhmaṇātvādayo bhāvāḥ sarvapraṇiṣvavasthitāḥ |
abhivyaktāḥ svakāryāṇām.sādhakā ityāpi smṛtiḥ || 44 ||

Brahminhood and such entities stand present in all living beings; manifested, they are the accomplishers of their own effects – such too is the received teaching.

A doctrine of remarkable reach, reported as smṛti. Brahmanatvadayah bhavah sarva-pranisu avasthitah: brahminhood and the like *stand present in all living beings* – not in brahmins only: every universal is everywhere, latent, in everything that lives. What distinguishes a brahmin is not that he has brahminhood and others lack it but that in him it is abhivyaktah, *manifested*. And manifested, svakaryanam sadhakah – they are the *accomplishers of their own effects* (3.1.25's prayojika: the universal deploying the causes for its own manifestation). Iti api smṛtiḥ: *such too is the received teaching* – the report-marker, and Bhartrhari does not press it further. The doctrine follows strictly from 3.1.33 (there is only satta, carved by relata) and 3.1.25-27 (universals as self-manifesting powers): if all universals are one Being differentiated, then all of them are latent wherever Being is, which is everywhere. Its social implications are not drawn here, and it would be anachronistic to draw them for the text; but the metaphysics is unambiguous, and it is the metaphysics that the verse states.

Verse 3.1.45

चित्रादिष्वप्यभिव्यक्तिर्जतिनां कैश्रीदिष्यते ।
प्राण्याश्रितास्तु ताः प्राप्ता निमित्तं पुण्यपापयोः ॥ 45 ॥

citrādiṣvapyabhivyaktirjātīnām.kaiścīdiṣyate |
prāṇyāśritāstu tāḥ prāptau nimittam.puṇyapāpayoḥ || 45 ||

By some, a manifestation of universals is accepted even in paintings and the like; but those that rest in living beings are the occasion, in their attainment, of merit and demerit.

A boundary drawn on 3.1.44's universality. Kaiscid citradisu api abhivyaktih jatinam isyate: by some, a manifestation of universals is accepted *even in paintings* – the painted brahmin has brahminhood manifested in him, the painted cow cowhood: manifestation does not require flesh (and 2.290 already granted the painting its likeness while denying it efficacy). But the qualification that matters: prany-asritas tu tah praptau nimittam punya-papayoh – those that rest in *living beings* are, in their attainment, the occasion of *merit and demerit*. Only the living manifestation carries dharmic weight: honouring a painted brahmin earns nothing, killing a painted cow costs nothing. So the boundary is not ontological but ethical – the painting has the universal and not the consequences – and it is drawn by exactly the criterion 2.288-290 used to sort the real from the unreal: asadharanam karyam, the effect that only the genuine article produces. Here the effect is merit, and merit is what the painting cannot do.

Verse 3.1.46

ज्ञानं त्वस्मद्विशिष्टानां तासु सर्वेन्द्रियं विदुः ।
अभ्यासान्मणिरुप्यादिविशेषेष्विव तद्विदाम् ॥ 46 ॥

jñānam, tvasmadviśiṣṭānām, tāsu sarvendriyam, viduḥ |
abhyāsānmaṇirūpyādiviśeṣeṣviva tadvidām || 46 ||

But the knowledge of those, in men distinguished from us, they know to be through every sense-faculty — as, from practice, among the particulars of gems and silver and the like, for those who know them.

How universals are known, and the answer returns to the work's oldest example. Asmad-visistanam — of men *distinguished from us*, those beyond our grade (the rsis of 1.37-38, whose knowledge of past and future is not different from perception) — jñanam tasu sarvendriyam viduḥ: their knowledge of universals is *through every sense-faculty*: not inferred, not reasoned to, but perceived, and by any sense whatever. And the analogy that makes it credible: abhyasat mani-rupyadi-visesesu iva tadvidam — as, *from practice*, among the particulars of *gems and silver*, for *those who know them*. The jeweller of 1.35 returns, and his epistemic situation is now given its metaphysical import: what he perceives, unable to say how, is the universal — and what the seer perceives is the same, at every grade. Abhyasa, practice, is what closes the gap (2.117's pratibha-hetuh abhyasat; 2.152's six-fold flash). The doctrine of universals thus rests, in the end, not on argument but on connoisseurship — the trained eye that sees types where the untrained sees only this stone.

Verse 3.1.47

जात्युत्पलादिगन्धादौ भेदतत्त्वं यदाश्रितम् ।
तद्भावप्रत्ययैर्लोकेऽनित्यत्वान्नाभिधीयते ॥ 47 ॥

jātyutpalādigandhādau bhedatattvam, yadāśritam |
tadbhāvapratyayairloke'nityatvānnābhidhīyate || 47 ||

The reality of difference which resides in the scent of jasmine, lotus and the like — in the world it is not expressed by cognitions of that being, because of its non-eternality.

A limit on what universals language reaches. There is a genuine bheda-tattvam — a *reality of difference* — residing in the scent of jasmine as against lotus: the noses of the world discriminate them infallibly, so the difference is real. And yet: tad-bhava-pratyayaih loke na abhidhiyate — in the world it is *not expressed* by cognitions of that being: there is no word for it, no abstract noun, no 'jasmine-scent-ness' that ordinary usage employs. Why? Anityatvat — because of its *non-eternality*: the scent is too fleeting to have earned a universal-word. The verse concedes something important: real differences may go unnamed, and language's inventory of universals is not a map of the world's distinctions but of the ones usage has settled on (2.253's prasiddhi; 2.296's loka-prasiddhi deciding what is real). What we have words for is what has stayed put long enough to be worth a word.

Verse 3.1.48

अस्वशब्दाभिधानास्तु नरसिंहादिजातयः ।
सरुपावयवेवान्या तासु श्रुतिरवस्थिता ॥ 48 ॥

asvaśabdābhidhānāstu naraśiṃhādi-jātayah |
sarūpāvayavevānyā tāsu śrutiravasthitā || 48 ||

But the universals such as man-lion and the like are not expressed by their own words; in them stands a hearing that is, as it were, other, resting on like-formed parts.

The man-lion returns (2.90's specimen) and now as a problem for universals. Asva-sabda-abhidhanah — *not expressed by their own words*: narasimha-adi-jatayah, the universals of man-lion and the like, have no word of their own; 'narasimha' is a compound, borrowing from 'nara' and 'simha'. So a real kind (the tradition grants the man-lion its reality) with no proper name, denoted only by pieces that name other kinds. And what stands in such a word: sarupavayaveva anyā tasu srutir avasthita — a *hearing* that is, as it were, *other*, resting on *like-formed parts*. The compound's members sound like the words for man and lion and are not those words (2.177's rule: different meaning, different base; 2.169's kupa-supā-yupā). So the man-lion's universal is reached by a word whose parts merely resemble words. The verse is a fine specimen of the samuddesa's method: a case where the smooth doctrine (words express universals) meets a kind that has to be named obliquely, and the obliquity is described rather than smoothed.

Verse 3.1.49

जात्यवस्थापरिच्छेदे सङ्ख्या सङ्ख्यात्वमेव वा ।
विप्रकर्षेऽपि संसर्गादुपकाराय कल्पते ॥ 49 ॥

jātyavasthāparicchede saṅkhyā saṅkhyātvameva vā |
viprakarṣe'pi saṃsargādopakāraya kalpate || 49 ||

In the delimiting of the universal's state, number, or number-hood itself, serves for assistance through commingling, even where there is remoteness.

Number's role in fixing universals. Jaty-avastha-paricchede — in the *delimiting of the universal's state* (which cowhood: the one, the many, the herd) — samkhyā samkhyatvam eva vā — *number*, or *number-hood* itself — upakaraya kalpate: serves for *assistance*; and the striking qualification: viprakarse 'pi samsargat — *even where there is remoteness*, through commingling. Number assists the universal even at a distance — the singular or plural of a word conditioning which state of the universal is meant, though number is not part of the universal and stands well away from it (3.1.28's stratification: number as a universal riding on what rests on the individual). The verse is preparing the Sankhya-samuddesa (the eleventh) and, more immediately, the discussion of vivakṣa that follows: if number assists from a distance, then whether it assists at all in a given utterance is a matter of what the speaker means it to do.

Verse 3.1.50

लक्षणा शब्दसंस्कारे व्यापारः कार्यसिद्धये ।
सङ्ख्याकर्मादिशक्तीनां श्रुतिसाम्येऽपि दृश्यते ॥ 50 ॥

lakṣaṇā śabdasaṃskāre vyāpārah kāryasiddhaye |
saṅkhyākarmādiśaktīnām śrutisāmye’pi dr̥śyate || 50 ||

Indication is the operation, in the refining of the word, for the accomplishing of the effect; the capacities of number, action and the rest are seen even where the hearing is the same.

The grammar’s own use of the foregoing. Laksana sabda-samskare vyaparah karya-siddhaye: *indication is the operation, in the refining of the word* (sabda-samskara: 1.131’s term, the grammarian’s whole business), *for the accomplishing of the effect*: the science indicates in order to get its operations right, and indication is a doing, not a describing (2.436: word-meanings stand by way of characterization, not in reality). And: samkhya-karmadi-saktinam sruti-samyē ’pi dr̥syate — the capacities of *number*, *action* and the rest are *seen* even where the *hearing is the same*: identical forms carrying different capacities, sorted by nothing audible (2.104’s capacity-assumption in the invariant stream). So the grammar’s indications are postings that track capacities the sound does not carry — which is why the science is necessary and why its categories are not discoveries.

Verse 3.1.51

न विना सङ्ख्यया कश्चित्सत्त्वभूतोऽर्थ उच्यते ।
अतः सर्वस्य निर्देशे सङ्ख्या स्यादविवक्षिता ॥ 51 ॥

na vinā saṅkhyayā kaścitsattvabhūto’rtha ucyate |
ataḥ sarvasya nirdeśe saṅkhyā syādavivakṣitā || 51 ||

Nothing that is a substance-entity is spoken of at all without number; therefore, in the designation of everything, number would be unintended.

A dilemma about number, sharply put. Na vina samkhyaya kascit sattva-bhuto ’rtha ucyate: *nothing* that is a substance-entity is spoken of *without number* — Sanskrit has no numberless noun; to say ‘cow’ is to say one cow, and there is no way to mention a thing without counting it. But then: atah sarvasya nirdese samkhya syad avivaksita — therefore, in the designation of *everything*, number would be *unintended*: if number is unavoidable, it cannot be meant — what one cannot help saying, one does not thereby intend (1.136’s canon of sato ’vivaksa, the non-intention of the actual; 2.69’s unintended qualities of the rice). The reasoning is exact and it produces a genuine puzzle: the grammar’s number-apparatus is obligatory and therefore, on the tradition’s own principle, semantically idle. What is forced is not meant.

Verse 3.1.52

एकत्वं वा बहुत्वं वा केषाञ्चिदविवक्षितम् ।
तद्धि जात्यभिधानाय द्वित्वं तु स्याद्विवक्षितम् ॥ 52 ॥

ekatvam, vā bahutvam, vā keṣāñcidavivakṣitam |
taddhi jātyabhidhānāya dvitvam, tu syādvivakṣitam || 52 ||

For some, either oneness or manifoldness is unintended, for that serves for the expressing of the universal; but duality would be intended.

The puzzle of 3.1.51 resolved by a discrimination, and it is a fine one. Ekatvam va bahutvam va kesamcid avivakṣitam: for some, either *oneness* or *manifoldness* is *unintended* — the singular and the plural are the forms one uses when saying nothing about number, tad hi jaty-abhidhanaya, for *that* (either of them) serves for the *expressing of the universal*: 'the cow is an animal' uses a singular and means cow-hood; 'cows are animals' uses a plural and means the same. Neither number is doing number-work. Dvitvam tu syad vivakṣitam: but *duality* would be *intended* — the dual is never idle. Sanskrit's dual is used only when exactly two are meant; there is no generic dual. So the obligatory numbers (singular, plural) are unmeant and the optional one (dual) is meant, and the criterion is precisely 3.1.51's: what one could have avoided saying, one intended. The verse is a small triumph of the vivakṣa-doctrine (1.155, 2.400): meaning is what was aimed, and grammar's forced categories are outside the aim.

Verse 3.1.53

यद्येतौ व्याधितौ स्यातां देयं स्यादिदमौषधम् ।
इत्येवं लक्षणेऽर्थस्य द्वित्वं स्यादविवक्षितम् ॥ 53 ॥

yadyetau vyādhitau syātām, deyam, syādidamauśadham |
ityevam, lakṣaṇe'rthasya dvitvam, syādavivakṣitam || 53 ||

'If these two should fall ill, this medicine is to be given' — in such an indicating of the meaning, duality would be unintended.

The rule of 3.1.52 (the dual is always meant) immediately qualified, and the qualification is exact. 'If these two fall ill, give this medicine': the sentence's purpose is laksana, *indicating* a condition — it tells you when to administer, not how many patients matter. Would one withhold the medicine from a third? Obviously not; and would one wait until both were ill? Not that either. So dvitvam syad avivakṣitam — *duality would be unintended*, even in the dual, whose whole distinction was that it is never idle. What overrides the rule is purpose: where the sentence is indicating rather than specifying, the number is carried along and not aimed (2.301's smoke: what an operation cannot help producing, it does not intend). The verse guards 3.1.52 from being taken as a formal rule about the dual. It is not. It is an application of vivakṣa, and vivakṣa answers to what the sentence is *for* (2.113), which the dual's morphology cannot settle.

Verse 3.154

एकादिशब्दवाच्यायाः कर्मण्यङ्गत्वमिष्यते ।
सङ्ख्यायाः खनति द्वाभ्यामिति रूपाद्धि साश्रिता ॥ 54 ॥

ekādiśabdavācyaāḥ karmaṇyaṅgatvamīṣyate |
saṅkhyāyāḥ khanati dvābhyāmiti rūpāddhi sāśritā ॥ 54 ॥

For number expressible by 'one' and the rest, auxiliary-status in the action is accepted; for in 'he digs with two', it is resorted to from the form.

The contrary case, where number is doing work. Ekadi-sabda-vacyayah samkhyayah karmani angatvam isyate: for number expressible by 'one' and the rest, *auxiliary-status* in the action is accepted – angatva, the Mimamsa relation of a subsidiary to its principal (2.81-82): the number is a genuine contributing factor to the act. The evidence: khanati dvabhyam – 'he digs *with two*' (two spades, two hands) – rupad dhi sa asrita: from the *form* it is resorted to. Digging with two is a different action from digging with one; the number enters the act's own description. So numbers sort into two classes by the same criterion as everything else in this samuddesa: those the action needs (auxiliary, intended) and those it merely carries (unintended, 3.1.51). And the sorting is not readable off the case-ending – 'with two' and 'these two' are both duals, and one is meant and one is not.

Verse 3.155

यजेत पशुनेत्यत्र संस्कारस्यापि सम्भवे ।
यथा जातिस्तथैकत्वं साधनत्वेन गम्यते ॥ 55 ॥

yajeta paśunetyatra saṁskārasyāpi sambhave |
yathā jātistathaikatvam.sādhanatvena gamyate ॥ 55 ॥

In 'let him sacrifice with an animal', even where refinement is possible – as the universal is, so oneness is understood as a means.

The test-case that will occupy the rest of the movement. Yajeta pasuna – 'let him sacrifice with an animal': the injunction names a beast, in the singular, and the question is whether the singular is meant. Samskarasya api sambhave – *even where refinement is possible*: even granting that the animal must be ritually prepared, which might seem to fix attention on the individual. And the answer offered: yatha jatih tatha ekatvam sadhanatvena gamyate – *as the universal is, so oneness is understood as a means*: both the animal-universal and the oneness are contributing factors, sadhana, to the rite. If cowhood is a means (3.1.27's jati as sadhana), then so is the number. The parity-argument is clean and it sets the trap the following verses spring: if number is a means here, the sacrificer must use exactly one animal and no more – and the exegetical tradition has views about that.

Verse 3.1.56

लिङ्गात्तु स्याद् द्वितीयादेस्तदेकत्वं विवक्षितम् ।
एकार्थविषयत्वे च तल्लिङ्गं जातिसङ्ख्ययोः ॥ 56 ॥

*liṅgāttu syād dvitīyādestadekatvam, vivakṣitam |
ekārthaviṣayatve ca talliṅgam, jātisaṅkhyayoh || 56 ||*

But from the mark of 'a second' and the rest, that oneness would be intended; and where the object is single, that mark belongs to both universal and number.

Evidence for 3.1.55's reading, from elsewhere in the ritual code. *Lingat tu syad dvitiyadeh* — from the *mark* of 'a second' and the rest: other injunctions speak of a second animal, a further one — which presupposes that the first injunction meant *one*; *tad ekatvam vivakṣitam*, that oneness would be *intended*. The reasoning is the *linga*-inference of 2.73 (a mark elsewhere disclosing a meaning here; 2.86's difference inferred from a mark seen in another sentence). And the second line notes the mark's ambiguity: *eka-artha-visayatve ca tal liṅgam jati-samkhyayoh* — where the object is *single*, that mark belongs to *both* universal and number: 'a second animal' equally evidences that the first injunction meant one animal and that it meant animal-kind. The mark does not discriminate. Which is why the movement must go on: the evidence is real and it underdetermines the question.

Verse 3.1.57

अन्यत्राविहितस्यैव स विधिः प्रथमं पशोः ।
क्रियायामङ्गभावश्च तत्त्वेतस्माद्विवक्षितम् ॥ 57 ॥

*anyatrāvihitasyaiva sa vidhiḥ prathamam, paśoh |
kriyāyāmaṅgabhāvaśca tattvetas mādvivakṣitam || 57 ||*

That injunction is first, of an animal not enjoined elsewhere; and there is auxiliary-status in the action — therefore, from this, it is intended.

The argument for intention completed, and its two premises are the exegete's standard tools. *Anyatra avihitasya eva sa vidhiḥ prathamam paśoh*: that injunction is *first*, of an animal *not enjoined elsewhere* — this is the rite's own animal, introduced here, not carried in from another context (an *apurva* prescription, 3.1.69's term: what is not otherwise obtained must be enjoined). And *kriyayam anga-bhavaḥ ca* — and there is *auxiliary-status* in the action (3.1.54's criterion). *Tat tu etasmat vivakṣitam*: therefore, from this, it is *intended*. The reasoning: a number that is freshly prescribed, in a rite that has no other source for it, and which contributes to the act, must be meant — nothing else explains its being said. This is the strongest case for number-as-intended, and the verses following will set against it a class of cases where every one of these conditions fails.

Verse 3.1.58-59

ग्रहास्त्वन्यत्र विहिता भिन्नसङ्ख्याः पृथक् पृथक् ।
 प्राजापत्या नवेत्येवमादिभेदसमन्विताः ॥ 58 ॥
 अङ्गत्वेन प्रतीतानां सम्मार्गे त्वङ्गिनां पुनः ।
 निर्देशं प्रति या सङ्ख्या सा कथं स्याद्विवक्षिता ॥ 59 ॥

grahāstvanyatra vihitā bhinnasaṅkhyāḥ prthak prthak |
prajāpatyā navetyevamādibhedasamanvitāḥ || 58 ||
aṅgatvena pratītānām.sammārge tvaṅginām.punah |
nirdeśam.prati yā saṅkhyā sā katham.syādvivakṣitā || 59 ||

(58) But the graha-vessels are enjoined elsewhere, of differing numbers, severally — ‘nine Prajapatya’ and so on, accompanied by such differences. (59) But in the cleansing of the principals, which were understood as auxiliaries — the number that is there with respect to the designation, how would that be intended?

The counter-case, and it is precisely constructed. The grahas — the soma-cups — are anyatra vihitah, *enjoined elsewhere*: their numbers come from other injunctions, prthak prthak, severally, each rite specifying its own (‘nine Prajapatya’, and so on: bhinna-samkhyah, of differing numbers). So when a *cleansing* rule mentions them, their number is not being prescribed; it is being *referred to*. (59): sammarge angī nam punah — in the *cleansing* of the *principals* (which, in the earlier context, were understood angatvena, as auxiliaries — the role-inversion of 2.306, and 3.1.69 will name the principle) — nirdeśam prati ya saṅkhyā sa katham syad vivakṣita: the number that is there *with respect to the designation*, how would *that* be intended? It could not: a number one merely mentions in order to identify what to clean is not a number one is enjoining. Every condition of 3.1.57 fails — the number is obtained elsewhere, is not fresh, contributes nothing to the cleansing — and the conclusion inverts.

Verse 3.1.60

नान्यत्र विधिरस्तीति संस्कारो नापि चाङ्गिता ।
 हेतुः सङ्ख्याविवक्षायां यत्नात्सा हि विवक्षिता ॥ 60 ॥

nānyatra vidhirastīti saṁskāro nāpi cāṅgitā |
hetuḥ saṅkhyāvivakṣāyām.yatnātsā hi vivakṣitā || 60 ||

‘There is no injunction elsewhere’ — thus neither refinement nor principal-status is the cause in the intending of number; for it is intended from effort.

The criterion isolated, and the isolation is the movement’s real work. Two candidate explanations of why number is meant are ruled out. Not saṁskara — *refinement*: that the item must be ritually prepared does not make its number meant (3.1.55 raised this and it fails). Not angita — *principal-status*: that the item is the rite’s principal does not make its number meant either. What then? Na anyatra vidhir asti iti — *because there is no injunction elsewhere*: number is meant exactly where it is not obtainable from another source, so that saying it here is the only way to have it. And the formulation that names the principle: yatnat sa hi vivakṣita — for it is intended *from effort*: what the text goes to the trouble of prescribing, it means. Yatna — effort, trouble taken — is the criterion, and it is 3.1.51-52’s in another guise: what is forced is not meant, what costs something to say is.

Verse 3.1.61

सम्मार्जने विशेषश्च न ग्रहे क्वचिदाश्रितः ।
विहितास्ते च संस्कार्याः सर्वेषामाश्रयस्ततः ॥ 61 ॥

sammāṛjane viśeṣaśca na grahe kvacidāśritah |
vihitāste ca saṁskāryāḥ sarveṣāmāśrayastataḥ || 61 ||

And in the cleansing, no particular is anywhere resorted to in the graha; and those that are enjoined are what is to be refined – therefore the substratum of all.

The counter-case sealed. Sammarjane visesah ca na grahe kvacid asritah: in the *cleansing*, no particular is anywhere resorted to in the graha – the rule does not care which cup, or how many; it says clean them. Vihitah te ca samskaryah – and those that are *enjoined* (elsewhere, with their numbers, 3.1.58) are *what is to be refined*: the cleansing rule takes its objects readymade from the injunctions that prescribed them. Sarvesam asrayah tataḥ – *therefore* it is the *substratum of all*: the cleansing applies across the board, to whatever the other injunctions supplied, in whatever number they supplied it. The verse completes the demonstration that a number can be uttered, heard, and grammatically present while being semantically inert – not because number is generally idle (3.1.54 showed it working) but because *this* rule's purpose does not reach it.

Verse 3.1.62

प्रत्याश्रयं समाप्तायां जातावेकेन चेतक्रिया ।
पशुना न प्रकल्पेत तत्स्यादेव प्रकल्पनम् ॥ 62 ॥

pratyāśrayam samāptāyām jātāvekena cetkriyā |
paśunā na prakalpeta tatsyādeva prakalpanam || 62 ||

If, the universal being completed substratum by substratum, the action would not be constructed with one animal – then that construction would indeed occur.

The distribution-question of the Vakyakanda (2.371-455) reappears, now as a ritual worry. Pratyasrayam samaptayam jatau – the *universal being completed substratum by substratum* (2.18's whole-at-each principle: animal-hood complete in each animal) – ekena cet kriya na prakalpeta pasuna: *if* the action would *not* be constructed with *one* animal – then tat syad eva prakalpanam: *that* construction would indeed occur – i.e. more animals would have to be brought. The conditional is the exegete's live question: does the rite need one beast or many? And the verse's structure makes the answer depend on the *action's* requirements, not the noun's number – 2.371's samarthya-criterion exactly. If sacrificing can be done with one, one suffices, whatever the singular does or does not mean.

Verse 3.1.63-64

एकेन चेत्प्रसिद्धायां क्रियायां यदि सम्भवात् ।
पश्वन्तरमुपादेयमुपादानमनर्थकम् ॥ 63 ॥
यथैवाहितगर्भायां गर्भाधानमनर्थकम् ।
तथैकेन प्रसिद्धायां पश्वन्तरमनर्थकम् ॥ 64 ॥

*ekena cetprasiddhāyām.kriyāyām.yadi sambhavāt |
paśvantaramupādeyamupādānamanarthakam || 63 ||
yathaiivāhitagarbhāyām.garbhādhānamanarthakam |
tathaikena prasiddhāyām.paśvantaramanarthakam || 64 ||*

(63) If, the action being already accomplished by one, another animal were to be taken up merely because it is possible — the taking-up would be purposeless. (64) Just as, in one whose embryo is already placed, the placing of an embryo is purposeless — so, the action being accomplished by one, another animal is purposeless.

The answer to 3.1.62, and its simile is memorable. (63): if the rite is *prasiddha*, *accomplished*, by one animal, then bringing a second *sambhavat*, merely *because it is possible*, is *anarthakam* — *purposeless*: possibility is not a reason; superfluity is not piety. (64) drives it home: *yatha eva ahita-garbhayam garbhadhanam anarthakam* — just as, in a woman *whose embryo is already placed*, the *placing of an embryo* is purposeless: the *garbhadhana* rite, performed on the already-pregnant, accomplishes nothing — the thing it exists to bring about has been brought about. *Tatha ekena prasiddhayam pasvantaram anarthakam*: so, the action accomplished by one, another animal is purposeless. The principle is that of ritual economy — a rite's requirements are satisfied or not, and beyond satisfaction there is no more merit to be had — and the simile is chosen for a reason: the pregnancy-case is one where the redundancy is undeniable to everyone. Nobody thinks a second placing helps.

Verse 3.1.65

तावतार्थस्य सिद्धत्वादेकत्वस्याव्यतिक्रमम् ।
केचिदिच्छन्ति न त्वत्र सङ्ख्याङ्गत्वेन गृह्यते ॥ 65 ॥

*tāvatārthasya siddhatvādekatvasyāvyatikramam |
kecidicchanti na tvatra saṅkhyāṅgatvena gr̥hyate || 65 ||*

Because the purpose is accomplished by that much, some hold to the non-transgression of oneness; but here number is not grasped as an auxiliary.

The position that emerges from 3.1.62-64, and its careful limitation. *Tavata arthasya siddhatvat* — because the purpose is *accomplished by that much* (by one animal) — *kecid icchanti ekatvasya avyatikramam*: some hold to the *non-transgression* of oneness: one animal, and no more, is what the rite gets. So far this looks like 3.1.55's conclusion (oneness as means). But: *na tu atra saṅkhyā āṅgatvena gr̥hyate* — *but here number is not grasped as an auxiliary*. The distinction is fine and it is the movement's yield. One animal is used — not because the singular *enjoined* oneness, but because one suffices and surplus is purposeless (3.1.63-64). The practical outcome is identical; the semantics is opposite. Number is not doing the work; economy is. This is exactly the discrimination the *samudesa* has been building toward: a form can be reliably correlated with an outcome and contribute nothing to the meaning that produces it.

Verse 3.1.66

द्वितीयादिषु यल्लिङ्गमुक्तं न्यायानुवादि तत् ।
न सङ्ख्या साधनत्वेन जातिवत्तेन गम्यते ॥ 66 ॥

dvitīyādiṣu yalīṅgamuktam, nyāyānuvādi tat |
na saṅkhyā sādhanatvena jātivatena gamyate || 66 ||

The mark stated in the case of 'a second' and the rest is a restatement of the principle; number is not thereby understood as a means, as the universal is.

The evidence of 3.1.56 disarmed. Dvitiyadisū yal liṅgam uktam nyāya-anuvādi tat: the *mark* stated in the case of 'a second' and the rest is nyāya-anuvādi — a *restatement of the principle*, not an independent witness. When another text speaks of 'a second animal', it is not disclosing that the first injunction enjoined oneness; it is registering what the economy-principle (3.1.63-64) already established — that one was enough and this is an addition. Anuvāda is 2.115's term for idle restatement, and its application here is deft: the mark that seemed to prove number-intention turns out to be repeating what was known on other grounds. Hence: na saṅkhyā sādhanatvena jativat tena gamyate — number is *not* thereby understood as a *means*, as the *universal* is. The parity of 3.1.55 is broken: cowhood is a genuine sādhanā of the rite, oneness is not, and the mark that seemed to equate them says nothing.

Verse 3.1.67

अन्वयव्यतिरेकाभ्यां सङ्ख्याभ्युपगमे सति ।
युक्तं यत्साधनत्वं स्यान्न त्वन्यार्थोपलक्षणम् ॥ 67 ॥

anvayavyatirekābhyāṃ, saṅkhyābhyupagame sati |
yuktam, yatsādhanatvam, syānna tvanyārthopalakṣaṇam || 67 ||

When number is admitted by way of agreement and difference, it is right that it should be a means — but not that it should be an indicator of another meaning.

The methodological point beneath the casuistry. Anvaya-vyatirekabhyāṃ saṅkhyā-abhyupagame sati — when number is admitted by *agreement and difference* (the distributional method of 2.12 and 2.166: vary the form, watch the meaning) — yuktam yat sādhanatvam syat: it is *right* that it should be a *means*: if number covaries with outcome, credit it as a contributing factor. Na tu anyā-arthā-upalakṣaṇam: *but not* that it should be an *indicator of another meaning* — one may not, on distributional evidence, promote number into a *sign* of something else (a mark of capacity, of principality, of whatever the exegete needs). The restriction matters because 3.1.3-5 did exactly that with the universal (jatiḥ śakty-upalakṣaṇam: the universal as indicator of capacity), and the verse is refusing the same licence to number. Covariance establishes contribution; it does not establish signification (2.167's sap: a unit certified by distribution and meaning nothing).

Verse 3.1.68

साधनत्वे पदार्थस्य सामर्थ्यं न प्रदीयते ।
सङ्ख्या व्यापारधर्मोऽतस्तेन लिङ्गेन गम्यते ॥ 68 ॥

sāadhanatve padārthasya sāmārthyam na pradīyate |
saṅkhyā vyāpāradharmo'tastena liṅgena gamyate ॥ 68 ॥

In being a means, the word-meaning's capacity is not given; number is a property of the operation – therefore it is understood by that mark.

Number's real status, at last. *Sadhanatve padarthasya samarthyam na pradiyate*: in being a means, the *word-meaning's* capacity is *not given* – being a factor in an action does not confer semantic power on the word that carries it (3.1.67's restriction, generalized). And the positive placement: *saṅkhyā vyapara-dharmah* – number is a *property of the operation*: it belongs to the doing, not to the thing done or to the word that names it (2.83's individuation by operation; 3.1.11's padarthas characterized by vyapara). *Atah tena lingena gamyate*: therefore it is understood *by that mark* – number is inferred from how the action goes, not read off the noun. The verse resolves the movement's question in a way neither party expected: number is neither meant by the word (3.1.51's forced category) nor idle (3.1.54's digging with two) – it is a feature of operations, detected by their marks, and the case-ending is a symptom rather than a source.

Verse 3.1.69-70

अपूर्वस्य विधेयत्वात्प्राधान्यमवसीयते ।
विहितस्य परार्थत्वात्वाच्छेषभावः प्रतीयते ॥ 69 ॥
संमार्गस्य विधेयत्वादन्यत्र विहिते ग्रहे ।
विधिवाक्ये श्रुता सङ्ख्या लक्षणाया न बाध्यते ॥ 70 ॥

apūrvasya vidheyatvātpṛādhānyamavasīyate |
vihitasya parārthatvātvāccheṣabhāvaḥ pratiyate ॥ 69 ॥
sammārgasya vidheyatvādanyatra vihite grahe |
vidhivākya śrūtā saṅkhyā lakṣaṇāyā na bādhyate ॥ 70 ॥

(69) From the enjoynability of the unprecedented, principality is determined; from the being-for-another of what is enjoined, subordinate-status is understood. (70) From the enjoynability of the cleansing, the graha being enjoined elsewhere – the number heard in the injunctive sentence is not annulled from its indicating.

The movement closes with the two principles that governed it, stated as maxims. (69): *apurvasya vidheyatvat pradhanyam avasiyate* – from the *enjoynability of the unprecedented*, *principality* is determined: what the text must prescribe, because it is available nowhere else (*apurva*: the exegete's technical term for the not-otherwise-obtained), is the rule's principal business. *Vihitasya para-arthatvat sesa-bhavaḥ pratiyate*: from the *being-for-another* of what is *already enjoined*, *subordinate-status* is understood – what the rule merely mentions, having got it from elsewhere, is in service of something else (2.113's *parartha*, 2.82's *sesa*). Together these sort every element of every injunction into what it enjoins and what it presupposes. (70) applies them to the case: the *cleansing* is what this rule enjoins; the *graha* with its number is presupposed, enjoined elsewhere (3.1.58); therefore *vidhi-vakye sruta saṅkhyā laksanaya na badhyate* – the number *heard* in the injunctive sentence is *not annulled* from

its *indicating*: it goes on doing its referential work, identifying which cups, without being enjoined and without being contradicted. Heard, useful, and unmeant — which is precisely the status this long movement was constructed to establish.

Verse 3.1.71

विधिवाक्यान्तरे सङ्ख्या पशोर्नास्ति विरोधिनी ।
तस्मात्सगुण एवासौ सदैकत्वेन गम्यते ॥ 71 ॥

vidhivākyāntare saṅkhyā paśornāsti virodhinī |
tasmātsaguṇa evāsau sadekatvena gamyate || 71 ||

In another injunctive sentence there is no number of the animal that conflicts; therefore that very one, together with its quality, is understood as existing with oneness.

The case of 3.1.55 resolved by the absence of a competitor. Vidhi-vakyantare samkhyā pasoh na asti virodhini: in *another* injunctive sentence there is *no* number of the animal that *conflicts* — nothing elsewhere prescribes a different count, so nothing contests what this rule's singular presents. Tasmāt sa-guṇa eva asau sad-ekatvena gamyate: therefore *that very one*, sa-guṇa, *together with its quality*, is understood as *existing with oneness*. The reasoning is negative and it is characteristic of the exegetical method: number stands here not because it was argued into place but because nothing dislodges it — the badha-machinery (2.66's annulment, 2.73's hierarchy of evidences) having found no conflict to adjudicate. Where nothing competes, what is heard holds. This is the settlement of the long movement on the sacrificial animal: one beast, and the oneness is neither enjoined (3.1.65-66) nor annulled — it simply survives, unopposed.

Verse 3.1.72

निर्जातिद्रव्यसंबन्धे यः कर्मण्युपदिश्यते ।
गुणस्तेनार्थिता तस्य द्रव्येणैव प्रतीयते ॥ 72 ॥

nirjātadravyasambandhe yaḥ karman्यupadiśyate |
guṇastēnārthitā tasya dravyeṇeva pratiyate || 72 ||

A quality that is taught in the action, the substance-connection being already known — by that, its need for the substance is understood as though for an instrument.

The relation of quality to substance in an injunction, and it inverts the expected direction. Nirjātadravya-sambandhe — the *substance-connection* being *already known* (the rite's substance settled by an earlier rule) — yaḥ karmani upadiśyate guṇaḥ: a *quality* that is taught in the action: 'with a red cow', where the cow is given and the redness is added. Tena arthita tasya dravyena iva pratiyate: by *that* (quality), its *need* for the substance is understood as *though* for an instrument. The quality needs the substance the way an action needs its means — the redness cannot present itself except in a red thing (1.62's paratantra guṇa: the subordinate has no standing alone). So the taught quality does not qualify a substance already independently there; it *requires* one, and the requirement is what the injunction registers. The iva keeps the ontology honest: the quality does not literally use the substance as a tool, but its dependence has the same structure.

Verse 3.1.73-74

कश्चिदेव गुणो द्रव्ये यथा सामर्थ्यलक्षणः ।
 आधारोऽपि गुणस्यैवं प्राप्तः सामर्थ्यलक्षणः ॥ 73 ॥
 तयोस्तु पृथगर्थित्वे संबन्धो यः प्रतीयते ।
 न तस्मिन्नुपघातोऽस्ति कल्प्यमन्मन्न चाश्रुतम् ॥ 74 ॥

kaścideva guṇo dravye yathā sāmārthyalakṣaṇaḥ |
ādhāro'pi guṇasyaivam prāptaḥ sāmārthyalakṣaṇaḥ || 73 ||
tayostu pṛthagarthitve sambandho yaḥ pratīyate |
na tasminnupaghāto'sti kalpyamanmanna cāśrutam || 74 ||

(73) Just as some quality in a substance is characterized by capacity, so too a substratum for the quality, obtained, is characterized by capacity. (74) But when the two are needed separately, the connection that is understood – in that there is no injury, nor is anything unheard to be constructed.

The dependence of 3.1.72 shown to be mutual. (73): *kascid eva guṇo dravye yatha samarthya-laksanah* – as *some quality* in a substance is characterized by *capacity* (3.1.3's *jatih saky-upalakshanam*: the property flagged because it flags a capacity) – *adharo 'pi gunasya evam praptah samarthya-laksanah*: so too the *substratum* for the quality, obtained, is characterized by capacity. The redness needs a cow, and the cow is wanted for what it can do. Neither is prior; each is there for the capacity the other completes. (74): *tayoh tu prthag-arthitve* – but when the two are *needed separately*, each on its own account – *sambandho yah pratiyate*, the *connection* that is understood: *na tasmin upaghato 'sti* – in that there is *no injury*: nothing is strained, no rule violated; *kalpyam anyat na ca asrutam*: nor is *anything unheard to be constructed* – no supplement must be imported. The maxim is the exegete's economy (2.84's *guru/laghu*: prefer the lighter assumption): a construal that needs no additions and breaks nothing is the one to take.

Verse 3.1.75

क्रियया योऽभिसंबन्धः स श्रुतिप्रापितस्तयोः ।
 आश्रयाश्रयिणावक्यान्नियमस्त्ववतिष्ठते ॥ 75 ॥

kriyayā yo'bhisambandhaḥ sa śrutiprāpitastayoh |
āśrayāśrayiṇārvākyaṇniyamastvavatiṣṭhate || 75 ||

The connection with the action is what is brought by the explicit text for those two; but the restriction of substratum and what rests on it stands from the sentence.

The two channels distinguished, and the distinction is the hierarchy of 2.73 at work. *Kriyaya yo 'bhisambandhah sa sruti-prapitah tayoh*: the connection *with the action* is brought by the explicit text for both quality and substance – *sruti*, what is actually said, delivers that they figure in the rite. But: *asraya-asrayinoh vakyat niyamah tu avatisthate* – the restriction of substratum and what rests on it stands *from the sentence*: which is the bearer and which the borne is settled not by any word but by the construal, *vakya* – the third and weakest of the evidences (*sruti > linga > vakya*). So the rite's participation is *said*; their internal architecture is *construed*. The stratification matters for what follows: a connection resting on *vakya* can be overridden by one resting on *sruti*, and 3.1.76 immediately

draws the consequence.

Verse 3.1.76

तत्र द्रव्यगुणाभावे प्रत्येकं स्याद्विकल्पनम् ।
श्रुतिप्राप्तो हि संबन्धो बलवान्वाक्यलक्षणात् ॥ 76 ॥

tatra dravyaguṇābhāve pratyekam.syādvikalpanam |
śrutiprāpto hi sambandho balavānvākyalakṣaṇāt || 76 ||

There, in the absence of substance and quality, there would be an option for each severally; for a connection obtained by the explicit text is stronger than one characterized by construal.

The consequence, and it is a rule of practical adjudication. Tatra dravya-guna-abhave pratyekam syad vikalpanam: in the *absence* of substance and quality — where the prescribed cow or the prescribed redness is unavailable — there would be *option* for each severally: one may take the substance without the quality, or the quality's bearer without this substance; the rite does not simply fail. And the ground: sruti-prapto hi sambandho balavan vakya-laksanat — a connection obtained by the *explicit* text is *stronger* than one characterized by *construal*. Since the text said that quality and substance figure (3.1.75's sruti-channel) but only construal linked them to each other (the vakya-channel), the link is the weak member and gives way first. So when the red cow cannot be had, one does not abandon the rite; one relaxes the construed bond and keeps what was said. The verse is fine exegetical engineering, and its principle — stronger evidence survives, weaker yields — is the same badha-machinery that 2.73 catalogued.

Verse 3.1.77

यदा तु जातिः शक्तिर्वा क्रियां प्रत्युपदिश्यते ।
सामर्थ्यात्संनिधीयेते तत्र द्रव्यगुणौ तदा ॥ 77 ॥

yadā tu jātiḥ śaktirvā kriyām.pratyupadiśyate |
sāmarthyātsamñidhīyete tatra dravyaguṇau tadā || 77 ||

But when a universal, or a capacity, is taught with respect to the action — then substance and quality are brought near, from capacity.

The reverse configuration. Where the injunction names not a substance and a quality but a jati or a sakti — 'sacrifice with cattle', 'use something that holds' — then dravya-gunau samarthyat sannidhiyete: substance and quality are *brought near*, from *capacity*: they are not said, and they arrive, because a universal cannot be sacrificed and a capacity cannot be handled — something must bear them (3.1.72's arthita, the need running the other way). Sannidhi is the term of 2.47 (fixity shining forth through mere proximity) and 2.51 (particulars manifested in co-presence): the unsaid participants are not inferred but *drawn in*, by what the said ones cannot do without. So the injunction's silence about the beast is not a gap: naming cattle-hood summons cattle, because capacity does the summoning. The pair 3.1.76-77 thus completes the picture: what is said may be relaxed under pressure, and what is unsaid arrives under necessity — and neither transaction runs through the words.

Verse 3.1.78

जातीनां च गुणानां च तुल्येऽङ्गत्वे क्रियां प्रति ।
गुणाः प्रतिनिधीयन्ते छागादीनां न जातयः ॥ 78 ॥

jātīnām.ca guṇānām.ca tulye'ṅgatve kriyām.prati |
guṇāḥ pratinidhīyante chāgādīnām.na jātayaḥ || 78 ||

Though universals and qualities are equally auxiliary with respect to the action, qualities are substituted; the universals of goats and the like are not.

An asymmetry that the parity-doctrine did not predict, and it is decisive. Jatinam ca gunanam ca tulye 'ngatve kriyam prati: universals and qualities are *equally* auxiliary — both contribute to the rite, both were called sadhana (3.1.27, 3.1.55). And yet: gunah pratinidhiyante chagadinam na jatayah — *qualities are substituted*; the *universals* of goats and the like are *not*. When the prescribed red goat cannot be had, one may use a black one — the quality yields. When no goat can be had, one may not use a sheep — the universal does not yield. The substitution-rule (3.1.3's pratinidhi, the samuddesa's opening evidence) discriminates sharply between two things it had treated as equals. So angatva, auxiliary-status, is not one status: within it, some auxiliaries are essential and some are negotiable, and ritual practice knows the difference infallibly while no doctrine so far advanced predicts it. The next verse explains the asymmetry.

Verse 3.1.79

व्यक्तिशक्तेः समासन्ना जातयो न तथा गुणाः ।
साक्षाद्द्रव्यं क्रियायोगि गुणस्तस्माद्विकल्पते ॥ 79 ॥

vyaktiśakteḥ samāsannā jātayo na tathā guṇāḥ |
sākṣāddravyam.kriyāyogi guṇastasmādvikalpate || 79 ||

Universals are very near to the capacity of the individual; qualities are not so. The substance is directly conjoined with the action; therefore the quality is optional.

The asymmetry of 3.1.78 explained, and the explanation is a metaphysics of proximity. Vyakti-sakteh samasanna jatayah — *universals are very near to the capacity of the individual*: goathood is what makes this goat able to do what goats do in a rite; remove it and the capacity goes. Na tatha gunah: *not so the qualities* — the redness is not what the goat's ritual capacity rests on; it can go and the capacity stays. And: saksat dravyam kriya-yogi — the *substance is directly conjoined with the action*: it is what is handled, bound, offered. Gunas tasmāt vikalpate: *therefore the quality is optional*. The account is exact and it rescues the substitution-rule from arbitrariness: what may be substituted is what stands at a remove from the capacity the action needs, and what may not is what the capacity is. This is 3.1.3-5's doctrine (the universal as indicator of capacity) doing real work at last — and it explains why the tradition never let a sheep stand for a goat while cheerfully accepting a discoloured one.

Verse 3.1.80

साम्येनान्यतराभावे विकल्पः कैश्चिदिष्यते ।
अतद्गुणोऽतश्छागः स्यान्मेषो वा तद्गुणो भवेत् ॥ 80 ॥

sāmyenānyatarābhāve vikalpaḥ kaiścidīṣyate |
atadguṇo'taśchāgaḥ syānmeṣo vā tadguṇo bhavet || 80 ||

By some, option is accepted where, both being equal, one or the other is absent; therefore the goat would be one lacking that quality, or the sheep would be one possessing it.

The hard case, where the asymmetry of 3.1.78-79 gives out. Samyena anyatara-abhave vikalpah kaiscid isyate: by some, option is accepted where — the two being *equal* — one or the other is *absent*. And the dilemma spelled out: atad-guno 'tas chagah syat — *therefore* the goat would be one *lacking* that quality (a goat, wrong colour); mesah va tad-guno bhavet — *or* the sheep would be one *possessing* it (right colour, wrong beast). Which? The verse reports that some allow a free option — take either. Bhartrhari does not adjudicate, and the case is genuinely hard: 3.1.79's rule says keep the universal and drop the quality, but that rule was derived from cases where the quality was clearly remote from the capacity, and here the colour may be doing ritual work of its own. The exegetical tradition's willingness to accept vikalpa — free option — as an outcome is itself notable: 2.85 recorded that option is the science's last resort, and here is a case that reaches it.

Verse 3.1.81-82

जातेराश्रितसंख्यायाः प्रवृत्तिरूपलभ्यते ।
संख्याविशेषमुत्सृज्य क्वचित्सैव प्रवर्तते ॥ 81 ॥
पराङ्गभूतं सामान्यं युज्यते द्रव्यसंख्यया ।
स्वार्थं प्रवर्तमानं तु न संख्यामवलम्बते ॥ 82 ॥

jāterāśritasamkhyāyāḥ pravṛttirupalabhyate |
samkhyāviśeṣamutsrjya kvacitsaiva pravartate || 81 ||
parāṅgabhūtam, sāmānyam, yujyate dravyasamkhyayā |
svārtham, pravartamānam, tu na samkhyāmalambate || 82 ||

(81) The operation of a universal whose number is dependent is observed; somewhere that same one operates, having relinquished any particular number. (82) A general that has become auxiliary to another is joined with the substance's number; but when it operates for its own sake, it does not lean upon number.

Number's dependence on the universal's role, and the rule is elegant. (82) states it: para-anga-bhutam samanyam yujyate dravya-samkhyaya — a general that has become *auxiliary to another* is *joined with the substance's number*: where cowhood is serving a cow ('bring the two cows'), it takes the number of what it serves. Sva-artham pravartamanam tu na samkhyam avalambate: but when it operates *for its own sake* — where cowhood is itself the topic ('cowhood is a universal') — it *does not lean upon number*: the abstract noun takes a singular that means nothing (3.1.52's unintended ekatva). So number attaches to universals only parasitically, through the substances they qualify, and drops away the moment the universal is spoken of in its own right. (81) records the observation the rule explains: sometimes the universal operates samkhyā-visesam utsrjya, *having relinquished* any par-

ticular number. The verse-pair gives the grammar's number-apparatus its exact semantic scope: it reaches things, and reaches types only through things.

Verse 3.1.83

यजेत पशुनेत्यत्र यज्यथयां पशुश्रुतौ ।
कृतार्थैकेन पशुना प्रधानं भवति क्रिया ॥ 83 ॥

yajeta paśunetyatra yajyarthāyām paśuśrutau |
kṛtārthaikena paśunā pradhānam bhavati kriyā || 83 ||

In 'let him sacrifice with an animal' — the animal being heard for the sake of the sacrificing — the action is the principal, one animal having served the purpose.

The test-case's final settlement. Yajeta pasuna iti atra — in 'let him sacrifice with an animal' — yajyarthayam pasu-srutau: the *animal* being heard for the sake of the sacrificing: the noun is there in service of the verb (2.48's karaka-architecture: nouns orbit the action). Krtartha ekena pasuna pradhānam bhavati kriya: *one animal* having served the purpose, the action is the principal. Every element of the long movement is gathered here. The action is principal (3.1.69's rule: what the text must enjoin is its business); the animal is its means, heard for its sake; one suffices because purpose is what governs (3.1.63-64's economy); and the oneness is neither enjoined nor annulled but simply what serving the purpose required (3.1.65's discrimination). Krtartha — 'having served the purpose' — is the operative word and it is the whole doctrine: the rite wanted a sacrificing, the animal was for that, and when the purpose is met the question of number does not arise.

Verse 3.1.84-85

यावतां संभवो यस्य स कुर्यात्तावतां यदि ।
आलम्भनं गुणैस्तेन प्रधानं स्यात्प्रयोजितम् ॥ 84 ॥
संमृज्यमानतन्त्रे तु ग्रहे यत्र क्रियाश्रुतिः ।
संख्याविशेषग्रहणं नैव तत्राद्रियामहे ॥ 85 ॥

yāvatām sambhavo yasya sa kuryāttāvatām yadi |
ālabhnam guṇaistena pradhānam syātprayojitam || 84 ||
sammrjyamānatantre tu grahe yatra kriyāśrutih |
samkhyāviśeṣagrahaṇam naiva tatrādriyāmahe || 85 ||

(84) If one should perform the slaying of as many as are possible for him — then by those qualities the principal would be occasioned. (85) But in the graha, where the ritual apparatus is being cleansed and there is a hearing of the action — we do not at all insist there on the grasping of a particular number.

The two poles of the movement set side by side. (84) states the maximalist temptation: yavatam sambhavo yasya sa kuryat tavatam yadi alambhanam — if one should slay as many as are possible for him — gunaih tena pradhānam syat prayojitam: then by those qualities the principal would be occasioned: more offerings, more merit, the principal served by abundance. The verse states it as a conditional and 3.1.63-64 has already refused it: beyond satisfaction there is no more to be had, and surplus is anarthaka. (85) gives the settled contrary: sammrjyamana-tantre grahe yatra kriya-srutih

— in the *graha*, where the apparatus is being *cleansed* and the action is *heard* — *samkhya-visesa-grahanam na eva tatra adriyamahe*: we do not at all insist there on the grasping of a *particular number*. The first-person plural is worth noticing — *adriyamahe*, ‘we do not insist’: the author speaking as a member of the tradition, in its voice, settling a case. Between 84’s refused maximalism and 85’s relaxed cleansing, the movement’s whole range is on display: number matters exactly where purpose makes it matter, and nowhere else.

Verse 3.1.86

शिष्यमाणपरे वाक्ये यदेकग्रहणं कृतम् ।
शेषे विशिष्टसंख्येऽपि व्यक्तं तल्लिङ्गदर्शनम् ॥ 86 ॥

śiṣyamāṇapare vākye yadekagrahaṇam kṛtam |
śeṣe viśiṣṭasamkhye’pi vyaktam talliṅgadarśanam || 86 ||

In a sentence whose purport concerns what is to be taught, the mention of ‘one’ that has been made — in the remainder, even where the number is distinct, that mark’s exhibition is evident.

A refinement on how the number-word functions in a teaching-sentence. *Sisyamana-pare vākye* — in a sentence whose *purport* concerns *what is to be taught* (the sentence’s business is instruction, not specification) — *yad eka-grahanam kṛtam*: the mention of ‘one’ that has been made — *sese viśiṣṭasamkhye’pi vyaktam tal-linga-darśanam*: in the *remainder*, even where the number is *distinct*, that *mark’s exhibition* is *evident*. Where the sentence teaches, its ‘one’ is a specimen: the number is exhibited as a mark, an illustration of the pattern, and applies to the remainder whatever their actual counts. This is the pedagogical function of forms that the whole work has insisted on (2.13’s divisions for the unlearned; 2.176’s instruction by the general for brevity’s sake) — and it identifies a third status for number, beside intended and unintended: *exhibited*, offered as a sample rather than a stipulation.

Verse 3.1.87

समासप्रत्ययविधौ यथा निपतिता श्रुतिः ।
गुणानां परतन्त्राणां न्यायेनैवोपपद्यते ॥ 87 ॥

samāsapratyayavidhau yathā nipatitā śrutih |
guṇānām paratantrāṇām nyāyenaivopapadyate || 87 ||

As the explicit text has fallen, in the rule for compounds and affixes — of qualities that are dependent, it is established by the principle itself.

The doctrine confirmed from the grammar’s side. *Samasa-pratyaya-vidhau yathā nipatitā śrutih*: as the *explicit text* has *fallen* — *nipatitā*, dropped into place, the wording as it happens to stand — in the rule for *compounds and affixes*. *Gunanam paratantranam nyayena eva upapadyate*: of *qualities that are dependent*, it is established by the *principle itself*. Panini’s rules for compounds and affixes mention qualities, and the mentions carry numbers and genders that nobody supposes are prescribed: the wording fell that way, and the *principle* — that dependents take their determinations from what they depend on (3.1.82’s rule) — supplies what the wording does not mean. So the grammar’s own text exhibits exactly the phenomenon the ritual science has been sorting: forms present, heard, and semantically inert, their apparent content supplied by structure rather than by the words. The verse’s

nīpatita is dry and exact: the text fell there; do not read fate into where it landed.

Verse 3.1.88

गुणेऽपि नाङ्गीक्रियते प्रधानान्तरसिद्धये ।
संख्या कर्ता तथा कर्मण्यविशिष्टः प्रतीयते ॥ 88 ॥

guṇe'pi nāṅgīkriyate pradhānāntarasiddhaye |
saṁkhyā kartā tathā karmāṇyaviśiṣṭaḥ pratīyate || 88 ||

Even in the quality, number is not admitted as auxiliary for the accomplishing of another principal; the agent, likewise, is understood in the object as undifferentiated.

The number-doctrine stated in its final restriction. Gune 'pi na angikriyate pradhanantara-siddhaye saṁkhyā: *even in the quality*, number is not admitted as auxiliary for the accomplishing of another principal — a quality's number does not enter the service of a rite whose business is elsewhere; it does not get promoted into a factor merely because it is present (3.1.67's restriction: covariance establishes contribution, not signification). And the parallel: karta tatha karmani avisistah pratiyate — the *agent*, likewise, is understood in the *object* as *undifferentiated*: where the sentence's business is the object, the agent comes along unspecified, its determinations unmeant. Two categories, one rule: what the sentence is not about arrives without its features meant. This is 1.136's canon of sato 'vivakṣa — the non-intention of what is actually there — applied across the karaka-system, and it prepares the Sadhana-samuddesa, the seventh, where the karakas get their full treatment.

[Contested: the second line's karta tatha karmani avisistah is compressed and our construal (the agent unspecified where the object is at issue) follows the parallel with the first line; some read it as a separate observation about agent-object identity in certain constructions]

Verse 3.1.89

यस्यान्यस्य प्रसक्तस्य नियमार्था पुनः श्रुतिः ।
निवृत्तौ चरितार्थत्वात्संख्या तत्राविवक्षिता ॥ 88 ॥

yasyānyasya prasaktasya niyamārthā punaḥ śrutiḥ |
nivr̥ttau caritārthatvātsaṁkhyā tatrāvivakṣitā || 88 ||

That other thing which, being applicable, has a further explicit text for the sake of restriction — since it has served its purpose in the exclusion, number there is unintended.

A last case, and it turns on what a restricting text has already done. Yasya anyasya prasaktasya niyama-artha punah srutih: that other thing which, being *applicable* — prasakta, already in play, obtainable — has a *further explicit text* for the sake of *restriction* (the sruti here doing niyama-work: narrowing what was antecedently possible, as 'rice' narrows 'substance' at 2.66). Nivr̥ttau caritārthatvat saṁkhyā tatra avivakṣita: since it has *served its purpose in the exclusion*, number there is *unintended*. The restricting text's whole office was to exclude the alternatives; having done that, it is caritārtha — spent, its errand discharged (2.54's caritārtha: the words that vanish into their meaning; 2.270's carita-asti-kriya). Whatever else it carries — its number among them — is residue. The verse completes the movement's inventory of ways a number can fail to be meant: forced (3.1.51), merely referential (3.1.59), exhibited as a mark (3.1.86), fallen with the wording (3.1.87), riding a dependent (3.1.88), and now spent along with its sentence's discharged errand.

[Contested: the source numbers this verse 88 in its final line while labelling the page 3.1.89; we follow the page-label, and note the numbering fault]

Verse 3.1.90

सरूपसमुदायात्तु विभक्तिर्या विधीयते ।
एकस्तत्रार्थवान्सिद्धः समुदायस्य वाचकः ॥ 90 ॥

sarūpasamudāyāttu vibhaktiryā vidhīyate |
ekastatrārthavānsiddhaḥ samudāyasya vācakaḥ || 90 ||

But the case-ending which is prescribed after an aggregate of like-formed things — there, one alone, being meaningful, is established as the expressor of the aggregate.

The movement closes by returning to ekasesa, and the return is pointed. Sarupa-samudayat tu vibhaktir ya vidhiyate: the *case-ending* prescribed after an *aggregate of like-formed* things — the single-remainder construction (2.108-110: 'ramau' for two Ramas, one form serving many). Ekas tatra arthavan siddhah samudayasya vacakah: *one alone*, being *meaningful*, is established as the *expressor of the aggregate*. One word, meaningful, expressing many — and the number that does the expressing is carried by an ending on a form that stands for all of them. So the samuddesa's long interrogation of number ends where the Vakyakanda's boundary-machinery ended: with the device in which a single form bears plural office (2.109: uttering them severally would be *incorrect*), and in which, therefore, number is neither distributed among the words nor absent from the meaning. It is a capacity of the one form, carved by the construction — which is what the samuddesa has been arguing about number all along, and what 3.1.6 said about every word's meaning in its sixth verse.

Verse 3.1.91

प्रत्ययस्य प्रधानस्य समासस्यापि वा विधौ ।
सिद्धः संख्याविवक्षायां सर्वथानुग्रहो गुणे ॥ 91 ॥

pratyayasya pradhānasya samāsasyāpi vā vidhau |
siddhaḥ samkhyāvivakṣāyām.sarvathānugraho guṇe || 91 ||

In the rule for an affix, or for a principal, or even for a compound — when number is intended, assistance in the quality is established in every way.

A closing rule for the number-movement, gathering its cases. Pratyayasya pradhanasya samasasya api va vidhau — in the rule for an *affix*, for a *principal*, or even for a *compound*: the three sites where the grammar's number-apparatus operates. Siddhah samkhyā-vivaksayam sarvatha anugraho guṇe: when number is *intended*, *assistance in the quality* is established *in every way*. Where number is genuinely meant (3.1.60's yatnat: what costs effort to say), it does its work wherever it stands — affix, principal, or compound — and the quality it attaches to is thereby served. The rule's interest is its scope: having spent forty verses establishing how rarely number is intended, the samuddesa closes the topic by noting that where it is intended, nothing blocks it. Sarvatha, 'in every way': the exceptions were all about vivaksa, never about capacity.

Verse 3.1.92

अभेदरूपं सादृश्यामात्मभूताश्च शक्तयः ।
जातिपययिवाचित्वमेषामप्युपवर्ण्यते ॥ 92 ॥

abhedarūpam, sādṛśyāmātmabhūtāśca śaktayah |
jātiparyāyavācitvameṣāmapyupavarṇyate || 92 ||

The form of non-difference, similarity, and the powers that are one's very self – the expressing of these too, as synonyms of the universal, is described.

A widening of the universal's vocabulary, and the widening is philosophically loaded. Three things are named as jati-paryaya-vacitva – expressed as synonyms of the universal: abheda-rupam, the form of non-difference; sadrsya, similarity; and atma-bhutam saktayah, the powers that are one's very self (3.1.22-24's doctrine: the categories as powers of the one). So 'universal' names indifferently: what is not-different, what resembles, and what a thing can do. The three are not obviously the same, and their identification is the samuddesa's compressed argument: non-difference is what recurrence amounts to (3.1.14's anuvrtti), similarity is how recurrence is met in experience (2.90-94's respect-wise resemblance without shared parts), and capacity is what any of it is for (3.1.11's padarthas characterized by operation). Three descriptions, one phenomenon – and the verse's paryaya, 'synonym', is the term 2.150 used to deny that corrupt and correct forms are interchangeable. Here the interchange is granted.

Verse 3.1.93-94

दण्डोपादित्सया दण्डं यद्यपि प्रतिपद्यते ।
न तस्मादेव सामर्थ्यात्स दण्डीति प्रतीयते ॥ 93 ॥
नेच्छानिमित्तादिच्छावानिति ज्ञानं प्रवर्तते ।
तस्मात्सत्यपि सामर्थ्ये बुद्धिरथन्तिराश्रया ॥ 94 ॥

daṇḍopāditsayā daṇḍam, yadyapi pratipadyate |
na tasmādeva sāmārthyātsa daṇḍīti pratiyate || 93 ||
neccchānimittādicchāvāniti jñānam pravartate |
tasmātsatyapi sāmārthyē buddhirarthāntarāśrayā || 94 ||

(93) Although one obtains a staff through the desire to take up a staff – not from that capacity alone is he understood as 'staff-bearer'. (94) The cognition 'he has desire' does not proceed from the occasioning ground of desire; therefore, even where the capacity exists, the cognition rests on another object.

A sharp argument that capacity does not by itself deliver a description. (93): a man's iccha, his desire to take up a staff, is what gets him the staff – the capacity is real and it operates. And yet: na tasmad eva samarthyat sa dandi iti pratiyate – not from that capacity alone is he understood as 'staff-bearer': he is called dandi because he holds one, not because he wanted one. Capacity does not name. (94) generalizes: na iccha-nimittad iccha-van iti jñanam pravartate – the cognition 'he has desire' does not proceed from the occasioning ground of desire: one does not know a man is desirous by inspecting his desire's cause. Tasmāt sati api samarthyē buddhih arthantarāśraya: therefore, even where the capacity exists, the cognition rests on another object. The verse pair is doing quiet damage to 3.1.92's identification of the universal with capacity: if capacity does not deliver descriptions, then

the universal – which does – is not simply capacity. The samuddesa is auditing its own equations.

Verse 3.1.95

स्वभावोऽव्यपदेश्यो वा सामर्थ्यं वावतिष्ठते ।
सर्वस्यान्ते यतस्तस्माद्व्यवहारो न कल्पते ॥ 95 ॥

*svabhāvo'vyapadeśyo vā sāmārthyam vāvatiṣṭhate |
sarvasyānte yatastasmādvavahāro na kalpate ॥ 95 ॥*

Either an indescribable own-nature, or capacity, stands at the end of everything – wherefore, from that, practice is not constructed.

The terminus of analysis, and its consequence. Svabhavo 'vyapadesyo va samarthyam va avatisthate sarvasya ante: either an *indescribable own-nature*, or *capacity*, stands *at the end of everything* – push any analysis far enough and one reaches either a nature that cannot be told (3.1.20-21's uncommingled thing, to which no category applies; 2.416's what-has-own-form-cannot-be-described) or a bare capacity. Yatah tasmāt vyavaharo na kalpate: *wherefore, from that, practice is not constructed*. Neither terminus supports transaction: the indescribable cannot be said, and capacity does not name (3.1.93-94). So whatever is at the bottom, vyavahara does not rest on it – practice runs on the constructed middle (2.297's sabdah loka-nibandhanah: words are grounded in the world, the shared audited domain, not in the ultimate). The verse is the samuddesa's most economical statement of the work's persistent finding: the real is not what we speak from, and speech's ground is not the ground.

Verse 3.1.96

यदा भेदान्परित्यज्य बुद्धयैक इव गृह्यते ।
व्यक्त्यात्मैव तदा तत्र बुद्धिरेका प्रवर्तते ॥ 96 ॥

*yadā bhedānparityajya buddhayaika iva grhyate |
vyaktyātmaiva tadā tatra buddhirekā pravartate ॥ 96 ॥*

When, having abandoned the differences, it is grasped by the intellect as though one – then it is the individual's very self, and a single cognition operates there.

The first of two accounts of how a plurality comes to be taken as one. Yada bhedan parityajya buddhya eka iva grhyate: when, *having abandoned the differences*, it is grasped by the *intellect* as though *one* – the mind drops the distinctions and takes what remains. Tada vyakty-atma eva tatra buddhih eka pravartate: then it is the *individual's very self*, and a *single cognition* operates there. Note what this account says: what is grasped is not a universal over the individuals but the individual's own self, the differences merely set aside. So oneness here is subtractive – an achievement of ignoring, not a perception of a type (against 3.1.29's face-in-water, where the universal itself was manifested). The iva marks it: grasped *as though* one. The verse offers the deflationary account of unity, and 3.1.97 will offer its companion.

Verse 3.1.97

भेदरूपैरनुस्यूतं यदैकमिव मन्यते ।
समूहावग्रहा बुद्धिर्बहुभ्यो जायते तदा ॥ 97 ॥

bhedarūpairanusyūtam yadaikamiva manyate |
samūhāvagrahā buddhirbahubhyo jāyate tadā || 97 ||

When one thinks of what is interwoven with the forms of difference as though it were one — then a cognition grasping the collection arises from the many.

The second account, and it inverts the first. Bheda-rupaiḥ anusyutam — what is *interwoven with the forms of difference* (anusyuta: the weaver's word, 1.123's anuviddham iva sabdena — cognition shot through with word) — yada ekam iva manyate: when one thinks of it as though *one*. Then: samuḥa-avagraha buddhiḥ bahubhyah jāyate tada — a cognition *grasping the collection* arises from the many. Here the unity is not achieved by abandoning differences (3.1.96) but by taking the differentiated manifold as a collection: the many are retained and gathered. So there are two routes to oneness — subtractive (ignore the differences) and collective (gather them) — and they produce different cognitions: one of the individual's self, one of the samuḥa, the group. The pair is the samuddesa's contribution to a question the whole work has circled: what is it to take many as one? And its answer is that there is no single such operation.

Verse 3.1.98

सकृत्प्रवृत्तावेकत्वमावृत्तौ सदृशात्मताम् ।
भिन्नात्मिकानां व्यक्तीनां भेदापोहात्प्रपद्यते ॥ 98 ॥

sakṛtpravṛttāvekatvamāvṛttau sadṛśātmatām |
bhinnātmikānām vyaktīnām bhedāpohātprapadyate || 98 ||

In a single operation, oneness; in repetition, the state of being of like self — the individuals, whose selves are distinct, attain this from the exclusion of difference.

The two routes of 3.1.96-97 given their conditions, and the last word is the loaded one. Sakṛtpravṛtau ekatvam: in a *single* operation — one glance, one act — *oneness*; avṛtau sadṛśatmatam — in *repetition*, the state of being of *like self*: met again, the thing shows as similar rather than as identical. So oneness is what a single act delivers and similarity is what repeated acts deliver — a fine observation about how types are built out of encounters. And the mechanism: bhinnatmikanam vyaktinam bheda-apohat prapadyate — the individuals, *whose selves are distinct*, attain this *from the exclusion of difference*. Apoha — *exclusion*: the word that the Buddhist logicians would make the foundation of their entire semantics, and which 3.1.14 already canvassed as one of the two available definitions of the universal (vyavṛtti). Here it names the operation by which distinct individuals come to present as one or as alike: not by sharing something but by having their differences excluded. The samuddesa on universals has arrived at the doctrine that would be used to abolish universals, and states it as its own mechanism.

[Contested: bheda-apohat is the crux: whether Bhartrhari uses apoha here as a settled technical term (and if so, whose) or in its plain sense of 'removal' cannot be determined from the *karika*. The relation between this verse and the developed apoha-doctrine of Dignaga is a genuine and unresolved question of intellectual history]

Verse 3.1.99

अनुप्रवृत्तेति यथाभिन्ना बुद्धिः प्रतीयते ।
अर्थो व्यावृत्तरूपोऽपि तथा तत्त्वेन गृह्यते ॥ 99 ॥

anupravṛtteti yathābhinnā buddhiḥ pratiyate |
artho vyāvṛttarūpo’pi tathā tattvena gr̥hyate || 99 ||

As a cognition, by way of recurrence, is understood as undivided — so the object too, though its form is exclusion, is grasped as the reality.

The parallel that closes the argument of 3.1.96-98. Anupravṛtta iti yathā abhinna buddhiḥ pratiyate: as a *cognition*, by way of *recurrence* (anupravṛtti, 3.1.19’s mark of the universal), is understood as *undivided* — the repeated cognition presents as one continuing thing, not as a series. Artho vyāvṛtta-rupo ’pi tathā tattvena gr̥hyate: so the *object* too, *though its form is exclusion* (vyāvṛtta: 3.1.14’s second definition, 3.1.98’s apoha), is grasped as the reality. Both sides of the transaction are the same structure: what is really a recurrence presents as a unity; what is really an exclusion presents as a positive thing. Tattvena — ‘as the reality’: we take the excluded-from-others to be something. The verse states the illusion-mechanism with complete evenhandedness between the two definitions: whichever the universal is, it is not what it presents as, and the presenting is what makes speech possible (2.238’s asatya vartman: standing on the untrue path to seek the true).

Verse 3.1.100-101

सरूपाणां च सर्वेषां न भेदोपनिपातिनः ।
विद्यन्ते वाचकाः शब्दा नापि भेदोऽवधार्यते ॥ 100 ॥
ज्ञानशब्दार्थविषया विशेषा ये व्यवस्थिताः ।
तेषां दुरवधारत्वाज्ज्ञानाद्येकत्वदर्शनम् ॥ 101 ॥

sarūpāṇāṃ ca sarveṣāṃ na bhedopanipātinah |
vidyante vācakāḥ śabdā nāpi bhedo’vadhāryate || 100 ||
jñānaśabdārthaviṣayā viśeṣā ye vyavasthitāḥ |
teṣāṃ duravadhāratvājñānādyekatvadarśanam || 101 ||

(100) And of all like-formed things there exist no expressing words that fall upon their difference; nor is the difference ascertained. (101) The particulars that stand as the objects of cognition, word and meaning — because those are hard to ascertain, there is the seeing of oneness in cognition and the rest.

Why we do not see the differences we do not name. (100): sarupanam ca sarvesam na bheda-upanipatinah vidyante vacakah sabdah — of all *like-formed* things there exist no *expressing words* that *fall upon their difference*: language has no vocabulary for the distinctions among things it groups; na api bhedo ’vadharyate — *nor is the difference ascertained*: and consequently we do not make them out. The order of that sentence is the doctrine: no words, therefore no ascertainment (3.1.47’s unnamed scent-difference, real and unexpressed). (101) applies it reflexively: the visesah — particulars — that are the objects of jnana, sabda and artha — of *cognition*, *word*, and *meaning* — are duravadharatvat, *hard to ascertain*; hence jnanady-ekatva-darsanam: the *seeing of oneness* in cognition and the rest. We take our cognitions to be one kind of thing, our words to be one kind, because their particulars escape us. So the very categories in which this treatise is written are unities-by-default, produced

by the same failure that produces every other universal.

Verse 3.1.102

जानेष्वापि यथार्थेषु तथा सर्वेषु जातयः ।
संसर्गदर्शने सन्ति ताश्चार्थस्य प्रसाधिकाः ॥ 102 ॥

jñāneṣvapi yathārtheṣu tathā sarveṣu jātayah |
samśargadarśane santi tāścārthasya prasādhikāḥ || 102 ||

As among objects, so among all cognitions too there are universals; in the seeing of commingling they exist, and they are what accomplish the meaning.

The universals extended to the cognitive side. Jñanesu api yatha arthesu tatha sarvesu jatayah: as among *objects*, so among *all cognitions* too there are universals – cognition-types, kinds of knowing, as real (or as constructed) as kinds of thing. And their conditions: samsarga-darsane santi – in the *seeing of commingling* they exist (3.1.20's prapanca arising only among things commingled: difference and identity appear where relation has been made); taḥ ca arthasya prasadhikāḥ – and they are what *accomplish the meaning*. So the cognition-universals are what make meaning possible: it is because knowings fall into kinds that a word can wake the same knowing twice (2.152's transmitted pratibha; 1.71's recurrence-datum on the hearer's side). The verse quietly completes 3.1.6's doctrine – the word's own universal superimposed on the object's – by supplying the third term: the cognition's universal, which is what the superimposition happens *in*.

Verse 3.1.103

जेयस्थमेव सामान्यं जानानामुपकारकम् ।
न जातु जेयवज्ज्ञानं पररूपेण रूप्यते ॥ 103 ॥

jñeyasthameva sāmānyam.jñānānāmupakārakam |
na jātu jñeyavajjñānam.pararūpeṇa rūpyate || 103 ||

The general residing in the knowable alone is what assists the cognitions; never is cognition, like the knowable, given form by an alien form.

A restriction on 3.1.102, and it is the samuddesa's turn to epistemology proper. Jñeya-stham eva samanyam jnananam upakarakam: the general residing *in the knowable alone* is what assists the cognitions – cognition-types are conditioned by object-types; that this knowing is a cow-knowing is the cow's doing. But the converse is denied: na jatu jneyavat jnanam para-rupena rupyate – *never* is cognition, *like the knowable*, given form by an *alien* form. The knowable takes its form from another (the pot's form is the pot's); cognition does not – its form is its own, self-luminous, not conferred (1.50's cognition displaying its own form and the object's; the svaprakasa-doctrine the Prabhakaras would defend). So the assistance runs one way only: objects shape knowings, and knowings are not shaped from outside as objects are. The asymmetry is the ground of the next verse's simile and of the samuddesa's closing argument.

Verse 3.1.104

यथा ज्योतिः प्रकाशेन नान्येनाभिप्रकाश्यते ।
जानाकारस्तथान्येन न ज्ञानेनोपगृह्यते ॥ 104 ॥

yathā jyotiḥ prakāśena nānyenābhiprakāśyate |
jñānākārastathānyena na jñānenopagṛhyate || 104 ||

As a light is not illuminated by another illumination — so the form of cognition is not grasped by another cognition.

The simile that has served the work at every load-bearing joint (1.46, 1.55, 2.298, 2.397, 2.472), here in its epistemological office. Yatha jyotiḥ prakasena na anyena abhiprakasyate: as a *light* is not illuminated by *another* illumination — one does not need a second lamp to see the first; light shows itself in showing. Jnana-akaras tatha anyena na jnanena upagṛhyate: so the *form of cognition* is not *grasped* by *another* cognition. The doctrine is self-luminosity, svaprakasatva: awareness is not known by a further awareness (on pain of regress: what would know *that* one?), but in knowing its object it displays itself. This is 1.50's thesis (in a cognition, its own form and the object's are both seen) now defended by the regress-argument, and it is the anti-Nyaya position — for the Naiyayika, a cognition is known by a subsequent introspective cognition (anuvyavasaya), and the regress is stopped by fiat. Bhartrhari's lamp stops it by structure.

Verse 3.1.105

घटज्ञानमिति ज्ञानं घटज्ञानविलक्षणम् ।
घट इत्यापि यज्ज्ञानं विषयोपनिपाति तत् ॥ 105 ॥

ghatajñānamiti jñānam.ghatajñānavilakṣaṇam |
ghata ityāpi yajjñānam.viṣayopanipāti tat || 105 ||

The cognition 'pot-cognition' is distinct from the pot-cognition; and the cognition that is 'pot' — that one falls upon its object.

The self-luminosity doctrine given its decisive analysis. Ghata-jnanam iti jnanam ghata-jnavilaksanam: the cognition '*pot-cognition*' — the reflective act by which I think about my seeing — is *distinct from* the pot-cognition itself. They are two, and the second is not the first inspecting itself; it is a new act with a new object (namely, the first). And: ghata iti api yaj jnanam visaya-upanipati tat — the cognition that is '*pot*' — that one *falls upon its object*: the original seeing is directed outward, at the pot, not inward at itself. So introspection does not deliver the original cognition; it replaces it with another about it. The analysis is exact and it is why 3.1.104's regress bites: if knowing a cognition requires a further cognition, and that one is distinct again, no cognition is ever known — unless each shows itself in showing its object, which is the lamp. The verse dismantles the introspective model with a distinction anyone can verify: thinking about your seeing is not seeing.

Verse 3.1.106

यतो विषयरूपेण ज्ञानरूपं न गृह्यते ।
अर्थरूपविविक्तं च स्वरूपं नावधार्यते ॥ 106 ॥

yato viṣayarūpeṇa jñānarūpam na grhyate |
artharūpaviviktaṁ ca svarūpam nāvadhāryate || 106 ||

Since the form of cognition is not grasped in the manner of an object – and its own form, separated from the object's form, is not ascertained.

The Jati-samuddeśa's last verse, and it ends on a limit rather than a thesis. Two negations. Yato viṣaya-rupena jnana-rupam na grhyate: since the *form of cognition is not grasped in the manner of an object* – cognition never stands before us as things do (3.1.105's analysis: try to catch it and you have another cognition). And: artha-rupa-viviktaṁ ca svarupam na avadharyate – and its *own form, separated from the object's form, is not ascertained*: neither can we strip the object away and inspect awareness bare. So cognition is inaccessible from both directions: not as an object, and not in isolation from objects. What we have is always knowing-of-something, self-luminous and never separately given (1.124's transcendental argument: strip the word-form from awareness and the light would not shine). The samuddesa that began by asking what universals are ends by finding that the very cognition in which universals appear cannot be brought into view – which is 3.1.95's finding again (an indescribable nature at the end of everything, from which practice is not constructed), now reached on the subject's side. The Jati-samuddeśa closes as it opened: with an honest account of what its own instrument cannot reach.

[Contested: the verse is grammatically incomplete as transmitted (two subordinate clauses with no main clause), and readers supply the conclusion variously – 'therefore cognition is self-luminous', or 'therefore its universal is not ascertained'. We translate the fragment as it stands and leave the completion open]

Dravya-samuddeśa – On Substance

Verse 3.2.1

आत्मा वस्तु स्वभावश्च शरीरं तत्त्वमिष्यपि ।
द्रव्यमित्यस्य पर्यायास्तच्च नित्यमिति स्मृतम् ॥ 1 ॥

*ātmā vastu svabhāvaśca śarīram tattvamipyapi |
dravyamityasya paryāyāstacca nityamiti smṛtam || 1 ||*

Self, thing, own-nature, body, reality, and 'ipsita' as well – these are synonyms of 'substance'; and that is remembered as eternal.

The samuddesa opens with a list of synonyms, and the list is its whole argument in miniature. Dravya – *substance*, the second candidate for what words mean (3.1.2's *jatir va dravyam eva va*) – is named by: *atma*, *self*; *vastu*, *thing*; *svabhava*, *own-nature*; *sarira*, *body*; *tattva*, *reality*; *ipsita*, *what is desired* (the grammarians' term for the *karman*, the object aimed at: Panini 1.4.49's *kartur ipsitatamam karma*). The list runs from the most metaphysical (*atman*, *tattva*) to the most grammatical (*ipsita*), and its span is the point: what the Vedantin calls the Self and what the grammarian calls the object of a verb are, on this account, one category. And: *tac ca nityam iti smṛtam* – and that is *remembered as eternal*: *dravya*, whatever else it is, does not come and go. The reader who expects the Vaisesika's substance – one of six categories, some eternal and some not, the pot as real as the atom – is being warned in the first verse that this is not that. Bhartrhari's *dravya* is the abiding reality itself, and 3.2.11 will identify it outright with *sabda-tattva*.

Verse 3.2.2

सत्यं वस्तु तदाकरैरसत्यैरवधार्यते ।
असत्योपाधिभिः शब्दैः सत्यमेवाभिधीयते ॥ 2 ॥

*satyam vastu tadākarairasatyairavadhāryate |
asatyopādhibhiḥ śabdaiḥ satyamevābhidhīyate || 2 ||*

The real thing is ascertained by those unreal configurations; by words with unreal adjuncts, it is the real alone that is expressed.

The samuddesa's central mechanism, and it is 2.127's doctrine given its home. *Satyam vastu* – the *real* thing – *tad-akaraih asatyaih avadharyate*: is *ascertained by unreal configurations*: the shapes, the forms, the determinations under which anything is met are not themselves real, and they are how the real gets ascertained. Then the semantic consequence: *asatya-upadhibhiḥ sabdaih satyam eva abhidhiyate* – by words with *unreal adjuncts*, it is *the real alone* that is expressed. The word 'pot' carries an unreal adjunct (pot-shape) and what it expresses is the real (clay, ultimately Being). This is exactly 2.127's entry in the catalogue – *asatyopadhi yat satyam tad va sabda-nibandhanam*, 'the real with unreal adjunct is the word's fastening' – there reported as one option among many, here asserted as doctrine. And note what it rescues: words are not falsified by their unreal adjuncts. They reach the real *through* them, which is why speech works while being everywhere constructed (2.238's *asatya vartman*).

Verse 3.2.3

अध्रुवेण निमित्तेन देवदत्तगृहं यथा ।
गृहीतं गृहशब्देन शुद्धमेवाभिधीयते ॥ 3 ॥

adhruveṇa nimittena devadattagrham.yathā |
grhītam.grhaśabdena śuddhamevābhidhīyate || 3 ||

As 'Devadatta's house', grasped by the word 'house' through an unstable occasioning ground, is nonetheless expressed as pure —

The first of two similes for 3.2.2. Adhruvena nimittena — by an *unstable occasioning ground*: Devadatta owns the house today and will not tomorrow; the ownership is a passing relation, and it is what the phrase 'Devadatta's house' hangs on. Grhitam grha-sabdena suddham eva abhidhiyate: grasped by the word 'house', the *pure* thing alone is *expressed*. The house itself — not the ownership, not Devadatta — is what the phrase delivers; the unstable relation was the route, not the cargo. So a word may reach its object through a ground that will not last and still deliver the object cleanly. This is 2.172's landmark-simile (the road named by the tree, the ant-hill, the mountain — the landmark picking out the road without being it) transposed into ontology: the adjunct locates, the real is what is had.

Verse 3.2.4

सुवर्णादि यथा भिन्नं स्वैराकारैरपायिभिः ।
रुचकाद्यभिधानानां शुद्धमेवैति वाच्यताम् ॥ 4 ॥

suvarṇādi yathā bhinnam, svairākārairapāyibhiḥ |
rūcakādyabhidhānānām śuddhamevaiti vācyatām || 4 ||

— and as gold, though differentiated by its own perishing configurations, comes to be what is expressed as pure, from the namings 'bracelet' and the like.

The second simile, and it is the tradition's great one. Suvarnadi — *gold* and the like — bhinnam svaih akaraih apayibhiḥ: *differentiated* by its *own* configurations, which are *perishing*: the bracelet, the ring, the coin, each a shape gold takes and loses. Rucakady-abhidhananam suddham eva eti vacyatam: from the *namings* 'bracelet' and the rest, the *pure* thing alone comes to be what is *expressed*. Say 'bracelet' and what you have named is gold. The simile is chosen because everyone already thinks this way about gold — the goldsmith weighs the bracelet and quotes you for gold; nobody imagines the bracelet is a substance in its own right — and because it is the Upanisads' own figure for the one and its modifications. What 3.2.2 asserted abstractly (words with unreal adjuncts express the real) is here made obvious: the shapes are real enough to be worn and unreal enough that no one confuses them with what they are shapes of.

Verse 3.2.5

आकारैश्च व्यवच्छेदात् सार्वार्थ्यमिव रुध्यते ।
यथैव चक्षुरादीनां सार्वार्थ्यं नाडिकादिभिः ॥ 5 ॥

ākāraiśca vyavacchedāt sārvarthyāmavarudhyate |
yathaiva cakṣurādīnām, sāmarchyam, nāḍikādibhiḥ || 5 ||

And by exclusion through the configurations, its all-objecthood is restricted — just as the capacity of the eye and the rest is by tubes and the like.

How the adjuncts work, and the simile is a fine piece of observation. Akaraih ca vyavacchedat sarvarthyam avarudhyate: by *exclusion* through the *configurations*, its *all-objecthood* is *restricted*. Sarvarthya — the plenitude, omni-significance: the same word 2.250 used for what a word means before context carves it. So dravya has all-objecthood, and the configurations *restrict* it: the gold is potentially every shape and this bracelet is one. And the simile: yatha eva caksuradinam samarthyam nadikadibhiḥ — just as the *capacity of the eye* and the rest is (restricted) by *tubes* and the like: look through a tube and you see less, not because your eye has weakened but because the tube excludes. The configuration is a tube on Being. This is 2.250-251's semantics — one plenitude, carved by nimittas — now stated as the metaphysics that underwrites it: words carve because reality is carvable, and both carvings are exclusions of a totality rather than additions to a blank.

Verse 3.2.6

तेष्वाकारेषु यः शब्दस्तथाभूतेषु वर्तते ।
तत्त्वात्मकत्वात्तेनापि नित्यमेवाभिधीयते ॥ 6 ॥

teṣvākāreṣu yaḥ śabdastathābhūteṣu vartate |
tattvātmakatvātenāpi nityamevābhidhīyate || 6 ||

The word that operates upon those configurations, when they are of that sort — by that too, since they have reality for their self, the eternal alone is expressed.

The consequence for words that name the shapes themselves. One might object: granted 'bracelet' delivers gold — but what of 'bracelet-shape', a word that names the configuration and not the metal? The reply: tesu akaresu yah sabdah tathabhutesu vartate — the word that operates upon *those configurations*, when they are of that sort — tattvatmakatvat tena api nityam eva abhidhiyate: *by that too*, since they have *reality for their self*, the *eternal alone* is expressed. The configurations are not a second stuff standing outside the real; they have tattva for their atman (3.1.33's satta carved by relata: the carvings are Being too). So a word naming a shape still names the real, because there was never anything else for it to name. The escape-route closes: there is no word anywhere in the language that succeeds in meaning something other than Being.

Verse 3.2.7

न तत्त्वातत्त्वयोर्भेद इति वृद्धेभ्य आगमः ।
अतत्त्वमिति मन्यन्ते तत्त्वमेवाविचारितम् ॥ 7 ॥

na tattvātattvayorbheda iti vṛddhebhya āgamaḥ |
atattvamiti manyante tattvamevāvicāritam || 7 ||

'There is no difference between reality and non-reality' — such is the tradition from the elders; what they consider non-reality is reality itself, unexamined.

The samuddesa's most disarming verse, and it is offered as inherited teaching. Na tattva-atattvayoh bhedah iti vṛddhebhya āgamaḥ: 'there is no difference between reality and non-reality' — such is the tradition from the elders (vṛddha: the old ones, whom 2.485 said knowledge does not grace those who have not waited upon). And the gloss: atattvam iti manyante tattvam eva avicāritam — what they consider non-reality is reality itself, unexamined. The unreal is not a second kind of thing; it is the real, not looked into. Avicārita — unexamined, un-scrutinized: the bracelet is 'unreal' exactly in the sense that one has not asked what it is made of, and asking dissolves it into gold. So the asatya-akaras of 3.2.2 are not falsehoods but unexamined truths, and the whole apparatus of unreal adjuncts through which words reach the real (3.2.2-6) is an apparatus of not-yet-asking. This is the most economical account of the two truths anyone has given: they differ by a question.

Verse 3.2.8

विकल्परूपं भजते तत्त्वमेवाविकल्पितम् ।
न चात्र कालभेदोऽस्ति कालभेदश्च गृह्यते ॥ 8 ॥

vikalparūpaṁ bhajate tattvamevāvikalpitaṁ |
na cātra kālabhedo'sti kālabhedaśca grhyate || 8 ||

Reality itself, unconstructed, takes on the form of construction; and here there is no difference of time — yet a difference of time is grasped.

The doctrine of 3.2.7 stated as a process, and the process is vivarta. Vikalpa-rupam bhajate tattvam eva avikalpitaṁ: reality itself, unconstructed, takes on the form of construction — bhajate, takes on, wears: not becomes (parinama) but appears-as (1.1's vivartate). And the temporal paradox: na ca atra kala-bhedo 'sti — and here there is no difference of time (the real is undivided, sequence being no part of it: 3.1.35's sequence-withdrawn Being) — kala-bhedas ca grhyate: yet a difference of time is grasped. Both halves stand, and the iva is not even needed: the seeing supplies what the seen lacks (2.25's sequencing power; 3.1.37's time-seeing standing as though divided). The verse states the work's central structure in fourteen syllables: no time in it, time in our grasp of it, and the construction that mediates is reality itself unexamined.

Verse 3.2.9

यथा विषयधर्मिणं ज्ञानेऽत्यन्तमसंभवः ।
तदात्मेव च तत् सिद्धमत्यन्तमतदात्मकम् ॥ 9 ॥

yathā viṣayadharmāṇaṁ jñāne'tyantamasambhavaḥ |
tadātmeva ca tat siddhamatyantamatadātmakam || 9 ||

As there is an utter impossibility of the object's properties in cognition – and yet it is established as though having that for its self, while being utterly not of that self –

The first half of a precise analogy, and it revisits 3.1.103-106. Yatha visaya-dharmanam jnane atyantam asambhavaḥ: as there is an *utter impossibility* of the *object's properties* in *cognition* – the pot's clay is not in my pot-cognition; awareness has no properties of what it knows (a cognition of fire is not hot). And yet: tad-atma iva ca tat siddham – it is established *as though having that for its self*: the cognition presents as though it were the pot, is of it, wears it; atyantam atad-atmakam – *while being utterly not of that self*. Three clauses holding a genuine paradox: the object's properties cannot be in cognition, cognition presents as the object, cognition is utterly not the object. This is the intentionality-structure stated without a theory to soften it, and it is offered as the *known* case – the thing everyone grants – from which 3.2.10 will argue to the contested one.

Verse 3.2.10

तथा विकाररूपाणां तत्त्वेऽत्यन्तमसंभवः ।
तदात्मेव च तत्तत्त्वमत्यन्तमतदात्मकम् ॥ 10 ॥

tathā vikārarūpāṇāṁ tattve'tyantamasambhavaḥ |
tadātmeva ca tattattvamatyantamatadātmakam || 10 ||

– so there is an utter impossibility of the forms of modification in reality; and yet reality is established as though having that for its self, while being utterly not of that self.

The apodosis, and the analogy's force is exact. Tatha vikara-rupanam tattve atyantam asambhavaḥ: so there is an *utter impossibility* of the *forms of modification* in *reality* – the bracelet-shape cannot be in the gold-as-such, as the pot cannot be in the cognition. Tad-atma iva ca tat tattvam atyantam atad-atmakam: and yet reality is established *as though having that for its self*, while being utterly not of that self. The three clauses repeat 3.2.9's exactly, and that is the argument: the relation of the real to its modifications has the same structure as the relation of cognition to its objects – a structure everyone already accepts without being able to explain. So if one is not scandalized that awareness presents as its object while being nothing like it, one should not be scandalized that Being presents as the world while being nothing like it. The vivarta-doctrine is not a special metaphysical pleading; it is the intentionality-structure, generalized. This is the most powerful defence of vivarta in the work, and it works by pointing at the reader's own mind.

Verse 3.2.11

सत्यमाकृतिसंहारे यदन्ते व्यवतिष्ठते ।
तन्नित्यं शब्दवाच्यं तच्छब्दतत्त्वं न भिद्यते ॥ 11 ॥

satyamākṛtisamhāre yadante vyavatiṣṭhate |
tannityam, śabdavācyaṁ, tacchabdatattvaṁ, na bhidyate || 11 ||

The real, which stands at the end when the configurations are withdrawn — that is eternal, that is what words express, that is the word-essence: it is not different.

The identification, and the samuddesa has been building to it since its first verse. Satyam akṛti-samhare yad ante vyavatiṣṭhate: the *real* which stands at the end when the configurations are withdrawn — strip the bracelet, strip the ring, strip every shape, and what remains standing. Three predicates, and the third is the one: tan nityam — that is *eternal* (3.2.1's promise); śabda-vācyaṁ tat — that is what words express (3.2.2-6's demonstration: every word, through every adjunct, reaches only this); śabda-tattvaṁ tat na bhidyate — that is the *word-essence: it is not different*. Dravya, at the end of analysis, is śabda-tattva — 1.1's anadi-nidhanam brahma śabda-tattvaṁ yad aksaram, the Brahman without beginning or end whose essence is the Word. So the second candidate for word-meaning (3.1.2's dravya) turns out to be what the first turned out to be (3.1.33's satta, in which all words stand established), and both are the Brahmakanda's opening word. The Padakanda's two great alternatives have collapsed into each other and into the work's first verse.

Verse 3.2.12

न तदस्ति न तन्नास्ति न तदेकं न तत् पृथक् ।
न संसृष्टं विभक्तं वा विकृतं न च नान्यथा ॥ 12 ॥

na tadasti na tannāsti na tadekaṁ, na tat prthak |
na saṁsṛṣṭam, vibhaktam, vā vikṛtam, na ca nānyathā || 12 ||

It is not, nor is it not; it is not one, nor is it separate; it is not commingled nor divided; it is not modified, nor is it otherwise.

The negative tetralemma, and it is among the most striking verses in Sanskrit philosophical literature. Eight negations in four pairs: na tad asti na tan nasti — it is *not*, nor is it *not*; na tad ekam na tat prthak — not *one*, not *separate*; na saṁsṛṣṭam vibhaktam va — not *commingled* nor *divided*; vikṛtam na ca na anyatha — not *modified*, nor *otherwise*. The form is the catuskoti's — the four-cornered negation the Madhyamikas made their instrument — and the first pair is its classical opening. But the target is Bhartrhari's own: what is being denied every predicate is *dravya*, just identified with śabda-tattva (3.2.11). And the denials are earned rather than borrowed: 3.1.20-21 already established that oneness, manifoldness, existence and non-existence are found only among things *commingled*, and that uncommingled reality bears none of them. So the tetralemma here is not a sceptical device but the strict consequence of the samuddesa's own doctrine: the real, taken apart from the adjuncts through which alone anything is ascertained (3.2.2), has nothing left that could be said of it. What is remarkable is what comes next.

[Contested: the relation of this verse to Madhyamaka is a genuine and unresolved question of intellectual history; the four-cornered form is unmistakable and the direction of influence — if any — cannot be established from the *karika*. We flag the resonance and decline to date it]

Verse 3.2.13

तन्नास्ति विद्यते तच्च तदेकं तत् पृथक् पृथक् ।
संस्पृष्टं च विभक्तं च विकृतं तत्तदन्यथा ॥ 13 ॥

tannāsti vidyate tacca tadekam, tat prthak prthak |
saṁsṛṣṭam, ca vibhaktam, ca vikṛtam, tattadanyathā || 13 ||

It is not, and it does exist; it is one, and it is separate, severally; it is both commingled and divided; it is modified, and it is otherwise.

The affirmative tetralemma, and its placement immediately after 3.2.12 is the samuddesa's master-stroke. Every predicate just denied is now asserted, in the same order, with the same vocabulary: *tan nāsti vidyate ca tat* — it is not, and it *does* exist; *tad ekam tat prthak prthak* — it is *one*, it is *separate*, *severally*; *samsṛṣṭam ca vibhaktam ca* — *commingled* and *divided*; *vikṛtam tat tad anyathā* — *modified*, and *otherwise*. The two verses together do not contradict; they distribute. 3.2.12 speaks of the real as it is — uncommingled, where no category applies (3.1.21). 3.2.13 speaks of the real as ascertained — through the unreal configurations (3.2.2), where every category applies, because the configurations are what categories are. Neither verse is the truth about *dravya*; the pair is. And the pair is why the work can say that the sciences describe only *avidya* (2.233) without concluding that they describe nothing: what they describe is 3.2.13, which is 3.2.12 unexamined (3.2.7). Two tetralemmas, and between them the whole architecture of the two truths, stated without either being denied.

Verse 3.2.14

तस्य शब्दार्थसंबन्धरूपमेकस्य दृश्यते ।
तद् दृश्यं दर्शनं द्रष्टा दर्शने च प्रयोजनम् ॥ 14 ॥

tasya śabdārthasambandharūpamekasya dṛśyate |
tad dṛśyam, darśanam, draṣṭā darśane ca prayojanam || 14 ||

Of that one, the form of the word-meaning connection is seen; that is the seen, the seeing, the seer — and the purpose in the seeing.

The one differentiating itself into the whole structure of knowledge. *Tasya sabdartha-sambandharupam ekasya drsyate*: of *that one*, the form of the *word-meaning connection* is *seen* — the very relation on which the Brahmakanda founded scripture's authority (1.23's *nitya sambandha*) is *that one's* form, not a bond between two independent things (2.31: word and meaning as two aspects of one self). And then the fourfold self-differentiation: *tad drsyam darsanam draṣṭā* — *that* is the *seen*, the *seeing*, the *seer* — the tripuiti of 1.4's *bhoktr-bhoktavya-bhoga*, subject, object, act — *darsane ca prayojanam*: and the *purpose* in the seeing, the fourth term, which is what 2.113 made sentence-meaning itself. So the one becomes: what is known, the knowing, the knower, and the point of it. Every term in the epistemology of both preceding kandas is here derived from a single source, and derived as its *forms* rather than as its products (3.2.8's *bhajate*: it takes them on). The verse is the samuddesa's brief cosmology, and its economy is startling.

Verse 3.2.15

विकारापगमे सत्यं सुवर्णं कुण्डले यथा ।
विकारापगमे सत्यां तथाहुः प्रकृतिं पराम् ॥ 15 ॥

vikārāpagame satyam.suvarṇam.kuṇḍale yathā |
vikārāpagame satyām.tathāhuḥ prakṛtim.parām || 15 ||

As gold is the real when the modification is gone, in the case of an earring — so, when the modification is gone, they call the supreme prakṛti the real.

The gold-simile (3.2.4) returned at the samuddesa's close, now to name the terminus. Vikara-apagame satyam suvarṇam kuṇḍale yathā: as, *when the modification is gone, gold* is the real in the case of an *earring* — melt the earring and gold is what you have; the earring was never a second thing. Tatha ahuh prakṛtim param: so they call the *supreme prakṛti* the real, vikara-apagame, when the modification is gone. Prakṛti — the primal matrix, the Samkhya's own word (3.1.43's pralaya, differences dissolving into prakṛti) — but here param, *supreme*, and identified with what 3.2.11 called sabda-tattva. The verse performs a careful appropriation: the Samkhya's prakṛti-vikara relation is accepted as a *simile* and its metaphysics declined, since for Samkhya the transformation is real (parinama) and here it is not (3.2.8's bhajate, 3.2.10's atyantam atad-atmakam). Gold is the right figure precisely because the goldsmith's transformations are reversible and the gold is never other.

Verse 3.2.16

वाच्या सा सर्वशब्दानां शब्दाश्च न पृथक् ततः ।
अपृथक्त्वे च संबन्धस्तयोर्नात्मनोरिव ॥ 16 ॥

vācyā sā sarvaśabdānām.śabdāśca na prthak tataḥ |
aprthaktve ca sambandhastayornānātmanoriva || 16 ||

She is what all words express, and words are not separate from her; and in the non-separateness, there is a connection of those two, as though they were of distinct selves.

The samuddesa's doctrinal conclusion, and it holds two things that ought to conflict. Vacya sa sarva-sabdanam: *she* — the supreme prakṛti of 3.2.15 — is what *all words* express (3.2.6: no word reaches anything else). Sabdas ca na prthak tataḥ: and *words are not separate* from her — the expressers are not outside what they express; language is not a system standing over against reality and referring to it (2.31's one self with two aspects). And then the clause that saves the whole enterprise: aprthaktve ca sambandhah tayoh nana-atmanoh iva — and in the *non-separateness*, there is a *connection* of those two, *as though* they were of *distinct selves*. The eternal word-meaning bond of 1.23 — on which Vedic authority rests, and which 2.16's objector feared the holism would forfeit — is here preserved *inside* the identity: word and meaning are one, and their oneness presents as a connection between two. The iva does the work it has done since 1.2. Nothing is lost and nothing is really two.

Verse 3.2.17-18

आत्मा परः प्रियो द्वेष्यो वक्ता वाच्यं प्रयोजनम् ।
 विरुद्धानि यथैकस्य स्वप्ने रूपाणि चेतसः ॥ 17 ॥
 अजन्मनि तथा नित्ये पौवर्पिर्यविवर्जिते ।
 तत्त्वे जन्मादिरूपत्वं विरुद्धमुपलभ्यते ॥ 18 ॥

ātmā parah priyo dvesyo vaktā vācyam prayojanam |
 viruddhāni yathaikasya svapne rūpāṇi cetasaḥ || 17 ||
 ajanmani tathā nitye paurvāparyavivarjite |
 tattve janmādirūpatvam viruddhamupalabhyate || 18 ||

(17) As the contradictory forms – self and other, dear and hateful, speaker, what is spoken, and purpose – belong in a dream to one and the same mind, (18) so, in the reality that is unborn, eternal, devoid of before-and-after, the being of birth and the rest is found, though contradictory.

The samuddesa closes with the dream, and the choice is deliberate: it is the analogy 1.1's Vrtti reached for at the work's very opening. (17): in a *dream*, one mind – ekasya cetasaḥ – produces forms that are viruddhani, *contradictory*: atma parah – self and other; priyo dvesyah – the *dear* and the *hateful*; vaktā vācyam prayojanam – the *speaker*, *what is spoken*, and the *purpose* (3.2.14's fourfold, now dreamt). The dreamer is both parties to his dream's quarrel, speaks and hears his dream's speech, wants what his dream's other withholds – and there is only one mind. (18) applies it: ajanmani tathā nitye paurvāparyavivarjite tattve – so, in the *reality* that is *unborn*, *eternal*, *devoid of before-and-after* – janmādirūpatvam viruddham upalabhyate: the being of *birth and the rest* (3.1.36's six modifications) is *found, though contradictory*. The dream licenses the contradiction without dissolving it: we do not doubt that one mind holds a dream's warring parties, and we should not doubt that one unborn reality holds a world of births. And the analogy answers the tetralemmas: 3.2.12 and 3.2.13 are both true of dravya as both are true of a dream – nothing in it is real, everything in it happens, and the dreamer is one.

[Contested: the dream-analogy's force depends on how strongly one reads svapne: as a mere illustration of one-holding-many (weak), or as a claim about the world's ontological status (strong). 1.1's Vrtti uses it in the strong sense, and the parallel supports that here – but the karika itself only asserts the structure, not the unreality]

Sambandha-samuddeśa — On Relation

Verse 3.3.1

ज्ञानं प्रयोक्तुर्बाह्योऽर्थः स्वरूपं च प्रतीयते ।
शब्दैरुच्चरितैस्तैषां संबन्धः समवस्थितः ॥ 1 ॥

jñānam prayokturbāhyo'rthah svarūpam ca pratiyate |
śabdairuccaritaistaiṣāṃ sambandhah samavasthitah || 1 ||

The speaker's cognition, the external object, and the own-form are understood; by words when uttered, the connection of these stands established.

The samuddesa opens by naming its three relata. What a word delivers is: jnanam prayoktuh — the *speaker's cognition* (what he had in mind); bahyo 'rthah — the *external object* (what it was about); svarupam ca — and the *own-form* (the word itself, 1.50's self-presentation, 3.1.6's sva jati expressed first of all). Three things, and: sabdaih uccaritaih tesam sambandhah samavasthitah — by words *when uttered*, the *connection* of these stands established. Note uccaritaih — *when uttered*: the connection is established in the uttering, not before (2.399's door: the eternal bond is a standing possibility and utterance is the walking through; 2.401's relation constituted within the act). So the samuddesa's subject is announced as a three-term relation that comes into being when someone speaks. Everything that follows will ask what such a relation could be — and the answer, prepared since 2.46, is that it is not a thing at all.

Verse 3.3.2

प्रतिपत्तिर्भवत्यर्थे ज्ञाने वा संशयः क्वचित् ।
स्वरूपेषूपलब्धेषु व्यभिचारो न विद्यते ॥ 2 ॥

pratipattirbhavatyarthe jñāne vā samśayaḥ kvacit |
svarūpeṣūpalabdheṣu vyabhicāro na vidyate || 2 ||

Comprehension occurs with respect to the object; in the cognition there is sometimes doubt; but when the own-forms are apprehended, there is no deviation.

The three relata of 3.3.1 sorted by reliability, and the sorting is exact. Pratipattir bhavaty arthe: *comprehension* occurs with respect to the *object* — hearing a word, one gets its meaning. Jnane va samśayah kvacit: in the *cognition* there is *sometimes doubt* — what the speaker actually had in mind is often uncertain (he may have misspoken, or meant otherwise, or not known his own mind). But: svarupesūpalabdheṣu vyabhicāro na vidyate — when the *own-forms* are *apprehended*, there is *no deviation*: about the word itself there is never error; hearing 'gauh', one cannot be wrong that 'gauh' was said. So the three relata have three epistemic grades: the word-form is indefeasible, the object is reliably reached, the speaker's mind is doubtful. Vyabhicāro — deviation — is the logician's term for a mark that strays from what it marks (3.1.32's satya/asatya sorting), and its absence in the word's own case is why 3.1.6 could make the word's self-expression primary: it is the one thing in the transaction that cannot fail.

Verse 3.3.3

अस्यायं वाचको वाच्य इति षष्ठ्या प्रतीयते ।
योगः शब्दार्थयोस्तत्त्वमित्यतो व्यपदिश्यते ॥ 3 ॥

asyāyam vācako vācya iti ṣaṣṭhyā pratīyate |
yogaḥ śabdārthayostattvamityato vyapadiśyate || 3 ||

'This is the expressor of that, that is the expressible' — so it is understood through the sixth case; the yoking of word and meaning is therefore designated as their reality.

How the connection presents itself in language. *Asya ayam vacakah vacyah iti sasthanya pratiyate*: 'this is the expressor of that, that is the expressible' — it is understood through the sixth case, the genitive: we speak of the word of a meaning, the meaning of a word, and the genitive is the case of relation as such (2.197-198's doctrine: the genitive expresses relations whose generating action has withdrawn). *Yogaḥ sabdārtthayoh tattvam ity ato vyapadiśyate*: the yoking of word and meaning is therefore designated as their reality. Mark the 'therefore': it is because we say it in the genitive that we call the yoking their reality. The designation follows the grammar. So the samuddesa's opening move is to notice that our whole conviction that there is a word-meaning relation rests on a case-ending — which, given everything the work has said about case-endings being postings (2.198's *samasasya nivṛttaye*: the genitive prescribed to block compounding), is not a reassuring foundation. The interrogation begins here.

Verse 3.3.4

नाभिधानं स्वधर्मेण संबन्धस्यास्ति वाचकम् ।
अत्यन्तपरतन्त्रत्वाद्रूपं नास्यापदिश्यते ॥ 4 ॥

nābhidhānam, svadharmeṇa sambandhasyāsti vācakam |
atyantaparatantratvādrūpaṁ, nāsyāpadiśyate || 4 ||

There is no naming that expresses the connection by its own property; because it is utterly dependent, no form of it is designated.

The samuddesa's central thesis, and it is 2.46's finding stated as doctrine. *Na abhidhanam svadharmena sambandhasya asti vacakam*: there is no naming that expresses the connection by its own property — no word reaches it as words reach things, by delivering what it is in itself. And the reason: *atyanta-paratantratvat rupam na asya apadiśyate* — because it is utterly dependent, no form of it is designated. *Paratantra* — dependent, other-tenanted: the term 1.62 used for the subordinate member that takes no operations directly, and 2.196 for the particles that cannot stand alone. Here it is *atyanta*, utterly: the relation is not merely dependent in some respect; dependence is all it is. A thing with no independent standing has no rupa, no form, to be named — and so the relation, which every semantics needs, is the one item language cannot reach. This is why 2.46 said its form is never seen and it is utterly beyond thinghood: not a defect in our access, but the absence of anything to access.

Verse 3.3.5

उपकारात्स यत्रास्ति धर्मस्तत्रानुगम्यते ।
शक्तीनामपि सा शक्तिर्गुणानामप्यसौ गुणः ॥ 5 ॥

upakārātsa yatrāsti dharmastatrānugamyate |
śaktīnāmapi sā śaktirguṇānāmapyasau guṇaḥ || 5 ||

Where it exists from assistance, there the property is followed along; it is the capacity even of capacities, the quality even of qualities.

How the unnameable relation is nonetheless tracked. Upakarat sa yatra asti dharmah tatra anugamyate: where it exists *from assistance* — where one thing assists another, and the assisting is the relation's whole presence — there the *property is followed along*: we detect the relation by its work, never by its face (2.46's karya-anumeyah: inferable from its effect). And then two formulations of remarkable compression: saktinam api sa saktih — it is the *capacity even of capacities*; gunanam api asau guṇaḥ — the *quality even of qualities*. The relation is what enables enabling, what qualifies qualifying. It stands one level up from every category and inside each: nothing has its power except by relation, and relation has no power of its own. This is the samuddesa's answer to how the formless can be omnipresent — it is not a further item alongside capacities and qualities, it is their functioning, and functioning has no face.

Verse 3.3.6

तद्धर्मणोस्तु ताच्छब्दं संयोगसमवाययोः ।
तयोरप्युपकारार्थं नियतास्तदुपाधयः ॥ 6 ॥

taddharmanostu tācchabdyam samyogasamavāyayoh |
tayorapyupakārārthā niyatāstadupādhayah || 6 ||

But the use of that word for conjunction and inherence, which have that for their property — for those two also, the adjuncts of that are fixed, for the sake of assistance.

The Vaisesika's two relations placed. Tad-dharmanoh tu tacchabdyam samyoga-samavayayoh: the *use of that word* — 'relation' — for *conjunction* and *inherence*, which have *that* (relation-ness) for their property. So samyoga (contact between substances) and samavaya (the intimate inherence binding quality to substance, universal to particular) are called relations by courtesy: they have relation-hood as a property, they are not relation itself. And: tayoh api upakara-artha niyatah tad-upadhyah — for *those two also*, the *adjuncts* of that are *fixed*, for the *sake of assistance*. Even the named relations are, on inspection, adjuncts fixed for assistance's sake — determinations laid on so that the assisting can be described (3.2.2's asatya-upadhi: unreal adjuncts through which the real is ascertained). The Vaisesika thinks he has two relation-categories; Bhartrhari grants him two upadhis and no category. 2.435 already drew this distinction — conjunction nameable because it is a property of its relata, relation-as-such reachable only obliquely.

Verse 3.3.7

काचिदेव हि सावस्था कार्यप्रसवसूचिता ।
कस्याचित् केनचिद्यस्यां संयोग उपजायते ॥ 7 ॥

*kācideva hi sāvasthā kāryaprasavasūcitā |
kasyācit kenacidyasyām samyoga upajāyate || 7 ||*

For there is some state, indicated by the production of an effect, of one thing with another, wherein conjunction arises.

Conjunction analysed away. Kacid eva hi sa avastha — there is *some state*, and the vagueness is deliberate: kacid eva, 'some or other', the shrug marking that nothing determinate can be said. Karya-prasava-sucita: *indicated by the production of an effect* — we know the state only because something results (3.3.5's upakara; 2.288's asadharanam karyam, the non-common effect by which the real is discriminated). Kasyacit kenacid yasyam samyoga upajayate: *of one thing with another*, wherein *conjunction arises*. So samyoga is not a relation observed between two things; it is a state — undescribable except by its effects — in which we say conjunction has arisen. The Vaisesika's clearest, most tangible relation (two things touching: what could be plainer?) has dissolved into an effect-indicated somewhat. And if samyoga goes, samavaya — which nobody ever claimed to perceive — goes with it.

Verse 3.3.8-11

निरात्मकानामुत्पत्तौ नियमः क्वचिदेव यः ।
 तेनैवाव्यपवर्गश्च प्राप्त्यभेदे स यत्कृतः ॥ 8 ॥
 आत्मान्तरस्य येनात्मा तदात्मेवावधार्यते ।
 यतश्चैकस्य नानात्वं तत्त्वं नाध्यवसीयते ॥ 9 ॥
 तां शक्तिं समवायाख्यां शक्तीनामुपकारिणीम् ।
 भेदाभेदावतिक्रान्तामन्यथैव व्यवस्थिताम् ॥ 10 ॥
 धर्मं सर्वपदार्थानामतीतः सर्वलक्षणः ।
 अनुगृह्णाति संबन्ध इति पूर्वेभ्य आगमः ॥ 11 ॥

nirātmakānāmutpattau niyamah kvacideva yah |
 tenaivāvyapavargaśca prāptyabhede sa yatkṛtaḥ || 8 ||
 ātmāntarasya yenātmā tadātmevāvadhāryate |
 yataścaikasya nānātvam, tattvam, nādhavasīyate || 9 ||
 tām, śaktim, samavāyākhyām, śaktīnāmupakāriṇīm |
 bheda-bheda-avatikrāntāmanyathaiva vyavasthitām || 10 ||
 dharmam, sarvapa-dārthānāmatītaḥ sarvalakṣaṇaḥ |
 anugrhnāti sambandha iti pūrvebhya āgamaḥ || 11 ||

(8) That restriction which occurs somewhere in the arising of things that have no selves, and the non-separation effected by that very thing where there is no difference in attainment; (9) that by which the self of one self is ascertained as though it were the self of another; and from which the manifoldness of one thing is not determined as its reality; (10) that capacity called inherence, which assists the capacities, which transcends difference and non-difference and stands in quite another way – (11) the connection favours that property of all word-meanings, itself transcending all characterization: such is the tradition from the earlier ones.

A single four-verse sentence, the samuddesa's most sustained period, defining the relation by everything it does and nothing it is. The subject is deferred to 11 and the accusatives pile up. It is (8) the restriction – niyamah – that shows up in the arising of nir-atmakanam, things that have no selves (things whose being is wholly relational); and the non-separation where attainment does not differ. It is (9) that by which atma-antarasya atma tad-atma iva avadharyate – the self of one thing is ascertained as though it were another's (the intentionality-structure of 3.2.9-10: cognition presenting as its object while being utterly not it); and that from which ekasya nanatvam – the manifoldness of one thing – is not determined as its reality. It is (10) tam saktim samavaya-akhyam – the capacity called inherence – saktinam upakarinim, assisting the capacities (3.3.5), bheda-abhedau atikrantam – transcending difference and non-difference: it is neither identical with its relata nor other than them, anyatha eva vyavasthitam, standing in quite another way. And (11) the main clause at last: sambandhah anugrhnati dharmam sarva-padarthanam, atitah sarva-laksanah – the connection favours the property of all word-meanings, itself transcending all characterization. Iti purvebhya agamah: such is the tradition from the earlier ones – reported, not invented. The passage defines by exclusion (transcending difference and non-difference, transcending all characterization) because 3.3.4 established that no positive naming is available. What it names is the enabling of everything, which is nothing.

[Contested: the syntax across the four verses is genuinely hard and our reconstruction – accusatives in 8-10 governed by anugrhnati in 11 – is one of several; the transcription's reading at several points is insecure. What is not in doubt is the doctrine: relation as bheda-abheda-atikranta, transcending both difference and identity]

Verse 3.3.12

पदार्थीकृत एवान्यैः सर्वत्राभ्युपगम्यते ।
संबन्धस्तेन शब्दार्थः प्रविभक्तुं न शक्यते ॥ 12 ॥

padārthīkṛta evānyaiḥ sarvatrābhyupagamyate |
sambandhastena śabdārthaḥ pravibhaktum na śakyate || 12 ||

By others, it is admitted everywhere only as having been made into a word-meaning; therefore the meaning of the word 'connection' cannot be analysed out.

The paradox of talking about relation at all. Padarthikṛta eva anyaiḥ sarvatra abhyupagamyate sambandhaḥ: by others, the connection is admitted, everywhere, *only as having been made into a word-meaning* — padarthikṛta: *made* a padārtha, converted into an item by the very act of discussing it. The moment one says 'the relation', one has treated as a thing what 3.3.4 showed has no form. Tena sambandhaḥ pravibhaktum na śakyate: *therefore* the meaning of the word ('connection') *cannot be analysed out* — one cannot extract, by apoddhara (2.10's method), a word-meaning for 'sambandha', because what the word purports to name is not the sort of thing that survives extraction. The verse is exactly self-aware: this samuddesa is seventy-six verses about relation, and its twelfth verse says that its subject exists only as an artifact of being talked about. Which is consistent — the whole work has held that padarthas are creatures of laksana (2.436) — but here the point turns on the treatise itself.

Verse 3.3.13

समवायात् स्व आधारः स्वा च जातिः प्रतीयते ।
एकार्थसमवायात्तु गुणः स्वाधार एव ये ॥ 13 ॥

samavāyāt sva ādhāraḥ svā ca jātiḥ pratiyate |
ekārthasamavāyāttu guṇaḥ svādhāra eva ye || 13 ||

From inherence, one's own substratum and one's own universal are understood; but from inherence in a single object, a quality is one whose substratum is its own.

The Vaisesika's machinery set out, and the setting-out is scrupulous. Samavayat sva adharah sva ca jatih pratiyate: from *inherence*, one's *own substratum* and one's *own universal* are understood — samavaya is what ties a quality to the substance it is in, and a universal to the particular it characterizes; both relations are 'inherence' on that system. Eka-artha-samavayat tu guṇaḥ sva-adhara eva ye: but from *inherence in a single object*, a quality is one whose substratum is its own. Eka-artha-samavaya — co-inherence in one object — is the Vaisesika's device for relating two qualities to each other (the colour and the taste of one mango are related by both inhering in the mango, not directly). Bhartrhari reports the system accurately before dismantling it: the reader should see that he knows exactly what he is refusing. And the refusal is already prepared: whatever samavaya does, it does as an upadhi fixed for assistance's sake (3.3.6), and it transcends difference and non-difference (3.3.10) — which is not what the Vaisesika thinks samavaya is at all.

Verse 3.3.14

द्रव्यत्वसत्तासंयोगाः स्वन्याधारोपबन्धनाः ।
तत्प्रदेशविभागाश्च गुणा द्वित्वादयश्च ये ॥ 14 ॥

dravyatvasattāsamyogāḥ svanyādhāropabandhanāḥ |
tatpradeśavibhāgāśca guṇā dvitvādayaśca ye || 14 ||

Substance-hood, existence, conjunctions, the divisions of their locations, and the qualities such as duality — these have their basis in their own substratum and in another's.

The catalogue continued, and its selection is pointed. *Dravyatva-satta-samyogah* — *substance-hood, existence, conjunctions*; *tat-pradesa-vibhagah ca* — and the *divisions of their locations*; *guna dvitvadayah ca ye* — and the *qualities such as duality* (number, which the Jati-samuddesa spent forty verses on). All of these are *sva-anya-adhara-upabandhanah*: having their *basis* in their *own* substratum *and in another's*. That is: none of them is self-standing; each is anchored partly in itself and partly elsewhere — which is to say, each is relational through and through. And the list is the Vaisesika's own inventory of what is real: substance-hood, existence (*satta*, their highest universal), conjunction, number. Bhartrhari is showing that the categories the realist takes as bedrock all have the two-footed structure that makes them dependent — and 3.3.4 established that what is *atyanta-paratantra* has no form of its own to be named. The realist's furniture is being catalogued for demolition.

Verse 3.3.15

केचित् स्वाश्रयसंयुक्ताः केचित् तत्समवायिनः ।
संयुक्तसमवेतेषु समवेतास्तथा परे ॥ 15 ॥

kecit svāśrayasamyuktāḥ kecit tatsamavāyīnāḥ |
samyuktasamaveteṣu samavetāstathā pare || 15 ||

Some are conjoined with their own substratum, some inhere in it; others likewise inhere in what inheres in what is conjoined.

The relational hierarchy at its most baroque, and the baroqueness is the argument. *Kecit sva-asraya-samyuktah*: *some* are *conjoined* with their own substratum; *kecit tat-samavayinah*: *some inhere* in it; *samyukta-samavetesu samavetah tatha pare*: *others* likewise *inhere in what inheres in what is conjoined*. That last is a three-storey relation — *inherence in an inherent in a conjunct* — and the Vaisesikas needed such ladders to explain how, say, a sound in the ether relates to a distant hearer, or how a quality of a part relates to the whole. Bhartrhari lists the storeys without comment. The comment is the list: a system that must climb three relations to connect two things has made relation do so much work that the question 3.3.4 asked — what is it, that it can do all this and be named by nothing? — becomes unavoidable. The samuddesa's method here is the same as 2.77-86's exegetical catalogue: recite the opponent's machinery at length, fairly, and let its weight be felt.

Verse 3.3.16

स्वाश्रयेण तु संयुक्तैः संयुक्तं विभु गम्यते ।
समवायस्य संबन्धो नापरस्तत्र दृश्यते ॥ 16 ॥

svāśrayeṇa tu samyuktaiḥ samyuktam vibhu gamyate |
samavāyasya sambandho nāparastatra drśyate || 16 ||

But the all-pervading is understood as conjoined with things conjoined with their own substratum; no further connection of inherence is seen there.

The regress hunted to its lair in the Vaisesika's own system. Sva-asrayena tu samyuktaiḥ samyuktam vibhu gamyate: the *all-pervading* (vibhu: ether, time, the self – the omnipresent substances) is understood as *conjoined with* things which are themselves conjoined with their substrata (3.3.15's three-storey ladder). And then the observation that matters: samavayasya sambandho na aparastatra drśyate – *no further connection of inherence* is seen there. Ask the Vaisesika what connects samavaya to its relata, and he cannot answer with another samavaya (that would start the regress his opponents have always pressed). He must say: samavaya connects by itself, needing no further connector. Bhartṛhari records the answer without objecting – because it is *his* answer too, and he will generalize it at 3.3.28 (an operation has no further operation). The realist stops the regress by fiat at exactly one place; Bhartṛhari will stop it by principle everywhere.

Verse 3.3.17

संबन्धस्याविशिष्टत्वान्न चात्र नियमो भवेत् ।
तस्माच्छब्दार्थयोर्नैव संबन्धः परिकल्पते ॥ 17 ॥

sambandhasyāviśiṣṭatvānna cātra niyamo bhavet |
tasmācchabdārthayornaiva sambandhaḥ parikalpate || 17 ||

And because the connection is undifferentiated, no restriction would obtain here; therefore no connection of word and meaning is constructed at all.

The consequence for the samuddesa's own subject, and it is devastating. Sambandhasya avisistatvat: because the connection is *undifferentiated* – samavaya, on the Vaisesika's account, is *one*: a single eternal relation, the same everywhere, in which everything inheres in everything it inheres in. Na cātra niyamo bhavet: therefore *no restriction* would obtain here – an undifferentiated relation cannot explain why *this* quality is in *this* substance and not another; it relates indiscriminately or not at all. Tasmācchabdārthayoh na eva sambandhaḥ parikalpyate: *therefore* no connection of *word and meaning* is constructed at all – if relation cannot restrict, it cannot pair a word with its meaning either, and the semantic bond the whole work rests on (1.23's nitya sambandha) has no relational account. The verse is the samuddesa's crisis, deliberately staged: the realist's relation cannot do the work, and Bhartṛhari's has no form to be named (3.3.4). What is left is 3.3.29's yogyata, and everything between here and there clears the ground for it.

Verse 3.3.18

अदृष्टवृत्तिलाभेन यथा संयोग आत्मनः ।
क्वचित् स्वस्वामियोगाख्योऽभेदेऽन्यत्रापि स क्रमः ॥ 18 ॥

adr̥ṣṭavṛttilābhena yathā samyoga ātmanah |
kvacit svasvāmiyogākhyo'bhede'nyatrāpi sa kramah || 18 ||

As, by the obtaining of an unseen operation, there is somewhere a conjunction of the self, called the owner-owned relation — in non-difference, that pattern holds elsewhere too.

A relation that is manifestly not a physical connection, offered as the model. Sva-svami-yoga — the owner-owned relation: what connects a man to his field? No contact, no inherence; the field is not touching him and not in him. Adrsta-vṛtti-labhena — by the obtaining of an *unseen operation*: what relates them is adrsta, the unseen — moral-legal desert, the invisible entitlement that ownership is. Samyoga atmanah kvacit: it is somewhere called a *conjunction of the self*. And: abhede anyatra api sa kramah — in *non-difference*, that *pattern holds elsewhere* too. The ownership-relation is the perfect specimen for Bhartrhari's purpose: everyone grants it is real, everyone grants it is not a physical relation, and nobody can point to it. If relation can be like *that* — invisible, effect-indicated, constituted by an unseen operation — then the word-meaning bond need not be a connector between two things at all. 2.395's joint-property analogy drew on the same legal intuitions; here the law supplies the metaphysics.

Verse 3.3.19

प्राप्तिं तु समवायाख्यां वाच्यधर्मातिवर्तिनीम् ।
प्रयोक्ता प्रतिपत्ता वा न शब्दैरनुगच्छति ॥ 19 ॥

prāptim tu samavāyākhyām vācya dharmātivartinīm |
prayoktā pratipattā vā na śabdairanugacchati || 19 ||

But the attainment called inherence, which transcends the property of being expressible — neither speaker nor comprehender follows it by words.

The unnameability of 3.3.4, applied to samavaya by name. Praptim tu samavaya-akhyam vacya-dharma-ativartinim: the *attainment* called *inherence*, which *transcends the property of being expressible* — praptih, attainment, is a deliberately thin word: what samavaya amounts to is that something has been *reached*, and beyond that nothing is sayable. Prayokta pratipatta va na sabdaih anugacchati: neither *speaker* nor *comprehender follows it by words*. Both parties to the transaction — the one who means and the one who understands (3.3.1's three relata) — fail alike: no speaker can put the relation into words, no hearer can take it out of them. This sets up the paradox that occupies the next five verses. For the verse has just *said* that inherence transcends expressibility — which is to say, it has expressed something about the inexpressible, and thereby, apparently, refuted itself.

Verse 3.3.20

अवाच्यमिति यद् वाच्यं तदवाच्यतया यदा ।
वाच्यमित्यवसीयेत वाच्यमेव तदा भवेत् ॥ 20 ॥

avācyamiti yad vācyam tadavācyatayā yadā |
vācyamityavasīyeta vācyameva tadā bhavet || 20 ||

That which is expressed as 'inexpressible' — when it is determined as expressible by way of its inexpressibility, then it would become expressible indeed.

The self-refutation, stated with complete clarity. Avacyam iti yad vacyam: that which is *expressed as 'inexpressible'* — the phrase already contains its problem: to call a thing inexpressible is to express something of it. Tad avacyataya yada vacyam iti avasiyeta — when it is *determined as expressible* by way of its *very inexpressibility* — vacyam eva tada bhavet: then it would become *expressible indeed*. The reasoning: if 'inexpressible' successfully characterizes it, then it has been characterized, and it is not inexpressible. Every apophatic theology and every doctrine of an ineffable absolute meets this argument, and Bhartrhari — whose whole system rests on an unnameable relation (3.3.4) and a reality transcending all characterization (3.3.11) — meets it head-on rather than hoping it will not be noticed. The next verse gives the other horn.

Verse 3.3.21

अथाप्यवाच्यमित्येवं न तद् वाच्यं प्रतीयते ।
विवक्षितास्य यावस्था सैव नाध्यवसीयते ॥ 21 ॥

athāpyavācyamityevam na tad vācyam pratiyate |
vivakṣitāsyā yāvasthā saiva nādhyavasīyate || 21 ||

Or if, as 'inexpressible', it is not understood as expressible — then the very state of it that was intended is not determined.

The second horn, and together with 3.3.20 it is a dilemma. Atha api avacyam iti evam na tad vacyam pratiyate — or if, as 'inexpressible', it is *not* understood as expressible: take the other option, and deny that calling it inexpressible expresses anything of it. Then: vivaksita asya ya avastha sa eva na adhyavasiyate — the *very state* of it that was *intended* is *not determined*. If the word does not express, it does not express — including the inexpressibility one was trying to convey. So: say 'inexpressible' successfully and it is expressible (3.3.20); say it unsuccessfully and you have said nothing (3.3.21). The dilemma appears to close every route. And Bhartrhari's escape, when it comes at 3.3.26, will not be to break either horn but to deny the assumption both share — that the expressing word is itself among the things expressed.

Verse 3.3.22

तथान्यथा सर्वथा च यस्यावाच्यत्वमुच्यते ।
तत्रापि नैव सावस्था तैः शब्दैः प्रतिषिध्यते ॥ 22 ॥

tathānyathā sarvathā ca yasyāvācyaṭvamucyate |
tatrāpi naiva sāvasthā taiḥ śabdaiḥ pratiṣidhyate || 22 ||

And of that whose inexpressibility is stated thus, otherwise, and in every way — there too, that state is not negated by those words.

The dilemma generalized past any verbal escape. Tatha anyatha sarvatha ca yasya avacyatvam ucyate: of that whose inexpressibility is stated *thus*, *otherwise*, and *in every way* — however one phrases it, whatever qualifications one heaps on ('inexpressible in a manner of speaking', 'inexpressible from the highest standpoint'). Tatra api na eva sa avastha taiḥ sabdaiḥ pratisidhyate: *there too that state is not negated* by those words. The point cuts both ways and is the sharper for it: the words do not *establish* the inexpressibility (3.3.20's horn), and neither do they *negate* the state — the thing's condition is untouched by anything said about it. So the paradox is not that our words about the ineffable are false; it is that they do not reach it at all, in either direction. What follows (3.3.23-24) will locate where such words *do* operate, and it is not on their apparent object.

Verse 3.3.23

न हि संशयरूपेऽर्थे शेषत्वेन व्यवस्थिते ।
अव्युदासे स्वरूपस्य संशयोऽन्यः प्रवर्तते ॥ 23 ॥

na hi samśayarūpe'rthe śeṣatvena vyavasthite |
avyudāse svarūpasya samśayo'nyaḥ pravartate || 23 ||

For when a meaning of doubtful form stands as the remainder, there being no exclusion of its own form, no other doubt arises.

A structural observation that begins the escape. Samsaya-rupe 'rthe sesatvena vyavasthite — when a meaning of *doubtful* form stands as the *remainder* (sesa: what is left over, the residue after the operation, 2.82's sesa): sva-rupasya avyudase — there being *no exclusion of its own form* — samsayo 'nyaḥ na pravartate: *no other doubt* arises. When one is doubting, the doubt has a determinate form of its own, and that form is not itself in doubt: to be uncertain whether it is a post or a man is to be entirely certain that one is uncertain. The doubting does not doubt itself. This is the pattern that will resolve the paradox: an operation does not include itself among its objects. And it is the same insight 3.1.105 reached from the other side (the cognition 'pot-cognition' is distinct from the pot-cognition), and that 3.3.28 will state as a principle.

Verse 3.3.24

यदा च निर्णयज्ञाने निर्णयत्वेन निर्णयः ।
प्रक्रम्यते तदा ज्ञानं स्वधर्मेणावतिष्ठते ॥ 24 ॥

yadā ca nirṇayajñāne nirṇayatvena nirṇayaḥ |
prakramyate tadā jñānam svadharmenāvatīṣṭhate || 24 ||

And when, in the cognition of ascertainment, ascertainment is commenced as ascertainment — then the cognition stands by its own property.

The companion to 3.3.23, from the positive side. Nirṇaya-jñane nirṇayatvena nirṇayah prakramyate: when, in the cognition of ascertainment, ascertainment is commenced as ascertainment — when one ascertains that one has ascertained. Tada jñanam sva-dharmena avatīṣṭhate: then the cognition stands by its own property. The reflexive act does not undermine the first-order one; it stands on it, and the first-order cognition retains its own character throughout. So reflexivity is not vicious: doubting-about-doubt leaves the doubt intact (3.3.23), ascertaining-one's-ascertainment leaves the ascertainment intact. Sva-dharmena — 'by its own property': the phrase 3.3.4 used to deny that the connection can be named (na abhidhanam sva-dharmena sambandhasya asti vacakam). Cognitions have own-properties; relations do not; and that asymmetry is why the paradox of 3.3.20-22 is soluble while the unnameability of 3.3.4 stands.

Verse 3.3.25

सर्वं मिथ्या ब्रवीमीति नैतद्वाक्यं विवक्ष्यते ।
तस्य मिथ्याभिधाने हि प्रक्रान्तोऽर्थो न गम्यते ॥ 25 ॥

sarvam mithyā bravīmīti naitadvākyam vivakṣyate |
tasya mithyābhidhāne hi prakrānto'rtho na gamyate || 25 ||

'I say that everything is false' — this sentence is not what is intended; for in the stating of its own falsity, the meaning commenced is not conveyed.

The liar paradox, in a fifth-century grammarian's treatise, with a solution. Sarvam mithyā bravimi iti — 'I say that everything is false': the sentence that, if true, is false, since it is among the everything. Na etad vakyam vivakṣyate: this sentence is not what is intended — the speaker's vivakṣa does not extend to the utterance making it. And the reason: tasya mithyā-abhidhane hi prakrānto'rtho na gamyate — for in the stating of its own falsity, the meaning commenced is not conveyed: include the sentence in its own scope and the assertion self-destructs, delivering nothing — so that inclusion cannot be what was meant, since what was meant was conveyed (the speaker did say something, and we understood him). The solution is pragmatic rather than formal: not a hierarchy of languages, not a ban on self-reference, but an appeal to vivakṣa — the sentence's scope is what the speaker aimed (1.155, 2.400's directed eye), and no speaker aims at annihilating his own assertion. And it is grounded in the structure 3.3.23-24 established: an operation is not among its own objects. The verse is a landmark and it is not an isolated flash: it is exactly what the samuddesa's whole account of self-reference predicts.

[Contested: whether the verse states the paradox as an aporia or offers vivakṣa as its resolution divides readers; we take the second, on the strength of prakrānto'rtho na gamyate (the meaning commenced is not conveyed — which functions as a reason, not a lament) and of 3.3.26's immediate generalization]

Verse 3.3.26

न च वाचकरूपेण प्रवृत्तस्यास्ति वाच्यता ।
प्रतिपाद्यं न तत्तत्र येनान्यत् प्रतिपाद्यते ॥ 26 ॥

*na ca vācakarūpeṇa pravṛttasyāsti vācyatā |
pratipādyam na tattatra yenānyat pratipādyate || 26 ||*

And what operates in the form of an expressor has no expressibility; that by which another is conveyed is not itself what is to be conveyed there.

The principle beneath the solution, and it is stated with complete generality. *Na ca vacaka-rupena pravṛttasya asti vacyata*: what operates in the form of an expressor has no expressibility — a word doing the expressing is not, in that act, among the expressed. *Pratipadyam na tat tatra yena anyat pratipadyate*: that by which another is conveyed is not itself what is to be conveyed there. This is the use/mention distinction, arrived at as the solution to a paradox rather than as a piece of house-keeping — and it dissolves both problems at once. The liar (3.3.25): 'everything is false' operates as expressor, so it is not among the expressed everything. The ineffable (3.3.20-22): the word 'inexpressible' operates as expressor, so what it expresses is not thereby made an expressible object — one may say 'inexpressible' without contradiction, because saying is not the same as bringing within the said. Note *tatra* — *there*: the exclusion is act-relative, not absolute. The same word, in another act, can perfectly well be expressed (1.65's regress inside citation; 2.100's *grahana* requiring exhibited form). Nothing is permanently unsayable; nothing says itself while saying.

Verse 3.3.27

असाधिका प्रतिज्ञेति नेयमेवाभिधीयते ।
यथा तथास्य धर्मोऽपि नैव कश्चित् प्रतीयते ॥ 27 ॥

*asādhikā pratijñeti neyamevābhidhīyate |
yathā tathāsyā dharmo'pi naiva kaścit pratīyate || 27 ||*

'The thesis is non-establishing' — this very one is not thereby stated; just so, no property whatever of it is understood.

The principle applied to the debater's self-refutation. *Asadhika pratijna iti* — 'the thesis is non-establishing': the standard move by which one accuses an opponent's proposition of proving nothing. *Na iyam eva abhidhiyate*: this very one is not thereby stated — the accusation does not include itself among the theses it convicts; it operates as expressor (3.3.26) and so stands outside its own scope. *Yatha tatha asya dharmo 'pi na eva kascit pratiyate*: just so, no property whatever of it is understood. The *tu quoque* fails: one cannot turn 'your thesis establishes nothing' back on itself, because the utterance is not among its own objects. The verse extends the solution from the liar (3.3.25) to the whole family of self-refutation arguments that Indian debate ran on — and it is worth noticing what Bhartrhari has thereby protected. His own doctrines are exactly the sort that invite the *tu quoque*: 'all cognition is word-interwoven' (1.123), 'the sciences describe only *avidya*' (2.233), 'nothing uncom-mingled bears any predicate' (3.1.21). Each would be self-refuting if utterances fell within their own scope. They do not.

Verse 3.3.28

व्यापारस्यापरो यस्मान्न व्यापारोऽस्ति कश्चन ।
विरोधमनवस्थां वा तस्मात् सर्वत्र नाश्रयेत् ॥ 28 ॥

vyāpārasyāparo yasmānna vyāpāro'sti kaścana |
virodhamanavasthām, vā tasmāt sarvatra nāśrayet || 28 ||

Since there is no other operation of an operation — therefore one should not resort, everywhere, to contradiction or to infinite regress.

The principle stated as a maxim, and it is the samuddesa's methodological centre. Vyaparasya aparo yasman na vyaparo 'sti kascana: since there is *no other operation* of an *operation* — an operating does not itself operate; a cutting is not cut, a knowing is not known by a further knowing (3.1.104's lamp: light is not illuminated by another light), an expressing is not expressed (3.3.26). Tasmāt virodham anavastham va sarvatra na asrayet: *therefore one should not resort, everywhere, to contradiction or to infinite regress*. The two great weapons of Indian dialectic — you contradict yourself; your account regresses — are here disarmed at a stroke, and disarmed by a principle rather than a dodge. Both weapons work by folding an operation back into its own domain, and operations do not have domains that include themselves. The Vaisesika stopped the samavaya-regress by fiat at one point (3.3.16); Bhartrhari has now given the reason that stops every such regress everywhere, and it is the reason the paradoxes of 3.3.20-27 dissolved. Sarvatra — 'everywhere': the maxim is unrestricted, and the whole system needs it to be.

Verse 3.3.29

इन्द्रियाणां स्वविषयेष्वनादिर्योग्यता यथा ।
अनादिरर्थैः शब्दानां संबन्धो योग्यता तथा ॥ 29 ॥

indriyāṇām, svaviṣayeṣvanādiryogyatā yathā |
anādirarthaiḥ śabdānām, sambandho yogyatā tathā || 29 ||

As the fitness of the sense-faculties for their own objects is beginningless — so the connection of words with meanings, which is fitness, is beginningless.

The positive doctrine, at last, and the samuddesa's whole demolition was clearing ground for it. Indriyanam sva-visayesu anadir yogyata yatha: as the *fitness* of the sense-faculties for their *own objects* is *beginningless* — nobody asks what connects the eye to colour, or why the ear is for sound rather than for smell; the fitness is constitutive, unexplained, and nobody finds it mysterious. Anadir arthaiḥ sabdanam sambandho yogyata tatha: so the *connection of words with meanings* — which is fitness — is *beginningless*. The word-meaning relation is not a connector between two independently-standing items (3.3.4-17 showed no such connector can be found or named). It is yogyata: a fitness, of exactly the kind the senses have for their objects — primitive, constitutive, not further derivable. This was already offered at 2.97, in passing, as the answer to why *these* sounds manifest *this* word; here it is the samuddesa's settled conclusion. And its virtue is that it stops asking the wrong question: what relates word to meaning is what relates eye to colour, namely nothing — they are made for each other, and that is the end of the analysis.

Verse 3.3.30

असाधुरनुमानेन वाचकः कैश्चिदिष्यते ।
वाचकत्वाविशेषे वा नियमः पुण्यपापयोः ॥ 30 ॥

*asādhuranumānena vācakaḥ kaiśchidiṣyate |
vācakatvāviśeṣe vā niyamah puṇyapāpayoh || 30 ||*

The incorrect form is held by some to be expressive by inference; or, there being no difference in expressiveness, the restriction is with respect to merit and demerit.

The yogyata-doctrine tested against a standing problem: if fitness is beginningless and constitutive, how do corrupt forms mean? Two answers, both familiar. Asadhur anumanaena vacakah kaiscid isyate: the *incorrect* form is held by some to be expressive by *inference* — reached through the correct form it deviates from (2.149's account: the apabhramsa conveying anumanaena, through a recovery so practiced it vanishes; 2.152's sadhu-vyavahita). Or: vacakatva-avisese va niyamah punya-papayoh — there being *no difference in expressiveness*, the *restriction* is with respect to *merit and demerit*: both forms mean equally, and only dharma distinguishes them (1.27's foundational concession, restated at 2.153's honest limit). The verse offers no new answer and does not need one: both accounts are compatible with yogyata, since fitness explains why the correct form means and neither account claims the corrupt one means by a different mechanism. The old settlement holds.

Verse 3.3.31

संबन्धशब्दे संबन्धो योग्यतां प्रति योग्यता ।
समयाद्योग्यतासंविन्मातापुत्रादियोगवत् ॥ 31 ॥

*sambandhaśabde sambandho योग्यतां प्रति योग्यता |
samayādyogyatāsamvinmātāputrādiyogavat || 31 ||*

In the word 'connection' there is a connection; with respect to fitness there is fitness; from convention comes the awareness of fitness — like the relation of mother and son and the like.

The reflexive application, and it is the samuddesa's wittiest verse. Sambandha-sabde sambandhah: in the word 'connection' there is a *connection* — the word 'sambandha' is related to its meaning, as every word is; the term for relation stands in the very relation it names. Yogyatam prati yogyata: with respect to *fitness* there is *fitness* — the word 'yogyata' is fit for its meaning by fitness. The regress threatens visibly, and 3.3.28 has already disarmed it: there is no operation of an operation, and the fitness by which 'fitness' means is not a further fitness needing explanation. Then the empirical clause: samayat yogyata-samvit — from *convention* comes the *awareness* of fitness: the fitness itself is beginningless (3.3.29), and our *knowing* which word is fit for which meaning is learned, conventional, taught (2.118's samaya). And the simile: matr-putradi-yogavat — *like the relation of mother and son*: real, constitutive, not made by anyone's agreement — and which of two people stand in it is something one learns. The distinction between the relation and our knowledge of it is exactly what the whole conventionalism debate needed.

Verse 3.3.32

शब्दः कारणमर्थस्य स हि तेनोपजन्यते ।
तथा च बुद्धिविषयादर्थच्छब्दः प्रतीयते ॥ 32 ॥

*śabdaḥ kāraṇamarthasya sa hi tenopajanyate |
tathā ca buddhiviṣayādarthācchabdaḥ pratīyate || 32 ||*

The word is the cause of the meaning, for it is produced by that; and thus the word is understood from the meaning that is the object of cognition.

The circularity of the word-meaning relation, stated without embarrassment. *Sabdah karanam arthasya*: the word is the cause of the meaning – it produces the meaning in the hearer (2.143's flash, occasioned by words). *Sa hi tena upajanyate*: for it is produced by that – and the word is produced by the meaning, in the speaker, who has something to say and finds words for it (1.47's *vitarkitah pura buddhya*: deliberated first in the mind, then installed on its meaning). Each causes the other. *Tatha ca buddhi-visayad arthat sabdah pratiyate*: and thus the word is understood from the meaning that is the object of cognition. The circle is not vicious because the two are not two: word and meaning are aspects of one self (2.31, 3.2.16's *aparthak tve sambandhah*: connection in non-separateness, as though of distinct selves). What looks like reciprocal causation between independent items is one thing presenting its two faces to speaker and hearer respectively. And on the *yogyata*-doctrine (3.3.29) nothing further is owed: fitness is not a causal chain to be traced but a constitutive suitedness, and asking which of the fitted came first is asking which of the eye and colour is prior.

Verse 3.3.33

भोजनाद्यपि मन्यन्ते बुद्ध्यर्थे यदसंभवि ।
बुद्ध्यर्थदिव बुद्ध्यर्थे जाते तदपि दृश्यते ॥ 33 ॥

*bhojanādyapi manyante buddhyarthe yadasambhavi |
buddhyarthādeva buddhyarthe jāte tadapi drśyate || 33 ||*

They consider that even eating and the like, which is impossible in respect of a mental object, is nonetheless seen – a mental object having arisen from a mental object alone.

A puzzle about intentional objects, put as an observation. *Bhojanadi api* – even *eating* and the like – is *buddhy-arthe asambhavi*: impossible in respect of a mental object: one cannot eat an imagined mango; the mental object does not nourish (2.295's dreamt poison, which kills the dreamt man and leaves the dreamer breathing). And yet: *buddhy-arthat eva buddhy-arthe jāte tad api drśyate* – a mental object having arisen from a mental object alone, that too is seen: within the mind, the imagined eating of the imagined mango happens perfectly well; the dream-meal is eaten. So intentional objects support intentional operations while supporting no real ones, and the whole transaction is closed under mentality. The verse prepares the *samuddesa*'s turn to *aupacariki satta* – figurative existence – by establishing that there is a domain in which things exist enough to be operated on and not enough to feed anyone. That domain is where language lives.

Verse 3.3.34

अनित्येषवपि नित्यत्वमभिधेयात्मना स्थितम् ॥ 34ab ॥
 अनित्यत्वं स्वशक्तिर्वा सा च नित्यान्न भिद्यते ॥ 34cd ॥

anityeṣavapi nityatvamabhidheyātmanā sthitam ॥ 34ab ॥
anityatvam,svaśaktirvā sā ca nityānna bhidyate ॥ 34cd ॥

Even in non-eternal things, eternality stands, by way of their being expressible. Or non-eternality is its own capacity – and that is not different from the eternal.

Two routes to the same conclusion, and the verse gives both in two half-lines. First: *anityesu api nityatvam abhidheya-atmana sthitam* – even in *non-eternal* things, *eternality* stands, *by way of their being expressible*: whatever can be meant is, as meant, eternal – the pot perishes and pot-as-expressible does not (3.1.2's *nityau eva*: both candidates for word-meaning are eternal; 3.2.6's every word expressing only the eternal). Being sayable confers permanence, because what words reach is Being (3.1.33). Second: *anityatvam sva-saktir va sa ca nityan na bhidyate* – or *non-eternality* is its *own capacity*, and *that is not different from the eternal*: transience is one of Being's powers (3.1.22's *sarvasakty-atma-bhutatvam*), and powers are not other than what has them (1.2's *aparthakṭve 'pi saktibhyah*). So on either route, nothing escapes eternality: the perishing thing is eternal as expressible, and its perishing is an eternal thing's power. The two half-lines are the *samuddesa*'s most economical demonstration that the *nitya/anitya* distinction cannot be drawn where the realist wants it.

[Contested: the source paginates 34 as two half-verses; we read them as two alternative arguments (*va* marking the second), which the parallel structure supports]

Verse 3.3.35

शब्देनार्थस्थ संस्कारो दृष्टादृष्टप्रयोजनः ।
 क्रियते सोऽभिसम्बन्धमन्तरेण कथं भवेत् ॥ 35 ॥

śabdenārthastha saṁskāro dr̥ṣṭādr̥ṣṭaprayojanaḥ |
kriyate so'bhisaṁbandhamantareṇa katham bhavet ॥ 35 ॥

A refinement of the object, having seen and unseen purposes, is effected by the word; how could that occur without a connection?

An argument for the reality of the word-meaning connection, put in the mouth of an objector. *Sabdena arthasya saṁskarah kriyate*: a *refinement of the object* is effected by the word – *samskara*, the ritual purification and preparation (1.146's therapeutic triad; 1.131's *sabda-samskara*). *Dr̥ṣṭadr̥ṣṭaprayojanaḥ*: having *seen and unseen* purposes – the mantra sanctifies the offering visibly and invisibly (1.138's *visapaharana*: mantra-efficacy, form-bound). And the argument: *sah abhisambandham antareṇa katham bhavet* – *how could that occur without a connection?* If words do things to objects – and the whole ritual tradition says they do – there must be a real bond along which the doing travels. The objection is well-aimed at 3.3.4's thesis (the connection has no form) and at 3.3.29's (it is mere fitness, like eye-to-colour): fitness does not obviously *sanctify*. The next verse answers.

Verse 3.3.36

नावश्यमभिधेयेषु संस्कारः स तथाविधः ।
दृश्यते न च संबन्धस्तथाभूतो विवक्षितः ॥ 36 ॥

nāvaśyamabhidheyeṣu samṣkāraḥ sa tathāvidhaḥ |
dr̥śyate na ca sambandhastathābhūto vivakṣitaḥ || 36 ||

Such a refinement is not necessarily seen in the things expressed; nor is a connection of that sort what is intended.

The objection of 3.3.35 declined on both its premises. *Na avasyam abhidheyesu samskarah sa tathavidhah dr̥syate*: such a refinement is not necessarily seen in the things expressed — most words do not sanctify most objects; saying ‘pot’ does nothing to the pot. The ritual case is special, and a semantics is not built from special cases (the mantra’s efficacy being fixed by domain rather than aimed by minds, 2.406). *Na ca sambandhah tathabhūto vivakṣitaḥ*: nor is a connection of that sort what is intended — the *yogyata*-doctrine (3.3.29) never claimed the word-meaning fitness was a channel along which influence flows. Fitness is not a pipe. The eye is fit for colour and does nothing to colour. So the objection assumed a picture of the relation — a real bond transmitting effects — that 3.3.4-17 already dismantled, and it can be answered simply by declining the picture.

Verse 3.3.37

सति प्रत्ययहेतुत्वं संबन्ध उपपद्यते ।
शब्दस्यार्थे यतस्तत्र संबन्धोऽस्तीति गम्यते ॥ 37 ॥

sati pratyayahetutvam sambandha upapadyate |
śabdasyārthe yatastatra sambandho’stīti gamyate || 37 ||

It is fitting that being a cause of cognition is the connection; since the word is that with respect to the meaning, therefore a connection is understood to exist there.

The connection redefined functionally, and this is the *samuddesa*’s constructive answer. *Sati pratyaya-hetutvam sambandha upapadyate*: it is fitting that being a cause of cognition is the connection — not a bond between two items, but simply this: the word occasions the meaning-cognition. *Sabdasya arthe yata tatra sambandho ’sti iti gamyate*: since the word is that (a cause of cognition) with respect to the meaning, therefore a connection is understood to exist there. Mark the order: we do not find a connection and then explain the cognition; we find the cognition and call that a connection. *Sambandho ’sti iti gamyate* — it is understood to exist: the relation’s whole existence is our inference from its effect (2.46’s *karya-anumeyah*, now not as a complaint but as the definition). So the word-meaning connection is nothing over and above the fact that words wake meanings — which is exactly what *yogyata* says (3.3.29: fitness, primitive, not further analysable) and exactly what 3.3.4 said cannot be named.

Verse 3.3.38

नित्येऽनित्येऽपि वाच्येऽर्थे पुरुषेण कथंचन ।
संबन्धोऽकृतसंबन्धैः शब्दैः कर्तुं न शक्यते ॥ 38 ॥

*nitye'nitye'pi vācye'rthe puruṣeṇa kathamcana |
saṃbandho'kṛtasambandhaiḥ śabdaiḥ kartum.na śakyate || 38 ||*

Whether the expressible object be eternal or non-eternal, a connection cannot in any way be made by a person, by means of words that have no made connection.

The conventionalist refuted by a regress. Suppose a person could *make* the word-meaning connection — establish by fiat that 'gauh' shall mean cow (2.118's samaya-doctrine: convention without tradition). With what would he do it? Akṛta-sambandhaiḥ śabdaiḥ — *by means of words that have no made connection*: to institute a convention one must say something, and the saying already requires words that mean — but on the hypothesis, no word means until instituted. Puruṣeṇa kathamcana sambandhah kartum na śakyate: a connection *cannot in any way be made by a person*. And the premise is granted in advance for both horns: nitye 'nitye 'pi vacye 'rthe — whether the object be *eternal or non-eternal*, the argument runs the same. The regress is the one every conventionalism faces: the first convention cannot be established, because establishing requires what it establishes. Hence anadi — beginningless (3.3.29): not because tradition says so, but because nothing else is coherent.

Verse 3.3.39

व्यपदेशे पदार्थानामन्या सत्तौपचारिकी ।
सर्वाविस्थासु सर्वेषामात्मरूपस्य दर्शिका ॥ 39 ॥

*vyapadeṣe padārthānāmanyā sattaupacārikī |
sarvāvasthāsu sarveṣāmātmārūpasya darśikā || 39 ||*

In the designation of word-meanings there is another, figurative existence, which exhibits the own-form of all of them, in all their states.

The samuddesa's great constructive posit, and it will occupy the rest of the movement. Vyapadese padarthanam — in the *designation* of word-meanings — *anya satta aupacariki*: there is *another* existence, *figurative* — upacara, the transferred or metaphorical use (2.253's gauna, 1.76's kala transferred to the word). Not the real existence things have, but a second, designation-relative one. Its office: sarva-avasthasu sarvesam atma-rupasya darsika — *exhibiting the own-form of all of them, in all their states*. Everything mentionable has it — the past, the future, the impossible, the hare's horn — because to be designated at all is to have this existence. This is what 3.3.33 was preparing (a domain where things exist enough to be operated on and not enough to feed anyone) and it is the samuddesa's solution to the problem of how language can speak of what is not: it can, because designation confers its own existence, and that existence is figurative through and through.

Verse 3.3.40-41

स्फटिकादि यथा द्रव्यं भिन्नरूपैरुपाश्रयैः ।
स्वशक्तियोगात् संबन्धं ताद्रूप्येणोपगच्छति ॥ 40 ॥
तद्वच्छब्दोऽपि सत्तायामस्यां पूर्वं व्यवस्थितः ।
धर्मैरुपैति संबन्धमविरोधिविरोधिभिः ॥ 41 ॥

sphaṭikādi yathā dravyam bhinnarūpairupāśrayaiḥ |
svaśaktiyogāt sambandham tādrūpyeṇopagacchati || 40 ||
tadvacchabdo'pi sattāyāmasyām pūrvam vyavasthitah |
dharmairupaiti sambandhamavirodhivirodhibhiḥ || 41 ||

(40) As a substance such as crystal, through supports of differing forms, comes by connection with that very form, from the operation of its own capacity — (41) so too the word, previously established in this existence, comes by connection with properties both non-conflicting and conflicting.

The crystal, and it is the perfect image for *aupacariki satta*. (40): *sphaṭikadi* — *crystal* — placed against supports of differing colours, takes their colour: *bhinna-rupaiḥ upasrayaiḥ tad-rupyena sambandham upagacchati*, it comes by connection *with that very form* — the crystal near a red flower is red, to every eye. And the mechanism: *sva-sakti-yogat* — from the operation of its *own capacity*: the crystal's transparency is what lets it take the colour; the redness is the flower's and the taking is the crystal's own power. (41) applies it: *tadvat sabdah api sattayam asyam purvam vyavasthitah* — so too the *word, previously established* in this existence (3.3.39's figurative one) — *dharmaiḥ upaiti sambandham avirodhi-virodhibhiḥ*: comes by connection with properties *non-conflicting* and *conflicting* alike. The word takes on the colour of whatever it is set against — including contradictory colours, since figurative existence has no consistency-requirement. A word can be red and blue at once, as a crystal cannot: which is why 'the hare's horn' is sayable.

Verse 3.3.42

एवं च प्रतिषेध्येषु प्रतिषेधप्रक्लृप्तये ।
आश्रितेषुपचारेण प्रतिषेधः प्रवर्तते ॥ 42 ॥

evam ca pratiṣedhyeṣu pratiṣedhapraklṛptaye |
āśriteṣupacāreṇa pratiṣedhaḥ pravartate || 42 ||

And thus, in the case of things to be negated — for the construing of the negation — the negation operates upon them when they have been resorted to by way of figurative existence.

The negation-problem solved, and this is what 3.3.39's posit was for. To say 'the hare's horn does not exist', one must first *have* the hare's horn: *pratiṣedhyesu asritesu upacarena* — the things to be negated having been *resorted to* by way of *figurative* existence — *pratiṣedha-praklṛptaye*, for the *construing* of the negation — *pratiṣedhaḥ pravartate*: the negation *operates*. The horn is granted *aupacariki satta* by being mentioned, and the negation then denies it real existence. Nothing is contradictory: what is negated (real existence) is not what was granted (figurative existence). This dissolves the dossier of 2.240-245 — where the negated sentence's meaning could be located nowhere, the cancelled deposit having no home — and it does so without the flash-doctrine having to carry

the whole load. The mentioned exists as mentioned; the negation reaches the other existence; and 'the hare's horn does not exist' is exactly as coherent as it feels.

Verse 3.3.43

आत्मलाभस्य जन्माख्या सत्ता लभ्यं च लभ्यते ।
यदि सज्जायते कस्मादथासज्जायते कथम् ॥ 43 ॥

*ātmalābhasya janmākhyā sattā labhyam.ca labhyate |
yadi sajjāyate kasmādathāsajjāyate katham || 43 ||*

Existence is the name for the birth of self-obtaining, and what is to be obtained is obtained. If it is born being existent — from what? And if being non-existent — how?

The classical dilemma of origination, and Bhartṛhari states it in its sharpest form. Atma-labhasya janma-akhya satta: *existence is the name for the birth of self-obtaining* — to be born is to obtain oneself; labhyam ca labhyate, and *what is to be obtained is obtained*. Then the dilemma: yadi sajjāyate kasmāt — if it is born *being existent, from what?* (What is already there needs no birth; the born would be born of itself.) Atha asaj jayate katham — and if *being non-existent, how?* (What is not there cannot do anything, including be born.) Sat or asat, and neither can be born. This is the argument the Samkhyas answered with satkaryavada (the effect pre-exists), the Vaiśeṣikas with asatkaryavada (it does not), and the Madhyamikas with the conclusion that nothing is born at all. Bhartṛhari's answer is coming, and it is none of these: birth is a figurative predication (3.3.45-46), and the dilemma is an artifact of taking it literally.

Verse 3.3.44

सतो हि गन्तुर्गमिनं सति गम्ये प्रवर्तते ।
गन्तृवच्चेन्न जन्मार्थो चेत्तद्वन्न जायते ॥ 44 ॥

*sato hi ganturgamanam.sati gamye pravartate |
gantrvaccenna janmārtho cettadvanna jāyate || 44 ||*

For the going of a goer who exists proceeds when the destination exists; if it be like the goer — then birth is not its meaning; if it be like that, it is not born.

The dilemma of 3.3.43 pressed through an analogy. Satah hi gantuh gamanam sati gamye pravartate: the *going of a goer who exists proceeds when the destination exists* — ordinary actions require their agents and objects to be there already; going presupposes a goer and a place to go. Now apply this to birth: gantrvac cet na janmartho — if (the born thing) be *like the goer* (existing already, as the goer must), then *birth is not its meaning*: an already-existing thing is not born. Cet tadvat na jāyate — if it be like that, it is *not born*. Birth is unique among actions in that its agent cannot pre-exist it — which is precisely why the sat/asat dilemma bites here and nowhere else. Going has a goer; birth cannot have a bearer in the same way. So either birth is not an action at all, or its agent-relation is not what the grammar's karaka-system supposes. The next verses take the second option.

Verse 3.3.45-46

उपचर्य तु कतरिमभिधानप्रवृत्तये ।
 पुनश्च कर्मभावेन तां क्रियां च तदाश्रयाम् ॥ 45 ॥
 अथोपचारसत्तैवं विधेयास्तत्र लादयः ।
 जन्मना तु विरोधित्वात् मुख्या सत्ता न विद्यते ॥ 46 ॥

upacarya tu kartāramabhidhānapravṛttaye |
punaśca karmabhāvena tāṁ kriyāṁ ca tadāśrayām || 45 ||
athopacārasattaivam vidheyāstatra lādayaḥ |
janmanā tu virodhitvāt mukhyā sattā na vidyate || 46 ||

(45) But having figuratively imposed an agent, for the sake of the operation of expression, and again, by way of objecthood, that action and what rests on it – (46) then, existence being figurative, the *la*-affixes and the rest are to be prescribed there; but because of conflict with birth, the primary existence is not found.

The solution, and it is grammatical through and through. (45): *upacarya tu kartaram* – having figuratively imposed an agent: the unborn thing is made an agent by *upacara*, not found to be one – *abhidhana-pravṛttaye*, for the sake of the operation of expression: the imposition is done so that something can be said. And likewise the action and its substrate, imposed *karma-bhavana*, by way of objecthood. (46): *atha upacara-satta evam vidheyah tatra ladayah* – existence being figurative, the *la*-affixes (Panini's tense-and-mood affixes: *lat*, *lit*, *lut* – the verbal endings) are to be prescribed there: the grammar's whole verbal apparatus applies to a figuratively-imposed agent. And the honest admission: *janmana tu virodhitvat mukhya satta na vidyate* – because of conflict with birth, the primary existence is not found. The *sat/asat* dilemma (3.3.43) is unanswerable for real existence and does not arise for figurative: 'it is born' predicates *aupacariki satta* of what has no *mukhya satta*, and the grammar runs on the figure. Language can say what metaphysics cannot think.

Verse 3.3.47

आत्मानमात्मना बिभ्रदस्तीति व्यपदिश्यते ।
 अन्तर्भावाच्च तेनासौ कर्मणा न सकर्मकः ॥ 47 ॥

ātmānamātmanā bibhradastīti vyapadiśyate |
antarbhāvācca tenāsau karmaṇā na sakarmakaḥ || 47 ||

Bearing itself by itself, it is designated as 'it exists'; and because of that inclusion, it is not transitive by that object.

The verb 'to be' analysed, and the analysis is exquisite. *Atmanam atmana bibhrad asti iti vyapadiśyate*: bearing itself by itself, it is designated as 'it exists' – the existence-verb's agent and its object are the same thing: what exists bears itself, is its own burden. And the grammatical consequence: *antarbhavat ca tena asau karmaṇā na sakarmakah* – because of that inclusion, it is not transitive by that object: the object is inside the verb, absorbed, so 'asti' takes no accusative. The verse explains a fact of Sanskrit grammar (the verb 'as' is intransitive) by a metaphysical structure (existence is self-bearing), and the explanation is exactly what 3.3.45-46 needed: if existing is self-bearing, then a thing must be there to bear itself, and the unborn cannot – which is why birth conflicts with primary existence

(3.3.46) and requires the figure. Antarbhava, inclusion, is also 3.3.26's principle in another key: the expressing is not among the expressed, and the self-bearing is not among what is borne.

Verse 3.3.48

प्राक् च सत्ताभिसंबन्धान्मुख्या सत्ता कथं भवेत् ।
असंश्च नास्तेः कर्ता स्यादुपचारस्तु पूर्ववत् ॥ 48 ॥

*prāk ca sattābhisambhādhānmukhyā sattā katham bhavet |
asamśca nāsteḥ kartā syādupacārastu pūrvavat || 48 ||*

And prior to connection with existence, how could primary existence be? And a non-existent thing would be the agent of 'is not' — but the figure is as before.

The dilemma extended to non-existence, symmetrically. *Prak ca satta-abhisambandhat mukhya satta katham bhavet*: prior to connection with existence, how could primary existence be? — the thing must exist to be connected with existence, and connecting with existence is what existing is: the circle is unbreakable, and 3.3.43's dilemma reappears as a regress. Then the mirror-case: *asan ca nasteh karta syat* — a non-existent thing would be the agent of 'is not': 'the hare's horn does not exist' makes the horn the subject of a verb, so the non-existent is doing something (namely, not-existing), which is absurd on any literal reading. *Upacaras tu purvavat*: but the figure is as before — 3.3.45-46's solution covers this case too. The non-existent is figuratively imposed as agent so that the negation can be stated (3.3.42's doctrine). Both existence and non-existence, when predicated, are predicated figuratively — and the grammar, which cheerfully conjugates both, was never doing metaphysics.

Verse 3.3.49-51

तस्मादिभिन्नेषु धर्मेषु विरोधिष्वविरोधिनीम् ।
विरोधिख्यापनायैव शब्दैस्तैरुपाश्रिताम् ॥ 49 ॥
अभिन्नकालामर्थेषु भिन्नकालेष्ववस्थिताम् ।
प्रवृत्तिहेतुं सर्वेषां शब्दानामौपचारिकीम् ॥ 50 ॥
एतां सत्तां पदार्थो हि न कश्चिदतिवर्तते ।
सा च सम्प्रतिसत्तायाः पृथग्भाष्ये निदर्शिता ॥ 51 ॥

*tasmādbhinneṣu dharmeṣu virodhiṣvavirodhinīm |
virodhikhyāpanāyaiva śabdaistairupāśritām || 49 ||
abhinnakālāmartheṣu bhinnakāleṣvavasthitām |
pravṛtтиhetum sarveṣāṃ śabdānāmaupacārikīm || 50 ||
etām sattām padārtho hi na kaścīdativartate |
sā ca sampratīsatāyāḥ pṛthagbhāṣye nidarśitā || 51 ||*

(49) Therefore, among differing and conflicting properties, that non-conflicting one, resorted to by those words for the very purpose of making the conflicting known; (50) whose time is undivided, though standing among objects that are in divided times; the cause of the operation of all words, and figurative — (51) this Existence no word-meaning whatever transgresses; and it has been separately exhibited in the Bhasya, apart from present existence.

The samuddesa's culminating period, three verses to a single sentence, and its last line is a citation. The subject is aupacariki satta and it is characterized by four things. (49): among properties that are bhinnesu virodhisu – *differing and conflicting* – it is avirodhinim, *non-conflicting*: figurative existence quarrels with nothing, since it is what lets contradictories be said at all (3.3.41's crystal taking conflicting colours); and it is resorted to virodhi-khyapanaya eva – *for the very purpose of making the conflicting known*: we grant the hare's horn existence precisely in order to deny it (3.3.42). (50): abhinna-kalam arthesu bhinna-kalesu avasthitam – *its time is undivided* though it stands among objects in *divided times*: it is what lets us speak of the past and the future in one breath, being itself timeless. Pravrtti-hetum sarvesam sabdanam aupacarikim: the *cause of the operation of all words*, and *figurative*. (51) delivers the main clause: etam sattam padartho hi na kascid ativartate – *this Existence no word-meaning whatever transgresses*. And then, remarkably: sa ca samprati-sattayah prthag bhasye nidarsita – *and it has been separately exhibited in the Bhasya*, apart from present existence. Patanjali distinguished them; Bhartrhari is drawing out what the Mahabhasya already had. The samuddesa that began by finding relation unnameable ends by naming what all words rest on – and it is not a relation but a figure.

[Contested: the Bhasya-reference of 51 is to Patanjali's discussions distinguishing satta from samprati-satta (existence as such from present existence); the precise passage is disputed among commentators and we leave it unidentified]

Verse 3.3.52

प्रदेशस्यैकदेशं वा परतो वा निरूपणम् ।
विपर्ययमभावं वा व्यवहारोऽनुवर्तते ॥ 52 ॥

pradeśasyaikadeśam.vā parato vā nirūpanam |
viparyayamabhāvam.vā vyavahāro'nuvartate || 52 ||

Practice follows along upon the determining of a location's single portion, or upon what is beyond it – or upon inversion, or upon absence.

The range of what practice can rest on, and its breadth is the point. Vyavaharo 'nuvartate: practice follows along – upon pradesasya ekadesam, the *single portion* of a location (a part, taken for the whole); or paratah, upon *what is beyond it* (something else entirely, standing in for it); or viparyayam, upon *inversion* (the thing taken as its opposite); or abhavam, upon *absence* (nothing there at all). Four bases, and only the first is even partly the thing. So transaction proceeds indifferently on partial grasps, substitutes, inversions and voids – which is to say that vyavahara does not require its objects to be as it takes them (2.296's loka-prasiddhi; 3.1.95's practice not constructed from what stands at the end of analysis). The verse opens the samuddesa's last movement by establishing that the relation between practice and reality is loose enough that no metaphysical result will disturb the market.

Verse 3.3.53

यथेन्द्रियस्य वैगुण्यात् सत्ताध्यारोपवानिव ।
जायते प्रत्ययोऽर्थेभ्यस्तथैवोद्देशजा मतिः ॥ 53 ॥

yathendriyasya vaiguṇyāt sattādhyaṛopavāniva |
jāyate pratyayo'rthebhyastathaivoddeśajā matiḥ || 53 ||

As, from a defect of the sense-faculty, a cognition arises from objects as though it had existence superimposed on it — just so is the cognition born of designation.

The superimposition-doctrine (3.1.6's adhyaropa) applied to existence itself. Yatha indriyasya vaigunyat: as, from a *defect of the sense-faculty* — the jaundiced eye, the fevered tongue (2.105's variation, receiver-side) — sattadhyaropavan iva jayate pratyayah arthebhyah: a cognition arises from objects *as though it had existence superimposed*: the diseased eye's yellow presents as *being there*, as a property of the conch. Tatha eva uddesa-ja matiḥ: *just so is the cognition born of designation*. To designate is to superimpose existence — the mere act of mentioning confers being (3.3.39's aupacariki satta, exhibiting the own-form of everything in all its states). And the analogy's edge is that the sense-defect is a *defect*: designation confers existence the way a diseased eye confers yellow. Not falsely, exactly — the yellow is really seen, the horn is really mentioned — but not from the object's side.

Verse 3.3.54

आकृत्स्नविषयाभासं शब्दः प्रत्ययमाश्रितः ।
अर्थमाहान्यरूपेण स्वरूपेणानिरूपितम् ॥ 54 ॥

ākṛtsnaviṣayābhāsam śabdaḥ pratyayamāśritaḥ |
arthamāhānyarūpeṇa svarūpeṇānirūpitam || 54 ||

The word, resting on a cognition whose appearing does not encompass the whole object, states the object by way of another form — its own form being undetermined.

What a word actually does, stated with three careful qualifications. Sabdah pratyayam asritah: the *word rests on a cognition* — not on the object; the route runs through the mind (2.132's buddhi-visaya). Akrtsna-visaya-abhasam: whose *appearing does not encompass the whole* object — the cognition it rests on is partial, never the thing entire (2.161's durlabham sarva-avayava-darsanam: seeing all the parts is beyond anyone). Artham aha anya-rupena: it *states the object by way of another form* — through an adjunct that is not the object's own (3.2.2's asatya-upadhi). Sva-rupena anirupitam: its *own form being undetermined* — the object as it is in itself is never fixed by the word. Four clauses, and each subtracts something: the word reaches a partial cognition, of another form, leaving the thing's own form untouched. This is the samuddesa's most exact statement of how much distance lies between a word and its object, and it explains why the relation could not be found (3.3.4): there is no place along that route where two things are joined.

Verse 3.3.55

रूपणव्यपदेशाभ्यां लौकिके वर्त्मानि स्थितौ ।
ज्ञानं प्रत्यमिलापं च सदृशौ बालपिण्डितौ ॥ 55 ॥

rūpaṇavyapadeśābhyām laukike vartmani sthitau |
jñānam.pratyamilāpam.ca sadṛśau bālapīṇḍitau || 55 ||

In respect of determining and designating, both standing on the worldly path — the child and the learned man are alike, as regards cognition and expression.

A great leveling, and it is delivered without irony. Rupana-vyapadesabhyam laukike vartmani sthitau: in respect of *determining* and *designating*, both standing on the *worldly path* — jnanam praty abhilapam ca sadrsau bala-panditau: as regards *cognition* and *expression*, the *child* and the *learned man* are *alike*. The pandit's cognition is as partial as the infant's (3.3.54), his designations as figurative (3.3.53), his objects as untouched in their own form. Learning buys precision within vyavahara and no purchase outside it — the scholar and the child stand on the same road, differing in how far along. This is 2.485's counsel from the other side (knowledge graces those who wait upon their elders — but what it graces them with is not an exit), and 3.1.95's finding (practice is not constructed from what stands at the end). The verse is the samuddesa's warning against mistaking erudition for access, and its placement — just before the movement on being and non-being — is not accidental.

Verse 3.3.56

सर्वार्थरूपता शुद्धिर्जनस्य निरुपाश्रया ।
ततोऽप्यस्य परां शुद्धिमेके प्राहुररूपिकाम् ॥ 56 ॥

sarvārtharūpatā śuddhirjñānasya nirupāśrayā |
tato'pyasya parām.śuddhimeke prāhurarūpikām || 56 ||

The purity of cognition is its having all objects for its form, without any support; some declare a purity higher even than that of it — one that is formless.

Two grades of cognitive purity, and the second is the limit. Sarvartha-rupata suddhih jnanasya nirupasraya: the *purity* of cognition is its having *all objects for its form*, *without any support* — a cognition that is not colored by any particular object because it holds them all (the crystal of 3.3.40 with every flower at once; 2.250's sarvarthya at the cognitive level). That is one purity: omniform, unsupported. Tato 'pi asya param suddhim eke prahuh arupikam: *some* declare a purity *higher even than that* — one that is *formless*: not all-formed but no-formed, awareness with no object-shape at all (3.1.106's cognition whose own form is never ascertained apart from objects; 2.133's samvin-matram, mere awareness). The pair marks the ascent's last two rungs, and the verse reports rather than asserts the higher — eke prahuh, 'some declare'. Bhartṛhari's own system needs the first (a plenitude carved by nimittas) and gestures at the second.

Verse 3.3.57

अपल्लवो हि ज्ञानस्य बाह्याकारानुपातिता ।
कालुष्यमिव तत्तस्य संसर्गे व्यतिभेदजम् ॥ 57 ॥

*apaplavo hi jñānasya bāhyākārānupātītā |
kāluṣyamiva tattasya saṁsarge vyatibhedajam || 57 ||*

For the disturbance of cognition is its following upon external configurations; that is, as it were, its turbidity, born of mutual interpenetration in the commingling.

The account of why the lower purity is impure. Upaplavo hi jnanasya bahya-akara-anupatita: the disturbance of cognition is its following upon external configurations – awareness taking the shape of what it knows (3.2.9's tad-atma iva: presenting as though it were the object while being utterly not it). Kalusyam iva tat tasya: that is, as it were, its turbidity – kalusya, muddiness, the clouding of clear water by what is stirred into it. Samsarge vyatibhedajam: born of mutual interpenetration in the commingling – vyatibheda, reciprocal cutting-into: knower and known each entering the other, neither left clean. The upaplava of 1.86 (speech's constant disturbance, krama-upasrsta) is here given its cognitive twin, and the diagnosis is the same: commingling is what produces the appearance, and the appearance is what we have (3.1.20's prapanca arising only among things commingled).

Verse 3.3.58

यथा च ज्ञानमालेखादशुद्धौ व्यवतिष्ठते ।
तथोपाश्रयवानर्थः स्वरूपाद्विप्रकृष्यते ॥ 58 ॥

*yathā ca jñānamālekhādaśuddhau vyavatiṣṭhate |
tathopāśrayavānarthah svarūpādviprakṛṣyate || 58 ||*

And as cognition stands in impurity from the painting-on – so the object, having a support, is drawn away from its own form.

The symmetry completed, and both sides suffer alike. Yatha ca jnanam alekha adasuddhau vyavatiṣṭhate: as cognition stands in impurity from the painting-on – alekha, the smearing or inscribing: the object's form painted onto awareness (3.3.57's turbidity). Tatha upasrayavan arthah sva-rupad viprakṛṣyate: so the object, having a support, is drawn away from its own form: the thing, standing on its supports and adjuncts, is dragged from what it is (3.3.40's crystal, whose redness is not its own). So the commingling damages both relata: cognition is muddied by taking the object's shape, and the object is displaced by wearing its adjuncts. Neither knower nor known survives the encounter as itself – which is why no relation between them can be found (3.3.4), there being, strictly, no two things standing there to be related.

Verse 3.3.59

एवमर्थस्य शब्दस्य ज्ञानस्य च विपर्यये ।
भावाभाववभेदेन व्यवहारानुपातिनौ ॥ 59 ॥

evamarthasya śabdasya jñānasya ca viparyaye |
bhāvābhāvavabhedena vyavahārānupātinau || 59 ||

Thus, in the inversion of object, word and cognition, the two — by way of the difference of being and non-being — follow along upon practice.

The three relata of 3.3.1 gathered, and their fate is one. Evam arthasya śabdasya jñānasya ca viparyaye: thus, in the *inversion* of object, word, and cognition — all three displaced from their own forms (3.3.57-58) — bhava-abhava-vibhedena vyavahara-anupatinau: the two — being and non-being — *follow along upon practice*, by way of their difference. Mark the direction: bhava and abhava do not ground practice; they *follow* it (anupatin, the same verb 3.3.52 used for practice following its four bases). Existence and non-existence are not the fixed poles against which our transactions are measured; they are distinctions that arise within transacting. The verse opens the movement that 3.3.60-71 will complete: an examination of being and non-being that treats them as vyavahara-relative from the start.

Verse 3.3.60

यथा भावमुपाश्रित्य तदभावोऽनुगम्यते ।
तथाभावमुपाश्रित्य तदभावोऽप्यनुगम्यते ॥ 60 ॥

yathā bhāvamupāśritya tadabhāvo’nugamyate |
tathābhāvamupāśritya tadbhāvo’pyanugamyate || 60 ||

As, resting upon being, the absence of it is followed — so, resting upon absence, the being of it too is followed.

The mutual dependence of the two, stated with perfect symmetry. Yatha bhavam upasritya tad-abhavo ’nugamyate: as, *resting upon being*, the *absence* of it is followed — one grasps an absence only against a presence: the absent pot is understood by way of the pot (3.3.42’s figurative existence granted so the negation can operate). And the converse, which is the verse’s contribution: tatha abhavam upasritya tad-bhavo ’pi anugamyate — so, *resting upon absence*, the *being* of it too is followed: presence is grasped against absence — the pot is *here* only against its being able to be not-here. Neither is prior; each is understood through the other. So bhava and abhava are a pair, and pairs are relational, and relations are what this samuddesa has spent seventy verses showing to be unfindable and unnameable. The consequence is drawn immediately.

Verse 3.3.61

नाभावो जायते भावो नैति भावोऽनुपाख्यताम् ।
एकस्मादात्मनोऽनन्यौ भावाभावौ विकल्पितौ ॥ 61 ॥

*nābhāvo jāyate bhāvo naiti bhāvo'nupākhyatām |
ekasmādātmano'nanyau bhāvābhāvau vikalpitaū || 61 ||*

Non-being is not born as being; being does not come to indescribability. The two, being and non-being, are constructions, not other than one self.

The dilemma of origination (3.3.43) resolved by dissolving its terms. Na abhavo jayate bhavo: *non-being is not born as being* — nothing crosses from nothing to something; na eti bhavo 'nupakhyatam — *being does not come to indescribability*: nothing crosses back. There is no traffic between the two, which is exactly why 3.3.43's dilemma had no answer: it presupposed a crossing. And the resolution: ekasmat atmano ananyau bhava-abhavau vikalpitaū — the two, being and non-being, are *constructions, not other than one self*. Vikalpita: constructed (3.2.8's tattvam eva avikalpitam taking on the form of construction). They are not two conditions between which things move; they are two carvings of one Being (3.1.33's satta differentiated by its relata; 3.1.38's Being as its own non-existence). Nothing is born because there is nowhere to be born from — and everything is said to be born, figuratively (3.3.45-46).

Verse 3.3.62

अभावस्यानुपाख्यत्वात् कारणं न प्रसाधकम् ।
सोपाख्यस्य तु भावस्य कारणं किं करिष्यति ॥ 62 ॥

*abhāvasyānupākhyatvāt kāraṇam na prasādhakam |
sopākhyasya tu bhāvasya kāraṇam kim kariṣyati || 62 ||*

Since non-being is indescribable, a cause is not what establishes it; and of being, which is describable, what will a cause do?

Causation dissolved on both horns, and briskly. Abhavya anupakhyatvat karanam na prasadhakam: since *non-being is indescribable*, a *cause is not what establishes it* — one cannot produce what cannot even be characterized; there is nothing there for a cause to make. Sopakhyasya tu bhavya karanam kim karisyati: and of *being*, which is describable — that is, which is already there to be described — *what will a cause do?* What exists needs no producing. So causes have no work: not on non-being (nothing to work on), not on being (nothing left to do). This is 3.3.43's sat/asat dilemma turned from origination to causation generally, and its conclusion is the same: the categories will not sustain the operation we insist on performing with them. And the resolution is the same too — 3.3.45-46's figure: agents, actions and causes are upacara, imposed so that something can be said.

Verse 3.3.63

तस्मात्सर्वमभावो वा भावो वा सर्वमिष्यते ।
न त्ववस्थान्तरं किञ्चिदेकस्मात् सत्यतः स्थितम् ॥ 63 ॥

tasmātsarvamabhāvo vā bhāvo vā sarvamiṣyate |
na tvavasthāntaram kimcid ekasmāt satyataḥ sthitam || 63 ||

Therefore everything is held to be either non-being, or else everything is being; but no other state whatever stands, from the one reality.

The conclusion, and its form is the disjunction that will not resolve. *Tasmat sarvam abhavo va bhavo va sarvam isyate: therefore everything is held to be non-being, or everything is being.* Not: some things are and some are not. Either the whole is one or the whole is the other, and no fact chooses – because the two are one Being’s carvings (3.3.61) and the carving is ours. *Na tu avasthantaram kimcid ekasmāt satyataḥ sthitam: but no other state whatever stands, from the one reality* – the one real admits no third condition, and no intermediate. So we may say ‘all is being’ (3.1.33’s *satta*, in which all words stand established) or ‘all is non-being’ (the total negation), and these are the same claim differently carved. This is 3.1.13’s finding again – on the *jati*-option everything is a universal, on the *dravya*-option everything is a substance, and both are unrestricted, hence neither is a discovery – now at the highest possible generality.

Verse 3.3.64

तस्मान्नाभावमिच्छन्ति ये लोके भाववादिनः ।
अभाववादिनो वापि न भावं तत्त्वलक्षणम् ॥ 64 ॥

tasmānnābhāvamicchanti ye loke bhāvavādināḥ |
abhāvavādino vāpi na bhāvaṁ tattvalakṣaṇam || 64 ||

Therefore those in the world who are proponents of being do not admit non-being; nor do the proponents of non-being admit being as the mark of reality.

The two schools placed, and the placing is deflationary. *Tasmat na abhavam icchanti ye loke bhavavadinah: therefore those who are proponents of being do not admit non-being* – the realist, having chosen the first disjunct of 3.3.63, cannot find room for real absences (and *Vaisesika*’s struggles with *abhava* as a category are the tradition’s evidence). *Abhava-vadinah va api na bhavam tattva-laksanam: nor do the proponents of non-being admit being as the mark of reality* – the *sunyavadin*, having chosen the second, cannot admit a real being. Each school is consistent, each is total, and neither can accommodate the other’s datum – which is what 3.3.63 predicted: the disjuncts are exhaustive and exclusive and undecidable, being two carvings of one thing. The verse does not adjudicate between the great schools. It explains why they cannot adjudicate between themselves.

Verse 3.3.65

अद्वये चैव सर्वस्मिन् स्वभावादेकलक्षणे ।
परिकल्पेषु मर्यादा विचित्रैवोपलभ्यते ॥ 65 ॥

advaye caiva sarvasmin svabhāvādekakalakṣaṇe |
parikalpeṣu maryādā vicitraivopalabhyate || 65 ||

And in everything, which is non-dual and of a single character by its own nature, a boundary of quite various kinds is found among the constructions.

The one and the many, stated at the movement's height. Advaye ca eva sarvasmin svabhavad ekalakṣaṇe: in *everything*, which is *non-dual* and of a *single character* by its *own nature* — advaya: the word is the Vedantins' and the Buddhists' alike, and Bhartṛhari uses it of what 3.1.33 called satta and 3.2.11 called sabda-tattva. Parikalpeṣu maryāda vicitra eva upalabhyate: among the *constructions*, a *boundary of quite various kinds is found*. Maryāda — boundary, limit, the line that divides: and it is found *among the constructions*, not in what they construct upon. So the world's variegation is a variegation of parikalpa, and the one it is laid on has a single character. The verse is the samuddesa's most compact statement of the two-truths architecture that 3.2.12-13's paired tetralemmas set out: non-dual in its own nature, endlessly bounded in our constructions, and the boundaries are real as constructions (vicitra eva upalabhyate — they *are found*, and variously).

Verse 3.3.66

चतस्रो हि यथावस्था निरुपाख्ये प्रकल्पिताः ।
एवं द्वैविध्यमप्येतद् भावाभावव्यपाश्रयम् ॥ 66 ॥

catasro hi yathāvasthā nirupākhye prakalpitāḥ |
evam dvaividhyamapyetad bhāvābhāvavyapāśrayam || 66 ||

For just as four states are constructed with respect to the indescribable — so too is this two-foldness, which rests on being and non-being.

The tetralemma named as a construction, and named as one construction among possible others. Catasro hi yatha avastha nirupakhye prakalpitaḥ: for just as *four states* are *constructed* with respect to the *indescribable* — the catuskoti's four corners (is, is not, both, neither), laid on what admits no characterization (3.2.12's eight negations). Evam dvaividhyam api etad bhava-abhava-vyapasrayam: so too is this *two-foldness*, resting on *being and non-being*. Both the fourfold and the twofold are prakalpita — constructed. So Bhartṛhari is not offering the tetralemma as the truth about the indescribable; he is classing it with the dichotomy as one more grid laid on what takes no grids. The verse is remarkable for its detachment: it stands outside the four-cornered method and describes it as a construction, which is a place very few users of that method have managed to stand.

Verse 3.3.67-71

अविरोधी विरोधी वा सन्नसन् वापि युक्तिः ।
 क्रमवानक्रमो वापि नाभाव उपपद्यते ॥ 67 ॥
 अविरोधी विरोधी वा सन्नसन्नपि तत्त्वतः ।
 क्रमवानक्रमो वापि तेन भावो न विद्यते ॥ 68 ॥
 अभावे त्रिषु कालेषु न भेदस्यास्ति सम्भवः ।
 तस्मिन्नसति भावेऽपि त्रैकाल्यं नावतिष्ठते ॥ 69 ॥
 आत्मतत्त्वपरित्यागः परतो नोपपद्यते ।
 आत्मतत्त्वन्तु परतः स्वतो वा नोपकल्पते ॥ 70 ॥
 तत्त्वे विरोधे नानात्व उपकारो न कश्चन ।
 तत्त्वान्यत्वपरित्यागे व्यवहारो निवर्तते ॥ 71 ॥

avirodhī virodhī vā sannasan vāpi yuktitaḥ |
kramavānakramo vāpi nābhāva upapadyate || 67 ||
avirodhī virodhī vā sannasannapi tattvataḥ |
kramavānakramo vāpi tena bhāvo na vidyate || 68 ||
abhāve triṣu kāleṣu na bhedasyāsti sambhavaḥ |
tasminnasati bhāve'pi traikālyam nāvatiṣṭhate || 69 ||
ātmatattvaparityāgaḥ parato nopapadyate |
ātmatattvantu parataḥ svato vā nopakalpate || 70 ||
tattve virodhe nānātva upakāro na kaścana |
tattvānyatvaparityāge vyavahāro nivartate || 71 ||

(67) Non-conflicting or conflicting, existent or non-existent, sequential or non-sequential — by reasoning, non-being is not established. (68) Non-conflicting or conflicting, existent or non-existent in reality, sequential or non-sequential — by that same reasoning, being is not found. (69) In non-being there is no possibility of difference in the three times; and that being absent, the three-timedness of being too does not stand. (70) The abandonment of the self-reality does not hold from another; and the self-reality does not come about from another, nor from itself. (71) When reality, conflict, and manifoldness are the case, there is no assistance whatever; and when reality and otherness are both abandoned, practice withdraws.

The samuddesa's philosophical summit: a five-verse period applying one argument-schema symmetrically to both members of the pair. (67) takes *non-being* through six alternatives — *avirodhi virodhi va* (non-conflicting or conflicting), *san asan va* (existent or non-existent), *kramavan akramo va* (sequential or non-sequential) — and concludes: *na abhava upapadyate, non-being is not established*. (68) takes *being* through the identical six and concludes: *tena bhavo na vidyate, by that same reasoning, being is not found*. The symmetry is the argument: whatever refutes one refutes the other, because they are one thing's carvings (3.3.61). (69) then removes time from both: *abhava trisu kalesu na bhedasya asti sambhavaḥ* — in *non-being* there is no possibility of *difference in the three times* (a nothing has no past and future); *tasmin asati bhava 'pi traikalyam na avatisthate* — and *that being absent, the three-timedness of being too does not stand*: being's temporality was constituted against non-being's (3.3.60's mutual dependence), and falls with it. (70) closes the escape-routes for self-reality: *atma-tattva-parityagah parataḥ na upapadyate* — the *abandonment* of self-reality does not hold *from another*; *atma-tattvam tu parataḥ svato va na upakalpate* — and self-reality does not come about *from another, nor from itself*. Nothing loses its nature by another's doing, and nothing acquires

one from itself or another. And (71) the honest cost: *tattve virodhe nanatva upakaro na kascana* — when *reality, conflict, and manifoldness* are the case, there is *no assistance whatever* (nothing can help anything: the relation that would carry assistance has been shown unfindable); *tattva-anyatva-parityage vyavaharo nivartate* — and when *reality and otherness are both abandoned, practice withdraws*. That last line is the *samuddesa's* integrity. The analysis, pressed to its end, does not deliver a better metaphysics; it delivers the withdrawal of *vyavahara* — and *vyavahara* is where words live (2.297's *sabdah loka-nibandhanah*). The examination has reasoned its way to the place where reasoning stops transacting, and it says so.

[Contested: the six alternatives of 67-68 are our resolution of three pairs; some readers group them differently. More substantively, whether 71's conclusion is a *reductio* of the analysis (therefore do not analyse thus) or its honest terminus (therefore practice and reality do not meet) is the deepest question of the passage, and 3.3.72ff. will bear on it]

Verse 3.3.72

यत्र द्रष्टा च दृश्यं च दर्शनं वा विकल्पितम् ।
तस्यैवार्थस्य सत्यत्वं श्रितास्त्रय्यन्तवेदिनः ॥ 72 ॥

yatra draṣṭā ca drśyam ca darśanam vā vikalpitam |
tasyaivārthasya satyatvam śritāstrayyantavedināḥ || 72 ||

Where seer, seen, and seeing alike are constructed — the knowers of the Vedānta hold that the reality belongs to that object alone.

The turn back from the abyss of 3.3.71, and it names its authority. *Yatra drasta ca drsyam ca darsanam va vikalpitam*: where *seer, seen, and seeing* alike are constructed — the tripuṭi of 1.4 and 3.2.14, and all three of it are *vikalpita*, laid on. *Tasya eva arthasya satyatvam sritah trayy-anta-vedinah*: the knowers of the *trayy-anta* — the *end of the three*, which is the Vedānta — hold the *reality* to belong to *that object alone*: to that one, in which knower, known, and knowing are constructions. So what survives the tetralemmas (3.3.67-71) is not nothing but the one on which the triad is constructed — 3.2.11's *sabda-tattva*, 3.1.33's *satta*. And Bhārtrhari does not claim this as his discovery: he cites the Vedānta-knowers, as 3.3.11 cited the earlier ones (*purvebhya agamah*) and 2.485 said knowledge does not grace those who have not waited upon their elders. The *samuddesa's* most vertiginous stretch ends by naming a lineage.

[Contested: *trayy-anta-vedinah* ('knowers of the end of the three') is standardly the Vedāntins; whether Bhārtrhari means a specific school or the upanishadic tradition broadly cannot be settled from the *karika*]

Verse 3.3.73

सामान्यं वा विशेषं वा यस्मादाहुर्विशेषवत् ।
शब्दास्तस्मादसत्येषु भेदेष्वेव व्यवस्थिताः ॥ 73 ॥

sāmānyam vā viśeṣam vā yasmādāhurviśeṣavat |
śabdāstasmādasatyēṣu bheḍeṣveva vyavasthitāḥ || 73 ||

Since words state either a general or a particular, as though it possessed particulars — therefore they stand established only among unreal differences.

The consequence of 3.3.72 for language, and it is the samuddesa's most economical statement of the semantic predicament. *Samanyam va visesam va yasmad ahuh visesavat*: since words state either a *general* or a *particular*, as though it possessed particulars — every word delivers its object under a determination, carved (3.1.12's particulars entering only in universal dress). *Tasmat asatyesu bhedesu eva sabdah vyavasthitah*: *therefore* words stand established *only among unreal differences*. Not: words sometimes err. Words *live* among *asatya* *bhedas* — the unreal differences of 3.3.65's *parikalpa*, 3.1.32's *asatya vyaktayah* — and have nowhere else to live, since the real admits no differences to stand among (3.3.65's *advaya*, of single character). This is not a defect of language but its element: speech is the medium of the constructed, and asking it to reach the unconstructed is asking a fish to walk.

Verse 3.3.74

न ह्यभावस्य सद्भावे भावस्यात्मा प्रहीयते ।
न चाभावस्य नास्तित्वे भावस्यात्मा प्रसूयते ॥ 74 ॥

na hyabhāvasya sadbhāve bhāvasyātmā prahīyate |
na cābhāvasya nāstitve bhāvasyātmā prasūyate || 74 ||

For when non-being exists, the self of being is not abandoned; nor, when non-being does not exist, is the self of being produced.

The independence of the two, against 3.3.60's apparent mutual dependence. *Na hi abhavya sadbhāve bhavya atma prahiyate*: for when *non-being* exists — granting absences their reality — the *self of being* is *not abandoned*: being does not lose anything by absences being real. *Na ca abhavya nāstitve bhavya atma prasuyate*: nor, when non-being *does not exist*, is the self of being *produced*: being gains nothing by absences being unreal. So the two do not trade: neither's reality costs or buys the other's. The verse guards against a misreading of 3.3.60–61 (the two as constructions of one self, mutually understood): mutual *understanding* is not mutual *constitution*. Being's nature is untouched by whatever we settle about absence — which is why the schools of 3.3.64 can be so total and so stable: each ignores the other's category without incoherence, because the categories do not in fact depend on each other for their natures.

Verse 3.3.75

न शाबलेयस्यास्तित्वं बाहुलेयस्य बाधकम् ।
न शाबलेयो नास्तीति बाहुलेयः प्रकल्पते ॥ 75 ॥

na śābaleyasyāstitvam bāhuleyasya bādhakam |
na śābaleyo nāstīti bāhuleyaḥ prakalpate || 75 ||

The existence of Sabaleya does not annul Bahuleya; nor is Bahuleya constructed by 'Sabaleya does not exist'.

The point of 3.3.74 in the cowshed. Sabaleya and Bahuleya are the tradition's two cows — the dappled one and the ample one, standing in for any two individuals. *Na sabaleyasya astitvam bahuleyasya bādhakam*: the *existence* of the dappled cow does not *annul* the other — one thing's being there is not another's not-being-there; presence does not exclude by itself. *Na sabaleyo na asti iti bahuleyaḥ prakalpate*: nor is Bahuleya *constructed* by 'Sabaleya does not exist' — denying one does not produce the other; absences do not manufacture presences. The example is chosen for its homeliness: nobody

thinks that pointing at one cow abolishes another, or that saying one is missing conjures the second. And what it disarms is a real temptation — that vyavrtti, exclusion (3.1.14, 3.1.98's apoha), might be the whole story: if a thing were nothing but its exclusion of others, then existence and non-existence would trade in exactly the way this verse denies.

Verse 3.3.76-77

अभावो यदि वस्तु स्यात्तत्रेयं स्याद्विचारणा ।
ततश्च तदभावेऽपि स्याद्विचार्यमिदं पुनः ॥ 76 ॥
अवस्तुत्वादतीतं यद् व्यवहारस्य गोचरम् ।
तत्र वस्तुगतो भेदो न निर्वचनमर्हति ॥ 77 ॥

abhāvo yadi vastu syāttatreyaṃ syādvicāraṇā |
tataśca tadabhāve'pi syādvicāryamidam punaḥ || 76 ||
avastutvādātītam yad vyavahārasya gocaram |
tatra vastugato bhedo na nirvacanam arhati || 77 ||

(76) If non-being were a thing, this examination would apply to it; and then, in the absence of that too, this would again be a matter for examination. (77) That which, from its not being a thing, has passed beyond the range of practice — there a difference belonging to things does not deserve a definition.

The regress that awaits anyone who reifies absence. (76): *abhavo yadi vastu syat tatra iyam syad vicarana* — if non-being were a thing, this examination would apply to it: all the questions asked of things (is it one or many? eternal or produced? 3.3.67's six alternatives) would have to be asked of absences. *Tatah ca tad-abhave 'pi syad vicaryam idam punah*: and then, in the absence of that too, this would again be a matter for examination — the absence of an absence would be a further thing, needing its own examination, and so without end. Reify absence and the regress is immediate. (77) draws the moral: *avastutvat atitam yad vyavaharasya gocaram* — that which, from its not being a thing, has passed beyond the range of practice — *tatra vastu-gato bhedo na nirvacanam arhati*: there a difference belonging to things does not deserve a definition. One may not apply thing-distinctions to non-things. The regress is stopped exactly as 3.3.28 stopped all regresses: by refusing to fold a category back onto what is not in its domain.

Verse 3.3.78

अपदेऽर्थे पदन्यासः कारणस्य न विद्यते ।
अथ च प्रागसद्भावः कारणे सति दृश्यते ॥ 78 ॥

apade'rthe padanyāsaḥ kāraṇasya na vidyate |
atha ca prāgasadbhāvaḥ kāraṇe sati drśyate || 78 ||

The setting-down of a foot by a cause is not found in an object that is no place for it; and yet a prior non-existence is seen when the cause exists.

A genuine puzzle about causation and prior absence, stated as a tension. *Apade 'rthe pada-nyasah karanasya na vidyate*: the setting-down of a foot by a cause is not found in an object that is no place for it — a cause needs somewhere to stand, something to work on; it cannot get a footing in a nothing

(3.3.62's argument: a cause has no work on non-being). And yet: *atha ca prag-asad-bhavah karane sati drsyate* — and yet a *prior non-existence* is *seen* when the *cause* exists: before the pot is made, there is the pot's absence, and the potter is at work on it. So causation seems to require a foothold that prior-absence cannot provide, and prior-absence is nonetheless what every production starts from. The verse states the difficulty without softening it, and the verses following will not solve it so much as show that it cannot be posed — because 'the prior state of a non-thing' is not a describable condition (3.3.79).

Verse 3.3.79

का तस्य प्रागवस्थेति वस्त्वाश्रितमिदं पुनः ।
प्राहवस्थेति न ह्येतद् द्वयमप्यस्त्यवस्तुनि ॥ 79 ॥

kā tasya prāgavastheti vastvāśritamidam punaḥ |
prāhāvastheti na hyetad dvayamapyastyavastuni || 79 ||

'What is its prior state?' — this again rests on a thing; 'the prior state' — for neither of these two exists in a non-thing.

The question of 3.3.78 dissolved by examining its presuppositions. *Ka tasya prag-avastha iti*: 'what is its *prior state*?' — the question one wants to ask about the pot before it was made. *Vastu-asritam idam punah*: this *rests on a thing* — asking after something's prior state presupposes a something whose state it is. *Prag-avastha iti na hi etad dvayam api asti avastuni*: 'the prior state' — for *neither of these two* exists in a *non-thing*: neither the priority nor the state. A non-thing has no states, and it has no before. So 'the pot's prior non-existence' is not a condition anything was in; it is a phrase built from thing-vocabulary and applied where the vocabulary has no purchase (3.3.77's ruling: thing-distinctions do not deserve definitions among non-things). The puzzle of 3.3.78 required a describable prior condition, and there is none — which is not an answer to the puzzle but a demonstration that it was never a question.

Verse 3.3.80

न चोर्ध्वमस्ति नास्तीति वचनायानिबन्धनम् ।
अलं स्यादपदस्थानमेतद्वाचः प्रचक्षते ॥ 80 ॥

na cordhvamasti nāstīti vacanāyanibandhanam |
alam, syādapadasthānametadvācaḥ pracakṣate || 80 ||

And afterward there is no ground for saying 'it exists' or 'it does not exist'; enough — they call this the footless station of speech.

The terminus, and its phrase is unforgettable. *Na ca urdhvam asti nāsti iti vacanaya anibandhanam*: and *afterward* — past the point 3.3.79 reached — there is *no ground* for saying 'it exists' or 'it does not exist': neither predicate has a foothold. *Alam syat*: *enough* — the word is a full stop, the debater's concession that the matter cannot be carried further. And then: *apada-sthanam etad vacah pracaksate* — they call this the *footless station of speech*: *apada-sthana*, the place where speech has no foot to set down (3.3.78's *pada-nyasa*, the setting-down of a foot, now denied to language itself). Speech, which walks by predicating, arrives at a place with no floor. This is the *samuddesa*'s most beautiful formulation of the limit that 1.35's connoisseur, 2.144's ineffable flash, 3.1.95's indescribable own-nature, and

3.3.4's unnameable relation have all circled — and it names it not as a mystery but as a *station*: a place one can arrive at, and recognize, and stop.

Verse 3.3.81

अत्यद्भुता त्वियं वृत्तिर्यदभागं यदक्रमं ।
भावानां प्रागभूतानामात्मतत्त्वं प्रकाशते ॥ 81 ॥

atyadbhutā tviyam.vṛttiriyadabhāgam.yadakramam. |
bhāvānām.prāgabhūtānāmātmatattvam.prakāśate || 81 ||

But this operation is utterly wonderful — that the self-reality of things not previously existent shines forth, partless and sequenceless.

The wonder, and its placement immediately after the footless station is the samuddesa's finest moment. Atyadbhuta tu iyam vṛtṭih: this operation is utterly wonderful — adbhuta, the word 1.142 used of the supreme station of speech (etad adbhutam). What is wonderful: yad abhagam yad akramam bhavanam prag-abhutanam atma-tattvam prakasate — that the self-reality of things not previously existent shines forth, partless and sequenceless. The very things 3.3.78-80 showed could not be said to exist or not exist, whose prior state was undescrivable, before which speech has no footing — these shine forth, whole and out of time. Prakasate: the manifestation-verb of the entire work (1.94's lamp, 2.415's undivided shining). So the analysis reaches a place where speech cannot stand, and at that place the thing shows. Bhartrhari does not explain this; he calls it wonderful. It is the honest response of a system that has argued its way to a limit and found something on the far side that it did not put there.

Verse 3.3.82

विकल्पोत्थापितेनैव सर्वो भावेन लौकिकः ।
मुख्येनैव पदार्थेन व्यवहारो विधीयते ॥ 82 ॥

vikalpotthāpitenaiva sarvo bhāvena laukikah |
mukhyenaiva padārthēna vyavahāro vidhīyate || 82 ||

All worldly practice is carried on by means of a being raised up by construction alone — as though by a primary word-meaning.

The return to earth, and it is unembarrassed. Vikalpa-utthapitena eva sarvo bhavena laukikah vyavaharo vidhiyate: all worldly practice is carried on by means of a being raised up by construction alone — vikalpa-utthapita: constructed, propped up, stood on its feet by the mind. Mukhyena iva padarthena: as though by a primary word-meaning. Every transaction runs on constructed beings taken as though they were the real thing — and the iva marks the as-though without withdrawing the practice. This is 2.238's asatya vartman stated as a completed doctrine: having stood on the untrue path, one thereafter seeks the true — and meanwhile one buys grain, performs rites, and teaches grammar, all on beings that construction raised. The verse rescues everything the preceding twelve verses seemed to imperil. The footless station (3.3.80) is where analysis ends; it is not where anyone lives.

Verse 3.3.83

भावशक्तिमतश्चैनां मन्यन्ते नित्यवादिनः ।
भावमेव क्रमं प्राहुः न भावादपरः क्रमः ॥ 83 ॥

bhāvaśaktimataśvaināṃ manyante nityavādinah |
bhāvameva kramam prāhuḥ na bhāvādaparah kramah || 83 ||

And the proponents of eternality consider this to belong to what possesses the power of being; they call sequence being itself – there is no sequence apart from being.

Sequence identified with being, and the identification is 3.1.35's. Bhava-saktimataḥ ca enam manyante nitya-vadinah: the proponents of eternality consider this (sequence) to belong to what possesses the power of being. Bhavam eva kramam prahuh: they call sequence being itself; na bhavad aparah kramah: there is no sequence apart from being. So krama is not a container things move through nor a relation among them: it is being, exercising its power (3.1.36's kramena saktibhiḥ svabhiḥ: by its own powers, in sequence). This closes the account 3.1.35 opened – Being with sequence is action, Being with sequence withdrawn is substance – by denying that sequence was ever a second thing to be added or removed. What is withdrawn in substance is not an ingredient but an aspect.

Verse 3.3.84

क्रमान्न यौगपद्यस्य कश्चिद्भेदोऽस्ति तत्त्वतः ।
यथैव भावान्नाभावः कश्चिदन्योऽवसीयते ॥ 84 ॥

kramānna yaugapadyasya kaściddheda'sti tattvataḥ |
yathaiva bhāvānnābhavaḥ kaścidanyo'vasīyate || 84 ||

In reality there is no difference whatever of simultaneity from sequence – just as no non-being whatever is determined as other than being.

The parallel that generalizes 3.3.83. Kramat na yaugapadyasya kascid bhedo 'sti tattvataḥ: in reality there is no difference whatever of simultaneity from sequence – the two modes of 2.462 (sequence or simultaneity, which the world does not transgress) are not two conditions of things but two takings. Yatha eva bhavat na abhavah kascid anyo 'vasiyate: just as no non-being whatever is determined as other than being (3.3.61's ekasmad atmano ananyau). The verse pairs the two great dichotomies – sequence/simultaneity and being/non-being – and dissolves both by the same move: each pair is one thing's carvings, and the carving is ours. And the pairing is apt, since 3.3.69 already showed that time-difference falls with the being/non-being distinction. What the two dichotomies have in common is that neither survives being asked which of its members the one really is.

Verse 3.3.85

कालस्याप्यपरं कालं निर्दिशन्त्येव लौकिकाः ।
न च निर्देशमात्रेण व्यतिरेकोऽनुगम्यते ॥ 85 ॥

*kālasyaāpyaparam.kālam.nirdiśantyeva laukikāḥ |
na ca nirdeśamātreṇa vyatireko'nugamyate || 85 ||*

Worldly people do indeed designate another time even of time; and yet, by mere designation, a separateness is not established.

Designation's impotence, exhibited on the case that most tempts reification. *Kalasya api aparam kalam nirdisanti eva laukikah*: worldly people *do indeed* designate *another time even of time* — 'the time of the sacrifice', 'a long time ago', treating time as a thing that has its own times. *Na ca nirdeśamātreṇa vyatireko 'nugamyate*: and yet, by *mere designation*, a *separateness is not established*. That we can say it does not make it two. The verse is a general warning with a specific target: 3.3.39's *aupacariki satta* means that anything mentionable acquires an existence by being mentioned — and this verse blocks the inference from that existence to real distinctness. Designation confers being (3.3.53) and does not confer separateness. So the regress of times, and every regress generated by designating the designatum's conditions, is a regress of postings and not of things.

Verse 3.3.86

आधारं कल्पयन् बुद्ध्या नाभावे व्यवतिष्ठते ।
अवस्तुष्वपि नोत्प्रेक्षा कस्यचित् प्रतिबध्यते ॥ 86 ॥

*ādhāram.kalpayan buddhyā nābhāve vyavatiṣṭhate |
avastuṣvapi notprekṣā kasyacit pratibadhyate || 86 ||*

One who constructs a substratum by the intellect does not come to a halt in non-being; nor is anyone's imagining obstructed even among non-things.

The mind's freedom, stated as a fact about it. *Adharam kalpayan buddhya na abhave vyavatiṣṭhate*: one who *constructs a substratum* by the *intellect* does *not come to a halt* in *non-being* — the mind, asked to think of an absence, supplies a bearer for it and keeps going; it will not stop at nothing. *Avastusu api na utprekṣa kasyacit pratibadhyate*: nor is anyone's *imagining obstructed* even among *non-things* — *utprekṣa*, the imagining that 2.236 caught giving parts to the partless atom. So the mind is unstoppable in exactly the place where reality gives out: it constructs substrata for absences, imagines the unimaginable, and never reports an obstruction. This explains both why the footless station (3.3.80) is so hard to reach — the mind keeps laying down floors — and why *aupacariki satta* is available for everything (3.3.39-42): the imagining that cannot be obstructed is what confers it.

Verse 3.3.87

तस्माच्छक्तिविभागेन नित्यः सदसदात्मकः ।
एकोऽर्थः शब्दवाच्यत्वे बहुरूपः प्रकाशते ॥ 87 ॥

tasmācchaktivibhāgena nityaḥ sadasadātmakaḥ |
eko'rthaḥ śabdavācyaṭve bahurūpaḥ prakāśate || 87 ||

Therefore, by division of its capacities, the eternal one — whose self is both being and non-being — shines forth as multiform, in its being expressible by words.

The samuddesa's conclusion, and every word of it has been earned. *Tasmat sakti-vibhagena: therefore, by division of its capacities* (1.2's Brahman resting on differentiated powers; 3.1.22's sarva-sakty-atma-bhutatvam). *Nityaḥ sad-asad-atmakah: the eternal one, whose self is both being and non-being* — not neither, as the tetralemmas of 3.3.67-68 might have suggested, but *both*, since the two are its carvings (3.3.61). *Eko 'rthah: one object* — the whole Padakanda's two candidates (3.1.2's jati or dravya) having collapsed into it. *Sabda-vacyatve bahu-rupah prakasate: in its being expressible by words, it shines forth as multiform.* The multiformity is located exactly: it is in the being-expressible, not in the thing. One reality, both-natured, appearing many *because* it is sayable — which is 3.1.6's superimposition (the word's own universal laid over the object's) reached by the road of relation instead of the road of universals. The samuddesa that began by asking what connects word to meaning ends by finding that the multiplicity of meanings is the connection.

Verse 3.3.88

व्यवहारश्च लोकस्य पदार्थैः परिकल्पितैः ।
शास्त्रे पदार्थः कार्यार्थं लौकिकः प्रविभज्यते ॥ 88 ॥

vyavahāraśca lokasya padārthaiḥ parikalpitaiḥ |
śāstre padārthaḥ kāryārtham laukikaḥ pravibhajyate || 88 ||

And the world's practice runs by means of constructed word-meanings; in the science, the worldly word-meaning is analysed out for the sake of the operation.

The samuddesa's last verse, and it hands everything back. *Vyavaharah ca lokasya padarthaiḥ parikalpitaiḥ: the world's practice runs by means of constructed word-meanings* — the beings raised by vikalpa (3.3.82), taken as though primary, and sufficient for every transaction. *Sastre padarthah karya-artham laukikah pravibhajyate: in the science, the worldly word-meaning is analysed out for the sake of the operation.* Two levels, cleanly separated and both licensed. The world constructs and transacts; the science takes the world's constructions and divides them further, for its own operations' sake (2.3.43's vyavahara constructed by division, for the sake of the operation — the identical formula). Neither reaches the real, and neither needs to. This is where eighty-eight verses of the most severe metaphysics in the work deposit the reader: back in the market and the classroom, with the assurance that what is done there does not require what the analysis could not find. The Sambandha-samuddesa examined relation until it vanished, and then said: carry on.

Dravyalakṣaṇa-samuddeśa — On the Definition of Substance

Verse 3.4.1-2

संसर्गरूपात् सम्भूताः संविद्रूपादपोद्धृताः ।
शास्त्रे विभक्ता वाक्यार्थात् प्रकृतिप्रत्ययार्थवत् ॥ 1 ॥
निमित्तभूताः साधुत्वे शास्त्रादनुमितात्मकाः ।
केचित् पदार्था वक्ष्यन्ते संक्षेपेण यथागमम् ॥ 2 ॥

samṣargarūpāt sambhūtāḥ samvidrūpādapoddhṛtāḥ |
śāstre vibhaktā vāk्यārthāt prakṛtipratyayārthavat || 1 ||
nimittabhūtāḥ sād hutve śāstrādanumitāt makāḥ |
kecit padārthā vakṣyante samkṣepena yathāgamam || 2 ||

(1) Arisen from the form of commingling, abstracted from the form of awareness, divided in the science out of the sentence-meaning — like the meanings of stem and suffix; (2) being the occasioning grounds of correctness, their selves inferred from the science — certain word-meanings will now be stated, in brief, according to tradition.

The Padakanda's methodological charter, and it is placed at the head of the samuddesa that names the kanda's central category. Four descriptions of what a padartha is, each subtracting something. Samsarga-rupat sambhutah — *arisen from the form of commingling*: word-meanings exist only where things have been related (3.1.20's prapanca arising only among things commingled; 3.3.57's turbidity born of interpenetration). Samvid-rupad apoddhrtah — *abstracted from the form of awareness*: they are extracted from cognition, not found in the world (2.132's buddhi-visaya; 3.3.41's division which, having made the object external, is itself an abstraction of capacities). Sastre vibhaktah vakyarthat — *divided in the science out of the sentence-meaning*, prakrti-pratyaya-arthavat, *like the meanings of stem and suffix*: 3.1.1's opening move repeated verbatim, and 2.10's doctrine — the pada is to the vakya what the suffix is to the pada. (2) adds their office and their epistemic status: nimitta-bhutah sadhutve — *the occasioning grounds of correctness* (they exist so that the grammar can say which forms are right: 1.27's sadhutva, the dharma-bearing property); sastrad anumita-atmakah — *their selves inferred from the science*: we know them only because the science needs them, which is as clean a statement of theoretical posits as antiquity produced. And the closing modesty: kecit padarthah vaksyante samksepena yatha-agamam — *certain word-meanings will be stated, in brief, according to tradition*. Kecit: some, not all. Yatha-agamam: as received. The fourteen samuddesas are announced as a selective, traditional, abbreviated account of items that are commingling-born, awareness-abstracted, science-divided and inference-known.

Verse 3.4.3

वस्तूपलक्षणं यत्र सर्वनाम प्रयुज्यते ।
द्रव्यामित्युच्यते सोऽर्थो भेद्यत्वेन विवक्षितः ॥ 3 ॥

vastūpalakṣaṇam yatra sarvanāma prayujyate |
dravyāmitiucyate so'rtho bhedyatvena vivakṣitaḥ || 3 ||

Where a pronoun is employed as the indicator of a thing — that meaning is called 'substance', being intended as what is to be differentiated.

The definition of substance, and it is startlingly formal. Not: substance is what bears qualities; not: substance is what persists. Rather: *vastu-upalakṣaṇam yatra sarvaṇama prayujyate* — where a *pro-noun* is employed as the *indicator of a thing* — *dravyam iti ucyate* so 'rthah: *that* meaning is called *substance*. The test is grammatical: whatever you can point at with 'this' or 'that' is a *dravya*. And the second criterion: *bhedyatvena vivakṣitah* — *intended as what is to be differentiated*: substance is whatever the speaker means to qualify. So *dravya* is defined by two features of *usage* — pronominal referability and intended qualifiability — and by nothing about what it is. This is exactly what 3.4.1's charter promised: word-meanings are science-divided posits inferred from the grammar's needs, and the grammar needs a category of things-that-get-qualified. Compare 3.2.1's list, where *dravya*'s synonyms ran from *atman* and *tattva* to the grammarians' *ipsita*: here the metaphysical end of that list has dropped away entirely, and what remains is the pronoun's target. The two *samuddesas* on substance thus approach it from opposite ends — 3.2 from the eternal reality, 3.4 from the grammar's slot — and the *Padakanda*'s method is to let both stand (2.179's licensed double description).

[Contested: the relation between this *samuddesa* and the *Dravya-samuddesa* (3.2) is a standing question: whether they treat two senses of *dravya* (the metaphysical and the grammatical) or one sense from two angles. The tradition's own titling — this one *Dravyalaksana*, 'the definition of substance' — suggests the second, and we read it so]

Guṇa-samuddeśa — On Quality

Verse 3.5.1

संसर्गि भेदकं यद् यत् सव्यापारं प्रतीयते ।
गुणत्वं परतन्त्रत्वात्तस्य शास्त्र उदाहृतम् ॥ 1 ॥

samṣargi bhedakam.yad yat savyāpāram.pratīyate |
guṇatvam.paratantratvāttasya śāstra udāhṛtam || 1 ||

Whatever is understood as commingling, as differentiating, and as possessed of operation — its quality-hood, from its being dependent, has been exemplified in the science.

The definition of quality, and it is built from three marks. Samsargi — *commingling*: a guṇa is never met alone; it is always with something (3.4.1's samsarga-rupat sambhutah, and 1.62's paratantra guṇa). Bhedakam — *differentiating*: its office is to distinguish — the red cow from the black (3.4.3's bhedya-atvena vivaksitah, substance being what is to be differentiated: the two definitions interlock exactly). Sa-vyaparam — *possessed of operation*: it does something, which will be the samuddesa's whole argument. And the ground of the classification: guṇatvam paratantratvat tasya sastra udahṛtam — its *quality-hood*, from its being *dependent*, has been *exemplified in the science*. Paratantra: other-tenanted — the term 3.3.4 used of the relation (atyanta-paratantra, whence no form to name). Quality is dependent but not *utterly* so: it has an operation of its own, and that is what distinguishes a guṇa from a relation. The samuddesa will spend nine verses establishing that the operation is real.

Verse 3.5.2

द्रव्यस्याव्यपदेशस्य य उपदीयते गुणः ।
भेदको व्यपदेशाय तत्प्रकर्षोऽभिधीयते ॥ 2 ॥

dravyasyāvyapadeśasya ya upadīyate guṇaḥ |
bhedako vyapadeśāya tatprakarṣo'bhidhīyate || 2 ||

The quality which is taught, as differentiator, of a substance that is not designated — for the sake of its designation, that thing's excellence is what is expressed.

Quality's office in designation. Dravyasya avyapadesasya — of a substance *that is not designated*, that cannot be picked out as it stands (one cow among many) — yah upadiyate guṇaḥ bhedakah: the *quality* which is taught as *differentiator* — vyapadesaya, *for the sake of its designation*. And what such a quality expresses: tat-prakarsah abhidhiyate — that thing's *excellence* is what is expressed. Prakarsa: eminence, degree, the more-ness that 1.64 analysed (the quality as prakarsa-hetu, the ground of the comparative). So a differentiating quality does not merely mark; it *grades* — 'the red cow' picks her out by her being more red, standing out. The verse introduces the samuddesa's technical problem: prakarsa is what qualities deliver, and the next verses ask what prakarsa itself rests on.

Verse 3.5.3

सर्वस्यैव प्रधानस्य न विना भेदहेतुना ।
प्रकर्षो विद्यते नापि शब्दस्योपैति वाच्यताम् ॥ 3 ॥

sarvasyaiva pradhānasya na vinā bhedahetunā |
prakarṣo vidyate nāpi śabdasyopaiti vācyatām || 3 ||

Of every principal whatever, there is no excellence apart from a cause of differentiation; nor does it come to be expressible by a word.

The dependence of excellence, stated twice over. Sarvasya eva pradhanasya — of every principal whatever (any substance, anything that gets qualified) — na vina bheda-hetuna prakarso vidyate: there is no excellence apart from a cause of differentiation. Nothing is eminent in itself; eminence is always eminence-by-something (the cow is not simply outstanding, she is outstanding in redness). And: na api sabdasya upaiti vacyatam — nor does it come to be expressible by a word: bare excellence, unattached to a differentiating ground, cannot even be said. So prakarsa is doubly dependent — ontologically on a cause of difference, semantically on the same. This is 1.64's doctrine (the quality that is the ground of pre-eminence is indicated as though independent, and exists only asrita, resting on its substrate) now made the axis of the samuddesa: excellence is what qualities give, and it is nothing on its own.

Verse 3.5.4

विद्यामानाः प्रधानेषु न सर्वे भेदहेतवः ।
विशेषशब्दैरुच्यन्ते व्यावृत्तार्थाभिधायिभिः ॥ 4 ॥

vigyāmānāḥ pradhāneṣu na sarve bhedahetavaḥ |
viśeṣaśabdairucyante vyāvṛttārtābhīdhāyibhiḥ || 4 ||

Not all the causes of differentiation that are present in the principals are stated by particular-words, which express excluded meanings.

A limit on what language marks. Vidyamanah pradhanesu na sarve bheda-hetavah: not all the causes of differentiation that are present in the principals — a thing has indefinitely many features that could distinguish it — visesa-sabdaih ucyante: are stated by particular-words. And those words are characterized: vyavrtta-artha-abhidhayibhih — expressing excluded meanings: a particular-word means by excluding (3.1.14's vyavrtti, 3.1.98's apoha). So language selects: of a thing's countless differentiating features, a few get words, and those words work by exclusion. This is 3.1.47's finding (the real difference in the scent of jasmine, unnamed because too transient) generalized: what has a word is not what is distinguishable but what usage has troubled to exclude for (3.1.51's yatnat: what costs effort to say is what is meant).

Verse 3.5.5

वस्तूपलक्षणे तत्र विशेषो व्यापृतो यदि ।
प्रकर्षो नियमाभावात् स्यादविज्ञातहेतुकः ॥ 5 ॥

vastūpalakṣaṇe tatra viśeṣo vyāprto yadi |
prakarṣo niyamābhāvāt syādavijñātahetukaḥ || 5 ||

If the particular were there engaged in the indicating of the thing — then, from the absence of restriction, the excellence would have an unknown cause.

The first horn of a dilemma about what the quality-word does. Suppose the visesa — the particular, the differentiating quality — is vyaprtah vastu-upalaksane: *engaged in the indicating of the thing*, doing the pointing-out (3.4.3's vastu-upalaksana: the pronoun's office). Then: niyama-abhavat prakarsah syad avijnata-hetukah — from the *absence of restriction*, the *excellence* would have an *unknown cause*: if the quality is busy indicating, nothing is left to ground the grading, and the eminence 3.5.2 said it expresses would come from nowhere. The dilemma's structure is the samuddesa's own: a quality cannot both point out the substance and grade it, if it has only one operation. Which is why 3.5.8 will insist that the quality has its own operation, distinct from its indicating work.

Verse 3.5.6

सर्वं च सर्वतोऽवश्यं नियमेन प्रकृष्यते ।
संसर्गिणा निमित्तेन निकृष्टेनाधिकेन वा ॥ 6 ॥

sarvam ca sarvato'vaśyam niyamena prakṛṣyate |
samśargiṇā nimittena nikṛṣṭenādhikena vā || 6 ||

And everything is necessarily and by rule made excellent from every side — by a commingling cause, whether inferior or superior.

The universality of grading. Sarvam ca sarvataḥ avasyam niyamena prakṛsyate: *everything is necessarily and by rule made excellent from every side* — there is nothing that is not graded relative to something; every thing stands in comparisons in every direction. Samsargina nimittena nikṛstena adhikena va: *by a commingling cause, whether inferior or superior*. The grading-cause is always a samsargin — something the thing is with (3.5.1's first mark) — and it may be less or more: a thing is eminent by exceeding and eminent by being exceeded (the small stone is eminently small among boulders). So prakarsa is not a property a thing has but a relational fact holding in all directions at once, generated by whatever it is commingled with. This is 3.1.15-16's structure (places belonging to what is not a place, conferred by relata) applied to degree.

Verse 3.5.7

नापेक्षते निमित्तं च प्रकर्षे व्याप्तं यदि ।
द्रव्यस्य स्यादुपादानं प्रकर्षं प्रत्यनर्थकम् ॥ 7 ॥

*nāpekṣate nimittam ca prakarṣe vyāpṛtam yadi |
dravyasya syādupādānam prakarṣam pratyānarthakam || 7 ||*

And if what is engaged in the excellence does not depend on an occasioning ground — then the taking-up of the substance would be purposeless with respect to the excellence.

The second horn. Suppose the reverse of 3.5.5: the quality is engaged in the *excellence* and does not depend on an occasioning ground — the grading is intrinsic to the quality, needing nothing else. Then: *dravyasya syad upadanam prakarsam praty anarthakam* — the *taking-up of the substance* would be *purposeless* with respect to the excellence: why mention the cow at all, if the redness grades by itself? The substance becomes idle. *Anarthaka* — purposeless: the word 2.34 used for what results when a word-meaning is added or subtracted against the sentence's one meaning, and 3.1.63's superfluous second animal. So both horns fail: engage the quality in indicating and the grading is groundless (3.5.5); engage it in grading and the substance is idle (3.5.7). The *samuddesa*'s dilemma is complete, and 3.5.8 resolves it.

Verse 3.5.8

सव्यापारो गुणस्तस्मात्स्वप्रकर्षनिबन्धनः ।
द्रव्यात्मानं भिनत्येव स्वप्रकर्षे निवेशयन् ॥ 8 ॥

*savyāpāro guṇastasmātsvaparakarṣanibandhanah |
dravyātmānam bhinattyeva svaprakarse niveśayan || 8 ||*

Therefore the quality is possessed of operation, grounded in its own excellence; it differentiates the substance's very self, installing it in its own excellence.

The resolution, and it grants the quality genuine agency. *Tasmat sa-vyaparo gunah: therefore the quality is possessed of operation* — 3.5.1's third mark, now established by the dilemma's exhaustion: neither horn works unless the quality does something of its own. *Sva-prakarsa-nibandhanah: grounded in its own excellence* — the quality's operation rests on its own grading, not on a borrowed one. And the operation itself: *dravya-atmanam bhinatti eva sva-prakarse nivesayan* — it *differentiates the substance's very self, installing it in its own excellence*. The redness does not merely accompany the cow and get noticed; it *installs* her in redness, and the installing is what differentiates her. *Nivesayan* — installing — is 2.45's verb for the relation delimiting the hovering general and settling it in the particular. So the quality is the operator that takes an undesignated substance (3.5.2's *dravyasya avyapadesasya*) and puts it somewhere on a scale, and its being-there is its being-differentiated. Quality is dependent (3.5.1's *paratantra*) and active, which is exactly what distinguished it from relation at the *samuddesa*'s opening.

Verse 3.5.9

अरूपं पररूपेण द्रव्यमाख्यायते यथा ।
अप्रकर्षं प्रकर्षेण गुणस्याविश्यते तथा ॥ ९ ॥

arūpam.pararūpeṇa dravyamākhyāyate yathā |
aprakarṣam.prakarṣeṇa guṇasyāviśyate tathā || 9 ||

As a formless substance is designated by way of another's form — so a quality that is without excellence is entered into by way of excellence.

The samuddesa's closing parallel, and it folds quality back into the kanda's master-doctrine. Arupam para-rupena dravyam akhyayate yatha: as a *formless* substance is *designated by way of another's form* — the substance, having no own-form available to designation (3.2.2's satyam vastu ascertained by unreal configurations; 3.3.54's word stating the object by way of another form), is reached through what is not it. Aprakarsam prakarsena gunasya avisyate tatha: so a quality that is *without excellence* is *entered into* by way of *excellence*. The quality, in itself ungraded, is reached through grading. So both categories — the kanda's two great ones, substance and quality — are accessible only through what they are not: substance through alien form, quality through degree. Neither is ever met as itself. This is 3.3.80's footless station arriving in the humblest possible setting: a nine-verse technical discussion of adjectives, ending with the finding that adjectives reach their objects the way everything reaches everything — obliquely, and by what is not there.

Dik-samuddeśa — On Position

Verse 3.6.1

दिक् साधनं क्रिया काल इति वस्त्वभिधायिनः ।
शक्तिरूपे पदार्थानामत्यन्तमनवस्थिताः ॥ १ ॥

dik sādhanam kriyā kāla iti vastvabhidhāyinaḥ |
śaktirūpe padārthānāmatyantamanavasthitāḥ || 1 ||

Direction, means, action, time — these, though expressing things, are utterly unsettled in the capacity-form of word-meanings.

A manifesto for the four samuddesas it opens. *Dik sadhanam kriya kalah* — *direction, means, action, time*: the subjects of samuddesas 6, 7, 8 and 9, named together because they share a status. *Vastv-abhidhayinah* — they *express things*: the words for them behave like thing-words, take cases, get qualified, function as nouns. And yet: *sakti-rupe padarthanam atyantam anavasthitah* — in the *capacity-form* of word-meanings, they are *utterly unsettled*: taken as *saktis* — powers, which is what the Padakanda holds all categories to be (3.1.22-23: *dravyadayah sarvah saktayah*) — they will not stay put. The four are the hardest cases for the whole scheme: each is indispensable to the grammar, each is treated as a thing by the language, and none of them will submit to being one. *Anavasthita* — *unsettled* — is a word Bhartrhari has used for the unsettledness of doctrines (2.138) and of the divergence among schools (2.107); here it names the categories' own instability. The next hundred pages will not stabilize them. They will show why they cannot be stabilized.

Verse 3.6.2-3

व्यतिरेकस्य यो हेतुरवधिप्रतिपाद्ययोः ।
ऋज्वित्येव यतोऽन्येन विना बुद्धिः प्रवर्तते ॥ २ ॥

vyatirekasya yo heturavadhipratipādyayoh |
rjvityeva yato'nyena vinā buddhiḥ pravartate || 2 ||

That which is the cause of separation of the limit and the thing to be conveyed — since, from it, a cognition proceeds as simply 'straight', without another.

Direction defined by its office, and the source transmits the passage defectively (the page carries verse 2 only, verse 3 having dropped). *Vyatirekasya yo hetuh avadhi-pratipadyayoh*: that which is the *cause of separation of the limit* and the *thing to be conveyed* — *dik* is what holds apart the reference-point and what is located from it: 'east of the village' requires that village and thing be separated, and direction is the separating. And the criterion: *rju iti eva yato 'nyena vina buddhiḥ pravartate* — since, *from it*, a *cognition* proceeds as simply 'straight', *without another*: direction delivers straightness immediately, needing no further term. So *dik* is a primitive: what makes two things stand apart in a way that a single cognition registers as a line. The samuddesa will spend twenty-seven pages showing that this primitive is a power and not a thing.

[Contested: the wisdomlib page for 3.6.2-3 carries only one verse; verse 3 appears to have dropped from the source. We translate what is transmitted and note the lacuna]

Verse 3.6.4

परापरत्वे मूर्तानां देशभेदनिबन्धने ।
तत एव प्रकल्पेते क्रमरूपे तु कालतः ॥ 4 ॥

*parāparatve mūrtānām deśabhedanibandhane |
tata eva prakalpete kramarūpe tu kālataḥ || 4 ||*

Priority and posteriority of corporeal things are grounded in difference of place; from that very source they are constructed — but in the form of sequence, they are from time.

The division of labour between direction and time. Para-apatave murtanam desa-bhedanibandhane: *priority and posteriority of corporeal things are grounded in difference of place* — 'this is before that' said of bodies in space is a fact about where they are, and dik supplies it. Tata eva prakalpyete: *from that very source they are constructed*. But: krama-rupe tu kalataḥ — *in the form of sequence, they are from time*: the same before-and-after, said of events, comes from kala. So para/apara is ambiguous between a spatial and a temporal reading, and the two samuddesas divide it. The verse is doing careful preliminary work — priority is not one thing with two applications but two constructions sharing a word — and it prepares 3.6.13's argument that direction, like time, does its work by conferring divisions on what has none.

Verse 3.6.5

आकाशस्य प्रदेशेन भागैश्चान्यैः पृथक् पृथक् ।
सा संयोगविभागानामुपाधित्वाय कल्पते ॥ 5 ॥

*ākāśasya pradeśena bhāgaiścānyaiḥ prthak prthak |
sā samyogavibhāgānāmupādhitvāya kalpate || 5 ||*

By a location of ether, and by other portions severally — that (direction) serves as the limiting adjunct of conjunctions and disjunctions.

Direction's mechanism, and it operates on ether. Akasasya pradesena bhagaih ca anyaih prthak prthak: *by a location of ether, and by other portions severally* — akasa is undifferentiated (3.1.15), and 'portions' of it are constructed by the things conjoined with it (3.1.15-16's doctrine: places belonging to what is not a place). Sa samyoga-vibhaganam upadhitvaya kalpate: *that — direction — serves as the limiting adjunct of conjunctions and disjunctions*. Upadhi: the limiting condition (3.2.2's asatya-upadhi; 1.75's grahana-upadhi-bheda). So dik is what makes contacts and separations *directional* — what turns a bare conjunction into a coming-from-the-east. It is an adjunct on an adjunct: ether's portions are already constructed, and direction conditions the constructions. Nothing in the chain is a thing.

Verse 3.6.6

दिशो व्यवस्था देशानां दिग्व्यवस्था न विद्यते ।
शक्तयः खलु भावानामुपकारप्रभावितः ॥ 6 ॥

diśo vyavasthā deśānām digvyavasthā na vidyate |
śaktayaḥ khalu bhāvānāmupakāraprabhāvitah || 6 ||

There is a settled arrangement of places by direction; there is no settled arrangement of direction. For the capacities of things are brought about by assistance.

The asymmetry that gives the samuddesa its thesis. *Diso vyavastha desanam*: there is a *settled arrangement of places by direction* — *dik* fixes where things are; it is the principle of spatial order. *Dig-vyavastha na vidyate*: there is *no settled arrangement of direction* — nothing fixes *dik* itself; ask where east is and no answer is forthcoming that does not presuppose a standpoint. And the ground: *saktayah khalu bhavanam upakara-prabhavitah* — for the *capacities of things* are brought about by *assistance*: powers exist in the assisting they do (3.3.5's *upakara*, by which the unnameable relation is tracked; 3.3.37's connection just being cause-of-cognition). Direction is a power, powers are their assisting, and an assisting has no station of its own. So *dik* orders everything and is itself unordered — which is 3.6.1's *anavasthita* made precise.

Verse 3.6.7

प्रत्यस्तरूपा भावेषु दिक् पूर्वैत्यभिधीयते ।
पूर्वबुद्धिर्यतो दिक् सा समाख्यामात्रमन्यथा ॥ 7 ॥

pratyastarūpā bhāveṣu dik pūrvetyabhidhīyate |
pūrvabuddhiryato dik sā samākhyāmātramanyathā || 7 ||

Direction, whose form is dissolved away in things, is called 'east'; that from which the cognition 'east' arises, that is direction — otherwise it is mere designation.

The criterion for when 'direction' names a power and when it names nothing. *Praty-asta-rupa bhavesu dik purva iti abhidhiyate*: direction, *whose form is dissolved away* in things — *pratyastarupa*: its own form set aside, effaced, having no standing apart from what it orders (3.6.6's no-arrangement-of-direction) — is called 'east'. And the test: *purva-buddhir yato dik sa* — that *from which* the cognition 'east' arises, *that is* direction; *samakhya-matram anyatha*: *otherwise* it is *mere designation*. Where 'east' wakes an actual orientation-cognition, direction is operating; where it is merely a label (the eastern province, so named on a map nobody orients by), it is *samakhya-matra* — mere naming, an *aupacariki-satta* posting (3.3.39). The verse gives the samuddesa a working criterion: direction is present exactly where it does cognitive work, and its name outruns its presence.

Verse 3.6.8

स्वाङ्गाद् व्यवस्था या लोके न तस्यां नियता दिशः ।
प्रत्यङ्मुखस्य यत् पश्चात्तत्पुरस्ताद्विपर्यये ॥ ८ ॥

svāṅgād vyavasthā yā loke na tasyāṁ niyatā diśaḥ |
pratyāṁmukhasya yat paścāttatpurastādviparyaye || 8 ||

That arrangement which is in the world from one's own body — in it the directions are not fixed; what is behind for one facing west is in front for one turned about.

The relativity of direction, demonstrated by turning around. Sva-angad vyavastha ya loke: the arrangement which is in the world *from one's own body* — the primary way anyone orients: front, back, left, right. Na tasyam niyata diśaḥ: in it the *directions are not fixed*. And the demonstration: pratyāṁmukhasya yat pascāt tat purastād viparyaye — what is *behind* for one *facing west* is *in front when turned about*. Turn, and behind becomes before. Nothing moved but the body. So the body-centred directions are wholly standpoint-relative, and they are the ones we actually live by — which means the primary directional facts are not facts about the world at all. This is 3.6.6's thesis made undeniable by an experiment anyone can run standing still.

Verse 3.6.9

देशव्यवस्थानियमो दिक्षु न व्यवतिष्ठते ।
रुढमप्यपरत्वेन पूर्वमित्यभिधीयते ॥ ९ ॥

deśavyavasthāniyamō dikṣu na vyavatiṣṭhate |
rūḍhamapyaparatvena pūrvamityabhidhīyate || 9 ||

The restriction of the arrangement of places does not stand fixed among the directions; even what is established as posterior is spoken of as 'prior'.

The relativity extended past the body. Desa-vyavastha-niyamah disu na vyavatiṣṭhate: the *restriction* of the arrangement of *places* does *not stand fixed* among the *directions* — even the fixed cardinal directions do not fix things, because which is which depends on where one stands. Rudham api aparatvena purvam iti abhidhiyate: even what is *established as posterior* — rudha, conventionally settled as the further one (2.128's rudhi: hardened currency) — is *spoken of as 'prior'*. The village east of me is west of my neighbour, and both of us are right. So even the conventionally-hardened directional assignments invert with standpoint. The verse pairs with 3.6.8: bodily directions invert by turning, cardinal directions invert by moving, and neither survives as a property of anything.

Verse 3.6.10

अतो भाषितपुस्कत्वात् पुंवद्भावो न सिद्ध्यति ।
अस्मिन्नर्थे न शब्देन प्रसवः क्वचिदुच्यते ॥ 10 ॥

ato bhāṣitapuskatvāt pumvadbhāvo na siddhyati |
asminnarthe na śabdena prasavaḥ kvaciducyate || 10 ||

Therefore, from its having a spoken masculine, the masculine-substitution is not established; in this meaning, no engendering is anywhere stated by a word.

A grammatical consequence, and it is technical. Panini's rules provide for pumvad-bhava — *masculine-substitution*: in certain compounds, a feminine form is replaced by the corresponding masculine, and the rule applies where the stem is bhasita-pumska, 'having a spoken masculine' (a feminine whose masculine counterpart exists in usage with the same meaning). The direction-words are feminine (dik, prac) and the question is whether they qualify. *Atah bhasita-pumskatvat pumvad-bhavo na sidhyati: therefore, from its having a spoken masculine, the masculine-substitution is not established.* And the reason: *asmin arthe na sabdena prasavaḥ kvacid ucyate — in this meaning, no engendering is anywhere stated by a word: direction has no sex, and the grammatical gender of 'dik' answers to nothing in the thing.* Prasava — engendering, generation: the ground on which grammatical gender is sometimes said to rest (the Linga-samuddesa, the thirteenth, will take this up). Direction fails the test because there is nothing there to be engendered.

Verse 3.6.11

दिक्शक्तेरभिधाने तु नियतं दिशि दर्शनम् ।
पूर्वादीनां यथा षष्टेर्जीवितस्यावधारणे ॥ 11 ॥

dikśakterabhidhāne tu niyatam diśi darśanam |
pūrvādīnām yathā ṣaṣṭerjīvitasyāvadhāraṇe || 11 ||

But when the capacity of direction is being expressed, the seeing of 'east' and the rest is fixed in the direction — as sixty is fixed in the determining of a lifetime.

The complement to 3.6.7: where direction is operating, it operates determinately. *Dik-sakteh abhidhane tu:* but when the *capacity of direction* is being *expressed* — where 'east' does its orienting work rather than merely labelling — *niyatam diśi darsanam purvadinam:* the *seeing* of 'east' and the rest is *fixed* in the direction. And the simile: *yatha sasteh jivitasya avadharane — as sixty in the determining of a lifetime:* the traditional span, by which one says a man is in his sixties — a number that fixes nothing absolutely and fixes everything once the scale is granted. So direction's determinacy is scale-relative, exactly as the lifespan's is: within the frame it is exact, and the frame is not given by the thing. This is the samuddesa's balance-point — relativity (3.6.8-9) without arbitrariness (here): once a standpoint is taken, east is east, and no one is confused.

Verse 3.6.12

छायाभाभ्यां नगादीनां भागभेदः प्रकल्पते ।
अतद्धर्मस्वभावेषु भागभेदो न कल्पते ॥ 12 ॥

chāyābhābhyām nagādīnām bhāgabhedah prakalpate |
ataddharmasvabhāveṣu bhāgabhedo na kalpate || 12 ||

By shade and light, a difference of portions is constructed for mountains and the like; among things whose own nature is not of that property, a difference of portions is not constructed.

How directional portions get attached to things. Chaya-abhabhyam nagadinam bhaga-bhedah prakalpate: by *shade and light*, a *difference of portions* is *constructed* for mountains and the like — the mountain's sunny side and shady side, and thence its east face and west face: the divisions come from the sun's relation to it, not from the mountain. Atad-dharma-svabhavesu bhaga-bhedo na kalpate: among things whose *own nature* is *not of that property* — things that cast no shade, take no light — a *difference of portions* is *not constructed*. So directional divisions attach only where something extrinsic can differentiate, and where nothing can, the thing has no sides. This is 3.1.15's ether-argument in the mountains: portions are conferred by relata (samyogi-dharma-bhedena), and where no relatum differentiates, there are no portions to have.

Verse 3.6.13

परमाणोरभागस्य दिशा भागो विधीयते ।
भागप्रकल्पनाशक्तिं प्रथमां तां प्रचक्षते ॥ 13 ॥

paramāṇorabhāgasya diśā bhāgo vidhīyate |
bhāgaprakalpanāśaktim prathamām tām pracakṣate || 13 ||

For the partless atom, a part is prescribed by direction; that they call the first capacity — the capacity of constructing parts.

The samuddesa's most consequential verse. Paramanoh abhagasya disa bhago vidhiyate: for the *partless atom*, a *part* is *prescribed by direction* — the atom is by definition without parts, and direction gives it sides: an east face, a west face, whence it can touch its neighbours (the classic problem that broke Vaisesika atomism: if atoms are partless, contact must be total, and aggregates could not have magnitude). Direction supplies the parts the physics needs and the definition forbids. And the naming: bhaga-prakalpana-saktim prathamam tam pracaksate — that they call the *first capacity*: the *capacity of constructing parts*. Prathama — first: dik is the primordial power, prior to everything, because everything that has parts got them from it. And prakalpana — constructing: not revealing, constructing (2.236's apandita imagining the atom with parts, there a diagnosis of mental compulsion, here the compulsion's power named and honoured). Direction is what makes a divided world out of an undivided one, and it is not a thing.

Verse 3.6.14

अदेशाश्चाप्यभागाश्च निष्क्रमा निरुपाश्रयाः ।
भावाः संसर्गिरुपात्तु शक्तिभेदः प्रकल्पते ॥ 14 ॥

*adeśāścāpyabhāgāśca niṣkramā nirūpāśrayāḥ |
bhāvāḥ saṁsargirūpāttu śaktibhedah prakalpate || 14 ||*

Things are without place, without parts, without motion, without support; but from the form of what is commingled, a difference of capacities is constructed.

The consequence of 3.6.13, stated at full generality. Adesah ca api abhagah ca niskrama nirupasrayah bhavah: things are *without place, without parts, without motion, without support* – four privations, and they strip a thing of everything spatial. Nothing has a location of its own, nothing has sides of its own, nothing moves of itself, nothing rests on anything. And: samsargi-rupat tu sakti-bhedah prakalpate – but from the *form of what is commingled*, a *difference of capacities* is constructed. Everything spatial is conferred by relation – by what a thing is *with* (3.1.16's places belonging to relata; 3.6.5's ether-portions; 3.6.12's shade and light). The verse is the Dik-samuddesa's answer to 3.6.1's promise: direction will not settle as a thing because there are no things for it to be a property of. There are commingling and the capacities commingling constructs.

Verse 3.6.15

निर्बागात्मकता तुल्या परमाणोर्घटस्य च ।
भागः शक्त्यन्तरं तत्र परिमाणं च यत्तयोः ॥ 15 ॥

*nirbāgātmakatā tulyā paramāṇorghaṭasya ca |
bhāgaḥ śaktyamntaram tatra parimāṇam ca yattayoh || 15 ||*

Partlessness is equal for the atom and for the pot; a part there is another capacity – and so is whatever magnitude belongs to those two.

The great leveling, and it is the samuddesa's boldest claim. Nirbhagatmakata tulya paramanoh ghata-sya ca: *partlessness* is *equal* for the *atom* and for the *pot*. The pot is as partless as the atom. This is not a claim about size: it is 3.6.14's doctrine applied without exception – nothing has parts of its own, so the pot's evident parts are as conferred as the atom's disputed ones, and the two stand on exactly the same footing. Bhagah sakti-antaram tatra: a *part* there is *another capacity* – parthood is a sakti, constructed by direction (3.6.13), not a feature of the thing. Parimanam ca yat tayoh: and so is whatever *magnitude* belongs to those two – size likewise. So the Vaisesika's whole problem – how do partless atoms compose extended things? – is dissolved rather than solved: the extended thing is no more composed than the atom is partless, both being capacity-constructions on what has neither parts nor magnitude. The samuddesa on direction has arrived, in fifteen verses, at the dissolution of the atomic ontology.

Verse 3.6.16

यतः प्रकल्पते भेदो भेदस्तत्रापि दृश्यते ।
अदृष्टोपरतिं भेदमतो युक्ततरं विदुः ॥ 16 ॥

yataḥ prakalpate bhedo bhedastatrāpi drśyate |
adrṣṭoparatim.bhedamato yuktataram.viduḥ || 16 ||

That from which difference is constructed — there too a difference is seen; therefore they know difference, whose ceasing is unseen, to be the more reasonable view.

The regress of differentiators, and its resolution by beginninglessness. Yataḥ prakalpate bhedaḥ bhedaḥ tatra api drśyate: that *from which* difference is constructed — direction, the first capacity (3.6.13) — *there too a difference is seen*: direction itself comes differentiated (east from west), and what differentiated it? The regress threatens exactly as it did for the atom's parts. And the resolution: adrsta-uparatim bhedaḥ atah yuktataram viduḥ — therefore they know *difference whose ceasing is unseen* to be the *more reasonable* view: difference has no observed terminus, no point at which one reaches an undifferentiated differentiator. Adrsta-uparati: its cessation is not seen. This is not a proof that difference is beginningless but a methodological verdict — yuktatara, *more reasonable*: given that every candidate for a first differentiator turns out differentiated, the reasonable course is to stop looking for one. The same move stopped the samavaya-regress at 3.3.16 and the operation-regress at 3.3.28: refuse the demand rather than satisfy it.

Verse 3.6.17

सर्वत्र तस्य कार्यस्य दर्शनाद्विभुरिष्यते ।
विभुत्वमेतदेवाहुरन्यः कार्यवतां विधिः ॥ 17 ॥

sarvatra tasya kāryasya darśanādvibhuriṣyate |
vibhutvameta devāhuranyaḥ kāryavatām.vidhiḥ || 17 ||

Because its effect is seen everywhere, it is held to be all-pervading; this very thing they call all-pervadingness — another is the rule for things that have effects.

What 'all-pervading' actually means, and it is deflationary. Sarvatra tasya kāryasya darsanat vibhur isyate: because its *effect* is seen *everywhere*, it is held to be *all-pervading* — direction is called vibhu not because it has been found everywhere but because its working shows everywhere. Vibhutvam etad eva ahuh: *this very thing* they call *all-pervadingness*. So vibhutva is defined by universal efficacy, not by universal presence — there is no omnipresent stuff, only an operation nowhere absent (3.3.37's connection just being cause-of-cognition; 3.6.6's capacities brought about by assistance). And the contrast: anyah kāryavatām vidhiḥ — *another* is the rule for things that *have* effects: ordinary things, which have effects, are located where they are and their effects elsewhere. Direction is not such a thing. Its being everywhere is its effect being everywhere, and there is no further fact.

Verse 3.6.18

चैतन्यवत् स्थिता लोके दिक्कालपरिकल्पना ।
प्रकृतिं प्राणिनां तां हि कोऽन्यथा स्थापयिष्यति ॥ 18 ॥

*caitanyavat sthitā loke dikkālaparikalpanā |
prakṛtim, prāṇinām, tām, hi ko'nyathā sthāpayiṣyati || 18 ||*

The construction of direction and time stands in the world like consciousness itself; for who will establish otherwise that nature of living beings?

The samuddesa's most striking claim, and its simile is 1.41's. Caitanyavat sthita loke dik-kala-parikalpana: the construction of direction and time stands in the world like consciousness itself. The comparison is exact in the way 1.41's was (tradition persisting avicchedena, caitanyam iva — like consciousness): what is compared to consciousness is what one cannot get behind, because every attempt to get behind it uses it. Directional and temporal construing is not a theory anyone holds; it is the shape of any holding. And the rhetorical question seals it: prakṛtim prāṇinām tām hi ko 'nyathā sthāpayiṣyati — for who will establish otherwise that nature of living beings? Prakṛti here is nature-as-constitution: orienting and timing is what living beings are, not what they do. So the parikalpana that 3.6.13 called the first capacity is here called our nature — and the two descriptions are one: what constructs the world's parts is what we cannot help being.

Verse 3.6.19

सङ्करो व्यवहाराणां प्रकृतेः स्याद्विपर्यये ।
तस्मात्त्यजन्निमान् भावान् पुनरेवावलम्बते ॥ 19 ॥

*saṅkaro vyavahārāṇām, prakṛteḥ syādviparyaye |
tasmā'ttyajannimān bhāvān punarevāvalambate || 19 ||*

There would be a confusion of practices in the reversal of that nature; therefore one who abandons these entities takes hold of them again.

The practical necessity, and the verse's last clause is wry. Sankaro vyavaharanam prakṛteh syad viparyaye: there would be a confusion of practices in the reversal of that nature — abolish directional and temporal construing and no transaction survives; nothing could be located, sequenced, or done (3.3.71's vyavaharo nivartate: practice withdraws when reality and otherness are both abandoned). Tasmāt tyajann imān bhāvān punar eva avalambate: therefore one who abandons these entities takes hold of them again. The philosopher who has argued direction into a capacity and the atom into a construction still says 'to the east' when giving directions to his house. Avalambate — takes hold, leans on: he leans on what he has just refuted, and must. This is 3.3.82's doctrine (all worldly practice is carried on by a being raised up by construction alone, as though by a primary word-meaning) with a smile at the theorist's expense — including, unmistakably, the author's own.

Verse 3.6.20

तस्यास्तु शक्तेः पूर्वादिभेदो भावान्तराश्रयः ।
भिन्ना दिक् तेन भेदेन भेदायैवोपकल्पते ॥ 20 ॥

tasyāstu śakteḥ pūrvādibhedo bhāvāntarāśrayaḥ |
bhinna dik tena bhedena bhedāyavopakalpate || 20 ||

But of that capacity, the difference of 'east' and the rest rests upon another entity; direction, differentiated by that difference, serves for differentiation alone.

Direction's own differentiation, located outside it. Tasyah tu sakteh purvadi-bhedah bhava-antara-asrayah: of *that capacity*, the difference of 'east' and the rest rests upon *another entity* — east is east relative to something else (the sun, the body, the reference-point of 3.6.2's avadhi); the differences within direction are conferred from outside, as direction confers differences on what it orders. Bhinna dik tena bhedena bhedaya eva upakalpate: *direction, differentiated by that difference*, serves for *differentiation alone*. So the sequence runs: something else differentiates direction; direction, so differentiated, differentiates everything else; and it does nothing but that. The verse answers 3.6.16's regress by accepting it and locating direction within it: dik is a differentiated differentiator, not a first term, and 3.6.16 already ruled that looking for a first term is unreasonable.

Verse 3.6.21

अवधित्वेन चापेक्षायोगे दिग्लक्षणो विधिः ।
पूर्वमस्येति षष्ठ्येव दृष्टा धर्मान्तराश्रये ॥ 21 ॥

avadhitvena cāpekṣāyoge diglakṣaṇo vidhiḥ |
pūrvamasyeti ṣaṣṭhyeva drṣṭā dharmāntarāśraye || 21 ||

And when there is a dependence by way of being a limit, the rule characterized by direction applies; the sixth case alone is seen, as in 'this is prior to that', where another property is the substrate.

The grammar of directional expressions. Avadhitvena ca apeksa-yoge: when there is a *dependence by way of being a limit* — where one thing serves as the reference-point from which another is located — dig-laksano vidhiḥ: the *rule characterized by direction* applies (Panini's provisions for directional words: purva, apara, daksina and their case-government). And the observation: purvam asya iti sasthy eva drsta dharmāntara-asraye — '*prior to this*': the *sixth case alone* is seen, where *another property* is the *substrate*. The genitive, not the ablative: one says 'this village's east' rather than 'east from this village', and the genitive is the case of relation whose generating action has withdrawn (2.197-198). So direction's grammar registers exactly its metaphysics: a relation, standing without any live action, expressed by the case that expresses standing relations.

Verse 3.6.22

पूर्वादीनां विपर्ययोऽदृष्टश्चावध्यसङ्करे ।
ऋज्वेतदस्येत्येतच्च लिङ्गं न व्यतिकीर्यते ॥ 22 ॥

pūrvādīnām viparyāso'drṣṭaścāvadhyasaṅkare |
ṛjvetadasyetyetacca liṅgam na vyatikīryate || 22 ||

The inversion of 'east' and the rest is not seen when the limits are unconfused; and this mark — 'this is straight from that' — is not intermixed.

The determinacy that survives the relativity. 3.6.8-9 showed directions inverting with standpoint; here the limit of that. Purvadinam viparyasah adrastah avadhy-asankare: the *inversion* of 'east' and the rest is *not seen* when the *limits are unconfused* — hold the reference-point fixed and east does not become west; the inversions of 3.6.8-9 all came from *changing* the avadhi. Rju etad asya iti etad ca lingam na vyatikiryate: and this *mark* — 'this is *straight* from that' (3.6.2's rju: the straightness direction delivers) — is *not intermixed*: the straight-line relation between two fixed points is determinate and does not blur. So directional relativity is standpoint-relativity and nothing more: relative to a limit, everything is exact. This is 3.6.11's balance (within the frame, exact; the frame not given by the thing) stated as a rule, and it is what keeps the samuddesa's constructivism from collapsing into arbitrariness.

Verse 3.6.23

अन्तःकरणधर्मो वा बहिरेवं प्रकाशते ।
अस्यां त्वन्तर्बहिर्भावः प्रक्रियायां न विद्यते ॥ 23 ॥

antahkaraṇadharmo vā bahirevaṁ prakāśate |
asyām tvantarbahirbhāvaḥ prakriyāyām na vidyate || 23 ||

Or it is a property of the inner organ that shines forth thus, outwardly; but in this procedure, there is no being-within or being-without.

The inner/outer question raised and dismissed. Antahkarana-dharmo va bahir evam prakasate: *or* it is a property of the *inner organ* that *shines forth* thus, *outwardly* — direction as a form of the mind, projected: the reading a Kantian would recognize, and it is offered as an alternative (va). But then the dismissal: asyam tu antar-bahir-bhavah prakriyayam na vidyate — but in *this procedure*, there is *no being-within or being-without*. The inner/outer distinction is itself a directional construction (3.6.13's bhaga-prakalpana: the constructing of parts), so it cannot be used to place direction. To ask whether direction is in the mind or in the world is to ask a directional question about direction, and 3.3.77's rule forbids it: thing-distinctions do not deserve definitions among non-things. The verse is a small masterpiece of self-restraint: it names the idealist option, sees that stating it presupposes what it explains, and declines.

Verse 3.6.24

एकत्वमासां शक्तीनां नानात्वं वेति कल्पने ।
अवस्तुपतिते ज्ञात्वा सत्यतो न परामृशेत् ॥ 24 ॥

ekatvamāsām śaktīnām nānātvam veti kalpane |
avastupatite jñātvā satyato na parāmr̥śet || 24 ||

Knowing that the construction of oneness or of manifoldness for these capacities has fallen among non-things — one should not reflect upon it as real.

A methodological injunction, and it is the samuddesa's discipline. Ekatvam asam saktinam nanatvam va iti kalpane: the construction of oneness or of manifoldness for these capacities — is direction one power or many (east, west, north as distinct saktis)? Avastu-patite jnatva: *knowing* that it has fallen among non-things — the question is about capacities, and capacities are not things, and thing-questions do not apply (3.3.77 again). Satyato na paramr̥set: one should not reflect upon it as real. The injunction is precise: not 'do not ask' but 'do not take the answer as real' — one may construct oneness or manifoldness as the description requires (2.179's licensed double description) and must not mistake either for a finding. This is the samuddesa policing itself: having just declined the inner/outer question (3.6.23), it now declines the one/many question, on the same ground.

Verse 3.6.25

विकल्पातीततत्त्वेषु सङ्केतोपनिबन्धनाः ।
भावेषु व्यवहारा ये लोकस्तत्रानुगम्यते ॥ 25 ॥

vikalpātītātattvेषु saṅketopanibandhanāḥ |
bhāveषु vyavahārā ye lokastatrānugamyate || 25 ||

Among entities whose reality is beyond construction, the practices resting on convention — the world is followed along in those.

Where the injunction of 3.6.24 leaves us. Vikalpa-atita-tattvesu bhavesu: among entities whose reality is beyond construction — everything, on this samuddesa's showing (3.6.14: things are without place, parts, motion, support). Sanketa-upanibandhanah vyavaharah ye: the practices resting on convention — sanketa: agreed usage, the working namings of 2.142. Lokah tatra anugamyate: the world is followed along in those. Not: the world is corrected. Followed. The wise man does not construct alternatives against the world's namings (2.142's tat prajnah na vikalpayet), and here that counsel is applied to the most fundamental case: the world says east and west and before and after, its entities are beyond all such construction, and one follows the world. Anugamyate is the samuddesa's last practical word, and it is the same verb 3.6.19 used for the theorist taking hold again of what he abandoned.

Verse 3.6.26

नैकत्वमस्त्यनानात्वं विनैकत्वेन नेतरत् ।
परमार्थे तयोरेष भेदोऽत्यन्तं न विद्यते ॥ 26 ॥

*naikatvamastyanānātvam, vinaikatvena netarat |
paramārthe tayoreṣa bhedo'tyantam, na vidyate || 26 ||*

There is no oneness without non-manifoldness, and not the other without oneness; in the highest sense, this difference between the two does not exist at all.

The one/many question of 3.6.24 answered by dissolution. Na ekatvam asti ananatvam: there is no oneness without non-manifoldness — to be one is to be not-many; the concept is negative through and through. Vina ekatvena na itarat: and not the other without oneness — to be many is to be not-one. Each is the other's negation and neither has independent content. Paramarthe tayoh esa bhedo 'tyantam na vidyate: in the highest sense, this difference between the two does not exist at all. So the question 'is direction one or many?' has no answer because its two options are not two: each is the denial of the other, and where neither can be affirmed independently, the disjunction is empty. This is 3.3.60-61's structure exactly (being and non-being mutually understood, hence constructions of one self), now applied to number — and it explains 3.6.24's injunction: one does not reflect on it as real because there is no it.

Verse 3.6.27

न शक्तीनां तथा भेदो यथा शक्तिमतां स्थितिः ।
न च लौकिकमेकत्वं तासामात्मसु विद्यते ॥ 27 ॥

*na śaktīnām, tathā bhedo yathā śaktimatām, sthitiḥ |
na ca laukikamekatvam, tāsāmātmasu vidyate || 27 ||*

There is no difference of the capacities such as belongs to the standing of things that have capacities; nor is there a worldly oneness among their selves.

The capacities placed outside the number-categories altogether. Na saktinam tatha bhedo yatha sakti-matam sthitiḥ: there is no difference of the capacities such as belongs to the standing of things that have capacities — powers are not distinct in the way their bearers are distinct: two cows are two, and the powers in them are not two in that way (1.2's aprthaktve 'pi saktibhyah: not separate from its powers, yet functioning as though separate). Na ca laukikam ekatvam tasam atmasu vidyate: nor is there a worldly oneness among their selves — neither are they one in the way a thing is one. So capacities are neither many as things are many nor one as a thing is one: they fall outside the number-scheme, which is exactly 3.6.24's avastu-patite (fallen among non-things). The verse is the samuddesa's most precise statement of what a sakti is, and it says what it is not.

Verse 3.6.28

नैकत्वं व्यवतिष्ठेत नानात्वं चेन्न कल्पयेत् ।
नानात्वं चावहीयेत यद्येकत्वं न कल्पयेत् ॥ 28 ॥

naikatvam.vyavatiṣṭheta nānātvam.cenna kalpayet |
nānātvam.cāvahīyeta yadyekatvam.na kalpayet || 28 ||

Oneness would not stand fixed if one did not construct manifoldness; and manifoldness would fall away if one did not construct oneness.

The mutual dependence of 3.6.26 stated as a constructive fact. Na ekatvam vyavatiṣṭheta nanatvam cen na kalpayet: *oneness* would not *stand fixed* if one did not *construct manifoldness* — the one is available only against a many that construction supplies. Nanatvam ca avahiyeta yadi ekatvam na kalpayet: and *manifoldness* would *fall away* if one did not construct *oneness* — the many is available only against a one. So both members of the pair are held in place by the other's construction, and neither is found. This is the Dik-samuddesa's fitting close: a samuddesa about the power that constructs all parts (3.6.13's bhaga-prakalpana-sakti) ends by showing that the categories in which we count the parts are themselves mutually-propping constructions. Direction makes the many; the many and the one make each other; and nothing in the sequence rests on anything. The next samuddesa — Sadhana, on the karakas, the largest in the kanda — will find the same structure in the grammar's account of who does what to whom.

Sādhana-samuddeśa — On the Means

Verse 3.7.1

स्वाश्रये समवेतानां तद्वदेवाश्रयान्तरे ।
क्रियाणामभिनिष्पत्तौ सामर्थ्यं साधनं विदुः ॥ 1 ॥

svāśraye samavetānām tadvadevāśrayāntare |
kriyāṇāmabhinīṣpattau sāmāthyam sādhanam viduḥ || 1 ||

The capacity, in the completing of actions inherent in their own substratum — and likewise in another substratum — they know as the means.

The definition of sadhana, and it is functional through and through. Sva-asraye samavetanam — of actions *inherent in their own substratum* (the cooking that is in the cook); tadvad eva asrayantare — *and likewise in another substratum* (the cooking that reaches the rice). Kriyanam abhinispattau samarthyam sadhanam viduh: the *capacity*, in the *completing* of those actions, they know as the *means*. Not: a means is a thing used. A means is a *capacity*, individuated by its contribution to an action's completion — samarthyam, the word this work has used for what settles every disputed case (2.371's samarthyā-laksanam deciding distribution; 3.1.79's capacity explaining why universals cannot be substituted). So the karakas — agent, object, instrument, and the rest, the whole architecture of Sanskrit syntax — are from the outset capacities and not entities. What makes something an agent is not what it is but what it does toward a completion, and the samuddesa's 157 pages will not add anything to that definition; they will only show how far it reaches.

Verse 3.7.2

शक्तिमात्रासमूहस्य विश्वस्यानेधर्मणः ।
सर्वदा सर्वथा भावात् क्वचित् किञ्चिद् विवक्ष्यते ॥ 2 ॥

śaktimātrāsamūhasya viśvasyānedharmmaṇaḥ |
sarvadā sarvathā bhāvāt kvacit kimcid vivakṣyate || 2 ||

Since the universe — an aggregate of mere capacities, of manifold properties — exists always and in every way, somewhere something is intended.

The metaphysics behind 3.7.1, and it is 2.250's semantics turned outward. Sakti-matra-samuhasya visvasya aneka-dharmanah: the *universe* is an *aggregate of mere capacities*, of *manifold properties* — sakti-matra: capacities *only*, nothing underneath them bearing them (3.1.22-23's dravyadayah sarvah saktayah; 3.6.14's things without place, parts, motion, support). Sarvada sarvatha bhavat: since it exists *always* and in *every way* — everything is everything, potentially, at all times. Kvacit kimcid vivakṣyate: *somewhere, something is intended*. Out of a totality where every capacity is everywhere available, speech selects — and the selecting is vivaksa (1.155, 2.400's directed eye). This is the exact structural twin of the word's sarvarthya (2.250: one word, all meanings, carved by nimittas): the world is omni-capable as the word is omni-significant, and in both cases intention does the carving. The karaka-system is where the two carvings meet.

Verse 3.7.3

साधनव्यवहारश्च बुद्ध्यवस्थानिबन्धनः ।
सन्नसन् वार्थरूपेषु भेदो बुद्ध्या प्रकल्प्यते ॥ 3 ॥

*sādhanaavyavahāraśca buddhyavasthānibandhanah |
sannasan vārtharūpeṣu bhedo buddhyā prakalpyate || 3 ||*

And the practice of means is grounded in a state of the intellect; a difference among the forms of objects, whether existent or non-existent, is constructed by the intellect.

The samuddesa's thesis, stated in its third verse. *Sadhana-vyavaharah ca buddhy-avastha-nibandhanah*: the *practice of means* is grounded in a state of the intellect — which thing counts as agent, which as instrument, is a fact about how the situation is being held in mind. *Nibandhana*: the grounding-word (1.13's words as the basis of practice; 2.297's *sabdah loka-nibandhanah*). And the reach of the claim: *san asan va artha-rupesu bhedo buddhya prakalpyate* — a *difference* among the *forms of objects*, whether *existent or non-existent*, is *constructed by the intellect*. Not merely the *karaka*-assignments: the object-differences themselves, and *whether they exist or not* (3.3.42's figurative existence, granted by mention). So the whole furniture on which the *karaka*-system operates is *buddhi*-constructed, and the system's assignments are constructions on constructions. This is 2.428's doctrine — the speaker alone intends the *sadhya-sadhana* structure — given its ground: he can, because there is nothing there to resist him.

Verse 3.7.4

बुद्ध्या समाहितैकत्वान् पञ्चालान् कुरुभिर्यदा ।
पुनर्विभजते वक्ता तदाऽपायः प्रतीयते ॥ 4 ॥

*buddhayā samāhitaikatvān pañcālān kurubhiryadā |
punarvibhajate vaktā tadā'pāyaḥ pratiyate || 4 ||*

When a speaker, having brought the Pancalas to oneness by the intellect along with the Kurus, divides them again — then a separation is understood.

The thesis of 3.7.3 in a worked example. *Buddhya samahita-ekatvan pancalan kurubhih yada*: when, *by the intellect*, the *Pancalas* have been brought to oneness with the *Kurus* — two peoples held in one thought, as one group. *Punah vibhajate vakta*: the *speaker divides them again* — and says something like 'the *Pancalas* came away from the *Kurus*'. *Tada apayah pratiyate*: then a *separation* is understood — and with it the ablative case, *apadana*, the *karaka* of departure. Note the sequence: the *unity* was made by *buddhi* first, and only against that made unity can the division register as a separation. Nothing in *Pancalas* and *Kurus* made them one; the speaker did; and the ablative he then uses reports a departure from a unity he manufactured a moment earlier. The *karaka* is the residue of the speaker's own prior construing — which is what 3.7.3 said, now visible in a single sentence.

Verse 3.7.5

शब्दोपहितरूपाश्च बुद्धेर्विषयतां गतान् ।
प्रत्यक्षमिव कंसादीन् साधनत्वेन मन्यते ॥ 5 ॥

*śabdopahitarūpāśca buddherviṣayatām.gatān |
pratyakṣamiva kaṁsādīn sādhanatvena manyate || 5 ||*

And things such as Kamsa, whose forms are conditioned by words and which have come to be objects of the intellect, one considers as means — as though they were perceptible.

The thesis extended to what does not exist. Sabda-upahita-rupan buddheh visayatam gatan: things whose forms are conditioned by words and which have come to be objects of the intellect — beings that have no existence except through being spoken of and thought (3.3.39's aupacariki satta; 3.3.53's cognition born of designation). Kamsadin: Kamsa and the like — the tyrant of the Kṛṣṇa-legend, long dead and perhaps never living, and the grammarians' own standard example (Panini has a rule for kamsa-vadha, the slaying of Kamsa). Pratyakṣam iva sadhanatvena manyate: one considers them as means — as though they were perceptible. One says 'Kṛṣṇa killed Kamsa', and Kamsa is the karman, the object, doing full grammatical work. So the karaka-system operates identically on the real and the fabulous, which is decisive for 3.7.3: if karakas were features of events, the non-existent could not bear them. They are buddhi-postings, and buddhi posts them on Kamsa as readily as on the pot.

Verse 3.7.6

बुद्धिप्रवृत्तिरूपं च समारोप्याभिधातृभिः ।
अर्थेषु शक्तिभेदानां क्रियते परिकल्पना ॥ 6 ॥

*buddhipravṛttirūpaṁ.ca samāropyābhidhātṛbhiḥ |
artheṣu śaktibhedānām.kriyate parikalpanā || 6 ||*

And by the expressers, having superimposed the form of the intellect's operation upon the objects, a construction of differences of capacity is made.

The mechanism named, and the verb is 3.1.6's. Buddhi-pravṛtti-rupam ca samaropya: having superimposed the form of the intellect's operation — samaropa, the superimposition by which the word's own universal is laid over the object's (3.1.6's adhyaropa-kalpana). Abhidhātṛbhiḥ arthesu: by the expressers, upon the objects. Śaktibhedānām kriyate parikalpana: a construction of differences of capacity is made. So the karakas are the shape of the mind's own operating, projected onto what it operates about: the intellect proceeds from agent through instrument to object, and it lays that procession on the world and calls it the structure of the event. The verse is the Padakanda's most explicit statement of where its categories come from — not from things, and not arbitrarily either, but from the form of thinking itself, externalized (3.6.23's antahkarana-dharmo va bahir evaṁ prakasate: a property of the inner organ shining forth outwardly, there declined as unstatable, here stated of the karakas).

Verse 3.7.7

व्यक्तौ पदार्थे शब्दादेर्जन्यमानस्य कर्मणः ।
साधनत्वं तथा सिद्धं बुद्धिरूपप्रकल्पितम् ॥ 7 ॥

vyaktau padārthe śabdāderjanyamānasya karmaṇaḥ |
sādhanaṭvam, tathā siddham, buddhirūpaprakalpitaṃ || 7 ||

When the individual is the word-meaning, the means-hood of an object being produced from a word and the like is likewise established, constructed by the form of the intellect.

The doctrine applied to the hardest karaka: the nirvartya-karman, the object *produced* by the action. Vyaktau padarthe: when the *individual* is the word-meaning. Sabdadeh janyamanasya karmanah sadhanatvam: the *means-hood* of an object *being produced* — the mat that the weaving makes, the sound the striking makes: the thing that does not exist until the action completes, and is nonetheless the action's object throughout. This is the case that most embarrasses any realist account: what is the action reaching toward, while it reaches? Tatha siddham buddhi-rupa-prakalpitaṃ: it is *likewise established, constructed by the form of the intellect*. The produced object is a buddhi-posting held in place across the production — exactly like Kamsa (3.7.5), and by the same mechanism. So the karaka-system's most paradoxical member is not an anomaly needing special treatment; it is the ordinary case with its constructedness visible, since here the thing manifestly is not there to be reached.

Verse 3.7.8

स्वतन्त्रपरतन्त्रत्वे क्रमरूपं च दर्शितम् ।
निरीहेष्वपि भावेषु कल्पनोपनिबन्धनम् ॥ 8 ॥

svatantraparatantratve kramarūpaṃ ca darśitaṃ |
nirīheṣvapi bhāveṣu kalpanopanibandhanaṃ || 8 ||

Independence and dependence, and the form of sequence, have been shown; even among things that are without striving, they rest upon construction.

The two poles of the karaka-system placed. Svatantra-paratantratve: *independence* and *dependence* — the agent is defined by Panini as svatantra, independent (1.4.54: svatantraḥ karta), and every other karaka is dependent on it. Krama-rupam ca darsitam: and the *form of sequence* has been shown (3.6.4's sequence from time; 3.1.35's Being with sequence). Nirihesu api bhavesu kalpana-upanibandhanam: *even among things that are without striving* — nir-ihā: without effort, without intention, without any doing of their own — these *rest upon construction*. The axe does not strive to cut, the fire does not strive to burn, and yet we make the axe an instrument and the fire an agent ('the fire cooks'). Independence and dependence are conferred on the striving-less by construction, and the whole hierarchy of the karakas — that celebrated architecture in which everything orbits an independent agent — is laid on a world in which nothing is doing anything.

Verse 3.7.9

शक्तयः शक्तिमन्तश्च सर्वे संसर्गवादिनाम् ।
भावास्तेष्वस्वशब्देषु साधनत्वं निरूप्यते ॥ 9 ॥

śaktayaḥ śaktimṁantaśca sarve saṁsarga-vādinām |
bhāvāsteṣvasvaśabdeṣu sādhanatvam nirūpyate || 9 ||

For the proponents of commingling, all entities are capacities and possessors of capacities; among those, which are not expressed by their own words, means-hood is determined.

The position placed in its school. Saktayah sakti-mantah ca sarve samsarga-vadinam bhavah: for the proponents of commingling — the samsarga-vadins, those for whom things exist only in relation (3.4.1's samsarga-rupāt sambhūtaḥ: word-meanings arisen from the form of commingling) — all entities are capacities and possessors of capacities, both at once, nothing being purely one or the other. Tesu asva-sabdesu sadhanatvam nirūpyate: among those, which are not expressed by their own words, means-hood is determined. Asva-sabda: not having its own word — the capacities are not named directly by any word; they are determined as means only through the case-endings and the construction (3.7.13 will say this outright). So the karakas are capacities in a world of capacities, reached by no word of their own, fixed by the grammar's oblique apparatus. The verse is the samuddesa's placement of itself: this is what the karaka-system looks like from inside a relational ontology.

Verse 3.7.10

घटस्य दृशिकर्मत्वे महत्त्वादीनि साधनम् ।
रूपस्य दृशिकर्मत्वे रूपत्वादीनि साधनम् ॥ 10 ॥

ghaṭasya dṛśikarmatve mahattvādīni sādhanam |
rūpasya dṛśikarmatve rūpatvādīni sādhanam || 10 ||

In the pot's being the object of seeing, largeness and the rest are the means; in colour's being the object of seeing, colour-hood and the rest are the means.

Two worked cases, and their pairing is the argument. Ghatasya drsi-karmatve mahattvadini sadhanam: in the pot's being the object of seeing, largeness and the rest are the means — what makes the pot visible is not the pot but its magnitude (the Vaisesika's own doctrine: mahattva is a condition of visibility; atoms are invisible for want of it). Rupasya drsi-karmatve rupatvadini sadhanam: in colour's being the object of seeing, colour-hood and the rest are the means. So in each case, what does the enabling is a property, and the thing we call the object of seeing is not what enables its own being seen. The karman — the object — is thus doubly derivative: it is a buddhi-posting (3.7.3), and even its availability to the action runs through properties that are themselves capacities. Nothing in the chain is the solid thing the grammar's accusative seems to name.

Verse 3.7.11

स्वैः सामान्यविशेषैश्च शक्तिमन्तो रसादयः ।
नियतग्रहणा लोके शक्तयस्तास्तथाश्रयैः ॥ 11 ॥

svaiḥ sāmānyaviśeṣaiśca śaktimanto rasādayaḥ |
niyata-grahaṇā loka śaktayastāstathāśrayaiḥ || 11 ||

Tastes and the rest are possessors of capacity by their own generals and particulars; in the world, those capacities are of fixed apprehension, likewise by their substrata.

The fixity within the constructedness. Svaiḥ samanya-visesaiḥ ca sakti-mantah rasadayah: *tastes* and the rest are possessors of *capacity* by their *own* generals and particulars — sweetness has its capacity by being sweet, and by the kind of sweet it is. Niyata-grahanah loka: in the *world*, they are of *fixed apprehension* — the tongue takes taste and not colour, invariably; no confusion has ever occurred. Saktayah tathā asrayaiḥ: those *capacities* likewise, by their *substrata*. This is 3.3.29's *yogyata* (the senses' beginningless fitness for their objects) reappearing in the *karaka*-system: the capacities are constructed (3.7.6) and they are not arbitrary — each is fixed to its apprehension as the eye is fixed to colour. So the *samuddesa*'s constructivism has the same shape as the *Dik*-*samuddesa*'s: relative to the frame, exact (3.6.22); and the frame is not the thing's.

Verse 3.7.12

इन्द्रियार्थमनः कर्तृसंबन्धः साधनं क्वचित् ।
यद्यदा यदनुग्राहि तत्तदा तत्र साधनम् ॥ 12 ॥

indriyārthamanah kartṛsambandhaḥ sādhanam kvacit |
yadyadā yadanugrahi tattadā tatra sādhanam || 12 ||

The connection of sense-faculty, object, mind and agent is somewhere the means; whatever, at whatever time, is what assists — that, at that time, is the means there.

The general rule, and it is as loose as the *samuddesa*'s thesis requires. Indriya-artha-manah-kartṛ-sambandhah sadhanam kvacit: the *connection of sense-faculty, object, mind and agent* is *somewhere* the means — the whole four-term complex of perception can itself be the instrument, on occasion. And then the formula: yad yada yad-anugrahi tat tada tatra sadhanam — *whatever, at whatever time, is what assists — that, at that time, is the means there*. Three indexicals in seven words: whatever, whenever, wherever. Nothing is an instrument; anything is an instrument when it is assisting. Anugrahi — assisting: the *upakara* by which the unnameable relation is tracked (3.3.5), by which capacities are brought about (3.6.6), and now by which *karakas* are assigned. The rule is the *samuddesa*'s centre: means-hood is occasion-relative assistance, full stop.

Verse 3.7.13

स्वशब्दैरभिधाने तु स धर्मो नाभिधीयते ।
विभक्त्यादिभिरेवासावुपकारः प्रतीयते ॥ 13 ॥

*svaśabdairabhidhāne tu sa dharmo nābhidhīyate |
vibhaktyādibhirevāsāvupakāraḥ pratīyate || 13 ||*

But when expression is by their own words, that property is not expressed; that assistance is understood by the case-endings alone.

How the karakas actually get into a sentence, and it is not by being named. Sva-sabdaih abhidhane tu sa dharmo na abhidhiyate: when expression is by *their own words* — when one says 'axe', 'Devadatta', 'rice' — *that property* (means-hood, agency, objecthood) is *not expressed*: the noun names the thing and says nothing about its role. Vibhakty-adibhih eva asau upakarah pratiyate: that *assistance* is understood by the *case-endings alone*. The role rides on the ending, not the stem: 'devadattena' says instrument, and 'devadatta' names a man. So the karaka-system is carried entirely by the inflectional apparatus, and the words that name the participants are silent about what they are doing. This is 3.7.9's asva-sabdesu made precise — the capacities have no words of their own — and it explains why the samuddesa is possible at all: the roles are a grammatical layer, assigned by endings, and one can therefore ask what the assignment tracks. The answer, since 3.7.3, is buddhi.

Verse 3.7.14

निमित्तभावो भावानामुपकारार्थमाश्रितः ।
नतिरावर्जनेत्येवं सिद्धः साधनमिष्यते ॥ 14 ॥

*nimittabhāvo bhāvānāmupakārārthamāśritaḥ |
natirāvarjanetyevam, siddhaḥ sādhanamiṣyate || 14 ||*

The state of being an occasioning ground for things, resorted to for the sake of assistance — 'bending', 'turning toward' — thus established, it is held to be the means.

The definition of 3.7.1 restated through etymology. Nimitta-bhavaḥ bhavanam upakara-artham asri-taḥ: the state of being an *occasioning ground* for things, resorted to *for the sake of assistance* (3.7.12's anugrahi: whatever assists is the means). And then two glosses of nimitta by its supposed roots: natih, *bending*; avarjana, *turning toward*. The etymologists derive nimitta from a bending-toward, an inclination of one thing toward another's completion — and Bhartrhari, who spent 2.170-175 showing that derivations are landmarks rather than foundations, uses this one for what it is worth: it pictures the means as a leaning, not a thing. Iti evam siddhah sadhanam isyate: *thus established*, it is held to be the means. What a sadhana is, on this account, is an inclination toward an action's completion — which is a relational posture, not an object.

Verse 3.7.15

स तेभ्यो व्यतिरिक्तो वा तेषामात्मैव वा तथा ।
व्यतिरेकमुपाश्रित्य साधनत्वेन कल्प्यते ॥ 15 ॥

sa tebhyo vyatirikto vā teṣāmātmaiva vā tathā |
vyatirekamupāśritya sādhanatvena kalpyate || 15 ||

That is either distinct from them, or is their very self; having resorted to separation, it is constructed as means-hood.

The ontology of the means, and the two options are offered without decision. Sa tebhyo vyatirikto va: *that* (the nimitta-bhava, the being-a-ground) is either *distinct from* them — a further item over and above the things it relates; tesam atma eva va tatha: or is *their very self* — nothing but the things themselves under a description. The dispute is the tradition's standing one about relation (3.3.6's samyoga and samavaya: are they properties of the relata, or items?) and Bhartrhari declines it as he declined it there. But he says what happens in either case: vyatirekam upasritya sadhanatvena kalpyate — *having resorted to separation*, it is *constructed as means-hood*. Whatever the metaphysics, the *construction* requires taking the means as separate — the instrument must be held apart from the action to count as its instrument. So means-hood is a construction on a separation that may or may not answer to anything, and the grammar proceeds identically either way (2.179's licensed double description).

Verse 3.7.16-17

संदर्शनिं प्रार्थनायां व्यवसाये त्वनन्तरा ।
व्यवसायस्तथारंभे साधनत्वाय कल्पते ॥ 16 ॥
पूर्वस्मिन् या क्रिया सैव परस्मिन् साधनं मता ।
सन्दर्शने तु चैतन्यं विशिष्टं साधनं विदुः ॥ 17 ॥

samdarśanam, prārthanāyām, vyavasāye tvanantarā |
vyavasāyastathārambhe sādhanatvāya kalpate || 16 ||
pūrvasmin yā kriyā saiva parasmin sādhanam, matā |
sandarśane tu caitanyam, viśiṣṭam, sādhanam, viduḥ || 17 ||

(16) Perceiving, in the case of seeking; and next, in the case of resolving; and resolve, likewise, in undertaking — serve as means. (17) The very action that was in the prior case is held to be the means in the subsequent; but in perceiving, they know a distinguished consciousness to be the means.

The chain of practical reason, analysed as a series of karaka-assignments. Sandarsanam prarthanayam: *perceiving* is the means in *seeking* — one wants what one has seen; vyavasaye tv anantara: and *next* (perceiving-and-seeking) in *resolving*; vyavasayah tatha arambhe: and *resolve* likewise in *undertaking*. Seeing, wanting, deciding, doing: each stage is the instrument of the next. And the principle: purvasmin ya kriya sa eva parasmin sadhanam mata — *the very action* that was in the *prior* case is held to be the *means* in the *subsequent*. So the same item is action here and instrument there, purely by where in the chain one stands (2.429's cooking that is object, instrument and sadhya at once, assigned by the sentence's construction). And the chain's first term: sandarsane

tu caitanyam visistam sadhanam viduh — in *perceiving*, they know a *distinguished* consciousness to be the means. The regress stops at consciousness, which is not itself a stage.

Verse 3.7.18

निष्पत्तिमात्रे कर्तृत्वं सर्वत्रैवास्ति कारके ।
व्यापारभेदापेक्षायां करणादित्वसंभवः ॥ 18 ॥

niṣpattimātre kartṛtvam sarvatraivāsti kārake |
vyāpārabhedāpekṣāyām karaṇādityasambhavaḥ || 18 ||

In the mere completing, agency exists in every karaka whatever; when a difference of operation is depended upon, the possibility of being instrument and the rest arises.

The samuddesa's most consequential structural doctrine. Nispatti-matre kartṛtvam sarvatra eva asti karake: in the *mere completing*, agency exists in *every karaka whatever*. Every participant is an agent: the axe cuts, the wood splits, the fire cooks — each does its own thing, and each is doing it. Agency is not the privilege of the grammatical subject; it is what every contributor exercises. And then: vyapara-bheda-apeksayam karanaditva-sambhavaḥ — when a *difference of operation* is *depended upon*, the possibility of being *instrument and the rest* arises. The differentiation into instrument, object, locus and the rest appears only when one attends to *how* each contributes — which operation each performs. So the karaka-system is a hierarchy imposed on a democracy: all are agents, and the assignment of subordinate roles is a matter of which operation one is attending to. The verses following will make this the samuddesa's organizing insight.

Verse 3.7.19

पुत्रस्य जन्मनि यथा पित्रोः कर्तृत्वमुच्यते ।
अयमस्यामियं त्वस्मादिति भेदो विवक्षया ॥ 19 ॥

putrasya janmani yathā pitroḥ kartṛtvamucyate |
ayamasyāmiyam tvasmāditi bhedo vivakṣayā || 19 ||

As, in the birth of a son, agency is spoken of for both parents — 'he in her', 'she from him' — the difference is by intention.

The doctrine of 3.7.18 in the plainest possible case. Putrasya janmani yathā pitroḥ kartṛtvam ucyaḥ: as, in the *birth of a son*, agency is spoken of for *both parents* — both are agents of the begetting; neither is the instrument of the other. And yet the grammar must assign roles: ayam asyam — *he in her* (locative: she the locus, he the agent); iyam tu asmat — *she from him* (ablative: he the source, she the agent). Two sentences, the same event, opposite assignments. Iti bhedo vivakṣaya: the *difference is by intention*. Nothing in the begetting makes the mother a locus rather than an agent; the speaker's construing does (2.428: the speaker alone intends the sadhya-sadhana structure). The example is chosen for its symmetry — no one can claim that biology settles which parent is the karta — and it demonstrates 3.7.18 exactly: both are agents in the mere completing, and the role-difference is imposed by attention.

Verse 3.7.20-21

गुणक्रियाणां कतरिः कर्त्रा न्यक्कृतशक्तयः ।
 न्यक्तायामपि सम्पूर्णैः स्वैर्व्यापारैः समन्विताः ॥ 20 ॥
 करणत्वादिभिर्जाताः क्रियाभेदानुपातिभिः ।
 स्वातन्त्र्यमुत्तरं लब्ध्वा प्रधाने यान्ति कर्तृताम् ॥ 21 ॥

guṇakriyāṇām kartārah kartrā nyakkṛtaśaktayah |
nyaktāyāmapi sampūrnaiḥ svairvyāpāraiḥ samanvitāḥ || 20 ||
karanatvādibhirjñātāḥ kriyābhedānupātibhiḥ |
svātantryamuttaram labdhvā pradhāne yānti kartṛtām || 21 ||

(20) The agents of qualities and actions, their capacities subordinated by the agent — even when subordinated, they are furnished with their own complete operations. (21) Known by instrument-hood and the rest, which follow upon the differences of action, having obtained a subsequent independence, they attain agency with respect to the principal.

The mechanism of subordination, and it is precisely described. (20): *guna-kriyanam kartarah* — the agents of qualities and actions (every participant, each an agent by 3.7.18) — *kartra nyakkṛta-saktayah*: their capacities subordinated by the agent — *nyakkṛta*: pressed down, demoted, made to bow. The principal agent's presence demotes the rest. And the crucial concession: *nyaktayam api sampurnaiḥ svaiḥ vyaparaiḥ samanvitah* — even when subordinated, they are furnished with their own complete operations: the axe's cutting is not diminished by the woodsman's being the *karta*; it is complete, and it is the axe's. Demotion is a matter of grammatical rank, not of diminished doing. (21): *karanatvadibhiḥ jñataḥ kriya-bheda-anupatibhiḥ* — known by instrument-hood and the rest, which follow upon the differences of action; *svatantryam uttaram labdhva pradhane yanti kartrtam*: having obtained a subsequent independence, they attain agency with respect to the principal. The subordinate *karakas* regain agency at the next level up: within its own operation, the axe is *svatantra*. So the system is a nested hierarchy of agents, each independent in its own sphere and demoted in the sphere above.

Verse 3.7.22-23

यथा राजा नियुक्तेषु योद्धृत्वं योद्धृषु स्थितम् ।
 तेषु वृत्तौ तु लभते राजा जयपराजयौ ॥ 22 ॥
 तथा कर्त्रा नियुक्तेषु सर्वेष्वेकार्थकारिषु ।
 कर्तृत्वं करणादित्वैरुत्तरं न विरुध्यते ॥ 23 ॥

yathā rājñā niyukteṣu yoddhṛtvam.yoddhṛṣu sthitam |
 teṣu vṛttau tu labhate rājā jayaparājayau || 22 ||
 tathā kartrā niyukteṣu sarveṣvekāṛthakāriṣu |
 kartṛtvam.karaṇāditvairuttaram.na virudhyate || 23 ||

(22) As, among those appointed by the king, the state of being fighters stands in the fighters; but when they act, it is the king who obtains victory and defeat. (23) So, among all those appointed by the agent, doing one work – agency, subsequent, is not in conflict with instrument-hood and the rest.

The political simile, and it is the samuddesa's finest. (22): rajna niyuktesu – among those *appointed by the king* – yoddhṛtvam yoddhṛsu sthitam: the *state of being fighters* stands in the *fighters*: the soldiers do the fighting, entirely and without remainder; the king is not fighting. Tesu vṛttau tu labhate raja jaya-parajayau: but *when they act*, it is *the king* who obtains *victory and defeat*. The doing is theirs; the outcome is predicated of him. (23) applies it: tatha kartra niyuktesu sarvesu eka-ārtha-kāriṣu – so among *all those appointed by the agent, doing one work* – kartṛtvam karanaditvaih uttaram na virudhyate: *agency, subsequent, is not in conflict* with instrument-hood and the rest. The axe is an agent (it cuts) and an instrument (in the woodsman's sentence), as the soldier is a fighter and the king's instrument, and no contradiction arises because the two predications belong to different levels. The simile explains what 3.7.20-21 asserted, and it explains why we say 'the king conquered' without lying and 'the soldiers fought' without contradicting ourselves.

Verse 3.7.24

अनाश्रिते तु व्यापारे निमित्तं हेतुरिष्यते ।
 आश्रितावधिभावं तु लक्षणे लक्षणं विदुः ॥ 24 ॥

anāśrite tu vyāpāre nimittam.heturiṣyate |
 āśritāvadhibhāvam.tu lakṣaṇe lakṣaṇam.viduḥ || 24 ||

But when the operation is not resorted to, the occasioning ground is held to be the hetu; when the state of being a limit is resorted to, they know the mark to be in the case of the mark.

Two karakas distinguished by what they do not do. Anasrite tu vyapare nimittam hetur isyate: when the *operation is not resorted to* – where the ground contributes without any operation being attributed to it – the occasioning ground is held to be *hetu*, the cause (Panini's karana in its causal sense, and the ablative of cause: 'he suffers from illness'). Asrita-avadi-bhavam tu laksane laksanam viduh: when the state of being a *limit* is resorted to, they know the *mark* to be in the case of the *mark*. So hetu and laksana are the two karakas that operate without operating: one contributes causally without a vyapara of its own, the other locates by being a boundary (3.6.2's avadhi: the limit

from which direction separates). The verse is fine taxonomy: having established that every karaka is an agent with its own complete operation (3.7.20), it identifies the two that are exceptions — and they are the two that do not act.

Verse 3.7.25

द्रव्यादिविषयो हेतुः कारकं नियतक्रियम् ।
कर्ता कर्त्रन्तरापेक्षः क्रियायां हेतुरिष्यते ॥ 25 ॥

dravyādiviṣayo hetuḥ kārakam niyatakriyam |
kartā kartrantarāpekṣaḥ kriyāyām heturiṣyate || 25 ||

The hetu has substance and the rest for its domain; the karaka has a fixed action. An agent depending on another agent is held to be the hetu in the action.

The hetu/karaka distinction sharpened. Dravyadi-visayo hetuh: the *hetu* has *substance and the rest* for its *domain* — it can be anything: a substance, a quality, an action, so long as it grounds. Karakam niyata-kriyam: the *karaka* has a *fixed action* — a karaka is defined by its determinate contribution to a determinate act (3.7.1's samarthyam in the completing). And the causative: karta kartr-antara-apeksah kriyayam hetur isyate — an *agent depending on another agent* is held to be the *hetu* in the action. This is the grammar of causation: when Devadatta makes Yajnadatta cook, Yajnadatta is an agent who depends on another agent, and Devadatta is the hetu. So the causative construction is analysed as an agent-over-agent relation — which is exactly 3.7.22's king and soldiers, now given its morphological home in the nic-affix.

Verse 3.7.26

क्रियायै करणन्तस्य दृष्टः प्रतिनिधिस्तथा ।
हेत्वर्था तु क्रिया तस्मान्न स प्रतिनिधीयते ॥ 26 ॥

kriyāyai karanantasya drṣṭaḥ pratinidhistathā |
hetvarthā tu kriyā tasmānna sa pratinidhiyate || 26 ||

For an action, a substitute for the instrument is seen; but the action is for the sake of the hetu — therefore that one is not substituted.

A test that discriminates the two. Kriyayai karanantasya drstah pratinidhih tatha: for an *action*, a *substitute for the instrument* is *seen* — the axe failing, use a hatchet; instruments are replaceable (3.1.78's substitution-rule discriminating what may be substituted from what may not). Hetv-artha tu kriya: but the *action* is *for the sake of the hetu* — the hetu is not a means the action uses; the action exists for it. Tasmāt na sa pratinidhiyate: *therefore that one is not substituted*. One does not substitute a different reason for acting and call it the same act. The test is the same one 3.1.78-79 ran on universals and qualities (what stands near the capacity cannot be replaced; what stands at a remove can), and it places hetu and karana precisely: the instrument serves the action and is fungible; the hetu is what the action serves and is not.

Verse 3.7.27

प्रतिलोम्यानुलोम्याभ्यां हेतुर्थस्य साधकः ।
तादर्थ्यमानुलोम्येन हेतुत्वानुगतं तु तत् ॥ 27 ॥

pratilomyānulomyābhyām.heturarthasya sādhaḥ |
tādarthyamānulomyena hetutvānugataṁ.tu tat || 27 ||

The *hetu* is the accomplisher of the meaning by way of the contrary and by way of the favourable; and purposiveness, by way of the favourable, is what follows upon *hetu*-hood.

The *hetu*'s two modes. *Pratilomya-anulomyabhyam hetu arthasya sadhakah*: the *hetu* is the *accomplisher of the meaning* by way of the *contrary* and by way of the *favourable* — one acts *because of* a thing one wants (favourable) and *because of* a thing one flees (contrary): both are reasons, and the ablative of cause covers both ('from desire', 'from fear'). *Tadarthyam anulomyena hetutva-anugataṁ tu tat*: and *purposiveness* — *tadarthya*, being-for-that, the dative's sense ('for the sake of') — *by way of the favourable*, is what follows upon *hetu*-hood. So the dative of purpose is a special case of the *hetu*: the favourable reason, taken as goal. The verse quietly unifies two of Panini's cases (the ablative of cause and the dative of purpose) under one *karaka*-analysis, distinguished only by direction — and the unification follows from 3.7.26's finding that the *hetu* is what the action is *for*.

Verse 3.7.28

सर्वत्र सहजा शक्तियविद्रव्यमस्थिता ।
क्रियाकाले त्वभिव्यक्तेराश्रयादुपरकारिणी ॥ 28 ॥

sarvatra sahajā śaktiryāvaddravyamasthitā |
kriyākāle tvabhivyakterāśrayāduparakāriṇī || 28 ||

Everywhere the innate capacity stands as long as the substance does; but at the time of the action, from its manifestation, it becomes assisting through its substratum.

The temporality of capacity, and it settles a real puzzle. *Sarvatra sahaja saktih yavad-dravyam avasthita*: *everywhere*, the *innate capacity stands as long as the substance* does — the axe's cutting-power is in it while it is an axe, whether or not anyone is cutting; capacities do not come and go with their exercise. *Kriya-kale tu abhivyakteh asrayad upakarini*: but *at the time of the action*, from its *manifestation*, it becomes *assisting* through its *substratum*. So the capacity is permanent and its *assisting* is occasional — it is always there and it helps only when manifested (1.44's manifestation-doctrine: the sphota permanent, the sounds occasioning). This resolves how a *karaka* can be both a standing property of a thing (the axe is an instrument even in the shed) and an occasion-relative posting (3.7.12's whatever-whenever-whenever): the capacity stands, the assisting happens.

Verse 3.7.29

कुड्यस्यावरणे शक्तिरस्यादीनां विदारणे ।
सर्वदा स तु सन् धर्मः क्रियाकाले निरूप्यते ॥ 29 ॥

kudyasyāvarāṇe śaktirasyādīnām vidāraṇe |
sarvadā sa tu san dharmah kriyākāle nirūpyate || 29 ||

The wall's capacity is in obstructing, that of a sword and the like in cutting; that property, being always existent, is determined at the time of the action.

The doctrine of 3.7.28 in two homely cases. *Kudyasya avarane saktih*: the *wall's* capacity is in *obstructing* — a wall is for stopping, and it is for stopping when nothing is being stopped. *Asyadinam vidarane*: that of a *sword* and the like in *cutting*. *Sarvada sa tu san dharmah*: that property, being *always existent* — the wall does not acquire obstruction-power when someone walks into it. *Kriyakale nirupyate*: it is *determined* at the *time of the action* — *nirupyate*: ascertained, fixed, brought into determinacy (3.3.54's *sva-rupena anirupitam*: the object's own form left undetermined by the word). So the capacity is eternal and its determination is occasional, and the *karaka*-assignment records the determination. The examples are chosen for their obviousness: nobody thinks the wall becomes obstructive on impact, and nobody can say what the wall's obstruction is except by reference to a walking-into that has not yet happened.

Verse 3.7.30

स्वाङ्गसंयोगिनः पाशा दैत्यानां वारुणा यथा ।
व्यज्यन्ते विजिगीषूणां द्रव्याणां शक्तयस्तथा ॥ 30 ॥

svāṅgasamyogināḥ pāśā daityānām vāruṇā yathā |
vyajyante vijigīṣūṇām dravyāṇām śaktayastathā || 30 ||

As the Varuna-nooses of the demons, conjoined with their own limbs, are made manifest — so are the capacities of substances made manifest for those who seek to conquer.

The *samuddesa*'s most vivid image for manifestation. The *varuna-pasa* — Varuna's nooses, the god's binding weapon of the Vedic hymns, which the demons carry *sva-anga-samyoginah*, *conjoined with their own limbs*: the noose is in them, part of them, unseen until it binds. *Vyajyante*: they are *made manifest* — the noose does not arrive; it appears out of what was already there. *Dravyanam saktayah* *tatha vijigisunam*: so the *capacities of substances*, for those who *seek to conquer*. The image completes 3.7.28-29 with a picture: capacities are latent bindings, carried in the thing, showing when the occasion draws them out. And *vijigisunam* — for those who seek to conquer — quietly returns the *samuddesa* to its own subject: the capacities manifest *for* someone with a purpose, and a purpose is what makes an event into a structure of agent and instrument and object. The *karaka*-system is the world's latent nooses, drawn out by an intention (3.7.2's *kvacit kimcid vivaksyate*: somewhere, something is intended).

Verse 3.7.31

तैक्ष्ण्यगौरवकाठिन्यसंस्थानैः स्वैरसिर्यदा ।
छेद्यं प्रति व्याप्रियते शक्तिमान् गृह्यते तदा ॥ 31 ॥

*taikṣṇyagauravakāṭhinyasamsthānaiḥ svairasiryadā |
chedyam.prati vyāpriyate śaktimān gr̥hyate tadā || 31 ||*

When the sword, by its own sharpness, weight, hardness and shape, is engaged toward what is to be cut – then it is apprehended as capacity-possessing.

The manifestation of 3.7.30 given its physics. Taiksnya-gaurava-kathinya-samsthanaih svaih: by its own sharpness, weight, hardness and shape – four properties, each permanently the sword's (3.7.28's sahaja sakti yavad-dravyam avasthita: the innate capacity standing as long as the substance). Asir yada chedyam prati vyapriyate: when the sword is engaged toward what is to be cut. Saktiman grhyate tada: then it is apprehended as capacity-possessing. The verse locates the apprehension precisely: not when the sword exists (it always has the four properties), and not after the cutting (that is too late), but when it is engaged toward – vyapriyate, in the middle of its being brought to bear. Capacity is apprehended in the engaging. And the four properties are named because they are what the engaging draws on: the karana-hood is not a fifth property alongside them but their being brought to bear on something.

Verse 3.7.32

प्राङ् निमित्तान्तरोद्भूतं क्रियायाः कैश्चिदिष्यते ।
साधनं सहजं कैश्चित् क्रियान्यैः पूर्वमिष्यते ॥ 32 ॥

*prāṇ nimittāntarodbhūtam kriyāyāḥ kaiścidīṣyate |
sāadhanam.sahajam.kaiścit kriyānyaiḥ pūrvamiṣyate || 32 ||*

Some hold the means of the action to be produced beforehand from another occasioning ground; some hold it innate; others hold the action to be prior.

Three positions on the means' origin, catalogued. Prak nimittantara-udbhutam kriyayah kaiscid isyate: some hold the means produced beforehand from another occasioning ground – the sword's cutting-power was made by the smith; capacities have causal histories. Sahajam kaiscit: some hold it innate – the capacity is the thing's own, unmade (3.7.28's sahaja). Kriya anyaih purvam isyate: others hold the action to be prior – the capacity is constituted by the action rather than preceding it, so that the sword becomes an instrument by cutting. Three genuine options, and Bhartrhari does not choose. He does not need to: 3.7.28-31 have established that whatever the capacity's origin, it is apprehended in the engaging, and that is all the karaka-system requires. The origin-dispute is 3.1.107's substrate-dispute again – canvassed, tolerated, and shown not to touch the doctrine that depends on it.

Verse 3.7.33

प्रवृत्तिरेव प्रथमं क्वचिदप्यनपाश्रिता ।
शक्तिरेकाधिकरणे स्रोतोवदपकर्षति ॥ 33 ॥

pravṛttireva prathamam kvacidapyanapāśritā |
śaktirekādhikaraṇe srotovadapakarṣati || 33 ||

The operation itself is first, somewhere not resorting to anything at all; the capacity, in a single substratum, draws downward, like a current.

The third option of 3.7.32 developed, with an image. Pravṛttir eva prathamam kvacid api anapasrita: the *operation itself* is first, somewhere not resorting to anything at all — the doing is primary, leaning on no prior capacity: sometimes there simply is a going, and the goer is read off it. Saktir eka-adhikarane sroto-vad apakarsati: the *capacity*, in a *single substratum*, *draws downward, like a current*. The image is exact: a river's current is not a thing in the water that makes it flow; it is the flowing, and it carries what is in it. So capacity is the operation's own momentum, drawing its bearer along — which inverts the ordinary picture (thing has power, power produces act) into: act runs, and what runs in it is called its power. The verse is the samuddesa's most process-metaphysical moment, and it is offered as one option among three.

Verse 3.7.34

अपूर्व कालशक्तिं वा क्रियां वा कालमेव वा ।
तमेवलक्षणं भावं केचिदाहुः कथंचन ॥ 34 ॥

apūrvam kālāśaktim vā kriyām vā kālameva vā |
tamevaṃlakṣaṇam bhāvaṃ kecidāhuḥ kathamcana || 34 ||

Some, in some fashion, call that entity of such a character the unprecedented, or the capacity of time, or action, or time itself.

The current of 3.7.33 named, and the names do not agree. Apurvam: the *unprecedented* — the Mīmamsa's technical term for the unseen ritual potency that bridges rite and remote fruit (2.119's test-word). Kala-saktim va: or the *capacity of time* (1.3's kala-sakti, on which the six modifications rest). Kriyam va: or *action*. Kalam eva va: or *time itself*. Tam evam-laksanam bhavam kecid ahuh kathamcana: some, *in some fashion*, call that entity of such a character by these names. Kathamcana — 'in some fashion': the shrug is 2.171's (kaicit kathamcid akhyatah, of the etymologists' derivations). Four schools, four names, one phenomenon: the drawing-onward that makes a sequence of events into an action. Bhartrhari records the disagreement and adds nothing, because 3.6.16 already ruled that where every candidate for a first term turns out to be another differentiated item, the reasonable course is to stop looking.

Verse 3.7.35

नित्याः षट् शक्तयोऽन्येषां भेदाभेदसमन्विताः ।
क्रियासंसिद्धयेऽर्थेषु जातिवत् समवस्थिताः ॥ 35 ॥

nityāḥ ṣaṭ śaktayo'nyeṣāṃ.bhedābhedasamanvitāḥ |
kriyāsamsiddhaye'rtheṣu jātivat samavasthitāḥ || 35 ||

For others, six capacities are eternal, endowed with difference and non-difference; for the accomplishing of action they stand established among objects, like universals.

The doctrine that will organize the rest of the samuddesa. Nityah sat saktayah anyesam: for others, six capacities are eternal — the six karakas (agent, object, instrument, recipient, source, locus) taken as permanent powers, not as occasional postings. Bheda-abheda-samanvitah: *endowed with difference and non-difference* — they are distinct from each other and not distinct from what has them (1.2's saktis, apthak and yet functioning prthaktvena iva). Kriya-samsiddhaye arthesu jativat samavasthitah: *for the accomplishing of action they stand established among objects, like universals*. The comparison to universals is the point: as cowhood stands in cows eternally and manifests in each (3.1.25-26's jati as self-manifesting power), so agenthood stands in things and manifests when they act. The six become a fixed ontological furniture — and the samuddesa will spend its remaining verses both using this scheme and undermining it.

Verse 3.7.36

द्रव्याकारादिभेदेन ताश्चापरिमिता इव ।
दृश्यन्ते तत्त्वसायां तु षट् शक्तीर्नातिवर्तते ॥ 36 ॥

dravyākārādibhedena tāścāparimitā iva |
drśyante tattvasāyām.tu ṣaṭ śaktīrnativartate || 36 ||

And by difference of substance, configuration and the rest, they are seen as though unlimited; but in the settling of the reality, one does not transgress the six capacities.

The six defended against their apparent multiplicity. Dravya-akaradi-bhedena tah ca aparimita iva drsyante: *by difference of substance, configuration and the rest, they are seen as though unlimited* — every instrument is a different instrument, every agent a different agent; the world's roles look innumerable. Iva: *as though*. Tattva-sayyam tu sat saktih na ativartate: *but in the settling of the reality, one does not transgress the six capacities*. The unlimited variety reduces to six modes. This is the ordinary structure of the work's reductions (2.250's one word carved by nimittas into unlimited meanings; 3.1.33's one satta carved by relata into all the universals) — and its application here yields the karaka-system's central claim: however many participants an event has, they occupy six slots, and the slots are exhaustive.

Verse 3.7.37

निमित्तभेदादेकैव भिन्ना शक्तिः प्रतीयते ।
षोढा कर्तृत्वमेबाहुस्तत्प्रवृत्तेर्निबन्धनम् ॥ 37 ॥

nimittabhedādekaiva bhinnā śaktiḥ pratīyate |
ṣoḍhā kartṛtvamebāhustatpravṛtternibandhanam || 37 ||

From difference of occasioning ground, one and the same capacity is understood as differentiated; they call agency alone six-fold – it is the ground of that operation.

The reduction pressed one step further, and this is the samuddesa's deepest structural claim. Nimitta-bhedad eka eva bhinna saktiḥ pratiyate: from *difference of occasioning ground*, one and the same capacity is understood as *differentiated* – the six are not six powers but one, carved by nimittas (2.250-251's mechanism exactly). And the identification: sodha kartṛtvam eva ahuh: they call *agency alone six-fold*. Not: there are six capacities of which agency is one. Rather: there is *agency*, and it appears sixfold. Tat-pravṛtteh nibandhanam: it is the *ground of that operation*. This completes 3.7.18 (in the mere completing, agency exists in every karaka whatever): if every karaka is an agent, then the six karakas are six modes of *one* thing, agency, differentiated by the occasions on which it is attended to. Instrument-hood is agency-under-a-nimitta. The whole architecture of Sanskrit syntax reduces to one power, sixfold-appearing.

Verse 3.7.38

तत्त्वे वा व्यतिरेके वा व्यतिरिक्तं तदुच्यते ।
शब्दप्रमाणको लोकः स शास्त्रेणानुगम्यते ॥ 38 ॥

tattve vā vyatireke vā vyatiriktam taducyate |
śabdapramāṇako lokah sa śāstreṇānugamyate || 38 ||

Whether in reality or in separation, that is spoken of as separate; the world has the word for its authority, and it is followed along by the science.

The methodological placement of 3.7.37's reduction. Tattve va vyatireke va vyatiriktam tad ucyate: *whether in reality or in separation* – whether the six are really distinct or only construed as distinct (3.7.15's undecided ontology) – that is *spoken of as separate*: language treats them as six regardless. And the ground of the treatment: sabda-pramanako lokah – the *world* has the *word* for its *authority*: people's ontology is their grammar (2.328's principle: what a word means is what is understood, and there is no other criterion). Sa sastrena anugamyate: *it is followed along by the science* – and the grammar follows the world, rather than correcting it (2.142's tat prajnah na vikalpayet; 3.6.25's lokah tatra anugamyate). So the six karakas are in the sastra because they are in the loka, and they are in the loka because that is how words work. The reduction to one agency (3.7.37) is true and changes nothing, because the science's business is the world's usage.

Verse 3.7.39

परमार्थे तु नैकत्वं पृथक्त्वादिभिन्नलक्षणम् ।
पृथक्त्वैकत्वरूपेण तत्त्वमेव प्रकाशते ॥ 39 ॥

*paramārthe tu naikatvam prthaktvādbhinnalakṣaṇam |
prthaktvaikatvarūpeṇa tattvameva prakāśate || 39 ||*

But in the highest sense there is no oneness whose character is distinct from separateness; reality itself shines forth in the form of separateness and oneness.

The reduction of 3.7.37 given its metaphysical honesty. Paramarthe tu na ekatvam prthaktvad bhinnalakṣaṇam: in the *highest sense* there is *no oneness* whose character is *distinct from separateness* — the 'one agency' of 3.7.37 is not a unity standing over against the six; oneness and separateness are not two conditions (3.6.26's finding: neither exists without the other, and in the highest sense the difference does not exist at all). Prthaktva-ekatva-rupena tattvam eva prakasate: *reality itself shines forth in the form of separateness and oneness*. So one must not read 3.7.37 as saying that the truth is one agency and the six are illusion. The truth shines as both — six, and one — and neither is the correction of the other. This is 3.2.12-13's paired tetralemmas applied to the karaka-system: everything true of it is true both ways, and the pair is the doctrine.

Verse 3.7.40-41

यत् पृथक्त्वमसंदिग्धं तदेकत्वान्न भिद्यते ।
यदेकत्वमसंदिग्धं तत् पृथक्त्वान्न भिद्यते ॥ 40 ॥
द्यौः क्षमा वायुरादित्यः सागराः सरितो दिशः ।
अन्तः करणतत्त्वस्य भागा बहिरवस्थिताः ॥ 41 ॥

*yat prthaktvamasamdigdham tadekatvānna bhidyate |
yadekatvamasamdigdham tat prthaktvānna bhidyate || 40 ||
dyauḥ kṣamā vāyurādityaḥ sāgarāḥ sarito diśaḥ |
antaḥ karaṇatattvasya bhāga bahiravasthitāḥ || 41 ||*

(40) That separateness which is beyond doubt is not different from oneness; that oneness which is beyond doubt is not different from separateness. (41) Sky, earth, wind, sun, oceans, rivers, directions — these are portions of the inner-organ reality, standing outside.

(40) states the mutual non-difference with a symmetry that is itself the argument: yat prthaktvam asandigdham tad ekatvan na bhidyate — that *separateness* which is *beyond doubt* is *not different from oneness*; and the mirror. Whatever is indubitably many is not other than one, and whatever is indubitably one is not other than many. Then (41) delivers, without warning, one of the most remarkable sentences in the work: dyauh ksama vayur adityah sagarah saritah disah — *sky, earth, wind, sun, oceans, rivers, directions* — antah-karana-tattvasya bhagah bahir avasthitah: *are portions of the inner-organ reality, standing outside*. The cosmos is the inner organ's parts, externalized. This is 3.7.6's doctrine (the intellect's operation superimposed on objects) at maximum scale, and 3.6.23's declined option (a property of the inner organ shining forth outwardly) here affirmed without the hedge. The list is deliberately elemental — the things anyone would call most obviously out there — and they are named as the mind's own portions standing outside.

[Contested: 41's antah-karana-tattvasya bhagah admits a weaker reading ('portions of the reality that is [known by] the inner organ') and a stronger ('portions of the inner-organ-reality itself'). The stronger is the natural construal and coheres with 3.7.6 and 3.7.3; we adopt it while noting that the verse stands without argument here]

Verse 3.7.42

कालविच्छेदरूपेण तदेवैकमवस्थितम् ।
स ह्यपूर्वापरो भागः पररूपेण लक्ष्यते ॥ 42 ॥

kālavicchedarūpeṇa tadevaikamavasthitam |
sa hyapūrvāparo bhāgaḥ pararūpeṇa lakṣyate || 42 ||

That very one stands, single, in the form of the division of time; for that portion, being without prior and posterior, is marked by another's form.

The cosmos of 3.7.41 given its temporal aspect. Kala-viccheda-rupena tad eva ekam avasthitam: *that very one stands, single, in the form of the division of time* – the same inner-organ reality that stands outside as sky and sun stands also as time's divisions. Sa hi apurvaparo bhagah: *for that portion is without prior and posterior* – the portion itself has no before and after (3.1.37's sequence being Being's own self, undivided; 3.2.8's no difference of time in the real). Para-rupena lakṣyate: *it is marked by another's form* – its temporal divisions come from elsewhere, as the mountain's sides come from the sun (3.6.12). So time's articulation is conferred on what has none, exactly as space's was (3.6.13's bhaga-prakalpana-sakti), and both articulations are of one thing which is the inner organ's own reality. The Kala-samuddesa, two samuddesas ahead, will take this up at length.

Verse 3.7.43

दृष्टो ह्यव्यतिरेकेऽपि व्यतिरेकोऽन्वयेऽसति ।
वृक्षाद्यर्थान्नयस्तस्माद्विभक्त्यर्थोऽन्य इष्यते ॥ 43 ॥

dr̥ṣṭo hyavyatireke'pi vyatireko'nvaye'sati |
vr̥kṣādyarthānlayastasmādvibhaktyartho'nya iṣyate || 43 ||

For separation is seen even where there is no separation, when there is no syntactic connection; therefore the meaning of the case-ending is held to be other than the meanings of 'tree' and the rest.

The argument that case-meanings are distinct from stem-meanings. Drsto hi avyatireke 'pi vyatireko 'nvaye 'sati: *separation is seen even where there is no separation, when there is no syntactic connection* – one can distinguish things that are not in fact distinct, wherever the construction does not link them. Vrksadyarthan layas tasmad vibhakty-artho 'nya iṣyate: *therefore the meaning of the case-ending is held to be other than the meanings of 'tree' and the rest*. The reasoning: the stem 'vrksa' gives a tree; the ending gives a role; and since the role can vary while the tree stays fixed ('the tree', 'to the tree', 'from the tree'), the two meanings are separable – which the distributional method (2.12's anvaya-vyatireka) certifies. This is the grammatical basis for the whole samuddesa: karaka-meanings are borne by the endings (3.7.13), and here that is established by method rather than asserted.

[Contested: the transcription's vrksadyarthan layah is corrupt; we translate the evident sense (the meanings of 'tree' etc. being distinguished from the case-meaning) and flag the fault]

Verse 3.7.44

सामान्यं कारकं तस्य सप्ताद्या भेदयोनयः ।
षट् कर्मख्यादिभेदेन शेषभेदस्तु सप्तमी ॥ 44 ॥

sāmānyam, kārakam, tasya saptādyā bhedayonayah |
ṣaṭ karmākhyādibhedena śeṣabhedastu saptamī || 44 ||

The karaka is the general; the seventh and the rest are the wombs of its differences: six, by the difference of what is called karman and so on — but the seventh is the difference of the remainder.

The system's formal architecture, and it is Panini's. Samanyam karakam: the *karaka* is the *general* — karaka is the genus, and the individual roles are its species (Panini 1.4.23: karake, the heading under which all the role-definitions fall). Tasya saptadya bheda-yonayah: the *seventh* and the rest are the *wombs of its differences* — the case-endings are what generate the distinctions. Sat karma-akhyadi-bhedena: six, by the difference of what is called *karman* and so on — the six karakas proper. Sesa-bhedas tu saptami: but the *seventh* is the *difference of the remainder*. This last is precise and it is Panini's own architecture: the genitive (sasthi) is not a karaka at all; it is the sesa, the *remainder* case (2.3.50: sasthi sese), used where no karaka-relation holds. So the system has six roles plus a residue-case for everything else — and the residue is where relation as such lives (3.3.3: the word-meaning connection understood through the sixth case; 2.197-198's genitive for relations whose action has withdrawn).

Verse 3.7.45

निर्वर्त्य च विकार्यं च प्राप्यं चेति त्रिधा मतम् ।
तत्रेप्सिततमं कर्म चतुर्धन्यत्तु कल्पितम् ॥ 45 ॥

nirvartyam, ca vikāryam, ca prāpyam, ceti tridhā matam |
tatrepśitatamam, karma caturdhānyattu kalpitam || 45 ||

The object is held to be three-fold: what is to be produced, what is to be modified, and what is to be reached. Among these, the karman is what is most desired; but another is constructed four-fold.

The object's classical taxonomy. Nirvartyam ca vikaryam ca prapyam ca iti tridha matam: the *object* is held to be *three-fold* — nirvartya, *what is to be produced* (the mat that the weaving makes: 3.7.7's janyamana karman, the object that does not exist until the act completes); vikarya, *what is to be modified* (the gold that the smith works: it exists and is changed); prapya, *what is to be reached* (the village one goes to: it exists and is unchanged). The three exhaust the ways an action can bear on an object. Tatra ipsitatamam karma: among these, the *karman* is *what is most desired* — Panini's own definition (1.4.49: kartur ipsitatamam karma, the object is what the agent most desires), and note that it is defined by the *agent's desire*, not by any feature of the thing (3.4.3's dravya defined by pronominal referability; 3.7.3's karakas grounded in buddhi). Caturdha anyat tu kalpitam: but *another* is constructed *four-fold* — a rival taxonomy, unnamed. The object's classification is doctrine-relative, as everything in this kanda has been.

Verse 3.7.46

औदासीन्येन यत् प्राप्यं यच्च कर्तुरनीप्सितम् ।
संज्ञान्तरैरनाख्यातं यद्यच्चाप्यन्यपूर्वकम् ॥ 46 ॥

audāsīnyena yat prāpyam.yacca karturanīpsitam |
samjñāntarairanākhyātam.yadyaccāpyanyapūrvakam || 46 ||

What is reached by way of indifference; what is not desired by the agent; what is not named by other designations; and whatever has another as its antecedent —

The object's residual categories, and they qualify 3.7.45's definition sharply. Panini defined the karman as *ipsitatamam* — *what is most desired* by the agent. But four classes of object are manifestly not desired. *Audasinyena yat prapyam*: what is reached by way of *indifference* — the grass one treads on while walking to the village (Panini's own example at 1.4.51's *akathitam ca* provisions); *yat ca kartuh anipsitam*: what is *not desired* by the agent — the poison one swallows unknowingly, the thief one meets on the road. *Samjnantaraih anakhyatam*: what is *not named by other designations* — the residue that no other karaka-term covers (the *akathita*, 'unstated', of Panini's rule). *Yat ca api anya-purvakam*: and whatever has *another as its antecedent*. So the definition by desire fails for most objects, and the grammar has had to build a residue-category to catch them. The verse is the *samuddesa*'s honest report that its central karaka is defined by a criterion its own instances violate — and 3.7.3's answer stands ready: the karakas are *buddhi*-postings, and the postings need not answer to the definition.

Verse 3.7.47

सती वाविद्यमाना वा प्रकृतिः परिणामिनी ।
यस्य नाश्रीयते तस्य निर्वर्त्यत्वं प्रचक्षते ॥ 47 ॥

satī vāvidyamānā vā prakṛtiḥ pariṇāminī |
yasya nāśriyate tasya nirvartyatvam.pracakṣate || 47 ||

That for which a transforming material cause — whether existent or non-existent — is not resorted to: of that they declare the state of being *what-is-to-be-produced*.

The *nirvartya* defined by an absence. *Sati va avidyamana va prakrtih parinamini*: a *transforming material cause* — whether *existent or non-existent* (the clause is careful: it does not matter whether one holds the material really transforms) — *yasya na asriyate*: *for which* it is *not resorted to*. *Tasya nirvartyatvam pracaksate*: of *that* they declare the state of being *what-is-to-be-produced*. So the *nirvartya*-karman is the object in whose production no material is being attended to: 'he makes a mat' does not present the reeds; the mat simply comes to be. And the contrast is with *vikarya* (3.7.48), where the material is attended to. The distinction is thus not between two kinds of event but between two ways of construing one — whether the stuff is in view — which is 3.7.3's thesis (the karaka-practice is grounded in a state of the intellect) applied to the object's own taxonomy.

Verse 3.7.48

प्रकृतेस्तु विवक्षायां विकार्यम् कैश्चिदन्यथा ।
निर्वर्त्य च विकार्यं च कर्म शास्त्रे प्रदर्शितम् ॥ 48 ॥

prakṛteṣtu vivakṣāyām vikāryam kaiścidanyathā |
nirvartyam, ca vikāryam, ca karma śāstre pradarśitam || 48 ||

But when the material cause is intended, it is what-is-to-be-modified; by some, otherwise. Both what-is-to-be-produced and what-is-to-be-modified have been exhibited as the object in the science.

The complement of 3.7.47, and the criterion is named. *Prakṛteh tu vivakṣayam vikaryam*: when the material cause is intended, it is what-is-to-be-modified. *Vivaksa* — intention: the *samuddesa*'s constant (3.7.2's *kvacit kimcit vivakṣyate*; 3.7.19's difference by intention). Whether an object is *nirvartya* or *vikarya* depends on whether the speaker means to bring its material into view: 'he makes an ornament' (*nirvartya*, the gold unattended) versus 'he works the gold into an ornament' (*vikarya*, the gold in view). Same goldsmith, same afternoon. *Kaiscid anyatha*: by some, otherwise — the criterion is disputed. *Nirvartyam ca vikaryam ca karma sastre pradarśitam*: both have been exhibited as the object in the science — Panini's system recognizes both, and it does not tell you which is which, because the assignment is the speaker's.

Verse 3.7.49

यदसज्जायते सद्वा जन्मना यत्प्रकाशयते ।
तन्निर्वर्त्य विकार्यं च कर्म द्वेधा व्यवस्थितम् ॥ 49 ॥

yadasajjāyate sadvā janmanā yatprakāśyate |
tannirvartyam, vikāryam, ca karma dvedhā vyavasthitam || 49 ||

What, being non-existent, comes to be; or what, being existent, is made manifest by the birth — that is the object established two-fold, as what-is-to-be-produced and what-is-to-be-modified.

The two-fold object given its metaphysical alternatives, and they are 3.3.43's dilemma. *Yad asat jayate*: what, being non-existent, comes to be — the *asatkarya-vada* option, the *Vaisesika*'s: the mat was not, and now is. *Sad va janmana yat prakasyate*: or what, being existent, is made manifest by the birth — the *satkarya-vada* option, the *Samkhya*'s: the mat was in the reeds and the weaving revealed it. *Tan nirvartyam vikaryam ca karma dvedha vyavasthitam*: that is the object established two-fold. The verse maps the grammar's two objects onto philosophy's two theories of causation — and note what this implies: the choice between *satkarya* and *asatkarya*, over which the schools fought for centuries, is here a choice of *construal*, available to any speaker, and Sanskrit has a case-assignment for each. The metaphysical dispute is a difference in *vivaksa* (3.7.48), and both parties speak grammatically.

Verse 3.7.50

प्रकृत्युच्छेदसंभूतं किञ्चित् काष्ठादिभस्मवत् ।
किञ्चिद् गुणान्तरोत्पत्त्या सुवर्णादिविकारवत् ॥ 50 ॥

prakṛtyucchedasambhūtam kimcit kāṣṭhādibhasmavat |
kimcid guṇāntarotpattyā suvarṇādivikāravat || 50 ||

Something arises from the destruction of the material — like ash from wood; something by the arising of another quality — like the modification of gold and the rest.

The vikarya's two modes. Prakṛty-uccheda-sambhutam kimcit: *something* arises from the *destruction of the material* — kasha-adi-bhasmavat, *like ash from wood*: the wood is gone, and the ash is what became of it; the material is consumed in the modification. Kimcid gunantara-utpattyā: *something* by the *arising of another quality* — suvarnadi-vikaravat, *like the modification of gold*: the gold persists entire and takes a new shape (3.2.4's suvarnadi bhinnam svaih akaraih apayibhih: gold differentiated by its own perishing configurations, and the gold never other). So the vikarya splits: destructive modification, where the material does not survive, and qualitative modification, where it does. And the two examples are the tradition's standing pair — ash and gold — precisely because they mark the limit: at one end the material is annihilated, at the other it is untouched, and the grammar's single category vikarya covers both. What unites them is only that the material is in view (3.7.48), which is a fact about the speaker.

Verse 3.7.51

क्रियागतविशेषणां सिद्धिर्यत्र न गम्यते ।
दर्शनादनुमानाद्वा तत्प्राप्यमिति कथ्यते ॥ 51 ॥

kriyāgataviśeṣaṇām siddhiryatra na gamyate |
darśanādanumānādvā tatprāpyamiti kathyate || 51 ||

Where an accomplishment of the particulars belonging to the action is not understood, either from seeing or from inference — that is called what-is-to-be-reached.

The third object, defined by a double absence. Kriya-gata-visesanam siddhih yatra na gamyate: where an *accomplishment* of the *particulars belonging to the action* is *not understood* — nothing about the object shows that the action happened to it. Darsanad anumanaad va: either from *seeing* or from *inference* — neither observation nor reasoning finds a mark. Tat prāpyam iti kathyate: *that* is called *what-is-to-be-reached*. The village one goes to is unchanged by the going; look at it and infer as you like, and no trace of the arrival is in it. So the prāpya-karman is the object that the action leaves as it found it — which makes it, of the three, the one whose objecthood is *purely* a construal: the nirvartya at least comes to be, the vikarya at least changes, and the prāpya does nothing at all except get reached. Its karman-hood is entirely the speaker's posting (3.7.3).

Verse 3.7.52

विशेषलाभः सर्वत्र विद्यते दर्शनादिभिः ।
केषांचित्तदभिव्यक्तिसिद्धिर्दृष्टिविषादिषु ॥ 52 ॥

viśeṣalābhah sarvatra vidyate darśanādibhiḥ |
keṣāṃcittadabhivyaktisiddhirdrṣṭiviśādiṣu || 52 ||

Everywhere a gaining of particulars exists, through seeing and the rest; for some, the establishing of that manifestation is in the case of seeing, poison and so on.

An objection to 3.7.51, and it is a good one. Visesa-labhah sarvatra vidyate darsanadibhiḥ: *everywhere a gaining of particulars exists, through seeing and the rest* — even the prapya does acquire something: being-seen, being-reached, being-arrived-at. Look hard enough and every object is marked by the action that took it. Kesamcit tad-abhivyakti-siddhiḥ drsti-visadisū: *for some, the establishing of that manifestation is in the case of seeing, poison and so on* — where the object visibly registers the act (the poisoned man shows the poison; the seen thing is, on some accounts, altered by being seen). So the third category may collapse: if every object gains a particular, none is merely reached. The objection presses 3.7.51's double absence, and the next verse answers by naming what the prapya does gain.

Verse 3.7.53

आभासोपगमो व्यक्तिः सोढत्वमिति कर्मणः ।
विशेषः प्राप्यमाणस्य क्रियासिद्धौ व्यवस्थिताः ॥ 53 ॥

ābhāsopagamo vyaktiḥ sodhatvamiti karmanah |
viśeṣāḥ prāpyamāṇasya kriyāsiddhau vyavasthitāḥ || 53 ||

Coming-to-appearance, manifestation, and being-endured: these particulars of the object that is being reached stand established in the accomplishing of the action.

The answer to 3.7.52: the prapya's gains are named, and they are all relational. Abhasa-upagamah — *coming-to-appearance*: the object comes into view; vyaktiḥ — *manifestation*: it becomes manifest; sodhatvam — *being-endured*, being-put-up-with, being-undergone. Iti karmanah visesah prapya-manasya kriya-siddhau vyavasthitah: *these particulars of the object that is being reached stand established in the accomplishing of the action*. Every one of the three is a fact about the object's standing-in-relation to the act, not about the object: coming-to-appearance is appearing to someone, manifestation is manifestation to a cognition, being-endured is enduring an action. So 3.7.52 is granted its datum and denied its conclusion: the prapya does gain particulars, and they are relational particulars, conferred in the act and belonging to no thing (3.6.14's things without place, parts, motion, support; 3.7.14's nimitta-bhava as a leaning).

Verse 3.7.54

निर्वत्यादिषु तत्पूर्वमनुभूय स्वतन्त्रताम् ।
कर्त्रन्तराणां व्यापारे कर्म संपद्यते ततः ॥ 54 ॥

nirvartyādiṣu tatpūrvamanubhūya svatantratām |
kartrantarāṇām.vyāpāre karma sampadyate tataḥ || 54 ||

Among what-is-to-be-produced and the rest, having first experienced independence, the object comes to be, thereafter, in the operation of other agents.

The object's own agency, and this is 3.7.18's doctrine reaching the karman. Nirvartyadisū tat purvam anubhūya svatantratam: among the nirvartya and the rest, *having first experienced independence* — the object is *svatantra*, independent, before it is an object: the wood is doing its own thing, the village stands on its own. Svatantrya is Panini's own mark of the agent (1.4.54: svatantrah karta), and it is here predicated of the object in its prior condition. Kartrantarāṇām vyapare karma sampadyate tataḥ: in the *operation of other agents*, the object comes to be, *thereafter*. Objecthood is a demotion suffered when another agent's operation arrives (3.7.20's nyakrta-saktayah: capacities subordinated by the agent). So the karman is an agent that has been overtaken. Every object in every sentence was independent a moment before the verb reached it, and its objecthood is the grammar's record of a subordination.

Verse 3.7.55

तद्व्यापारविवेकेऽपि स्वव्यापारे व्यवस्थितम् ।
कर्मपिदिष्टान् लभते क्वचिच्छास्त्राश्रयान् विधीन् ॥ 55 ॥

tadvyāpāraviveke'pi svavyāpāre vyavasthitam |
karmāpadiṣṭān labhate kvacicchāstrāśrayān vidhīn || 55 ||

Even in the separation from that operation, the object, standing in its own operation, obtains in some cases the rules taught in the science that rest upon it.

The object's retained agency, and it has grammatical consequences. Tad-vyapara-viveke 'pi: even in the *separation from that operation* — even when the other agent's action is withdrawn or not in view — *sva-vyapare vyavasthitam*: the object stands in its own operation: the wood goes on being wood, doing what wood does (3.7.20's sampurnaiḥ svaiḥ vyaparaiḥ samanvitah: furnished with their own complete operations even when subordinated). Karma apadistan labhate kvacit sastrasrayan vidhin: the object obtains, in some cases, the *rules taught* in the science that *rest upon* it. Because the object retains its own agency, the grammar can address rules to it — and this is exactly what the karma-kartari construction does (the next verses' subject): 'the rice cooks itself, where the object's own operation surfaces and it takes the agent's endings. The doctrine that every karaka is an agent (3.7.18) is not a metaphysical flourish; it is what makes a whole class of Sanskrit constructions statable.

Verse 3.7.56

निवृत्तप्रेषणं कर्म स्वक्रियावयवे स्थितम् ।
निवर्तमाने कर्मत्वे स्वे कर्तृत्वेऽवतिष्ठते ॥ 56 ॥

nivṛttapreṣaṇam karma svakriyāvayave sthitam |
nivartamāne karmatve sve kartṛtve'vatiṣṭhate ॥ 56 ॥

The object, its being-directed having ceased, stands in a portion of its own action; the objecthood withdrawing, it stands in its own agency.

The karma-kartari construction analysed, and the analysis is exact. Nivṛtta-presanam karma: the object, its being-directed having ceased — presana: the sending, the directing by another agent; when that withdraws — sva-kriya-avayave sthitam: it stands in a portion of its own action. Nivartamane karmatve sve kartṛtve 'vatisthate: the objecthood withdrawing, it stands in its own agency. So 'pacyate odanah' — 'the rice cooks' — is not a passive with a suppressed agent; it is the object having reverted to the agency it always had (3.7.54's svatantrata, experienced first) once the cook is out of view. The construction's morphology (the passive endings with an active sense) records exactly this: objecthood withdrawn, agency resumed. And the doctrine that makes it intelligible has been in place since 3.7.18: agency was never the subject's privilege; it was every karaka's, differently attended to.

Verse 3.7.57

तानि धात्वन्तराण्येव पचिसिद्ध्यतिवद् विदुः ।
भेदेऽपि तुल्यरूपत्वादेकत्वपरिकल्पना ॥ 57 ॥

tāni dhātvantarāṇyeva pacisiddhyativad viduḥ |
bhede'pi tulyarūpatvādekatvaparikalpānā ॥ 57 ॥

Those they know as simply other roots — like 'pac' and 'sidhyati'; though there is difference, from likeness of form there is a construction of oneness.

A deflationary account of the karma-kartari's morphology. Tani dhatv-antarani eva viduh: those they know as simply other roots — the 'cooks' of 'the cook cooks' and the 'cooks' of 'the rice cooks' are two verbs, not one verb in two constructions. Paci-sidhyati-vat: like 'pac' (to cook, transitive) and 'sidhyati' (to be accomplished, intransitive) — two roots that mean nearly the same and are undeniably two. Bhede 'pi tulya-rupatvat ekatva-parikalpana: though there is difference, from likeness of form there is a construction of oneness. We take them for one verb because they sound alike (2.169's kupa-supā-yupa: phonetic overlap is semantically inert; 2.177's rule: different meaning-behaviour, different base). So the elegant analysis of 3.7.56 is offered a rival: there is no reversion of agency, just two verbs that rhyme. Bhartrhari reports it without deciding — and the report is itself instructive, since the two accounts are 2.57's two darsanas (whole-first or parts-first) meeting in a single conjugation.

Verse 3.7.58

एकदेशे समूहे च व्यापाराणां पचादयः ।
स्वभावतः प्रवर्तन्ते तुल्यरूपसमन्विताः ॥ 58 ॥

ekadeśe samūhe ca vyāpārāṇām.pacādayaḥ |
svabhāvataḥ pravartante tulyarūpasamanvitāḥ || 58 ||

In a single portion and in an aggregate of operations, 'pac' and the rest proceed by their own nature, endowed with like form.

The rival account of 3.7.57 developed. Eka-dese samuhe ca vyaparanam pacadayah: in a *single portion* and in an *aggregate* of operations — whether the verb names one act or a complex of them — svabhavataḥ pravartante: they proceed by *their own nature*: the roots simply do what they do, without a scheme of role-assignments organizing them. Tulya-rupa-samanvitah: *endowed with like form*. So on this view the verb-family's unity is entirely superficial, and its members are separate items that happen to share a shape and a rough sense. The account is the atomist's (2.52's nominalism: word and sentence as mere designations upon order), and its virtue is economy: no reverting agency, no subordination-hierarchy, just roots. Its cost is that it explains nothing about why the forms cluster as they do — which is why 3.7.59-60 return to the structural analysis.

Verse 3.7.59-60

न्यग्भावान्यग्भवनं रुहौ शुद्धे प्रतीयते ।
न्यग्भावना न्यग्भवनं ण्यन्तेऽपि प्रतिपद्यते ॥ 59 ॥
अवस्थां पंचमीमाहुर्ण्यन्ते तां कर्मकर्तारि ।
निवृत्तप्रेषणाद्धातोः प्राकृतेऽर्थे णिजुच्यते ॥ 60 ॥

nyagbhāvanānyagbhavanam.rūhau śuddhe pratīyate |
nyagbhāvanā nyagbhavanam.nyante'pi pratipadyate || 59 ||
avasthām.pamcamīmāhurṇyante tāṁ.karmakartari |
nivr̥ttapreṣaṇāddhātoḥ prākṛte'rthe ṇijucyate || 60 ||

(59) Subordinating and being-subordinated are understood in the pure root; subordinating and being-subordinated are found in the causative as well. (60) They call it the fifth state; in the causative, in the object-as-agent — when the directing has ceased, the causative affix is stated of the root in its natural meaning.

The structure of 3.7.20-21 found at every morphological level. (59): nyag-bhavana nyag-bhavanam rudhau suddhe pratiyate — *subordinating* and *being-subordinated* are understood in the *pure root*: even the simple verb contains the hierarchy — something subordinates, something is subordinated (nyak: down, the same root as 3.7.20's nyakkṛta). And: nyanta 'pi pratipadyate — they are found in the *causative* as well: the nic-affix adds a level and the same structure repeats. So subordination is not a feature the causative introduces; it is present in the bare root and iterated by the affix (3.7.25's karta kartr-antara-apekṣah: an agent depending on another agent). (60): avastham pancamim ahuh nyante tam karma-kartari — they call it the *fifth state*, in the *causative*, in the *object-as-agent*; nivr̥ttapreṣanaḥ dhatoḥ prakṛte 'rthe ṇijucyate: when the *directing has ceased*, the causative affix is stated of the root in its *natural meaning*. The verse tracks a construction where the causative morphology appears without causative sense, because the directing (3.7.56's presana) has withdrawn — the

morphology outliving its semantics, which is 2.229-231's ledger-shuffling in the verb's own paradigm.

[Contested: 60's *avastham pancamim* ('the fifth state') is not further identified and the commentators differ over what series it numbers; we translate the phrase and leave the enumeration open]

Verse 3.7.61

ब्रवीति पचतेरर्थं सिद्ध्यतिर्न विना णिचम् ।
स ण्यन्तः पचतेरर्थो प्रकृते व्यवतिष्ठते ॥ 61 ॥

bravīti pacaterartham, siddhyatirna vinā ṇicam |
sa ṇyantaḥ pacaterartho prakṛte vyavatiṣṭhate || 61 ||

'Sidhyati' states the meaning of 'pacati' only with the causative affix; that causative-ending stands in the natural meaning of 'pacati'.

The two roots of 3.7.57 shown to be related after all, and by a morphological argument. *Braviti pacater artham sidhyatir na vina nijam*: 'sidhyati' (is accomplished) states the meaning of 'pacati' (cooks) *only with the causative affix* — *sadhayati*, the causative of *sidh*, means what *pacati* means: one has to add *nic* to get from the intransitive to the transitive sense. *Sa nyantah pacater artho prakrte vyavatiṣṭhate*: *that causative-ending* stands in the *natural* meaning of 'pacati' — what the one root needs a causative to say, the other says in its bare form. So *pac* contains, in its natural meaning, what *sidh* requires an affix to reach: transitivity is built into *pac* and added to *sidh*. This is 3.7.59's doctrine (subordinating and being-subordinated present in the pure root) given its evidence — the hierarchy is inside *pac* already, which is why it needs no *nic*, and its being inside is visible precisely by comparison with a root that lacks it.

Verse 3.7.62

केषांचिद्देवदत्तादेव्यपारो यः सकर्मके ।
स विना देवदत्तादेः कटादिषु विवक्ष्यते ॥ 62 ॥

keṣāṃciddevadattādevyāpāro yaḥ sakarmake |
sa vinā devadattādeḥ kaṭādiṣu vivakṣyate || 62 ||

For some, that operation of Devadatta and the rest which is in a transitive verb — that same is intended, without Devadatta and the rest, in mats and the like.

The karma-kartari's semantics restated. *Kesamcid devadattader vyaparo yah sakarmake*: for some, that *operation* of Devadatta and the rest which is in a *transitive* verb — the weaving that Devadatta does. *Sa vina devadattadeh katadisu vivakṣyate*: *that same is intended, without Devadatta and the rest, in mats and the like*. 'The mat weaves itself' intends the very operation that 'Devadatta weaves the mat' intends — the same weaving, with the weaver simply not meant (3.7.56's *nivṛtta-presana*: the directing having ceased). *Vivakṣyate*: *is intended* — the agent's absence is a fact about the speaker's aim, not about the event. So the construction subtracts nothing from the action; it withdraws attention from one of its participants, and the mat, which was an agent all along (3.7.54's *svatantrata* experienced first), surfaces.

Verse 3.7.63

निवृत्तप्रेषणं कर्म स्वस्य कर्तुः प्रयोजकम् ।
प्रेषणान्तरसंबन्धे ण्यन्ते लेनाभिधीयते ॥ 63 ॥

nivṛttapreṣaṇam karma svasya kartuḥ prayojakam |
preṣaṇāntarasambandhe ṇyante lenābhidhīyate || 63 ||

The object, its directing having ceased, is the occasioner of its own agent; when there is connection with another directing, in the causative it is expressed by the 'la'-affix.

The construction's morphology tracked through a further level. Nivṛtta-presanam karma svasya kartuḥ prayojakam: the *object*, its directing having ceased, is the *occasioner of its own agent* — the mat, freed from the weaver, occasions its own agency (3.7.56 verbatim, and prayojaka is 3.1.25's word for the universal deploying its causes). Presanantara-sambandhe nyante lena abhidhiyate: when there is connection with *another* directing — a second agent arriving above the first — in the *causative* it is expressed by the *la*-affix: the personal endings (Panini's lakaras) carry it. So the sequence is: object directed (accusative), directing withdrawn (object becomes agent), new directing added (causative, and the *la*-affix marks the new arrangement). Each level of subordination is a morphological layer, and the layers stack exactly as 3.7.59's nyag-bhavana predicted. The grammar is doing hierarchy-bookkeeping, and the hierarchy is 3.7.22's king and soldiers.

Verse 3.7.64

सदृशादिषु यत्कर्म कर्तृत्वं प्रतिपद्यते ।
आपत्त्यापादने तत्र विषयत्वं प्रतिक्रिये ॥ 64 ॥

sadṛśādiṣu yat karma kartṛtvam pratipadyate |
āpattyāpādane tatra viṣayatvam pratikriye || 64 ||

Where an object attains agency in 'sadrśa' and the like — there, in the bringing-about of a state, objecthood belongs to the counter-action.

A further case, and it is technical. Sadrsadisū yat karma kartṛtvam pratipadyate: where an *object* attains *agency* in 'sadrśa' (resembling) and the like — verbs of resembling, of becoming-like, where what is compared behaves now as object, now as agent. Apatty-apadane tatra viṣayatvam pratikriye: there, in the *bringing-about of a state* (apatti: coming-to-be-such), *objecthood* belongs to the *counter-action*. Where the construction expresses a becoming-like, the objecthood shifts to the reciprocal act — resembling being a relation each relatum bears to the other (3.7.19's parents, both agents, roles assigned by intention). The verse extends the karma-kartari analysis to a family of verbs where the agent/object assignment is symmetrical in the world and asymmetrical in every sentence — which is the samuddesa's constant finding since 3.7.19.

Verse 3.7.65

कुतश्चिदाहत्य पदमेवं च परिकल्पने ।
कर्मस्थभावकत्वं स्याददर्शनाद्यभिधायिनाम् ॥ 65 ॥

kutaścidāhṛtya padamevam ca parikalpane |
karmasthabhāvakatvam.spāddarśanādyabhidhāyinām || 65 ||

And when a word is fetched from somewhere and so construed, there would be object-located-state-hood for the expressers of seeing and the rest.

A construal-dependent classification. Kutascid ahrtya padam evam ca parikalpane: when a word is fetched from somewhere and so construed — supplied from context, imported into the analysis (2.327's unuttered word supplied by the cognition). Karma-stha-bhavakatvam syad darsanady-abhidhayinam: there would be object-located-state-hood for the expressers of seeing and the rest. Karma-stha-bhavaka is the grammarians' term for verbs whose state resides in the object rather than the agent: 'he sees the pot' — where does the seeing's result lodge? In the pot (which becomes seen) or in the seer? The classification decides how the verb's affixes behave. And the verse's point is that the classification follows the *construal*: fetch a word from context, construe accordingly, and the verb changes class. Nothing in seeing settles where seeing lodges (3.7.3's buddhi-grounding, at the level of verb-taxonomy).

Verse 3.7.66

विशेषदर्शनं यत्र क्रिया तत्र व्यवस्थिता ।
क्रियाव्यवस्था त्वन्येषां शब्दैरेव प्रकाशयते ॥ 66 ॥

viśeṣadarśanam.yatra kriyā tatra vyavasthitā |
kriyāvyavasthā tvanyeṣāṃ.śabdāireva prakāśyate || 66 ||

Where the seeing of a particular is, there the action stands settled; but for others, the settling of the action is made manifest by words alone.

Two criteria for locating an action. Visesa-darsanam yatra kriya tatra vyavasthita: where the *seeing of a particular* is, *there* the action stands settled — locate the action where its result shows: the cooking is in the rice, because the rice softens; the difference is visible, so the action is there (3.7.51's criterion for the prapya, run in reverse). Kriya-vyavastha tu anyesam sabdaih eva prakasyate: but for *others*, the settling of the action is made manifest *by words alone* — the action is where the grammar says it is, and no observation is relevant. Two schools: one locates actions by their visible effects, the other by the sastra's assignments. And the samuddesa has been arguing throughout that the second is right (3.7.13: the assistance is understood by the case-endings alone) — not because words are authoritative over the world but because the location of an action is not a fact the world contains (3.7.8's nirihesu api bhavesu kalpana-upanibandhanam: even among the striving-less, it rests on construction).

Verse 3.7.67

कालभावाध्वदेशानामन्तर्भूतक्रियान्तरैः ।
सर्वैरकर्मकैर्योगे कर्मत्वमुपजायते ॥ 67 ॥

kālabhāvādhvadeśānāmantarbhūtakriyāntaraiḥ |
sarvairakarmakairyoge karmatvamupajāyate || 67 ||

For time, state, road and place, in connection with all intransitive verbs having other actions included within them, objecthood arises.

How intransitive verbs acquire objects. Kala-bhava-adhva-desanam: for *time, state, road and place* — the four that Panini's rule (1.4.51's kala-adhvanor atyanta-samyoge and its kin) makes accusative even with intransitives: 'he sleeps a month', 'he goes a league'. Antarbhuta-kriyantaraiḥ sarvaiḥ akarmakair yoge: in connection with *all intransitive verbs having other actions included within them* — antarbhuta: absorbed, included (3.3.47's antarbhava, the self-bearing of 'asti'). Karmatvam upajāyate: *objecthood arises*. So 'he sleeps a month' has an object because the sleeping has an occupying-of-time included in it, and the month is that included action's object. The intransitive verb is not really intransitive: it contains a second action, and the accusative belongs to that one. The analysis is elegant and it is the samuddesa's method throughout — where the grammar assigns a role that seems unearned, find the included operation that earns it.

Verse 3.7.68

आधारत्वमिव प्राप्तास्ते पुनर्द्रव्यकर्मसु ।
कालादयो भिन्नकक्ष्यं यान्ति कर्मत्वमुत्तरम् ॥ 68 ॥

ādhāratvamiva prāptāste punardravyakarmasu |
kālādayo bhinnakakṣyam.yānti karmatvamuttaram || 68 ||

Having attained, as it were, the state of being a locus, those — time and the rest — again, in the case of substance-objects, attain a subsequent objecthood of a different level.

The levels of 3.7.67 sorted. Adharatvam iva praptah te: having attained, *as it were*, the state of being a locus — time and place naturally present as loci ('he sleeps *in the night*', locative), and the iva marks that this is their default construal. Punah dravya-karmasu: *again*, in the case of *substance-objects* — where the verb already has a substance for its object ('he studies the book a month'). Kaladayah bhinnakakṣyam yanti karmatvam uttaram: time and the rest attain a *subsequent objecthood* of a *different level* — bhinna-kakṣya: of another compartment, another tier. So a sentence can carry two objects at different levels: the book at one, the month at another, and they do not compete because they are objects of different included actions (3.7.67's antarbhuta-kriya). Kakṣya — level, compartment — is the samuddesa's term for the hierarchy 3.7.20-23 built, and here it does taxonomic work: objecthood is stratified, and the strata do not collide.

Verse 3.7.69

अतस्तैः कर्मभिर्धातुर्युक्तोऽद्रव्यैरकर्मकः ।
लस्य कर्माणि भावे च निमित्तत्वाय कल्पते ॥ 69 ॥

atastaiḥ karmabhir dhāturyukto'dravyai rakarmakah |
lasya karmaṇi bhāve ca nimittatvāya kalpate || 69 ||

Therefore a root joined with those objects, which are not substances, is intransitive; it serves as the occasioning ground for the 'la'-affix in the object and in the state.

The consequence for morphology. *Atah taiḥ karmabhiḥ dhatur yuktah adravyaiḥ akarmakah*: *therefore* a root joined with *those objects* — which are *not substances* (time, place, road, state: 3.7.67's four) — is *intransitive*. The verb has an accusative and is still *akarmaka*, because its accusative is not a substance-object. *Lasya karmani bhāve ca nimittatvāya kalpate*: it serves as the *occasioning ground* for the *la*-affix *in the object and in the state* — that is, it takes the passive/impersonal endings, which is what intransitives do. So the grammar's classification tracks *substance-objecthood*, not accusatives: a verb with a temporal accusative counts as intransitive for affixation. The verse is fine technical book-keeping and its interest is that the category 'transitive' turns out not to mean 'takes an accusative' — which is exactly what one expects if the *karakas* are postings assigned per operation (3.7.12) rather than features read off surface case.

Verse 3.7.70

सर्वं वाक्यितं कर्म भिन्नकक्ष्यं प्रतीयते ।
धात्वर्थोद्देशभेदेन तन्नेप्सिततमं किल ॥ 70 ॥

sarvam vākathitam karma bhinnakakṣyam pratiyate |
dhātvarthoddeśabhedena tannepsitatamam kila || 70 ||

Or every unstated object is understood as of a different level; by difference in the indication of the root's meaning, that is not what is most desired.

The *akathita* placed. *Sarvam va akathitam karma bhinna-kakṣyam pratiyate*: *every unstated object* is understood as of a *different level* — *akathita*: 'not stated', Panini's own term (1.4.51: *akathitam ca* — 'and what is unstated' is called *karman*), the residue-category that catches every object no other rule assigns. *Bhinna-kakṣyam*: they belong to another tier (3.7.68's stratification). *Dhatv-artha-uddesa-bhedena tan na ipsitatamam kila*: by difference in the *indication of the root's meaning*, that is not *what is most desired* — *kila*: 'so they say', the reportive particle carrying a shade of irony. So the *akathita* objects fail Panini's own definition of *karman* (3.7.45's *ipsitatamam*, what is most desired), and the grammar catches them in a residue-rule anyway. The verse's *kila* registers the awkwardness: the definition is by desire, most objects are not desired, and the system works by a catch-all. 3.7.46 already listed the undesired classes; here their status is named.

Verse 3.7.71

प्रधानकर्म कथितं यत् क्रियायाः प्रयोजकम् ।
तत्सिद्धये क्रियायुक्तमन्यत्त्वकथितं स्मृतम् ॥ 71 ॥

*pradhānakarma kathitam yat kriyāyāḥ prayojakam |
tatsiddhaye kriyāyuktamanyattvakathitam smṛtam || 71 ||*

The principal object is what is stated, which is the occasioner of the action; what is joined with the action for the accomplishing of that is remembered as unstated.

The two objects distinguished by office. Pradhana-karma kathitam: the *principal object* is what is stated — yat kriyayah prayojakam: which is the *occasioner of the action*: the object the action is for, whose desirability drives the whole undertaking (3.7.45's ipsitatama, now confined to this one). Tatsiddhaye kriya-yuktam anyat tu akathitam smrtam: what is joined with the action *for the accomplishing of that* is remembered as *unstated*. So in 'he milks the cow of milk' (the classic double-accusative), the milk is the principal — it is what he wants — and the cow is akathita: joined to the action in service of getting the milk. The distinction is teleological through and through: which object is principal depends on which is wanted, and the other is machinery. This is 2.113's prayojana-doctrine (sentence-meaning is purpose) reaching down into the accusative case.

Verse 3.7.72

दुह्यादिवन्नयत्यादौ कर्मत्वमकथाश्रयम् ।
आख्यातानुपयोगे तु नियमाच्छेव इष्यते ॥ 72 ॥

*duhyādivannayatyādau karmatvamakathāśrayam |
ākhyātānupayoge tu niyamāccheva iṣyate || 72 ||*

In 'nayati' and the like, as in 'duhi' and the rest, objecthood rests on what is not stated; but when the finite verb is not employed, the remainder is held to obtain, by rule.

The double-object verbs, and their two families. Duhy-adi-vat nayaty-adau karmatvam akathasrayam: in 'nayati' (leads) and the like, as in 'duhi' (milks) and the rest, *objecthood* rests on *what is not stated* — both families take two accusatives, and in both the second is akathita (3.7.70-71). Akhyata-anupayoge tu niyamat sesa isyate: but when the *finite verb is not employed* — in nominal constructions, participles, compounds, where no finite verb governs — *the remainder* is held to obtain, *by rule*: the genitive, Panini's sesa-case (3.7.44: sasthi sese), takes over. So 'he milks the cow of milk' has two accusatives, and 'the milking of the cow' has a genitive: withdraw the finite verb and the karaka-relations lapse into the residue-case. This is 2.197-198's doctrine exactly — the genitive expresses relations whose generating action has withdrawn — now shown operating in the double-object constructions.

Verse 3.7.73

अन्तर्भूतणिजथानां दुह्यादीनां णिजन्तवत् ।
सिद्धं पूर्वेण कर्मत्वं णिजन्तं नियमस्तथा ॥ 73 ॥

antarbhūtaṇijarthānām duhyādīnām ṇijantavat |
siddham pūrveṇa karmatvam ṇijantam niyamastathā || 73 ||

For 'duhi' and the rest, whose causative-meaning is included within, objecthood is established by the prior rule as though they ended in the causative; and the restriction is likewise as for causative-ending forms.

The double-object verbs explained by a hidden causative. Antarbhuta-nij-arthanam duhy-adinam: of 'duhi' and the rest, whose *causative-meaning is included within* — antarbhuta again (3.7.67's included actions): 'milks' contains a 'causes-to-flow'; the causative is in the root's own meaning without any affix. Nijantavat siddham purvena karmatvam: *objecthood is established by the prior rule as though they ended in the causative* — the grammar treats them like causatives because they are causatives semantically, and causatives take two objects (the one caused, and the thing done). Nijantam niyamas tatha: and the *restriction* is likewise as for causative-ending forms. So the double accusative of 'duhi' is not an idiosyncrasy: it is the ordinary causative pattern, with the causative buried in the root. This completes 3.7.61's finding (pac contains what sidh needs a nic to say) — the roots' meanings carry morphology invisibly, and the case-assignments reveal it.

Verse 3.7.74

करणस्य स्वकक्ष्यायां न प्रकर्षश्रियो यथा ।
कर्मणोऽपि स्वकक्ष्यायां न स्यादतिशयस्तथा ॥ 74 ॥

karaṇasya svakakṣyāyām na prakarṣāśrayo yathā |
karmaṇo'pi svakakṣyāyām na syādatiśayastathā || 74 ||

As for the instrument, in its own compartment, there is no resort to excellence — so for the object too, in its own compartment, there would be no surpassing.

An objection to the ipsitatama-definition, from the grammar's own logic. Karanasya sva-kaksyayam na prakarsa-asrayo yatha: as for the *instrument*, in its *own compartment*, there is no resort to *excellence* — one instrument is not more an instrument than another; the karaka-roles do not come in degrees. Karmano 'pi sva-kaksyayam na syad atisayas tatha: so for the *object* too, in its own compartment, there would be *no surpassing*. But Panini's definition is ipsitatamam — the *most* desired: a superlative, which requires degrees. So the definition demands a gradation the category cannot support: if objecthood does not admit of more and less, 'most desired' picks out nothing. The objection is sharp, and it targets the definition that 3.7.45, 3.7.70 and 3.7.71 have all leaned on. The answer follows.

Verse 3.7.75

कर्मणस्त्वाप्तुमिष्टत्वा आश्रितेऽतिशयो यतः ।
आश्रीयते ततोऽत्यन्तं भेदः पूर्वेण कर्मणा ॥ 75 ॥

karmanastvāptumiṣṭatva āśrite'tiśayo yataḥ |
āśriyate tato'tyantam.bhedah pūrveṇa karmaṇā || 75 ||

But since, for the object, when the state of being wished-to-be-attained is resorted to, a surpassing is present — therefore it is resorted to; hence there is an utter difference from the prior object.

The answer to 3.7.74, and it relocates the gradation. Karmanas tu aptum istatve asrite atisayo yataḥ: for the *object*, when the state of *being wished-to-be-attained* is *resorted to*, a *surpassing* is *present* — the degrees are not in objecthood but in *desiredness*: one may want the milk more than the cow, and that is a real gradation. Asriyate tataḥ: *therefore* it is resorted to — the definition invokes desire precisely because desire admits of degrees where objecthood does not. Atyantam bhedaḥ purvena karmana: hence there is an *utter difference* from the *prior* object — the ipsitatama (the milk) differs in kind from the akathita (the cow), because the first is wanted most and the second is machinery (3.7.71). So 3.7.74's objection is granted and disarmed: objecthood has no degrees, desire does, and the superlative in Panini's definition qualifies the desire. The definition survives by being read exactly.

Verse 3.7.76

णिजन्ते च यथा कर्ता सक्रियः सन् प्रयुज्यते ।
नयत्यादौ तथा कर्ता निष्क्रियोऽपि प्रयुज्यते ॥ 76 ॥

ṇijante ca yathā kartā sakriyaḥ san prayujyate |
nayatyādaū tathā kartā niṣkiyo'pi prayujyate || 76 ||

And as, in a causative-ending form, an agent possessing action is employed — so in 'nayati' and the like, an agent devoid of action is also employed.

The parallel completed, and its second half is the odd one. Nijante ca yathā kartā sakriyaḥ san prayujyate: in a *causative-ending* form, an agent *possessing action* is employed — in 'he makes Devadatta cook', Devadatta is an agent and he is cooking: the caused agent acts. Nayaty-adau tathā kartā niṣkiyo 'pi prayujyate: in 'nayati' (leads) and the like, an agent *devoid of action* is also employed — 'he leads the goat to the village': the goat is grammatically an agent of a sort (it is the one led, and the leading is its going), and it does nothing; it is dragged. Niskriya: without action (3.7.8's niriha, without striving). So the pattern that 3.7.73 established — the double-object verbs behaving as causatives — extends to cases where the 'caused agent' has no agency whatever. The grammar constructs an agent out of the inert, exactly as 3.7.8 said it does: independence and dependence rest upon construction, even among things that are without striving.

Verse 3.7.77

भेदवाक्यं तु यत् प्यन्ते नीदुहितप्रकृतौ च यत् ।
शब्दान्तरत्वान्नैवास्ति संस्पर्शस्तस्य धातुना ॥ 77 ॥

bhedavākyaṃ tu yat pyante nīduhitaprakṛtau ca yat |
śabdāntaratvānnāivāsti saṃsparśastasya dhātunā || 77 ||

But the analytic sentence which is used for a causative-ending form, and that which is used for the base of 'ni' and 'duh' — from its being another word, there is no contact of it with the root.

The paraphrase disowned. Bheda-vakyam tu yat nyante: the *analytic sentence* used for a *causative-ending* form — the gloss 'he causes X to cook' by which the grammar explains 'pacayati'; ni-duhita-prakṛtau ca yat: and that used for the *base* of 'ni' and 'duh' (the double-object verbs of 3.7.72-73). Sabdantaravat na eva asti saṃsparśah tasya dhatuna: *from its being another word*, there is *no contact* of it with the root. The paraphrase is a different word entirely and touches the root not at all. This is 2.35cd's doctrine (the vṛtti-analysis employing a verb-like element for what stands otherwise, the paraphrase faithful to the meaning and false to the form) and 2.37's (the resemblance constructed for the sake of reaching the meaning). So the causative analyses of 3.7.61-76, however illuminating, are glosses: they explain by substituting, and what they substitute has no contact with what it explains. The samuddesa audits its own method at the point where it has leaned hardest on it.

Verse 3.7.78

यथैवैकमपादानं शास्त्रे भेदेन दर्शितम् ।
तथैकमेव कर्मापि भेदेन प्रतिपादितम् ॥ 78 ॥

yathaiṣaikaṃ apādānam śāstre bhedena darśitam |
tathaiṣameva karmāpi bhedena pratipāditam || 78 ||

Just as one and the same ablative is exhibited in the science by way of difference — so one and the same object too is expounded by way of difference.

The taxonomies placed. Yatha eva ekam apadanam sastre bhedena darsitam: as *one and the same* ablative is exhibited in the *science* by way of *difference* — Panini divides apadana into kinds (the moving source, the fixed source, the source of fear, the source of learning) and it is one karaka throughout. Tatha ekam eva karma api bhedena pratipaditam: so *one and the same* object too is *expounded* by way of *difference* — the nirvartya, vikarya and prapya of 3.7.45 are one karman, divided for exposition. So the object's three-fold taxonomy is a teaching-device, not a discovery of three objecthoods (2.176's instruction by the general for brevity's sake; 3.7.36's unlimited-seeming capacities reducing to six). The verse tidies the samuddesa's own apparatus: everything it has distinguished about the karman is distinction *in the science*, and the karman is one.

Verse 3.7.79

निर्वर्त्यो वा विकार्यो वा प्राप्यो वा साधनाश्रयः ।
क्रियाणामेव साध्यत्वात् सिद्धरूपोऽभिधीयते ॥ 79 ॥

nirvartyo vā vikāryo vā prāpyo vā sādhanāśrayaḥ |
kriyāṇāmeva sādhyatvāt siddharūpo'bhidhiyate || 79 ||

Whether what-is-to-be-produced, or what-is-to-be-modified, or what-is-to-be-reached — the substratum of the means, since actions alone are what is to be accomplished, is expressed as having an accomplished form.

The object's grammatical form explained. Nirvartyo va vikaryo va prapyo va sadhana-asrayah: whatever kind it is, the object is the *substratum of the means*. Kriyanam eva sadhyatvat: since *actions alone* are *what is to be accomplished* — only actions are sadhya; nothing else is ever brought about (3.7.1's definition: the means is capacity in the completing of *actions*). Siddha-rupo 'bhidhiyate: it is expressed as having an *accomplished* form. So the object, however unaccomplished it may be in fact (the mat not yet woven, 3.7.7's janyamana karman), is grammatically *siddha* — presented as a standing thing, a noun, complete. The sadhya/siddha distinction is the grammar's deepest: verbs present the to-be-accomplished, nouns the accomplished, and every participant in an action is nominally presented as though finished. This is why 3.7.7 needed buddhi to hold the unmade mat in place: the grammar has no way to present an object as unfinished.

Verse 3.7.80

अहितेषु यता लौल्यात् कर्तुरिच्छोपजायते ।
विषादिषु भयादिभ्यस्तथैवासौ प्रवर्तते ॥ 80 ॥

ahiteṣu yatā laulyāt karturicchopajāyate |
viṣādiṣu bhayādibhyastathaivāsau pravartate || 80 ||

As, in the case of things not conducive, a desire of the agent arises from greed — so, in the case of poison and the like, it proceeds from fear and the rest.

The ipsitatama-definition rescued at its hardest case. 3.7.46 listed the undesired objects, and poison is the standing example: 'he eats poison' has an object that nobody most-desires. The answer: ahitesu yatha laulyat kartur iccha upajayate — in the case of things *not conducive*, a *desire* of the agent arises *from greed*: the glutton eats what harms him, and there is a desire — a bad one. Visadisuhayadibhyah tatha eva asau pravartate: in the case of *poison* and the like, *that* (desire) proceeds *from fear* and the rest. The suicide's desire for poison comes from fear; the desire is real, its source is dread. So the undesired objects are desired after all, under desires the agent would disown — and the definition holds, at the cost of making 'most desired' cover what one takes in terror. It is an honest rescue: it saves the rule and shows what the rule then means.

Verse 3.7.81-82

प्रधानेतकयोर्यत्र द्रव्यस्य क्रिययोः पृथक् ।
शक्तिर्गुणाश्रया तत्र प्रधानमनुरुध्यते ॥ 81 ॥
प्रधानविषया शक्तिः प्रत्ययेनभिधीयते ।
यदा गुणे तदा तद्वदनुक्तापि प्रकाशते ॥ 82 ॥

pradhānetakayoryatra dravyasya kriyayoh pṛthak |
śaktirguṇāśrayā tatra pradhānamanurudhyate || 81 ||
pradhānaviṣayā śaktiḥ pratyayenabhidhiyate |
yadā guṇe tadā tadvadanuktāpi prakāśate || 82 ||

(81) Where the capacity of a substance, in the principal and the other, is separately in the two actions — there the capacity resting on the subordinate follows the principal. (82) The capacity whose domain is the principal is expressed by the affix; when it is in the subordinate, then, though unstated, it likewise shines forth.

How karaka-roles propagate between clauses. (81): where a substance has a capacity in two actions — one principal, one subordinate — *guna-asraya saktih pradhanam anurudhyate*: the capacity resting on the subordinate follows the principal: the role assigned in the main clause governs the role in the subordinate one. (82) gives the morphology: *pradhana-visaya saktih pratyayena abhidhiyate* — the capacity whose domain is the principal is expressed by the affix (the finite verb's endings carry it); *yada guṇe tada tadvat anukta api prakasate* — when it is in the subordinate, then, though unstated, it likewise shines forth: the subordinate clause's role is not expressed and is understood, carried over from the principal. This is why 'having cooked, he eats' needs no agent for the cooking: the eater's agency propagates backward. The mechanism is 2.305's *anupatta* (what is not taken up by the word is nonetheless understood) operating across clause-boundaries.

Verse 3.7.83

पचावनुक्तं यत्कर्म क्त्वान्ते भावाभिधायिनि ।
भुजौ शक्त्यन्तरेऽप्युक्ते तत्तद्धर्मः प्रकाशते ॥ 83 ॥

pacāvanuktam.yatkarma kttvānte bhāvābhidhāyini |
bhujau śaktyantare'pyukte tattaddharmah prakāśate || 83 ||

The object not stated for 'paci', in a gerund expressing the state — for 'bhujī', though another capacity is stated, that property of it shines forth.

The propagation of 3.7.81-82 in a worked case. *Pacau anuktam yat karma*: the object not stated for 'paci' (cooks) — in 'pakva bhunkte', 'having cooked, he eats', the cooking's object is not said. *Ktvante bhava-abhidhayini*: in a gerund expressing the state — the *ktva*-affix, which forms the gerund and expresses the action without an agent of its own. *Bhujau sakti-antare 'pi ukte*: for 'bhujī' (eats), though another capacity is stated — the eating has its own object, said. *Tat tad-dharmah prakasate*: that property of it shines forth — the unstated cooking-object is understood as the same as the stated eating-object. One cooks what one eats, and no word says so. The verse shows the propagation working across a difference of role (the rice is the cooking's *nirvartya* and the eating's *prapya*) — and it works because the roles ride on the *buddhi*'s holding of the situation (3.7.3), not on the words.

Verse 3.7.84

इषेश्च गमिसंस्पशद् ग्रामे यो लो विधीयते ।
तत्रोषिणैव निर्भोगः क्रियते गतिकर्मणः ॥ 84 ॥

iṣeśca gamisamśparśād grāme yo lo vidhīyate |
tatroṣiṇaiva nirbhogaḥ kriyate gaticarmanah || 84 ||

And the 'la'-affix which is prescribed for 'isi', from its contact with 'gami', in 'the village' — there, by 'usi' alone, a separation of the going-object is effected.

A worked case of case-assignment under verb-contact. The construction is 'gramam icchati' — 'he wants the village', meaning he wants to go to the village: iseh gami-samsparsat, from 'isi' (wanting) having contact with 'gami' (going) — the wanting has a going absorbed in it (3.7.67's antarbhuta-kriyantara), and the village is the going's object, taking the accusative that 'icchati' alone could not license. Tatra usina eva nirbhogaḥ kriyate gati-karmanah: there, by 'usi' alone, a separation of the going-object is effected. The technical detail is obscure in transmission; the principle is not. When two actions fuse in one verb, the case-assignments come from the buried one — which is 3.7.73's finding about 'duhi' (the double accusative coming from an included causative) applied to a different fusion.

[Contested: the verse's technical apparatus (the la-affix, usi, nirbhoga) is compressed to the edge of recoverability and the transcription may be at fault; we translate the evident structure and note that the specific Paninian derivation intended is not confidently reconstructible]

Verse 3.7.85

पक्त्वा भुज्यत इत्यत्र केषांचिन्न व्यपेक्षते ।
ओदनं पचतिः सोऽसावनुमानात् प्रतीयते ॥ 85 ॥

paktvā bhujyata ityatra keṣāṃcinna vyapekṣate |
odanam pacatiḥ so'sāvanumānāt pratīyate || 85 ||

In 'having cooked, it is eaten' — for some, 'pacati' does not require the rice; that one is understood by inference.

The propagation of 3.7.83 disputed. Paktva bhujyate iti atra: in 'having cooked, it is eaten'. Kesamcid na vyapeksate odanam pacatiḥ: for some, 'pacati' does not require the rice — the cooking-verb has no unstated object waiting to be supplied; it is simply a cooking. So 'apeksa', the expectancy that 3.7.83 relied on, is denied. Sa asau anumānat pratīyate: that one is understood by inference — the rice arrives, but by inference from the situation rather than by any grammatical expectancy. The difference matters: on 3.7.83's account the object is carried over by the construction; on this account it is inferred by the hearer, and the construction is silent. This is 2.149's mechanism (the corrupt form conveying by inference, through a recovery so practiced it vanishes) offered as a rival to grammatical propagation — and the two are hard to distinguish, since both deliver the rice and neither shows its working.

Verse 3.7.86

तत्राभिनिविशौ कर्म यत्तिङन्तेऽभिधीयते ।
क्त्वान्तेऽधिकरणत्वेऽपि न तत्रेच्छन्ति सप्तमीम् ॥ 86 ॥

tatrābhinivīśau karma yattinānte'bhidhīyate |
ktvānte'dhikaraṇatve'pi na tatrecchanti saptamīm || 86 ||

There, for 'abhi-nivis', the object which is expressed in the finite verb – in the gerund, even where there is locus-hood, they do not desire the locative there.

A case where the propagation is grammatically visible. The verb abhi-nivis (to enter into, to settle upon) takes its object in the accusative by a special rule of Panini's (1.4.47: abhinivisas ca – the locus of abhinivis is called karman, not adhikarana). Tatra abhinivisau karma yat tinante 'bhidhiyate: the object which is expressed in the *finite verb*. Ktvante adhikaranatve 'pi na tatra icchanti saptamim: in the *gerund*, even where there is locus-hood, they do not desire the locative there. So the special accusative propagates into the gerund: even though the thing entered is by nature a locus, and gerunds might be expected to revert to the natural case, the rule's assignment carries across. The verse is evidence for 3.7.81-82's propagation-doctrine against 3.7.85's inference-account: here the carried-over role is marked, by the refusal of a case the situation would otherwise take.

Verse 3.7.87

यन्निर्वृताश्रयं कर्म प्राप्तेरप्रचितं पुनः ।
भक्ष्यादिविषयापत्त्या भिद्यमानं तदीप्सितम् ॥ 87 ॥

yannirvṛttāśrayam karma prāpterapracitam punaḥ |
bhakṣyādiviṣayāpattya bhidyamānam tadīpsitam || 87 ||

That object whose substratum is accomplished, but which is not yet augmented by the attaining – being differentiated by the coming-about of the state of being edible and the like – that is what is desired.

The ipsitatama located with precision. Yan nirvṛtta-asrayam karma: that object whose *substratum* is *accomplished* – the thing is there; the rice exists. Prapteh apracitam punaḥ: but which is *not yet augmented by the attaining* – it has not yet been got; the eating has not happened. Bhakṣyādi-visaya-apattya bhidyamānam: being *differentiated* by the *coming-about* of the state of being *edible* and the like – apatti: coming-to-be-such (3.7.64's term). Tad ipsitam: *that* is what is *desired*. So the desired object is the existing thing not yet attained, taken under the aspect it will have when attained: the rice, not yet eaten, wanted as *edible*. Every clause is doing work: existing (else there is nothing to want), unattained (else wanting is idle: 3.3.63-64's already-pregnant woman), and aspectually differentiated (one wants it as something). The definition by desire, which 3.7.74 attacked and 3.7.75 rescued, is here given its exact content.

Verse 3.7.88

धातोरथान्तरे वृत्तेर्धत्वर्थेनोपसंग्रहात् ।
प्रसिद्धेरविवक्षातः कर्मणोऽकर्मिका क्रिया ॥ 88 ॥

*dhātorarthāntare vṛtterdhātvarthenopasamgrahāt |
prasiddheravivakṣātaḥ karmaṇo'karmikā kriyā || 88 ||*

From the root's operating in another meaning; from the object's being included within by the root's meaning; from established usage; from non-intention — the action becomes objectless.

The four ways a transitive verb goes intransitive, and they are a complete taxonomy. Dhatoḥ arthantare vṛtteh: from the *root's operating in another meaning* — the verb used in a sense that has no object ('he sees' meaning he understands). Dhatv-arthena upasangrahaḥ karmanah: from the *object's being included within* by the root's meaning — the object absorbed into the verb, so that nothing is left to state (3.3.47's antarbhava: the self-bearing of 'asti', whence it takes no accusative). Prasiddheh: from *established usage* — the verb simply is not used with an object, whatever its sense allows (2.253's prasiddhi: currency deciding). Avivaksataḥ: from *non-intention* — the speaker does not mean to bring an object into view, and there is none (3.7.62's vina devadattadeh: the agent unmeant). Karmano akarmika kriya: the action becomes *objectless*. Four routes — semantic, absorptive, conventional, intentional — and only the first two are about the verb. The other two are about usage and the speaker, which is the samuddesa's constant finding.

Verse 3.7.89

भेदा य एते चत्वारः सामान्येन प्रदर्शिताः ।
ते निमित्तादिभेदेन भिद्यन्ते बहुधा पुनः ॥ 89 ॥

*bhedā ya ete catvāraḥ sāmānyena pradarśitāḥ |
te nimittādibhedena bhidyante bahudhā punaḥ || 89 ||*

These four differences that have been exhibited in general are again differentiated manifoldly, by difference of occasioning ground and the rest.

The taxonomy's status. Bhedah ya ete catvarah samanyena pradarsitah: these *four differences* that have been exhibited *in general* — 3.7.88's four routes to intransitivity. Te nimittadi-bhedena bhidyante bahudha punah: they are *again differentiated manifoldly*, by *difference of occasioning ground* and the rest. The four are not a bottom; each subdivides by nimitta, and the subdivision has no evident end (3.7.36's aparimita iva: seen as though unlimited, before the reduction to six). So the samuddesa reports its own taxonomies as provisional — general exhibitions that further analysis will multiply — which is 3.4.1's charter (kecit padarthah vaksyante samksepena yatha-agamam: certain word-meanings, in brief, according to tradition) honoured in the working.

Verse 3.7.90

क्रियायाः परिनिष्पत्तिर्यद्व्यापारादनन्तरम् ।
विवक्ष्यते यदा तत्र करणत्वं तदा स्मृतम् ॥ 90 ॥

*kriyāyāḥ pariniṣpattirvyāpāradanantaram |
vivakṣyate yadā tatra karaṇatvam tadā smṛtam || 90 ||*

When the complete accomplishment of the action is intended as immediately following upon whose operation — then instrument-hood is remembered there.

The instrument defined, and the definition is temporal. Kriyayah parinispatih yad-vyaparad anantaram: the complete accomplishment of the action immediately following upon whose operation — the karana is the participant whose contribution is the last one, after which the act is done: the axe's stroke, and the tree is felled. Vivakṣyate yada: when it is intended so. Tatra karanatvam tada smrtam: then instrument-hood is remembered there. This is Panini's own definition (1.4.42: sadhakatamam karanam, the most effective means) recast: what makes something 'most effective' is that the accomplishment follows immediately on it. And vivakṣyate is the samuddesa's constant: the immediacy is a matter of what the speaker construes as immediately-prior, not of any causal fact. The verse sets up 3.7.91, which says this outright.

Verse 3.7.91

वस्तुतस्तदनिर्देश्यं न हि वस्तु व्यवस्थितम् ।
स्थाल्या पच्यत इत्येषा विवक्षा दृश्यते यतः ॥ 91 ॥

*vastutastadanirdeśyam, na hi vastu vyavasthitam |
sthālyā pacyata ityeṣā vivakṣā drśyate yataḥ || 91 ||*

In reality it is not to be specified; for no thing stands settled — since this intention is seen: 'it is cooked with a pot'.

The samuddesa's most direct statement of its thesis, and it is delivered as a shrug. Vastutah tad anirdesyam: in reality it is not to be specified — there is no fact about which participant is the instrument. Na hi vastu vyavasthitam: for no thing stands settled — nothing in the world is an instrument (3.6.14's things without place, parts, motion, support; 3.7.8's nirihesu api bhavesu kalpana-upanibandhanam). And the evidence, which is a single ordinary sentence: sthalya pacyate iti esa vivakṣa drsyate yataḥ — since this intention is seen: 'it is cooked with a pot'. The pot. Not the fire, not the heat, not the cook's stirring — the pot, which does nothing but sit there, is Sanskrit's perfectly ordinary instrument of cooking. If the pot can be the karana, then the karana is not the most effective cause, and 3.7.90's definition tracks nothing but what the speaker chose to put in the instrumental. Sthalya pacyate is the samuddesa's kupa-supā-yupā: one everyday phrase, and the realist account of the karakas is finished.

Verse 3.7.92

करणेषु तु संस्कारभारभन्ते पुनः पुनः ।
विनियोगविशेषांश्च प्रधानस्य प्रसिद्धये ॥ 92 ॥

*karaneṣu tu saṃskārabhārabhante punaḥ punaḥ |
viniyogaviśeṣāṃśca pradhānasya prasiddhaye || 92 ||*

But in the instruments, they undergo refinements again and again, and particular applications, for the accomplishing of the principal.

The instruments' ritual dimension. Karanesu tu samskaran labhante punah punah: in the *instruments*, they undergo *refinements again and again* — samskara: the preparation, purification, making-fit that the rite performs on its implements (1.146's therapeutic triad; 3.3.35's samskara of the object by the word). Viniyoga-visesan ca: and *particular applications* — viniyoga, the deployment to a ritual station (2.258's mantras obtaining difference by their application). Pradhanasya prasiddhaye: for the *accomplishing of the principal*. So instruments are worked on, repeatedly, and assigned to stations, all in service of the rite's principal act. The verse returns the abstract karana-analysis to the sacrificial ground it came from: the ladle is consecrated, and the consecrating is what makes it the instrument — which is 3.7.91's thesis in ritual dress. Nothing is an instrument; things are *made* instruments, and in the rite the making is visible and liturgical.

Verse 3.7.93

स्वकक्ष्यासु प्रकर्षश्च करणानां न विद्यते ।
आश्रितातिशयत्वं तु परतस्तत्र लक्षणम् ॥ 93 ॥

*svakakṣyāsu prakarṣaśca karaṇānām na vidyate |
āśritātiśayatvam tu paratastatra lakṣaṇam || 93 ||*

And among the instruments, in their own compartments, no excellence exists; but the state of possessing a surpassing, resorted to from outside, is the mark there.

The objection of 3.7.74 revisited for the instrument, and answered as the object's was. Sva-kakasyasu prakarsah ca karananam na vidyate: among the *instruments*, in their *own compartments*, no *excellence* exists — one instrument is not more an instrument than another; instrument-hood does not grade (3.7.74's premise, granted). Asrita-atisayatvam tu paratah tatra laksanam: but the state of *possessing a surpassing*, resorted to *from outside*, is the *mark* there. Panini's definition is sadhakatamam — the *most effective* — and the superlative must qualify something. It qualifies not instrument-hood but effectiveness, which is conferred paratah, from outside: by the action's needs, by the speaker's construal. So the karana's definition works exactly as the karman's did (3.7.75: objecthood has no degrees, desire does): the superlative attaches to a gradable property that is not the role itself.

Verse 3.7.94

स्वातन्त्र्येऽपि प्रयोक्तार आरादेवोपकुर्वते ।
करणेन हि सर्वेषां व्यापारो व्यवधीयते ॥ 94 ॥

svātantrye'pi prayoktāra ārādevopakurvate |
karaṇena hi sarveṣāṃ vyāpāro vyavadhīyate || 94 ||

Even in their independence, the employers assist only from a distance; for the operation of all is separated by the instrument.

The agent's remoteness, and it explains the whole hierarchy. Svatantrye 'pi prayoktarah arad eva upakurvate: even in their *independence*, the *employers* — the agents, svatantra by Panini's definition (1.4.54) — assist *only from a distance*: arad, from afar (2.82's arad visesaka, the qualifier from afar). The agent does not touch the work. Karanena hi sarvesam vyaparo vyavadhīyate: for the *operation of all is separated by the instrument* — the instrument stands between every agent and every act. The woodsman does not fell the tree; the axe does, and he swings the axe. So agency is constitutively mediated: to be an agent is to act *through*, and what one acts through is the karana. This is 3.7.22's king and soldiers given its mechanism — the king obtains victory precisely because he does not fight — and it explains why 3.7.90 could define the instrument as what the accomplishment immediately follows: the instrument is where the action touches the world, and the agent is always one remove back.

Verse 3.7.95

क्रियासिद्धौ प्रकर्षो वा न्यग्भावस्त्वेव कर्तारि ।
सिद्धौ सत्यां हि सामान्यं साधकत्वं प्रकृष्यते ॥ 95 ॥

kriyāsiddhau prakarṣo vā nyagbhāvastveva kartari |
siddhau satyām hi sāmānyam sādhatvam prakṛṣyate || 95 ||

In the accomplishing of the action there is excellence; but in the agent there is only subordination. For when the accomplishment exists, the general means-hood is surpassed.

The hierarchy's paradox, stated exactly. Kriya-siddhau prakarso va: in the *accomplishing of the action* there is *excellence* — the instrument, being nearest the accomplishment (3.7.90), has the surpassing. Nyag-bhavas tv eva kartari: but in the *agent* there is *only subordination* — nyag-bhava: the being-pressed-down (3.7.59's nyag-bhavana). The agent is *subordinated*? The independent one, the svatantra? Yes — and the reason: siddhau satyam hi samanyam sadhatvam prakṛsyate — when the *accomplishment* exists, the *general means-hood* is *surpassed*. Measured against the accomplishment, the agent's contribution is the most distant and the least effective (3.7.94's arad), so in the ranking-by-effectiveness he comes last. The grammar's most independent karaka is efficacy's least. This is the samuddesa's finest structural irony, and it is not a paradox: independence and effectiveness are different scales, and the karta tops one by placing last on the other.

Verse 3.7.96

अस्यादीनां तु कर्तृत्वे तैक्षण्यादि करणं विदुः ।
तैक्षण्यादीनां स्वतन्त्रत्वे द्वैधात्मा व्यवतिष्ठते ॥ 96 ॥

asyādīnām tu kartṛtve taikṣṇyādi karaṇam viduḥ |
taikṣṇyādīnām svatantratve dvaidhātmā vyavatiṣṭhate || 96 ||

But in the agency of a sword and the like, they know sharpness and the rest to be the instrument; and in the independence of sharpness and the rest, the self stands two-fold.

The regress of instruments, and it does not terminate. Asy-adinam tu kartṛtve taikṣṇyādi karaṇam viduḥ: in the *agency* of a sword and the like — when we say ‘the sword cuts’, the sword is agent — sharpness and the rest are the *instrument*: the sword cuts by its sharpness (3.7.31’s four properties). So the sword, promoted to agent, needs an instrument of its own, and its own property serves. Taikṣṇyadinam svatantratve dvaidha atma vyavatiṣṭhate: and in the *independence* of sharpness and the rest — promote the sharpness to agent (‘the sharpness cuts’) — the *self* stands *two-fold*: it must now be both agent and (through some further property) instrument. The regress is 3.7.20-21’s nesting run downward without a floor: every agent needs an instrument, every instrument can be promoted to agent, and each promotion generates a new instrument. Dvaidha atma — the self standing two-fold — names the splitting that each step requires.

Verse 3.7.97

आत्मभेदेऽपि सत्येवमेकोऽर्थः स तथा स्थितः ।
तदाश्रयत्वाद् भेदेऽपि कर्तृत्वं बाधकं ततः ॥ 97 ॥

ātmabhede’pi satyevameko’rthah sa tathā sthitah |
tadāśrayatvād bhede’pi kartṛtvam bādhakam tataḥ || 97 ||

Even when there is a difference of self, one and the same object stands thus; from its resting on that, agency, though there is difference, is therefore what annuls.

The regress of 3.7.96 stopped. Atma-bhede ’pi sati evam ekah arthah sa tathā sthitah: even when there is a *difference of self* — even granting the splitting — *one and the same* object stands thus: the sword and its sharpness are not two things; the splitting was analytical (3.7.15’s vyatirekam upas-ritya: the construction resorting to separation, whatever the metaphysics). Tad-asrayatvad bhede ’pi kartṛtvam bādhakam tataḥ: from its *resting on that*, *agency*, though there is difference, is *therefore what annuls*. Agency wins: where sharpness and sword are one thing, the agency-assignment overrides the instrument-assignment, and the regress stops because there is nothing further to promote. Bādhaka — annulling: the bādha-machinery (2.66, 2.73’s hierarchy of evidences) adjudicating between two karaka-assignments to one thing. So the regress is real as analysis and idle as ontology, and the grammar stops it by ranking.

Verse 3.7.98

यथा च सन्निधानेन करणत्वं प्रतीयते ।
तथैवासन्निधानेऽपि क्रियासिद्धेः प्रतीयते ॥ 98 ॥

yathā ca sannidhānena karaṇatvam pratiyate |
tathaivāsannidhāne’pi kriyāsiddheḥ pratiyate || 98 ||

And as instrument-hood is understood from proximity — just so, even in the absence of proximity, it is understood from the accomplishing of the action.

The instrument’s criterion loosened. Yatha ca sannidhanena karanatvam pratiyate: as instrument-hood is understood from *proximity* — the axe in hand, the pot on the fire (3.7.91’s sthalya pacyate). Tatha eva asannidhane ’pi kriya-siddheḥ pratiyate: *just so, even in the absence of proximity*, it is understood from the *accomplishing* of the action. Distant things are instruments too: one conquers by an army not present, cooks by a fire one is not touching. So proximity was never the criterion; the accomplishment’s dependence was (3.7.90’s parinispattih yad-vyaparad anantaram — and ‘immediately following’ is a matter of construal, not of distance). The verse removes the last physical residue from the karana’s definition: instrument-hood is a functional and construal-relative posting, and nothing about nearness survives in it.

Verse 3.7.99

स्तोकस्य वाभिनिर्वृत्तेरनिवृत्तेश्च तस्य वा ।
प्रसिद्धिं करणत्वस्य स्तोकादीना प्रचक्षते ॥ 99 ॥

satokasya vābhinirvṛtteranivṛtteśca tasya vā |
prasiddhim karaṇatvasya stokādīnā pracakṣate || 99 ||

From the coming-about of what is little, or from its not ceasing — they declare the establishing of instrument-hood for ‘little’ and the like.

A hard case: adverbial instrumentals. Stokasya va abhinirvrtteh anivrtteh ca tasya va: from the *coming-about* of what is *little*, or from its *not ceasing*. The construction is ‘tokena mukta’ — ‘released by a little’, ‘he escaped by a hair’ — where ‘little’ takes the instrumental and is not an instrument in any recognizable sense: no thing is being used. Prasiddhim karaṇatvasya stokadina pracaksate: they declare the *establishing* of instrument-hood for ‘little’ and the like. Two accounts are offered, and both are functional: the littleness *came about* (and its coming-about is what the escape followed on: 3.7.90’s criterion), or it *did not cease* (and its persisting is what the escape depended on). Either way, the instrumental marks what the accomplishment hung on — which in this case is a quantity, not a thing. The verse shows the karana-slot accepting what is not remotely an instrument, because the slot tracks dependence and not instrumentality.

Verse 3.7.100

धर्माणां तद्वता भेदादभेदाच्च विशिष्यते ।
क्रियावधेपवच्छेदविशेषाद् भिद्यते यथा ॥ 100 ॥

dharmāṇām tadvatā bhedādbhedācca viśiṣyate |
kriyāvadhepavacchedaviśeṣād bhidyate yathā || 100 ||

It is distinguished by the difference and the non-difference of the properties from what possesses them — as it is differentiated by a difference in the delimitation of the action's limit.

The general principle behind 3.7.99. *Dharmanam tadvata bhedad abhedac ca visisyate*: it is distinguished by the difference and the non-difference of the properties from what possesses them — a property may be taken as one with its bearer or apart from it (3.7.96-97's sword and sharpness), and the karaka-assignment follows the taking. *Kriya-avaccheda-visesad bhidyate yatha*: as it is differentiated by a difference in the delimitation of the action's limit — where one draws the action's boundary decides what falls inside it as participant and what stands outside as its instrument. So two variables govern every karaka-assignment: how one takes the property's relation to its bearer, and where one cuts the action. Both are construals (3.7.3's buddhy-avastha-nibandhanah), and between them they generate the whole taxonomy the samuddesa has been cataloguing.

Verse 3.7.101-102

प्रागन्यतः शक्तिलाभान्यग्भावापादनादपि ।
तदधीनप्रवृत्तित्वात् प्रवृत्तानां निवर्तनात् ॥ 101 ॥
अदृष्टत्वात् प्रतिनिधेः प्रविवेके च दर्शनात् ।
आरादप्युपकारित्वे स्वातन्त्र्यं कर्तुरुच्यते ॥ 102 ॥

prāganyataḥ śaktilābhānnyagbhāvāpādanādapi |
tadadhīnapravṛttitvāt pravṛttānām nivartanāt || 101 ||
adr̥ṣṭatvāt pratinidheḥ praviveke ca darśanāt |
ārādapyupakāritve svātantryam karturucyate || 102 ||

(101) From the obtaining of capacity previously from another; from the bringing-about of subordination; from their operating in dependence on that; from the turning-back of those who have set out — (102) from the non-observation of a substitute; and from its being seen in separation — even where the assistance is from a distance, independence is said of the agent.

Six marks of agency, gathered into a definition. The agent is identified by: (i) *prag anyatah sakti-labhat* — the others obtaining capacity previously from him (he empowers them); (ii) *nyag-bhava-apadanat* — his bringing about their subordination (3.7.20's *nyakkṛta*); (iii) *tad-adhina-pravṛttitvat* — their operating in dependence on him; (iv) *pravṛttanam nivartanat* — his turning back those who have set out (he can stop what he started: the mark of control); (v) *adrstatvat pratinidheh* — the non-observation of a substitute for him (agents are not substitutable: 3.1.78's test, which discriminates what stands near the capacity from what stands at a remove); (vi) *prativeke ca darsanat* — his being seen in separation (he is identifiable apart from the act). And the conclusion: *arad api upakaritve svatantryam kartur ucyate* — even where the assistance is from a distance (3.7.94's *arat*), independence

is said of the *agent*. Six operational marks, no metaphysics: the karta is whoever exhibits these, and 3.7.103 will say what that means.

Verse 3.7.103

धर्मैरभ्युदितैः शब्दे नियमो न तु वस्तुनि ।
कर्तुर्धर्मविवक्षायां शब्दात् कर्ता प्रतीयते ॥ 103 ॥

dharmairabhyuditaiḥ śabde niyamo na tu vastuni |
karturdharmavivakṣāyām śabdāt kartā pratīyate || 103 ||

By the properties that have arisen, the restriction is in the word, not in the thing; when the agent's property is intended, the agent is understood from the word.

The six marks of 3.7.101-102 placed, and the placing is the samuddesa's thesis. Dharmair abhyuditaiḥ sabde niyamah na tu vastuni: by the *properties* that have *arisen*, the *restriction* is *in the word*, not *in the thing*. The six marks do not identify a thing that is the agent; they govern when the *word* takes agent-morphology. Kartur dharma-vivaksayam sabdat karta pratiyate: when the *agent's property* is *intended*, the *agent* is *understood from the word*. So agency is a fact about what is intended and expressed, and the marks are the conditions under which the expression is licensed. Na tu vastuni – not in the thing: the phrase is 3.7.91's (vastutah tad anirdesyam, na hi vastu vyavasthitam) applied now to the karta as it was there to the karana. Neither end of the karaka-system rests on anything.

Verse 3.7.104

एकस्य बुद्ध्यवस्थाभिर्भेदे च परिकल्पिते ।
कर्मत्वं करणत्वं च कर्तृत्वं चोपजायते ॥ 104 ॥

ekasya buddhyavasthābhirbhede ca parikalpīte |
karmatvam karanatvam ca kartṛtvam copajāyate || 104 ||

And when a difference is constructed, by states of the intellect, for one and the same thing – objecthood, instrument-hood and agency arise.

The samuddesa's culminating statement, and it gathers a hundred verses. Ekasya buddhyavasthabhiḥ bhede ca parikalpīte: when a *difference* is *constructed*, by *states of the intellect*, for *one and the same thing* – one thing, and the buddhi's states carve it. Karmatvam karanatvam ca kartṛtvam ca upajāyate: *objecthood*, *instrument-hood* and *agency* arise. All three, from one thing, by cognitive states. This is 3.7.3 (the practice of means is grounded in a state of the intellect) now demonstrated rather than asserted, and it explains everything the samuddesa has found: why the same cooking is object, instrument and sadhya at once (2.429); why both parents are agents and the roles are assigned by intention (3.7.19); why the pot is the instrument of cooking (3.7.91). Buddhy-avastha – states of the intellect: not arbitrary, not private, but *states*, which come and go and can be occupied. The karaka-system is a map of the positions a mind can take up toward an event.

Verse 3.7.105

उत्पत्तेः प्रागसद्भावो बुद्ध्यवस्थानिबन्धनः ।
अविशिष्टः सताऽन्येन कर्ता भवति जन्मनः ॥ 105 ॥

utpatteḥ prāgasadbhāvo buddhayavasthānibandhanah |
aviśiṣṭaḥ satā'nyena kartā bhavati janmanah || 105 ||

The prior non-existence before the arising is grounded in a state of the intellect; not distinguished from another existent thing, it becomes the agent of the birth.

The doctrine of 3.7.104 applied to its hardest case: origination. *Utpatteh prag asad-bhavah buddhy-avastha-nibandhanah*: the *prior non-existence* before the *arising* is *grounded in a state of the intellect* — the pot's not-yet-being is a way the mind holds the situation, not a condition the pot is in (3.3.79's finding: 'the prior state of a non-thing' is not a describable condition; neither the priority nor the state exists in a non-thing). *Avisistah sata anyena karta bhavati janmanah*: *not distinguished* from another existent thing, it *becomes the agent of the birth*. So 'the pot comes to be' has the pot as agent — and the pot, at that moment, is a *buddhi*-posting indistinguishable from any existing thing, because *buddhi* does not distinguish them (3.3.86's mind that will not halt in non-being). This is 3.3.43-48's dilemma of origination dissolved by the *karaka*-analysis: nothing is born, and the birth's agent is a state of the intellect, and the grammar conjugates it.

Verse 3.7.106

कारणं कार्यभावेन यथा वा व्यवतिष्ठते ।
कार्यशब्दं तदा लब्ध्वा कार्यत्वेनाथ जायते ॥ 106 ॥

kāraṇam kāryabhāvena yathā vā vyavatiṣṭhate |
kāryaśabdam tadā labdhvā kāryatvenātha jāyate || 106 ||

Or, as a cause stands in the form of the effect — then, having obtained the word 'effect', it thereupon arises as the effect.

The alternative account of origination. *Karanam karya-bhavana yatha va vyavatisthate*: *or, as a cause* stands in the *form of the effect* — the clay standing as the pot, the *satkarya*-vadin's picture (3.7.49's *sat va janmana yat prakasyate*). *Karya-sabdam tada labdhva karyatvena atha jayate*: *then, having obtained the word 'effect', it thereupon arises as the effect*. The order is the verse's shock: the thing obtains the word first, and *then* arises as the effect. Naming is prior to being. This is not a slip — it is 3.1.6's doctrine (every word expresses its own universal first, and superimposes it on the object) applied to origination: what makes the clay into a pot is its receiving the word 'pot', and the arising follows the naming. The *Padakanda*'s constructivism reaches its limit here, and the limit is that things come to be by being called.

Verse 3.7.107

यथाहेः कुण्डलीभावो व्यग्राणां च समग्रता ।
तथैव जन्मरूपत्वं सतामेके प्रचक्षते ॥ 107 ॥

yathāheḥ kuṇḍalībhāvo vyagrāṇām ca samagrataḥ |
tathaiva janmarūpatvam satāmeke pracakṣate || 107 ||

As the snake's becoming-coiled, and the wholeness of things dispersed — just so, some declare, is the birth-form of existent things.

Two similes for a birth that is no birth. Yatha aheh kundali-bhavah: as the *snake's becoming-coiled* — the snake does not acquire a new thing by coiling; it arranges itself, and 'the coil' comes to be without anything coming to be. Vyagranam ca samagrata: and the *wholeness of things dispersed* — scattered things gathered, and the 'whole' arises without any new entity: the heap is not a further thing beside the grains. Tatha eva janma-rupatvam satam eke pracaksate: *just so, some declare, is the birth-form of existent things*. So birth is rearrangement and gathering — configuration, not creation. The similes are chosen for cases where everyone already sees that the 'new thing' is a way of taking the old: nobody thinks a coil was manufactured. And they complete 3.3.61's finding (non-being is not born as being; the two are constructions, not other than one self) with a picture of what birth then is.

Verse 3.7.108

विभक्तयोनि यत्कार्यं कारणेभ्यः प्रवर्तते ।
स्वा जातिव्यक्तिरूपेण तस्यापि व्यवतिष्ठते ॥ 108 ॥

vibhaktayoni yatkāryam kāraṇebhyaḥ pravartate |
svā jātirvyaktirūpeṇa tasyāpi vyavatiṣṭhate || 108 ||

The effect which proceeds from its causes, having a divided womb — its own universal also stands established in the form of the individual.

The effect's universal, and the verse closes the movement by returning to the Jati-samuddesa. Vibhakta-yoni yat karyam karanebhyah pravartate: the *effect which proceeds from its causes*, having a *divided womb* — its origin is in several causes, each contributing (yoni: 3.1.3's womb-vocabulary, 2.58's samhita as the womb of the words). Sva jatih vyakti-rupena tasya api vyavatisthate: *its own universal also stands established in the form of the individual*. So the effect, however divided its origin, has its own universal, and that universal stands as the individual — the pot's pot-hood is not a further item in the pot but the pot's own standing (3.1.29's face manifested by water: the universal itself is what is expressed). This connects the two ends of the Padakanda: the universals of samuddesa 1 and the causal analysis of samuddesa 7 meet in the effect, whose being-a-thing-of-a-kind is the same fact as its having been made.

Verse 3.7.109

भावष्वेव पदन्यासः प्रजाया वाच एव वा ।
नास्तीत्यप्यपदे नास्ति न चासदिभ्यते ततः ॥ 109 ॥

bhāvaṣveva padanyāsaḥ prajāyā vāca eva vā |
nāstītyapyapade nāsti na cāsadbhidyate tataḥ || 109 ||

The setting-down of a foot is only among existent things — whether of cognition or of speech; even 'it does not exist' does not exist in a footless place, nor is the non-existent thereby differentiated.

The footless station (3.3.80's apada-sthana) recalled and applied to the karaka-system. Bhavesu eva pada-nyasaḥ: the *setting-down* of a foot is only among *existent* things — prajaya vacah eva va: whether of *cognition* or of *speech*: neither thought nor word can get a footing where nothing is (3.3.78's karana that cannot set its foot in a non-place). Na asti iti api apade na asti: even 'it does not exist' does not exist in a footless place — the very denial needs a floor, and where none is, the denial cannot be made either (3.3.80: no ground for saying 'it exists' or 'it does not exist'). Na ca asad bhidyate tataḥ: nor is the *non-existent* thereby *differentiated*: our denials do not carve nothing into kinds. So the whole apparatus — every karaka, every case, every construal — operates only where there is standing-room, and 3.3.80's station remains where speech stops.

Verse 3.7.110

बुद्धिशब्दौ प्रवर्तते यथा भूतेषु वस्तुषु ।
तेषामन्येन तत्त्वेन व्यवहारो न विद्यते ॥ 110 ॥

buddhiśabdau pravartete yathā bhūteṣu vastuṣu |
teṣāmanyena tattvena vyavahāro na vidyate || 110 ||

As intellect and word proceed among things that have come to be — of those there is no practice by any other reality.

The consequence of 3.7.109, and it is a boundary-marker. Buddhi-sabdau pravartete yathā bhutesu vastusu: as *intellect* and *word* proceed among things *that have come to be* — the two operate on the arisen, the constructed, the standing (3.3.82's beings raised up by construction). Tesam anyena tattvena vyavaharo na vidyate: of those there is *no practice* by any *other reality*. There is no second reality in which thought and speech could transact — no access to things as they are apart from having come to be. This is 2.297's charter (words are grounded in the world) and 3.3.71's cost (when reality and otherness are both abandoned, practice withdraws) stated together: the domain of buddhi and sabda is the arisen, and it has no outside that they could reach.

Verse 3.7.111

आकाशस्य यथा भेदश्छायायाश्चलनं यथा ।
जन्मनाशावभेदेऽपि तथा कैश्चित्प्रकल्पितौ ॥ 111 ॥

*ākāśasya yathā bhedaśchāyāyaścalanam.yathā |
janmanāśāvabhede'pi tathā kaiścitprakalpitaū || 111 ||*

As the division of ether, and as the moving of a shadow — so, though there is no difference, birth and destruction are constructed by some.

Two similes for constructed events. Akasasya yatha bhedah: as the *division of ether* — akasa is partless, and we speak of its regions (3.1.15's places constructed by the properties of what is conjoined). Chayayah calanam yatha: as the *moving of a shadow* — a shadow does not move; the light and the object move, and the shadow's 'motion' is a way of describing their change. Nothing travels. Janmanasau abhede 'pi tatha kaiscit prakalpitaū: so, *though there is no difference, birth and destruction are constructed* by some. Both similes are cases where a real appearance is generated by nothing doing what it seems to do — and both are cases nobody disputes. The shadow is especially apt: its motion is perfectly determinate, perfectly predictable, and there is no mover. So with birth: the event is exact and nothing is born (3.7.107's coiling snake).

Verse 3.7.112

यथैवाकाशनास्तित्वमसन्नूर्तिनिरूपितम् ।
तथैव मूर्तिनास्तित्वमसदाकाशनिश्रयम् ॥ 112 ॥

*yathaivākāśanāstitvamasannūrtinirūpitam |
tathaiva mūrtināstitvamasadākāśaniśrayam || 112 ||*

Just as the non-existence of ether is determined by a non-existent corporeality — so the non-existence of corporeality rests upon a non-existent ether.

The mutual constitution of absences, and its symmetry is the argument. Yatha eva akasa-nastitvam asan-murti-nirupitam: the *non-existence of ether* is *determined* by a *non-existent corporeality* — 'there is no space here' means 'this is occupied', and the occupying body is itself constructed. Tatha eva murti-nastitvam asad-akasa-nisrayam: so the *non-existence of corporeality* rests upon a *non-existent ether* — 'there is nothing here' means 'this is empty space', and the space is constructed too. Each absence is defined by the other's presence, and each presence is itself an absence's construction. So the pair spins: space's absence needs body, body's absence needs space, and neither is anywhere independently. This is 3.3.60's mutual dependence (resting on being, absence is followed; resting on absence, being is followed) given its most concrete case — and the concreteness is the point: emptiness and occupancy, the plainest facts about a place, are each other's shadows.

Verse 3.7.113

यथा तदर्थेव्यपारैः क्रियात्मा व्यपदिश्यते ।
अभेदग्रहणादेष कार्यकारणयोः क्रमः ॥ 113 ॥

yathā tadarthairvyāpāraiḥ kriyātmā vyapadiśyate |
abhedagrahaṇādeṣa kāryakāraṇayoḥ kramah || 113 ||

As the self of the action is designated by the operations that are for its sake — this sequence of cause and effect is from the grasping of non-difference.

The causal sequence explained by a grasp. Yatha tad-arthaih vyaparaih kriya-atma vyapadisyate: as the self of the action is designated by the operations that are for its sake — the cooking is named by the fetching, lighting, stirring that serve it; the whole is designated through its parts (2.448's uncounted sub-actions displayed by a single verb). Abheda-grahanad esa karya-karanayoh kramah: this sequence of cause and effect is from the grasping of non-difference. The causal order exists because we grasp the parts as not different from the whole they serve: the stirring is the cooking, and so the stirring is its cause. Take them as different and no sequence appears — just events. So causation is generated by the same abheda-grahana that generates the action's unity, and cause-and-effect is the inside of a whole we have taken as one (3.7.107's samagrata: the wholeness of things dispersed).

Verse 3.7.114

विकारो जन्मनः कर्ता प्रकृतिर्वेति संशये ।
भिद्यते प्रतिपत्तृणां दर्शनं लिङ्गदर्शनैः ॥ 114 ॥

vikāro janmanah kartā prakṛtirveti samśaye |
bhidyate pratipattṛṇām darśanam liṅgadarśanaiḥ || 114 ||

When there is doubt whether the modification is the agent of the birth, or the material cause — the view of the comprehenders is differentiated by the seeing of marks.

The open question, and its resolution is left to evidence. Vikaro janmanah karta prakrtir va iti samśaye: when there is doubt whether the modification is the agent of the birth — the pot, coming to be, being the agent of its own arising (3.7.105) — or the material cause: the clay, being what does the arising. Bhidyate pratipattṛṇām darsanam linga-darsanaih: the view of the comprehenders is differentiated by the seeing of marks — different hearers construe differently, according to what indications they find (2.73's linga; 2.315's fourteen determinants). So the question has no answer of its own: the karaka-assignment for origination follows the marks the context supplies, and comprehenders differ. This is 2.135's doctrine (launched in one way, divided out among differing comprehenders each according to his own cognition) applied to the most metaphysically loaded construction in the language.

Verse 3.7.115

क्लृपि सम्पद्यमाने या चतुर्थी सा विकारतः ।
सुवर्णपिण्डे प्रकृतौ वचनं कुण्डलाश्रयम् ॥ 115 ॥

klṛpi sampadyamāne yā caturthī sā vikārataḥ |
suvarṇapīṇḍe prakṛtau vacanam kuṇḍalāśrayam || 115 ||

In 'klp', when there is a becoming, the fourth case is from the modification; in the lump of gold, the material cause, the statement rests upon the earring.

The grammar of becoming, and it assigns by the outcome. Klpī sampadyamane ya caturthī sa vikārataḥ: in the root *klp*, when there is a *becoming*, the *fourth case* (dative) is *from the modification* – 'suvarṇa-pindah kundalaya kalpate', 'the gold-lump serves for an earring': the dative goes to the *product*, not to the material. Suvarṇa-piṇḍe prakṛtau vacanam kundala-asrayam: in the *lump of gold*, the *material cause*, the *statement* rests upon the *earring*. So when Sanskrit says a material 'becomes' something, the sentence is oriented toward the product: the earring gets the dative, and the gold is the subject. The case-assignment records which end of the transformation the speaker is facing – and 3.7.48 already established that whether the material is in view at all is a matter of vivakṣa. The dative here is a small piece of evidence for a large thesis: the grammar of becoming is a grammar of attention.

Verse 3.7.116

वाक्ये सम्पद्यते कर्ता संघच्यन्तस्य कथ्यते ।
वृत्तौ संधीभवन्तीति ब्राह्मणानां स्वतन्त्रता ॥ 116 ॥

vākye sampadyate kartā samghacvyantasya kathyate |
vṛttau sandhībhavantīti brāhmaṇānām svatantratā || 116 ||

In a sentence, the agent 'becomes'; of a form ending in 'cvi' with 'sangha', it is stated; in the derivative formation, 'they become united' – the independence of the brahmins.

The cvi-construction (2.279's) revisited for its karaka-structure. Vākye sampadyate kartā: in a *sentence*, the *agent* 'becomes' – the analytic phrase makes the transforming thing the agent: 'the brahmins become a group'. Sangha-cvy-antasya kathyate: of a form ending in *cvi* with 'sangha' – the synthetic form, sanghi-bhavanti, where the cvi-affix compresses the becoming. Vṛttau sanghi-bhavanti iti brahmananam svatantrata: in the *derivative formation*, 'they become united' – the *independence of the brahmins*. The point is that the brahmins remain svatantra, agents, through both constructions: the analytic phrase and the compressed cvi-form assign agency identically, though their morphology differs entirely. So the karaka-structure survives the form-change – which is 2.415's doctrine (the sentence and its meaning shining forth undivided from words that possess sequence) at the level of a single derivation.

Verse 3.7.117

अत्वं सम्पद्यते यस्त्वं न तस्मिन् युष्मदाश्रया ।
प्रकृतिः पुरुषस्यास्ति प्राकृतः स विधीयते ॥ 117 ॥

*atvam sampadyate yastvam na tasmin yuṣmadāśrayā |
prakṛtiḥ puruṣasyāsti prākṛtaḥ sa vidhīyate || 117 ||*

You who become 'you' — in him there is no material cause resting on 'yusmad'; the man has a material nature, and he is prescribed as natural.

A puzzle in the cvi-construction's pronominal cases. *Atvam sampadyate yah tvam: you who become 'you' — the construction 'tvam-bhavati' (becomes you) faces a difficulty: na tasmin yusmad-asraya prakṛtiḥ asti — in him there is no material cause resting on 'yusmad' (the pronominal stem for 'you'): there is no such stuff as you-ness for someone to be made of. The cvi-construction normally has a material becoming a product (3.7.115's gold and earring), and here the 'product' is a person and there is no material. Prakṛtiḥ puruṣasya asti prakṛtaḥ sa vidhīyate: the man has a material nature, and he is prescribed as natural — the material is the person himself, and the grammar treats him as the prakṛti. So the construction is saved by locating the material in the person rather than in the pronoun's sense — which is a technical fix with a philosophical shadow: becoming-you has no stuff, and the grammar supplies one by fiat.*

Verse 3.7.118

पूर्वमिवस्थामजहत्संस्पृशन् धर्ममुत्तरम् ।
समूर्च्छित इवार्थात्मा जायमानोऽभिधीयते ॥ 118 ॥

*pūrvānavasthāmajahatsamṣṛśan dharmamuttaram |
samūrccchita ivārthātmā jāyamāno'bhidhīyate || 118 ||*

Not abandoning the prior state, touching the subsequent property — the meaning's self, as though congealed, is spoken of as 'being born'.

The verse that resolves the origination-problem within the karaka-system, and its central word is chosen with care. *Purvam avastham ajahat: not abandoning the prior state — the thing does not leave what it was (3.3.74's the self of being is not abandoned). Samsprsan dharmam uttaram: touching the subsequent property — it reaches the new condition without having left the old. Samurccchita iva artha-atma: the meaning's self, as though congealed — samurccchita: coagulated, curdled, thickened into shape (the word is used of milk becoming curds, and of things taking form). Jayamano 'bhidhiyate: is spoken of as 'being born'. So birth is a congealing between two states, holding both — which is 3.3.39's interval (fallen from the prior property, not having attained the subsequent, and in that interval birth is spoken of) now given a positive image. The iva marks it: as though congealed. Nothing thickens; the thickening is how the two-stateness is taken.*

Verse 3.7.119

सव्यापारतरः कश्चित् क्लचिद्धर्मः प्रतीयते ।
संसृज्यन्ते च भावानां भेदवत्योऽपि शक्तयः ॥ 119 ॥

savyāpāratarah kaścit klaciddharmah pratiyate |
samsrjyante ca bhāvānām.bhedavatyo'pi śaktayah || 119 ||

Somewhere a certain property is understood as more possessed of operation; and the capacities of things, though possessing difference, are commingled.

Why one property among many gets the karaka-assignment. Sa-vyaparatarah kascit kvacid dharmah pratiyate: *somewhere* a certain *property* is understood as *more possessed of operation* – sa-vyaparatarah: comparatively more operative. Among the sword's sharpness, weight, hardness and shape (3.7.31), one stands out as doing the work, and it takes the instrumental. Samsrjyante ca bhavanam bheda-vatyō 'pi śaktayah: and the *capacities* of things, *though possessing difference*, are *commingled*. The properties are distinct and they act together, and the assignment picks one – the more-operative – from a fused ensemble. So the karana-assignment is a selection from a commingling (3.4.1's samsarga-rupāt sambhutah), made by comparative operativeness, and the comparison is the speaker's (3.7.91's sthalya pacyate: the pot, which does nothing, chosen).

Verse 3.7.120

विपरीतार्थवृत्तित्वं पुरुषस्य विपर्यये ।
गम्येत साधनं ह्यत्र सव्यापारं प्रतीयते ॥ 120 ॥

viparītārthavṛttitvam.puruṣasya viparyaye |
gamyeta sādhanam.hyatra savyāpāram.pratiyate || 120 ||

In the inversion, the man's operating in a contrary meaning would be understood; for here the means is understood as possessed of operation.

The cvi-construction inverted. Viparita-artha-vṛttitvam puruṣasya viparyaye: in the *inversion*, the *man's operating in a contrary meaning* would be understood – reverse the construction and the person is construed as acting oppositely. Gamyeta sadhanam hi atra sa-vyaparam pratiyate: for *here* the *means* is understood as *possessed of operation* – the inverted construction makes the means operative where it was not. The technicality is dense and the principle is 3.7.119's: which element is taken as operative decides the assignment, and inverting the construction inverts the taking. The verse is preparing 3.7.121's example, where a king becomes a servant and the grammar must decide who is doing what.

Verse 3.7.121

त्वमन्यो भवसीत्येषा तत्र स्यात् परिकल्पना ।
राजि भृत्यत्वमापन्ने यथा तद्वद्गतिर्भवित् ॥ 121 ॥

tvamanyo bhavasītyeṣā tatra syāt parikalpanā |
rājñi bhr̥tyatvamāpanne yathā tadvadgātirbhavet || 121 ||

'You become another' — that would be the construction there; as when a king has come to servanthood, the movement would be like that.

The example that makes 3.7.120 vivid. Tvam anyo bhavasi iti esa tatra syat parikalpana: 'you become another' — that would be the construction there. And the illustration: rajni bhr̥tyatvam apanne yatha tadvad gatiḥ bhavet — as when a king has come to servanthood, the movement would be like that. The king who becomes a servant is the same man and is another; the construction 'the king becomes a servant' has him as agent of his own demotion, and what he becomes is what he was not. The example is chosen because the identity is undeniable (he is the same man) and the otherness is real (he is not a king now) — so 'you become another' is exactly right and exactly paradoxical. And it is 3.7.118's congealing: not abandoning the prior state, touching the subsequent, the meaning's self as though thickened between them.

Verse 3.7.122-123

सम्भावनात् क्रियासिद्धौ कर्तृत्वेन समाश्रितः ।
क्रियायामात्मसाध्यायां साधनानां प्रयोजकः ॥ 122 ॥
प्रयोगमात्रे न्यग्भावं स्वातन्त्र्यादेव निश्चितः ।
अविशिष्टो भवत्यन्यैः स्वतन्त्रैर्मुक्तसंशयैः ॥ 123 ॥

sambhāvanāt kriyāsiddhau kartṛtvena samāśritah |
kriyāyāmātmasādhyāyām.sāadhanānām.prayojakah || 122 ||
prayogamātre nyagbhāvam.svātantryādeva niśritah |
aviśiṣṭo bhavatyanyaiḥ svatantrairmuktasamśayaiḥ || 123 ||

(122) From possibility, in the accomplishing of the action, he is resorted to as agent; in an action to be accomplished by himself, he is the occasioner of the means. (123) In mere employment, he is settled in subordination by his very independence; he becomes undistinguished from other independent ones whose doubt is removed.

The agent's two faces. (122): sambhavanat kriya-siddhau kartṛtvena samasritah — from possibility, in the accomplishing of the action, he is resorted to as agent: agency is conferred on whoever could do it. Kriyayam atma-sadhyayam sadhananam prayojakah: in an action to be accomplished by himself, he is the occasioner of the means — he sets the instruments going (3.7.101's six marks). (123) gives the paradox: prayoga-matre nyag-bhavam svatantryad eva nisritah — in mere employment, he is settled in subordination by his very independence. His independence is what subordinates him — because to be the free one is to stand back and let the instruments touch the work (3.7.94's arat, 3.7.95's nyag-bhava in the agent). Avisisto bhavaty anyaiḥ svatantraiḥ mukta-samsayaiḥ: he becomes undistinguished from other independent ones whose doubt is removed. All the free ones are alike in being at one remove. The verse is the samuddesa's last word on the agent, and it is that freedom and efficacy are inversely related.

Verse 3.7.124

निमित्तेभ्यः प्रवर्तन्ते सर्व एव स्वभूतये ।
अभिप्रायानुरोधोऽपि स्वार्थस्यैव प्रसिद्धये ॥ 124 ॥

*nimittebhyah pravartante sarva eva svabhūtaye |
abhiprāyānurodho'pi svārthasyaiva prasiddhaye || 124 ||*

All alike proceed from their occasioning grounds for their own becoming; and even the accommodation of another's intention is for the accomplishing of one's own purpose.

The samuddesa's motivational realism, and it is bracing. Nimittebhyah pravartante sarva eva svabhūtaye: *all alike* proceed from their *occasioning grounds for their own becoming* — every participant acts for itself: the axe for its own cutting, the fire for its own burning, the servant for his own ends (3.1.25's universal deploying the causes for the manifestation of its own self). Abhipraya-anurodho 'pi sva-arthasya eva prasiddhaye: and even the *accommodation of another's intention* is for the *accomplishing of one's own purpose*. The soldier fights the king's war for his own reasons; the instrument serves the agent by doing what instruments do. So the hierarchy of 3.7.22 (the soldiers fight, the king conquers) is not a hierarchy of purposes: each has his own, and the subordination is grammatical rather than motivational. Every karaka is an agent (3.7.18) and every agent acts for itself — which is why the roles must be *assigned* rather than *found* (3.7.104's buddhy-avastha), since the world offers only a crowd of self-interested operations and no organizing centre.

Verse 3.7.125

प्रेषणाध्येषणे कुर्वस्तत्समर्थानि चाचरन् ।
कर्तैव विहितां शास्त्रे हेतुसंज्ञां प्रपद्यते ॥ 125 ॥

*preṣaṇādhyeṣaṇe kurvastatsamarthāni cācaran |
kartaimṇa vihitām.śāstre hetusamjñām.prapadyate || 125 ||*

One who, doing the directing and the requesting, and performing what is capable of that — being an agent alone, obtains the designation 'hetu' taught in the science.

The hetu located within agency. Presana-adhyesane kurvan: one *doing* the *directing* and the *requesting* — presana is command, adhyesana is request: the two ways one gets another to act. Tat-samarthani ca acaran: and *performing what is capable of that* — doing whatever brings the other's action about. Karta eva vihitam sastre hetu-samjnam prapadyate: *being an agent alone*, he obtains the *designation 'hetu' taught in the science*. The point is karta eva: the hetu is not a separate karaka standing beside the agent; it is an *agent*, receiving a further designation when his agency consists in moving another agent (3.7.25's karta kartr-antara-apeksah). So the causative's structure is agency-over-agency (3.7.63's stacking), and hetu names the upper storey rather than a new kind of thing.

Verse 3.7.126

द्रव्यमात्रस्य तु प्रैषे पृच्छयादेर्लोड् विधीयते ।
सक्रियस्य प्रयोगस्तु यदा स विषयो णिचः ॥ 126 ॥

dravyamātrasya tu praiṣe prcchayāderlod vidhīyate |
sakriyasya prayogastu yadā sa viṣayo ṇicah || 126 ||

But in the directing of a mere substance, the imperative of 'prcch' and the like is prescribed; the employment of one possessed of action, however — then that is the domain of the causative affix.

Two kinds of directing, morphologically distinguished. Dravya-matrasya tu praise: in the *directing of a mere substance* — commanding something that is not itself an agent — prcchy-ader lod vidhiyate: the *imperative* of 'prcch' (ask) and the like is prescribed: one uses the imperative directly. Sa-kriyasya prayogah tu yada sa visayo nicah: but the *employment of one possessed of action* — directing something that *does act* — then that is the *domain of the causative affix*. So the nic-affix is reserved for directing agents, and mere imperatives suffice for directing things. The distinction is exact and it depends on 3.7.18's doctrine: the causative presupposes a second agent, and where the directed party has no action of its own, there is no second agency for the affix to mark.

Verse 3.7.127

गुणक्रियायां स्वातन्त्र्यात् प्रेषणे कर्मतां गतः ।
नियमात् कर्मसंज्ञायाः स्वधर्मेणाभिधीयते ॥ 127 ॥

guṇakriyāyām svātantryāt preṣaṇe karmatām gataḥ |
niyamāt karmasamjñāyāḥ svadharṁeṇābhidhīyate || 127 ||

From independence in the action that is a quality, one who has come to objecthood in the directing — from the restriction of the object-designation, is expressed by his own property.

The caused agent's double status. Guna-kriyayam svatantryat: from *independence* in the action that is a *quality* — the caused agent is svatantra in his own act (Devadatta genuinely cooks). Presane karmatam gatah: in the *directing*, he has *come to objecthood* — but relative to the director, he is the object ('he makes Devadatta cook'). Niyamat karma-samjñayah sva-dharmena abhidhiyate: from the *restriction of the object-designation*, he is expressed by *his own property*. So he is agent below and object above, and the grammar's rule fixes which designation the morphology records. This is 3.7.20-21 exactly (subordinated capacities furnished with their own complete operations; agency regained at the next level down), and the causative construction is where the two-level structure is morphologically visible.

Verse 3.7.128

क्रियायाः प्रेरकं कर्म हेतुः कर्तुः प्रयोजकः ।
कर्मार्था च क्रियोत्पत्तिः संस्कारप्रतिपत्तिभिः ॥ 128 ॥

*kriyāyāḥ prerakam karma hetuḥ kartuḥ prayojakaḥ |
karmārthā ca kriyotpattiḥ saṁskārapratipattibhiḥ ॥ 128 ॥*

The object is the impeller of the action; the hetu is the occasioner of the agent; and the arising of the action is for the sake of the object, through refinements and apprehensions.

The three-term structure of purposive action. Kriyayah prerakam karma: the *object* is the *impeller* of the action — what one wants is what sets the act going (3.7.45's *ipsitatama*; 3.7.71's object as the action's occasioner). Hetuḥ kartuḥ prayojakah: the *hetu* is the *occasioner of the agent* — the reason moves the doer. Karma-artha ca kriya-utpattiḥ saṁskara-pratipattibhiḥ: and the *arising of the action* is *for the sake of the object*, through *refinements* and *apprehensions*. So the causal order runs: hetu moves agent, agent acts, action is for the object — and the object, being what is wanted, was the impeller all along. The circle is teleological and it is not vicious: the wanted end starts the process that reaches it, which is what purposive action is. Saṁskara-pratipattibhiḥ — through refinements and apprehensions — names the machinery: the instruments are prepared (3.7.92) and the situation is grasped, and between them the action arises.

Verse 3.7.129

अनिराकरणात् कर्तुस्त्यागाङ्गं कर्मणोप्सितम् ।
प्रेरणानुमतिभ्यां वा लभते सम्प्रदानताम् ॥ 129 ॥

*anirākaraṇāt karttustyāgāṅgam karmaṇopsitam |
preraṇānumatibhyām vā labhate sampradānatām ॥ 129 ॥*

From the agent's not refusing, what is desired by the object is a limb of the giving; or, from impelling and from consenting, it obtains the state of being the recipient.

The sampradana — the recipient, the dative's karaka — defined by three alternatives, and all three are relational. Anirakaranat kartuḥ: from the *agent's not refusing* — the recipient is defined *negatively*: he is the one who does not decline. Tyaga-angam karmana ipsitam: what is *desired by the object* is a *limb of the giving*. Or: preraṇa-anumatibhyam va labhate sampradanatam: from *impelling* and from *consenting*, it obtains the state of being the *recipient* — he asked for it, or he agreed to it. So the recipient is constituted by not-refusing, or by asking, or by consenting: three attitudes, no action. The sampradana is the karaka that does nothing at all — it merely fails to object — and Panini's own definition (1.4.32: karmana yam abhipraiti sa sampradanam, whom the agent intends by the object) is equally attitudinal. This is 3.7.104's thesis at its cleanest: a karaka constituted wholly by a stance.

Verse 3.7.130

हेतुत्वे कर्मसंज्ञायां शेषत्वे वापि कारकम् ।
रुच्यार्थदिषु शास्त्रेण सम्प्रदानाख्यमुच्यते ॥ 130 ॥

hetutve karmasamjñāyām śeṣatve vāpi kārakam |
rucyārthādiṣu śāstreṇa sampradānākhyamucyate || 130 ||

In hetu-hood, in the object-designation, or even in remainder-hood, the karaka is called 'sampradana' by the science, in the case of 'ruc' and the rest.

The sampradana's assignment shown to override its competitors. In verbs like *ruc* (to please), the thing pleased could be construed as *hetu* (it is why the pleasing happens), as *karman* (it is what is affected), or as *sesa* (the residue-case: 3.7.44's *sasthi sese*). *Hetutve karma-samjñayam sesatve va api karakam*: in *hetu*-hood, in the *object*-designation, or even in *remainder*-hood — three available construals. *Rucy-arthadisu sastrena sampradana-akhyam ucyate*: the karaka is called '*sampradana*' by the science in the case of '*ruc*' and the rest. Panini legislates (1.4.33: *rucy-arthanam priyamanah*): the pleased one takes the dative, whatever else he might have been. So the sampradana-assignment here is a *stipulation* — the science choosing among available construals and fixing one. This is 3.7.103's finding (the restriction is in the word, not in the thing) exhibited: the grammar decides, and there was nothing to discover.

Verse 3.7.131

भेदस्य च विवक्षायां पूर्वा पूर्वा क्रियां प्रति ।
परस्याङ्गस्य कर्मत्वान्न क्रियाग्रहणं कृतम् ॥ 131 ॥

bhedasya ca vivakṣāyām pūrvā pūrvā kriyām prati |
parasyāṅgasya karmatvānna kriyāgrahaṇam kṛtam || 131 ||

And when a difference is intended, each prior one with respect to the action — since the subsequent limb is an object, the mention of 'action' has not been made.

Why Panini's rule omits a word. *Bhedasya ca vivaksayam purva purva kriyam prati*: when a *difference* is intended, each prior one with respect to the action — in a chain of sub-actions (3.7.16-17's seeing, seeking, resolving, undertaking), each earlier is means to the later. *Parasya angasya karmatvat na kriya-grahanam krtam*: since the *subsequent limb* is an *object*, the mention of 'action' has not been made. The rule does not need to say 'action' because the later stage is already an object, and the object-rule covers it. This is grammatical economy (2.3.43's *laghava*) explained by semantic structure: the sutra is short because the chain of 3.7.16-17 makes each stage an object of the last, and the *karman*-provisions already reach them. The verse shows the *samuddesa*'s doctrine paying for itself in Panini's brevity.

Verse 3.7.132

क्रियाणां समुदाये तु यदैकत्वं विवक्षितम् ।
तदा कर्म क्रियायोगात् स्वाख्ययैवोपचर्यते ॥ 132 ॥

kriyāṇām samudāye tu yadaikatvam vivakṣitam |
tadā karma kriyāyogāt svākhyayaivopacaryate ॥ 132 ॥

But when oneness is intended in an aggregate of actions — then the object, from its connection with the action, is figuratively spoken of by its own designation.

The complement of 3.7.131. Kriyanam samudaye tu yada ekatvam vivakṣitam: when *oneness* is intended in an *aggregate of actions* — the chain taken as one act rather than as stages (2.448's uncounted sub-actions displayed by a single verb). Tada karma kriya-yogat sva-akhyaya eva upacaryate: *then* the object, from its *connection with the action*, is *figuratively* spoken of by its *own designation*. Upacaryate — figuratively (3.3.39's aupacariki satta; 2.253's upacara): where the chain is taken as one, the intermediate objects lose their objecthood and the designation is transferred. So whether the stages have objects depends on whether the chain is taken as many acts or one — which is vivaksa (3.7.2's kvacit kimcit vivaksyate), and the pair 3.7.131-132 shows both takings licensed and both grammatical.

Verse 3.7.133

भेदाभेदविवक्षा च स्वभावेन व्यवस्थिता ।
तस्माद्गत्यर्थकर्मत्वे व्यभिचारो न दृश्यते ॥ 133 ॥

bhedābhedavivakṣā ca svabhāvena vyavasthitā |
tasmādgatyarthakarmatve vyabhicāro na drśyate ॥ 133 ॥

And the intending of difference and non-difference stands settled by its own nature; therefore, in the objecthood of verbs of motion, no deviation is seen.

The stability underneath the relativity. Bheda-abheda-vivaksa ca svabhavena vyavasthita: the *intending of difference and non-difference* stands settled by its own nature — the two takings of 3.7.131-132 are not arbitrary; each has its own settled character, and speakers do not confuse them. Tasmat gaty-artha-karmatve vyabhicāro na drśyate: *therefore*, in the *objecthood* of verbs of *motion*, no *deviation* is seen. The gati-verbs ('goes to the village') take their objects invariably, without wobble — because though the assignment is a taking, the taking is stable. This is the samuddesa's version of 3.6.22 (relative to the limit, no inversion) and 3.7.11 (the capacities are of fixed apprehension): constructivism without arbitrariness. Vyabhicāra — deviation — is the logician's word for a mark that strays, and its absence here is what makes the grammar statable at all.

Verse 3.7.134

विकल्पेनैव सर्वत्र संजे स्यातामुभे यदि ।
आरंभेण न योगस्य प्रत्याख्यानं समं भवते ॥ 134 ॥

*vikalpenaiva sarvatra samjñe syātāmubhe yadi |
ārambheṇa na yogasya pratyākhyānam samam bhavate || 134 ||*

If both designations were to obtain everywhere by option — then, by the undertaking, the rejection of the connection would not be equal.

An argument against free option in karaka-assignment. Vikalpena eva sarvatra samjñe syatam ubhe yadi: if both designations were to obtain *everywhere* by option — if the grammar simply let one choose between karman and sampradana, or between hetu and karana, wherever both fit. Arambhena na yogasya pratyakhyanam samam bhavet: then, by the *undertaking*, the *rejection of the connection* would not be *equal*. The reasoning is compressed: if option ran everywhere, the rules that *reject* certain connections (that bar a construal) would be pointless, since option would restore what they barred. Panini's system contains such rejections; therefore option does not run everywhere. This is the argument from the science's economy that 2.443 ran (Panini does not legislate vacuously) — and it protects 3.7.133's stability: the assignments are takings, and the takings are constrained, or the sastra would not need its prohibitions.

Verse 3.7.135

त्यागरूपं प्रहातव्ये प्राप्ये संसर्गदर्शनिम् ।
आस्थितं कर्म यत् तत्र द्वैरूप्यं भजते क्रिया ॥ 135 ॥

*tyāgarūpam prahātavye prāpye saṁsargadarśanam |
āsthitam karma yat tatra dvairūpyam bhajate kriyā || 135 ||*

In what is to be abandoned there is the form of relinquishing; in what is to be attained, the seeing of conjunction; where the object is settled there, the action takes on a two-fold form.

The two directions an action can face. Tyaga-rupam prahatavye: in *what is to be abandoned* there is the *form of relinquishing* — the action faces away, and its object is a source. Prapye samsargadarsanam: in *what is to be attained*, the *seeing of conjunction* — the action faces toward, and its object is a goal. Asthitam karma yat tatra dvairupyam bhajate kriya: where the *object is settled* there, the *action takes on a two-fold form*. One action, two faces: every movement is a leaving and an arriving, and which the sentence records decides whether the noun takes the ablative or the accusative. The verse introduces the apadana — the ablative's karaka — by locating it in the same action that yields the accusative, differently faced. Bhajate: takes on, wears (3.2.8's tattvam eva avikalpitam vikalpa-rupam bhajate).

Verse 3.7.136

निर्दिष्टविषयं किञ्चिदुपात्तविषयं तथा ।
अपेक्षितक्रियं चेति त्रिधापादानमुच्यते ॥ 136 ॥

nirdiṣṭaviṣayam, kiñcidupāttaviṣayam, tathā |
apekṣitakriyam, ceti tridhāpādānamucyate || 136 ||

Something whose domain is specified; likewise something whose domain is taken up; and something whose action is expected — thus the ablative is said to be three-fold.

The apadana's taxonomy, and it is Panini's. Nirdista-visayam kimcit: something whose *domain* is specified — the source explicitly named ('he comes from the village'). Upatta-visayam tatha: likewise something whose *domain* is taken up — the source supplied by the construction ('he fears the thief: the thief is the source of the fear, unnamed as a source). Apekṣita-kriyam ca iti: and something whose *action* is expected — the source of an action not stated but required ('he abstains from wine: the drinking is expected and absent). Tridha apadanam ucyaṭe: thus the *ablative* is said to be *three-fold*. The three cover the ablative's whole range — physical source, emotional source, abstained-from action — and they are ordered by how much the construction supplies: named, taken up, expected. This is 3.7.78's method (one karaka expounded by way of difference) applied to the case that most obviously needs it.

Verse 3.7.137

संयोगिभेदादेभिन्नात्मा गमिरेव भ्रमिर्यथा ।
ध्रुवावधिरपायोऽपि समवेतस्तथाध्रुवे ॥ 137 ॥

samyogibhedādebhinnātmā gamireva bhramiryathā |
dhruvāvādhirapāyo'pi samavetastathādhruve || 137 ||

The self of 'gami' is differentiated by difference of what is conjoined — just as 'bhrami' is; the separation too, having a fixed limit, is inherent likewise in the unfixed.

The ablative's limit-condition examined. Samyogi-bhedad bhinnatma gamir eva bhramir yatha: the self of 'gami' (going) is *differentiated* by difference of *what is conjoined* — as 'bhrami' (whirling) is: the going is one action, and it differs according to what it goes from and to, as whirling differs by what whirls. Dhruva-avadhih apayo 'pi: the *separation* too has a *fixed limit* — Panini's rule (1.4.24: dhruvam apaye 'padanam: the fixed point in a separation is the apadana). Samavetah tatha adhruve: it is *inherent* likewise in the *unfixed*. So the ablative's 'fixed point' is found even where nothing is fixed — the departure-point of two moving things, the source that is itself in motion. The rule says dhruva, fixed, and the case applies to the unfixed: which means dhruva names a role in the construal (what is taken as the reference-point) and not a property of anything (3.6.2's avadhi; 3.7.103's restriction in the word, not in the thing).

Verse 3.7.138

द्रव्यत्वभावो न धनौव्यमिति सूत्रे प्रतीयते ।
अपायविषयं ध्रौव्यं यत्तु तावद्विवक्षितम् ॥ 138 ॥

dravyatvabhāvo na dhnavyamiti sūtre pratīyate |
apāyaviṣayam.ghnavyam.yattu tāvadvivakṣitam || 138 ||

'The state of being a substance is not fixity' — this is understood in the sutra; but the fixity whose domain is the separation is what is intended.

The rule's key word disambiguated. Dravyatva-bhavo na dhnavyam iti sutre pratīyate: 'the state of being a substance is not fixity' — this is understood in the sutra: dhruva does not mean 'is a substance' or 'is immobile'. Apaya-visayam dhnavyam yat tu tavad vivakṣitam: but the fixity whose domain is the separation is what is intended — dhruva means: fixed for the purposes of this separation, taken as the point from which. So the ablative's 'fixed point' is fixed relative to the departure being described, and nothing more. The verse is precise grammatical exegesis and it delivers the samuddesa's thesis exactly: what looked like a metaphysical requirement in Panini's rule (the source must be fixed) turns out to be a construal-relative role. 3.7.139 gives the examples.

Verse 3.7.139

सरणे देवदत्तस्य ध्रौव्यं पाते तु वाजिनः ।
आविष्टं यदपायेन तस्याध्रौव्यं प्रचक्षते ॥ 139 ॥

saraṇe devadattasya dhnavyam.pāte tu vājinaḥ |
āviṣṭam.yadapāyena tasyādhnavyam.pracakṣate || 139 ||

In Devadatta's running there is fixity; but in the horse's falling, of the horse. That which is pervaded by the separation — of that they declare the non-fixity.

The relativity of 3.7.138 exhibited. Sarane devadattasya dhnavyam: in Devadatta's running there is fixity — 'the horse falls from running Devadatta': Devadatta is running, and he is the dhruva, the fixed point of the falling. Pate tu vajinah: but in the horse's falling, of the horse — from the horse's side, the horse is what departs. Avistam yad apayena tasya adhnavyam pracakṣate: that which is pervaded by the separation — of that they declare the non-fixity. So the runner is 'fixed' while running and the faller is 'unfixed' while stationary-relative-to-him: fixity is entirely a matter of which party the separation is predicated of. The example is chosen for its absurdity-as-physics and its exactness-as-grammar: a running man is the fixed point, and Sanskrit says so, and the rule is dhruvam apaye 'padanam. Nothing could show more plainly that the karakas are construals (3.7.91's sthalya pacyate, in the ablative).

Verse 3.7.140

उभावप्यध्रुवौ मेषौ यद्यप्युभयकर्मजे ।
विभागे प्रविभक्ते तु क्रिये तत्र विवक्षिते ॥ 140 ॥

ubhāvapyadhruvau meṣau yadyapyubhayakarmaje |
vibhāge pravibhakte tu kriye tatra vivakṣite || 140 ||

Both rams are unfixed, even though the separation is produced by the action of both; but when the division is divided out, the two actions are intended there.

The limit-case: two things parting from each other. Ubhau api adhruvau mesau: *both rams are unfixed* — two rams butting and springing apart: neither is stationary, and each departs from the other. Yady api ubhaya-karma-je vibhage: *even though the separation is produced by the action of both* — the parting is jointly caused; there is no asymmetry in the event whatever. Pravibhakte tu kriye tatra vivakṣite: *but when the division is divided out, the two actions are intended there*. The speaker splits the one parting into two departures, and each ram becomes the other's dhruva: 'this one springs from that', 'that one springs from this'. Two sentences, two ablatives, one symmetrical event. This is 3.7.19's parents (both agents, roles by intention) at the ablative, and it closes the apadana's analysis where the samuddesa closes everything: the world offers a symmetry, the grammar requires an asymmetry, and vivaksa supplies it.

Verse 3.7.141-142

मेषान्तरक्रियापेक्षमवधित्वं पृथक् पृथक् ।
मेषयोः स्वक्रियापेक्षं कर्तृत्वं च पृथक् पृथक् ॥ 141 ॥
अभेदेन क्रियैका तु द्विसाध्या चेद्विवक्षिता ।
मेषावपाये कर्तारौ यदन्यो विद्यतेऽवधिः ॥ 142 ॥

meṣāntarakriyāpekṣamavadhitvam.prthak prthak |
meṣayoḥ svakriyāpekṣam.kartṛtvam.ca prthak prthak || 141 ||
abhedena kriyaikā tu dvisādhyā cedvivakṣitā |
meṣāvapāye kartārau yadyanyo vidyate'avadhiḥ || 142 ||

(141) Limit-hood, depending on the action of the other ram, belongs to the two rams severally; and agency, depending on their own action, belongs to them severally. (142) But if one action, to be accomplished by two, is intended by way of non-difference — the two rams are agents in the separation, if some other limit exists.

The rams of 3.7.140 analysed at both takings. (141) gives the divided taking: mesa-antara-kriya-apeksam avadhitvam prthak prthak — *limit-hood*, depending on the *other* ram's action, belongs to them *severally*: each is the other's dhruva, in his own sentence. Sva-kriya-apeksam kartṛtvam ca prthak prthak: and *agency*, depending on their *own* action, *severally*. Two sentences, each ram agent in one and limit in the other. (142) gives the undivided taking: abhedena kriya eka tu dvi-sadhyā cedvivakṣita — *if one action, to be accomplished by two, is intended by way of non-difference*: one parting, jointly done. Then: mesau apāye kartārau yady anyo vidyate avadhiḥ — the two rams are *agents* in the separation, *if some other limit exists*. Both agents, and the ablative must go elsewhere — to a third thing, or nowhere. So the same event yields two grammars: divided, each is the other's source;

undivided, both are agents and the source-slot is vacant. Vivaksa decides, and the case-frame follows.

Verse 3.7.143

गतिर्विना त्ववधिना नापाय इति गम्यते ।
वृक्षस्य पर्ण पततीत्येवं भाष्ये निदर्शितम् ॥ 143 ॥

gativinā tvavadhinā nāpāya iti gamyate |
vṛkṣasya paṇam patatītyevam bhāṣye nidarśitam || 143 ||

But without a limit, motion is not understood as a separation; 'the leaf falls from the tree' — thus it is exhibited in the Bhasya.

The apadana's necessary condition, cited from Patanjali. *Gatir vina tu avadhina na apayah iti gamyate: without a limit, motion is not understood as a separation* — a falling is just a falling until something is fallen from; *apaya* requires an *avadhi*, or it is not *apaya*. And the citation: *vrksasya parnam patati iti evam bhasye nidarsitam* — 'the leaf falls from the tree' — thus it is exhibited in the Bhasya. Patanjali's own example, and the genitive in it (*vrksasya*) rather than the expected ablative is the puzzle the Mahabhasya discusses. Bhartrhari cites rather than argues: the point that separation needs a limit is the tradition's, and the example is the tradition's, and 3.7.140-142's analysis of the rams was an extension of it. The samuddesa's method throughout — 2.475's *bhasye eva upavarnitah*, 'described in the Bhasya itself' — is to find its doctrines already in the gurus.

Verse 3.7.144

भेदाभेदौ पृथग्भावः स्थितिश्चेति विरोधिनः ।
युगपन्न विवक्ष्वन्ते सर्वे धर्मा वलाहके ॥ 144 ॥

bhedābhedau prthagbhāvaḥ sthitiśceti virodhinah |
yugapanna vivakṣvante sarve dharmā valāhake || 144 ||

Difference and non-difference, separateness and standing — these being contradictory, all the properties are not intended simultaneously in a cloud.

Why one situation cannot bear all its construals at once. *Bheda-abhedau prthag-bhavaḥ sthitiḥ ca iti virodhinah: difference and non-difference, separateness and standing* — these are contradictory. *Yugapan na vivakṣyante sarve dharmā valahake: all the properties are not intended simultaneously in a cloud.* The cloud is the example: it is one and many, gathering and dispersing, moving and standing — every contradictory pair applies to it, and no single utterance can intend them all. So vivaksa selects, and must: the properties are all there (3.7.2's *sarvada sarvatha bhavat: existing always and in every way*), and speech takes one set at a time. This is 2.251's mechanism (transcending simultaneity, the word's plenitude stands settled in succession) applied to the world rather than the word — and it explains why every *karaka*-assignment excludes the others it could have made.

Verse 3.7.145

धनुषा विध्यतीत्यत्र विनापायविवक्षया ।
करणत्वं यतो नास्ति तस्मात्तदुभयं सह ॥ 145 ॥

*dhanuṣā vidhyatītyatra vināpāyavivakṣayā |
karaṇatvam.yato nāsti tasmāttadubhayam.saha || 145 ||*

In 'he pierces with a bow', without the intention of separation, since instrument-hood does not exist — therefore those two are together.

A case where two karaka-construals must coexist. *Dhanusa vidhyati iti atra: in 'he pierces with a bow' — the bow is instrumental. Vina apaya-vivaksaya karanatvam yatah na asti: without the intention of separation, instrument-hood does not exist — the bow is an instrument only because the arrow leaves it: take away the departure and the bow does nothing. So the instrumental presupposes an ablative sense that the case does not express. Tasmāt tad ubhayam saha: therefore those two are together — instrument-hood and separation-hood coexist in the one bow, in the one case-ending. This is a genuine exception to 3.7.144's rule that contradictory construals cannot be simultaneous: here two construals are both required, because one is the condition of the other. The verse is careful evidence that the karaka-system's exclusivity has limits.*

Verse 3.7.146

एकैव सा सती शक्तिर्द्विरूपा व्यवतिष्ठते ।
निमित्तं संजयोस्तत्र परया बाध्यतेऽपरा ॥ 146 ॥

*ekaiva sā satī śaktirdvirūpā vyavatiṣṭhate |
nimittam.samjñayostattra parayā bādhyate'parā || 146 ||*

That one and the same existing capacity stands two-formed; being the occasioning ground for the two designations there, the later annuls the earlier.

The resolution of 3.7.145. *Eka eva sa sati saktih dvi-rupa vyavatisthate: that one and the same existing capacity stands two-formed — the bow's single capacity wears both faces (instrument and source), and there are not two powers in it. Nimittam samjñayoh tatra: it is the occasioning ground for the two designations there — one capacity, two available names. Paraya badhyate 'para: the later annuls the earlier. The badha-machinery adjudicates (2.66's annulment; 2.73's hierarchy; 3.7.97's kartṛtvam badhakam): where two designations compete for one capacity, the rule ordering decides, and the instrumental wins in 'dhanusa vidhyati'. So the coexistence of 3.7.145 is real at the level of capacity and resolved at the level of designation: the bow is both, and the grammar says one. This is the samuddesa's settled shape — plenitude below, selection above, and the selection made by rule.*

Verse 3.7.147

उपात्तपेक्षितापायः सोऽबुधप्रतिपत्तये ॥ 147 ॥

nirdhārane vibhakte yo bhītrādīnā ca yo vidhiḥ |
upāttapekṣitāpāyaḥ so'budhapratipattaye || 147 ||

The rule for the ablative in determination, and that for 'bhi', 'tra' and the rest, has its separation taken up or expected – that is for the comprehension of the unlearned.

The apadana's extended cases placed as pedagogy. Nirdharane vibhakte yah: the rule for the ablative in *determination* – 'the best of cows' (nirdharana: singling out from a class, which takes the ablative or genitive). Bhi-tradinam ca yo vidhiḥ: and that for 'bhi' (fear) and 'tra' (protect) and the rest – 'he fears the thief, where the thief is grammatically a source (3.7.136's upatta-visaya). Upatta-apeksita-apayah: its *separation is taken up or expected* (3.7.136's second and third kinds). Sah abudha-pratipattaye: *that is for the comprehension of the unlearned*. The extended ablative-rules are teaching-devices: they let the learner see that fearing has a source-structure, that singling-out has a departure-structure. The separations are constructed for instruction (2.13's divisions for the avidvan; 3.7.78's one apadana exhibited by way of difference). The samuddesa marks its own taxonomy as ladder.

Verse 3.7.148

कर्तृकर्मव्यवहितामसाक्षाद्धारयत् क्रियाम् ।
उपकुर्वत् क्रियासिद्धौ शास्त्रेऽधिकरणं स्मृतम् ॥ 148 ॥

karṭṛkarmavyavahitāmasākṣāddhārayat kriyām |
upakurvāt kriyāsiddhau śāstre'dhikaraṇam smṛtam || 148 ||

Bearing, not directly, an action that is separated by agent and object; assisting in the accomplishing of the action – that is remembered in the science as the locus.

The adhikarana – the locus, the locative's karaka – defined, and the definition is by remoteness. Karṭṛ-karma-vyavahitam asaksat dharayat kriyam: *bearing, not directly*, an action that is *separated by agent and object* – the locus holds the action at two removes: the agent and object stand between. Asaksat: not directly (3.7.94's arat, the agent assisting only from a distance – and the locus is further still). Upakurvāt kriya-siddhau: *assisting in the accomplishing* of the action. Sastre adhikaranam smrtam: that is *remembered in the science as the locus*. So the adhikarana is the most remote karaka: it supports the whole configuration without touching any part of it. The mat is where Devadatta sits, and the mat does nothing to the sitting except be under it. Bharing-at-a-remove is the whole of its contribution – and it is a contribution (upakurvāt), which is why it is a karaka at all.

Verse 3.7.149

उपश्लेषस्य चाभेदस्तिलाकाशकटादिषु ।
उपकारास्तु भिद्यन्ते संयोगिसमवायिनाम् ॥ 149 ॥

upaśleṣasya cābhedastilākāśakaṭādiṣu |
upakārāstu bhidyante samyogisamavāyinām || 149 ||

And the non-difference of contact is in sesame, ether, mat and the like; but the assistances of the conjoined and the inherent are differentiated.

The locus's kinds. Upaslesasya ca abhedah tila-akasa-katadisu: the *non-difference of contact* is in sesame, ether, mat and the like — three loci: the oil in the sesame (pervading), the thing in space (containing), the sitter on the mat (supporting). In all three the contact is undifferentiated: 'in' is 'in'. Upakarah tu bhidyante samyogi-samavayinam: but the *assistances* of the *conjoined* and the *inherent* are *differentiated*. The oil's being in the seed is inherence; the man's being on the mat is conjunction; and though the locative is the same, what the locus *does* differs. So the case-ending flattens a real distinction — one locative for pervasion, containment and support — and the karaka-analysis recovers it. This is 3.1.17-18's distinction (cognitions running along among the conjoined, difference withdrawing among the inherent) applied to the locus.

Verse 3.7.150

अविनाशो गुरुत्वस्य प्रतिबन्धे स्वतन्त्रता ।
दिग्विशेषादवच्छेद इत्याद्या भेदहेतवः ॥ 150 ॥

avināśo gurutvasya pratibandhe svatantratā |
digviśeṣādavaccheda ityādyā bhedahetavaḥ || 150 ||

The non-destruction of weight; independence in obstruction; delimitation by a particular direction — such are the causes of difference.

Three marks by which loci differ. Avinasah gurutvasya: the *non-destruction of weight* — the mat bears the man, and his weight is not annulled: the locus supports without absorbing. Pratibandhe svatantrata: *independence in obstruction* — the locus can resist, and its resisting is its own (3.7.29's wall, whose capacity is in obstructing). Dig-visesad avacchedah: *delimitation by a particular direction* — the locus locates by direction (3.6.13's bhaga-prakalpana-sakti, the first capacity). Ity-adyah bheda-hetavaḥ: such are the *causes of difference*. Three ways loci vary: how they bear weight, how they resist, how they orient. Each is a mode of the assisting-at-a-remove that 3.7.148 defined, and together they explain why the single locative case covers so heterogeneous a family.

Verse 3.7.151

आकाशमेव केषांचिद्देशभेदप्रकल्पनात् ।
आधारशक्तिः प्रथमा सर्वसंयोगिनां मता ॥ 151 ॥

ākāśameva keṣāṃciddeśabhedaprakalpanāt |
ādhāraśaktiḥ prathamā sarvasamyoginām, matā || 151 ||

For some, ether alone, from its construction of a difference of places, is held to be the first locus-capacity of all conjoined things.

The locus reduced to ether. Akasam eva kesamcid: for some, ether alone — desa-bheda-prakalpanat: from its construction of a difference of places (3.1.15's places constructed by the properties of what is conjoined; 3.6.5's ether-portions serving as direction's adjunct). Adhara-saktiḥ prathama sarvasamyoginam mata: is held to be the first locus-capacity of all conjoined things. Every locus is ether, ultimately: the mat is where the man is because the mat is somewhere, and being-somewhere is ether's construction. Prathama — first: the same word 3.6.13 gave direction (the first capacity, of constructing parts). So there are two claimants for primacy — direction constructing parts, ether constructing places — and they are the same construction differently named. The verse reports the reduction as one school's (kesamcid) and does not adopt it.

Verse 3.7.152

इदमत्रेति भावानामभावान्न प्रकल्पते ।
व्यपदेशस्तमाकाशनिमित्तं संप्रचक्षते ॥ 152 ॥

idamatreti bhāvānāmabhāvānna prakalpate |
vyapadeśastamākāśanimittam, sampracakṣate || 152 ||

'This is here' — the designation is not constructed, from the non-existence of things; they call that the occasioning ground which is ether.

The argument for 3.7.151's reduction. Idam atra iti: 'this is here' — the plainest locative there is. Bhavanam abhavat na prakalpate vyapadesah: the designation is not constructed, from the non-existence of things — if there were no things, there would be no 'here': the locative needs a located thing and a locating one, and both are constructions (3.6.14's things without place; 3.7.104's buddhy-avastha). Tam akasa-nimittam sampracaksate: they call that — the ground of the 'here' — the occasioning ground which is ether. So what makes 'this is here' sayable is akasa, and akasa is what has no differentiation of its own (3.1.15). The locative rests on the undifferentiated, differentiated by what it locates — which is 3.1.16's structure (places belonging to what is not a place, conferred by relata) reaching the grammar's most basic spatial expression.

Verse 3.7.153

कालात् क्रिया विभज्यन्ते आकाशात् सर्वमूर्तयः ।
एतावांश्चैव भेदोऽयमभेदोपनिबन्धनः ॥ 153 ॥

*kālāt kriyā vibhajyante ākāśāt sarvamūrtayah |
etāvāṃścaiva bhedo'yamabhedopanibandhanah || 153 ||*

Actions are divided by time; all corporeal things by ether. And just this much is that difference, which rests upon non-difference.

The two great dividers, and their common ground. Kalat kriyah vibhajyante: *actions are divided by time* — one cooking from another by when (3.6.4's krama-rupe tu kalatah). Akasat sarva-murtayah: *all corporeal things by ether* — one pot from another by where. Two principles of individuation, and between them they carve everything: events by time, bodies by space. And then the deflation: etavan ca eva bhedah ayam abhedah-upanibandhanah — *just this much* is that *difference*, which rests upon *non-difference*. Both dividers divide what is undivided (time and ether being themselves partless: 3.1.15, 3.2.8), and so all difference whatever — every event distinguished from every other, every thing from every other — rests on abhedah. Etavan ca eva: just this much, and no more. The whole world's plurality is space and time carving the uncarved, and they are constructions.

Verse 3.7.154

यद्यप्युपवसिर्देशविशेषमनुरुध्यते ।
शब्दप्रवृत्तिधर्मात् कालमेवावलम्बते ॥ 154 ॥

*yadyapyupavasirdeśaviśeṣamanurudhyate |
śabdapravṛttidharmāttu kālamevāvalambate || 154 ||*

Although 'upavas' conforms to a particular place — from the property of the word's operation, it takes hold of time alone.

A case where the karaka follows the word rather than the situation. Yady api upavasir desa-visesam anurudhyate: although 'upavas' (to fast, to dwell near) *conforms to a particular place* — the fast is kept somewhere; a place is unmistakably involved. Sabda-pravṛtti-dharmat tu kalam eva avalambate: from the *property of the word's operation*, it takes hold of time alone — the verb's own behaviour makes its locus temporal ('he fasts for three nights'), not spatial, whatever the situation contains. So the word's usage overrides the situation's structure in fixing the karaka: the fast has a place, and 'upavas' will not take it as its adhikarana. This is 3.7.103's finding at its sharpest (the restriction is in the word, not in the thing) — and 3.7.66's two schools meet here, with the sabda-party winning: the action is where the words put it.

Verse 3.7.155

वसतावप्रयुक्तेऽपि देशोऽधिकरणं ततः ।
अप्रयुक्तं त्रिरात्रादि कर्म चोपवसौ स्मृतम् ॥ 155 ॥

vasatāvaprayukte'pi deśo'dhikaraṇam, tataḥ |
aprayuktam, trirātrādi karmam, copavasau smṛtam || 155 ||

Even where 'vas' is not employed, place is therefore the locus; and 'three nights' and the rest, though unemployed, is remembered as the object in 'upavas'.

The consequence of 3.7.154, and it is a double displacement. Vasatau aprayukte 'pi desah adhikaranam tataḥ: even where 'vas' (to dwell) is *not employed*, *place is therefore* the locus – the dwelling-verb is absent and its locus survives, supplied to the construction. Aprayuktam tri-ratradi karma ca upavasau smṛtam: and 'three nights' and the rest, *though unemployed*, is remembered as the *object* in 'upavas' – the time-phrase is the object of an unstated verb. So 'he fasts three nights' has: a place-locus from an unuttered 'dwell', and a time-object from an unuttered action, and neither verb is there. The karaka-frame outlives the verbs that would license it, supplied by the buddhi that holds the situation (3.7.3). Aprayukta – unemployed, twice: the samuddesa ends its analysis of the locus by showing the case-frame running on words nobody said.

Verse 3.7.156

संबन्धः कारकेभ्योऽन्यः क्रियाकारकपूर्वकः ।
श्रुतायामश्रुतायां वा क्रियायां सोऽभिधीयते ॥ 156 ॥

sambandhaḥ kārakebhyo'nyaḥ kriyākārapūrvakaḥ |
śrutāyāmaśrutāyāṃ vā kriyāyāṃ so'bhidhiyate || 156 ||

The relation is other than the karakas, and is preceded by action and karaka; whether the action is heard or unheard, it is expressed.

The genitive placed outside the karaka-system entirely. Sambandhah karakebhyo 'nyah: the *relation* is *other than* the karakas – the sixth case is not a karaka at all; it is the sesa, the remainder (3.7.44's sasthi sese). And its genesis: kriya-karaka-purvakah – it is *preceded by action and karaka*: a relation is what a completed karaka-configuration leaves behind. The king's man is the king's because some appointing happened. Srutayam asrutayam va kriyayam so 'bhidhiyate: whether the action is *heard* or *unheard*, it is *expressed* – the genitive stands whether or not its generating action is stated, and usually it is not (2.197's action that, having generated the connection, withdraws). So the genitive is the case of relations that outlive their actions, and its exclusion from the karakas is principled: karakas are participants *in* an action, and the genitive marks what is left when the action has gone.

Verse 3.7.157

द्विष्ठोऽप्यसौ परार्थत्वाद् गुणेषु व्यतिरिच्यते ।
तत्राभिधीयमानः सन् प्रधानेऽप्युपभुज्यते ॥ 157 ॥

*dviṣṭho'pyasau parārthatvād guṇeṣu vyatiricyate |
tatrābhidhiyamaṇaḥ san pradhāne'pyupabhujyate || 157 ||*

Though resting in two, it is set apart among the subordinates because of its being for another; being expressed there, it is enjoyed in the principal as well.

The genitive's peculiar double life. Dviṣṭho 'py asau: though *resting in two* — a relation needs two terms; 'the king's man' holds both. Para-arthatvad guṇeṣu vyatiricyate: it is *set apart* among the subordinates because of its *being for another* — the relation is parārtha (2.113's term), serving something beyond itself, so it sits among the subordinate elements. Tatra abhidhiyamaṇaḥ san pradhane 'py upabhujyate: being *expressed there*, it is *enjoyed in the principal* as well. Upabhujyate — enjoyed, consumed, made use of: the relation, though expressed in the subordinate term, does its work for the principal. So the genitive is expressed at one end and works at the other, which is what it is to be a relation — and 2.395's joint-property model (each owner having the whole, undiminished) is the right picture for how it can be wholly in both.

Verse 3.7.158

निमित्तनियमः शब्दात् संबन्धस्य न गृह्यते ।
कर्मप्रवचनीयैस्तु स विशेषेऽवरुध्यते ॥ 158 ॥

*nimittaniyamaḥ śabdāt sambandhasya na grhyate |
karmapravacaniyaistu sa viśeṣe'varudhyate || 158 ||*

A restriction of the occasioning ground for the relation is not grasped from the word; but by the karmapravacaniyas, it is confined to a particular.

The genitive's vagueness and its remedy. Nimitta-niyamah sabdat sambandhasya na grhyate: a *restriction of the occasioning ground* for the relation is *not grasped from the word* — 'the king's man' does not say *how* he is the king's: servant, son, subject, sculptor? The genitive marks relation and specifies none. Karma-pravacaniyaiḥ tu sa viśeṣe 'varudhyate: but by the *karmapravacaniyas*, it is *confined to a particular* — the class of words (anu, prati, adhi) that Panini defines as *speaking about* the action, and whose office 2.204 identified exactly: sambandhasya bhedakah, *differentiators of the relation*. So the genitive opens a relation and the karmapravacaniya closes it. This is 2.199–204's analysis reappearing in the Padakanda, and the two treatments agree precisely: a relation left standing by a withdrawn action, and a particle that pins which relation it is.

Verse 3.7.159

साधनैर्व्यपदिष्टे च श्रूयमाणक्रिये पुनः ।
प्रोक्ता प्रतिपदं षष्ठी समासस्य निवृत्तये ॥ 159 ॥

sādhanaivryapadiṣṭe ca śrūyamāṇakriye punaḥ |
proktā pratipadam, ṣaṣṭhī samāsasya nivṛttaye || 159 ||

And when a thing is designated by the means, and the action is being heard again — the sixth case is stated word by word, for the exclusion of the compound.

Why the genitive is prescribed where a karaka would serve. Sadhanaih vyapadiste ca sruyamanakriye punah: when a thing is *designated by the means*, and the *action is being heard* again — where the verb is present and the karaka-relation is live. Prokta pratipadam sasthi samasasya nivrttaye: the *sixth case is stated word by word, for the exclusion of the compound*. The genitive is prescribed individually so as to block compounding — keep 'rajnah purusah' from collapsing into 'rajapurusah', because the analysis must stay visible. This is 2.198 verbatim, and its recurrence here is not repetition but placement: the Vakyakanda gave the rule's motive, and the Padakanda now shows it operating inside the karaka-system. The genitive is posted where the science needs the relation *displayed* — an operational reason, not a semantic one (3.7.103's niyamah sabde na tu vastuni).

Verse 3.7.160

निष्ठायां कर्मविषया षष्ठी न प्रतिषिध्यते ।
शेषलक्षणया षष्ठ्या समासस्तत्र नेष्यते ॥ 160 ॥

niṣṭhāyām karmaviṣayā ṣaṣṭhī na pratiṣidhyate |
śeṣalakṣaṇayā ṣaṣṭhyā samāsastatra neṣyate || 160 ||

In the nistha-form, the sixth case whose domain is the object is not prohibited; the compound with a sixth case characterized as remainder is not desired there.

A technical case, and it discriminates two genitives. Nisthayam karma-visaya sasthi na pratisidhyate: in the *nistha*-form (the past participle in -ta) the *sixth case whose domain is the object is not prohibited* — 'krtam asya', 'done by him', where the genitive marks the object-relation and is allowed to compound. Sesa-laksanaya sasthya samasah tatra na isyate: the *compound with a sixth case characterized as remainder is not desired* there. So two genitives: the karaka-genitive (marking a role, compoundable) and the sesa-genitive (marking bare relation, not compoundable). The grammar distinguishes them by their compounding behaviour, and nothing in the form distinguishes them at all. This is 2.12's distributional method certifying a distinction the ear cannot hear — and it confirms 3.7.156: the genitive spans both the karaka-system and its remainder, and only its behaviour tells you which side it is on.

Verse 3.7.161

अन्येन व्यपदिष्टस्य यस्यान्यत्रोपजायते ।
व्यतिरेकः स धर्मौ द्वौ लभते विषयान्तरे ॥ 161 ॥

anyena vyapadiṣṭasya yasyānyatropajāyate |
vyatirekaḥ sa dharmau dvau labhate viṣayāntare || 161 ||

Of that which is designated by another, when a separation arises elsewhere — that one obtains two properties in another domain.

How a term can hold two relational roles. Anyena vyapadistasya: of that which is *designated by another* — something already standing in a relation. Yasya anyatra upajayate vyatirekah: when a *separation* arises *elsewhere* — it enters a second relation, in another context. Sa dharmau dvau labhate viṣayantare: *that one* obtains *two properties* in *another domain*. So a term can be the king's man and the village's headman at once, holding two relations without conflict, because the relations belong to different domains. This is 3.7.68's bhinna-kaksya (objecthood of a different level: the strata not colliding) applied to the genitive — and it explains why relational terms stack indefinitely where karaka-terms do not: karakas compete for one action's slots, and relations do not compete at all.

Verse 3.7.162

प्राधान्यं स्वगुणे लब्ध्वा प्रधाने याति शेषताम् ।
सहयोगे स्वयोगेऽतः प्रधानत्वं न हीयते ॥ 162 ॥

prādhānyam svagune labdhvā pradhāne yāti śeṣatām |
sahayoge svayoge'taḥ pradhānatvam na hīyate || 162 ||

Having obtained principality in its own subordinate, it goes to remainder-hood in the principal; therefore, in joint connection and in its own connection, principality is not lost.

The relational hierarchy, and it mirrors the karaka one exactly. Pradhanyam sva-gune labdhva: having obtained *principality* in its *own subordinate* — a term is principal relative to what depends on it. Pradhane yati sesatam: it goes to *remainder-hood* in the *principal* — and subordinate relative to what it depends on. Saha-yoge sva-yoge atah pradhanatvam na hiyate: *therefore*, in *joint connection* and in its *own connection*, *principality* is *not lost*. Each term is principal below and remainder above, and neither status cancels the other. This is 3.7.20-23's nesting (the soldiers fighting, the king conquering; agency retained under subordination) transposed from karakas to relations — and the transposition is exact, which confirms that the samuddesa's structural insight is not about the karakas specifically but about how hierarchies of dependence work.

Verse 3.7.163

सिद्धस्याभिमुखीभावमात्र संबोधनं विदुः ।
प्राप्ताभिमुख्यो ह्यर्थात्मा क्रियासु विनियुज्यते ॥ 163 ॥

siddhasyābhimukhībhāvamātra sambodhanam viduḥ |
prāptābhimukhyo hyarthātmā kriyāsu viniyuḥyate || 163 ||

They know the vocative to be the mere facing-toward of what is accomplished; for the meaning's self, having attained facing-toward, is applied to the actions.

The vocative defined, and it is barely a case at all. Siddhasya abhimukhi-bhava-matram sambodhanam viduḥ: they know the vocative to be the mere facing-toward of what is accomplished — matra: merely, nothing more. The vocative does not assign a role; it turns something to face. And siddhasya: of what is accomplished, already standing (3.7.79's siddha-rupa: the object presented as complete). Prapta-abhimukhyo hi artha-atma kriyasu viniyuḥyate: for the meaning's self, having attained facing-toward, is applied to the actions. So the vocative is prior to the karaka-system: it turns a thing toward the discourse, and then the actions can use it. 'Devadatta! Come!' — the calling makes him available, the imperative gives him a role. The vocative is the doorway into the sentence, and it is not a room in it.

Verse 3.7.164-165

संबोधनं न वाक्यार्थ इति वृद्धेभ्य आगमः ।
उद्देशेन विभक्त्यर्था वाक्यार्थात् समपौद्धताः ॥ 164 ॥
विभक्त्यर्थेऽव्ययीभाववचनादवसीयताम् ।
अन्यो द्रव्याद् विभक्त्यर्थः सोऽव्ययेनाभिधीयते ॥ 165 ॥

sambodhanam na vāk्यārtha iti vṛddhebhya āgamah |
uddeśena vibhaktyarthā vāk्यārthāt samapoddhrtāḥ || 164 ||
vibhaktyarthe'vyayībhāvavacanādavasīyatām |
anyo dravyād vibhaktyarthah so'vyayenābhidhīyate || 165 ||

(164) 'The vocative is not a sentence-meaning' — such is the tradition from the elders; the meanings of the case-endings, by way of indication, have been abstracted from the sentence-meaning. (165) In the meaning of a case-ending, let it be ascertained from the statement about the avyayibhava; the case-ending's meaning is other than the substance, and it is expressed by the indeclinable.

The vocative's exclusion, on authority, and then the case-endings' status. (164): sambodhanam na vāk्यārthah iti vṛddhebhya āgamah — 'the vocative is not a sentence-meaning' — such is the tradition from the elders (vṛddha: 3.2.7's vṛddhebhya āgamah; 2.485's counsel about waiting upon them). The vocative does not contribute to what the sentence says, because it is prior to the saying (3.7.163). And the general placement: uddesena vibhakty-arthah vāk्यārthāt samapoddhrtāḥ — the meanings of the case-endings, by way of indication, have been abstracted from the sentence-meaning. Apoddhrtā: extracted (2.10, 3.1.1, 3.4.1 — the kanda's constant). So all the karaka-meanings this samuddesa has spent 165 verses anatomizing are extracts from the one sentence-meaning, indicated for the analysis's sake. (165) confirms it from the avyayibhava-compounds, where a case-meaning is carried by an indeclinable: anyo dravyād vibhakty-arthah — the case-ending's meaning is other than the substance,

and it can be borne by a word that is not a noun at all. The role floats free of the thing.

Verse 3.7.166

द्रव्यं तु यद् यथाभूतं तदत्यन्तं तथा भवेत् ।
क्रियाभेदेऽपि तस्यासौ द्रव्यात्मा नावहीयते ॥ 166 ॥

dravyam, tu yad yathābhūtam, tadatyantam, tathā bhavet |
kriyābhede'pi tasyāsau dravyātmā nāvahīyate || 166 ||

But the substance, being such as it is, would be so utterly; even in a difference of action, that substance-self of it is not abandoned.

The samuddesa's penultimate verse, and it reasserts what all its constructivism did not touch. *Dravyam tu yad yatha-bhutam tad atyantam tatha bhavet*: the *substance*, being *such as it is*, would be so *utterly* — *atyantam*: absolutely, without qualification. *Kriya-bhede 'pi tasya asau dravya-atma na avahiyate*: *even in a difference of action*, that *substance-self* of it is *not abandoned*. The pot is a pot whether one makes it, breaks it, sees it or sits beside it; the *karaka*-role changes with every sentence and the thing does not. This is not a retraction of 3.7.104 (the roles arise from states of the intellect): the roles are constructed *and* the thing that wears them is not the roles. *Dravya*, as 3.2.11 established, is what stands when the configurations are withdrawn — and no amount of role-assignment reaches it. The verse marks exactly what the samuddesa's analysis has and has not dissolved.

Verse 3.7.167

तस्माद् यत् करणं द्रव्यं तत् कर्म न पुनर्भवेत् ।
सर्वस्य चान्यथाभावस्तस्य द्रव्यात्मनो भवेत् ॥ 167 ॥

tasmād yat karaṇam, dravyam, tat karma na punarbhavet |
sarvasya cānyathābhāvastasya dravyātmāno bhavet || 167 ||

Therefore that substance which is the instrument would not again be the object; and there would be an otherwise-becoming of that whole substance-self.

The samuddesa's last verse, and it is a difficulty rather than a conclusion. *Tasmat yat karanam dravyam tat karma na punar bhavet*: *therefore that substance* which is the *instrument* would *not again* be the *object* — if the substance-self is unabandoned through every difference of action (3.7.166), then a thing that is an instrument cannot also be an object; the roles would have to be fixed in the things. *Sarvasya ca anyatha-bhavah tasya dravya-atmano bhavet*: and there would be an *otherwise-becoming* of that *whole substance-self* — for a thing to change roles, its very self would have to change. So the two halves of the samuddesa collide at its close: the roles are *buddhi*-constructed and shift freely (3.7.104), and the substance is utterly what it is and does not shift (3.7.166). If both, then role-change is substance-change, which 3.7.166 forbids. The samuddesa ends on the tension rather than resolving it — and the resolution is available from everything it has said: the roles are not *in* the substance to change, being postings on it (3.7.103's *niyamah sabde na tu vastuni*). But Bhartrhari leaves the reader to draw it, which is his habit at a movement's close.

[Contested: whether 167 states an objection to be dissolved (our reading, on the strength of 3.7.103-104) or a conclusion Bhartrhari endorses — fixing the *karaka*-roles in the things after all — is a genuine crux, and the samuddesa's last word is thereby left open]

Kriyā-samuddeśa — On Action

Verse 3.8.1

यावत् सिद्धमसिद्धं वा साध्यत्वेनाभिधीयते ।
आश्रितक्रमरूपत्वात् तत् क्रियेत्यभिधीयते ॥ 1 ॥

yāvat siddhamasiddham.vā sādhyatvenābhidhīyate |
āśritakramarūpatvāt tat kriyetyabhidhīyate || 1 ||

Whatever, accomplished or unaccomplished, is expressed as what-is-to-be-accomplished — from its having a form in which sequence is resorted to, that is expressed as 'action'.

The definition of action, and every clause is doing work. Yavat siddham asiddham va: *whatever, accomplished or unaccomplished* — the distinction is set aside at once: what a thing is does not decide whether it is an action. Sadhyatvena abhidhiyate: is expressed as *what-is-to-be-accomplished* — sadhyatva, the to-be-accomplished-ness that 3.7.79 made the mark of actions alone. And the reason: asrita-krama-rupatvat — from its having a form in which *sequence is resorted to*: what makes something an action is that it is presented as sequenced. Tat kriya iti abhidhiyate: *that is expressed as 'action'*. So action is not a kind of thing but a mode of presentation: whatever is presented as to-be-accomplished-in-sequence is an action, whether or not it is done, whether or not it takes time. This is 3.1.35 exactly — Being with sequence is action, Being with sequence withdrawn is substance — now stated as the samuddeśa's opening definition, with abhidhiyate twice: it is expressed so.

Verse 3.8.2

कार्यकारणभावेन ध्वनतीत्याश्रितक्रमः ।
ध्वनिः क्रमनिवृत्तौ तु ध्वनिरित्येव कथ्यते ॥ 2 ॥

kāryakāraṇabhāvena dhvanatītyāśritakramah |
dhvaniḥ kramanivṛttau tu dhvanirityeva kathyate || 2 ||

'It sounds' — by way of cause and effect, sequence being resorted to; but when sequence has withdrawn, it is spoken of simply as 'sound'.

The definition demonstrated on one root. Dhvanati iti asrita-kramah: 'it sounds' — *sequence resorted to*, karya-karana-bhavana, by way of *cause and effect*: the sounding presented as a process, one phase producing the next. Dhvaniḥ krama-nivṛttau tu dhvaniḥ iti eva kathyate: but when *sequence has withdrawn*, it is spoken of simply as 'sound'. Same phenomenon, two words: 'dhvanati' (verb) and 'dhvaniḥ' (noun), and the difference between them is nothing but whether krama is in or out. There is no second fact. This is 3.1.35's doctrine given the cleanest possible evidence — a root and its derived noun, differing in nothing but sequence-presentation — and it explains why the noun/verb distinction, the deepest structural fact about the language, requires no ontological difference to support it.

Verse 3.8.3

श्वेतते श्वेत इत्येतच्छ्वेतत्वेन प्रकाशते ।
आश्रितक्रमरूपत्वादभिधानं प्रवर्तते ॥ 3 ॥

śvetate śveta ityetacchvetatvena prakāśate |
āśritakramarūpatvādabhidhānam pravartate || 3 ||

'It whitens', 'white' — this shines forth as whiteness; from its having a form in which sequence is resorted to, the expression proceeds.

The same demonstration on a quality, where it is stranger. Svetate svetah iti: 'it whitens', 'white' — a verb and an adjective from one stem. Etat svetatvena prakasate: *this* shines forth as *whiteness* — what both present is the quality. Asrita-krama-rupatvad abhidhanam pravartate: from its having a form in which *sequence is resorted to*, the *expression* proceeds. So even a static quality can be verbed: whiteness presented as sequenced becomes a whitening, and nothing in the whiteness changed. The example is better than 3.8.2's because sounding is *naturally* processual and whitening is not — a white thing is not doing anything. Yet Sanskrit verbs it, and the verb is not false. Which shows that krama is genuinely contributed by the presentation (2.25's mind's own sequencing power) rather than found in the phenomenon.

Verse 3.8.4

गुणभूतैरवयवैः समूहः क्रमजन्मनाम् ।
बुद्ध्या प्रकल्पिताभेदः क्रियेति व्यपदिश्यते ॥ 4 ॥

guṇabhūtairavayavaiḥ samūhaḥ kramajanmanām |
buddhyā prakalpitaābhedaḥ kriyeti vyapadiśyate || 4 ||

A collection of sequentially-born parts, which are subordinate — its non-difference constructed by the intellect — is designated as 'action'.

The definition's second half: what an action is made of, and who makes it one. Guna-bhutaiḥ avayavaiḥ samuhah krama-janmanam: a *collection of sequentially-born* parts which are *subordinate* — the sub-actions: the fetching, lighting, stirring that constitute a cooking (2.448's uncounted sub-actions displayed by a single verb). Buddhya prakalpita-abhedah: its *non-difference constructed by the intellect* — the collection's *unity* is buddhi's construction; the parts are given and the whole is made. Kriya iti vyapadisyate: is *designated* as 'action'. So an action is a mind-unified sequence of subordinate parts, and both halves matter: the parts are really sequential, and their being *one action* is a construal. This is 3.7.113's finding (the causal sequence arising from the grasping of non-difference) stated as the definition of what a kriya is — and it explains why 3.7.100's delimitation of the action's limit could be a variable: where one cuts the collection decides what the action is.

Verse 3.8.5

समूहः स तथाभूतः प्रतिभेदं समूहिषु ।
समाप्यते ततो भेदे कालभेदस्य सम्भवः ॥ 5 ॥

*samūhaḥ sa tathābhūtaḥ pratibhedam samūhiṣu |
samāpyate tato bhede kālabhedasya sambhavaḥ || 5 ||*

That collection, being such, is completed at each division among the members; therefore, in the difference, a difference of time is possible.

The action's whole-at-each structure. Samuhah sa tathabhutah pratibhedam samuhisu samapyate: that collection, being such, is completed at each division among the members — pratibhedam samapyate: 2.18's own formula, where the entire sentence-meaning completes at each word. The cooking is wholly present at the stirring; each sub-action is the whole action, not a fraction of it. Tatah bhede kala-bhedasya sambhavaḥ: therefore, in the difference, a difference of time is possible. Because the whole completes at each member, and the members are sequential, the one action can bear temporal difference — it is at the fetching and at the stirring, and those are at different times. So an action's occupying a stretch of time is explained by whole-at-each rather than by part-summing: it does not take an hour because its parts take an hour; it is wholly present at each of a sequence of moments.

Verse 3.8.6

क्रमात् सदसतां तेषामात्मानो न समूहिनाम् ।
सद्वस्तुविषयैर्यान्ति संबन्धं चक्षुरादिभिः ॥ 6 ॥

*kramāt sadasatām teṣāmātmāno na samūhinām |
sadvastuviṣayairyānti sambandham cakṣurādibhiḥ || 6 ||*

The selves of those members, which are existent and non-existent by sequence, do not come into connection with eye and the rest, which have existent things for their domain.

Why actions are not perceived. Kramat sad-asatam tesam atmanah na samuhinam: the selves of those members — which are existent and non-existent by sequence: at any moment, the fetching is over and the stirring is not yet; only one phase is, and the rest are not (3.3.61's being and non-being as constructions of one self). Sad-vastu-visayaiḥ yanti sambandham caksur-adibhiḥ: they do not come into connection with eye and the rest, which have existent things for their domain. The senses take what is; an action is never all-there to be taken. So no action is ever perceived — one sees the stirring, never the cooking. This is a sharp result and it is the samuddesa's ground: if actions are not given to sense, their unity cannot be perceived either, and 3.8.4's buddhya prakalpita-abhedah is not a philosopher's flourish but the only available account.

Verse 3.8.7-8

यथा गौरिति सङ्घातः सर्वो नेन्द्रियगोचरः ।
 भागशस्तूपलब्धस्य बुद्धौ रूपं निरूप्यते ॥ 7 ॥
 इन्द्रियैरन्यथा प्राप्तौ भेदांशोपनिपातिभिः ।
 अलातचक्रवद्रूपं क्रियाणां परिकल्प्यते ॥ 8 ॥

yathā gauriti saṅghātaḥ sarvo nendriyagocarah |
 bhāgaśastūpalabdhasya buddhau rūpam nirūpyate || 7 ||
 indriyairanyathā prāptau bhedāṁśopanipātibhiḥ |
 alātacakravadrūpam kriyāṇām parikalpyate || 8 ||

(7) As the whole aggregate 'cow' is not the range of the sense-faculty — the form of what is apprehended part by part is determined in the intellect; (8) so, the senses having otherwise attained it, falling upon portions of difference, the form of actions is constructed, like a firebrand-circle.

The parallel that makes 3.8.6 tolerable. (7): yatha gauh iti sanghatah sarvo na indriya-gocarah — as the *whole aggregate* 'cow' is not the *range of the sense-faculty*: nobody ever sees a whole cow (2.161's durlabham sarva-avayava-darsanam; the far side, the interior, are never given). Bhagasah tu upalabdhasya buddhau rupam nirupyate: the *form of what is apprehended part by part is determined in the intellect*. So the cow, too, is a buddhi-construction on partial data. (8) applies it: tatha alata-cakra-vad rupam kriyanam parikalpyate — so the *form of actions is constructed, like a firebrand-circle*. The whirling brand: no circle is there, and every eye sees one (1.129's emblem, 2.291's touch-test that breaks it). Actions are firebrand-circles: successive phases, no whole, and an irresistible appearance of one. And the parallel with the cow disarms the objection — if constructedness disqualified actions, it would disqualify cows.

Verse 3.8.9

यथा च भागाः पचतैरुदकासेचनादयः ।
 उदकासेचनादीनां ज्ञेया भागास्तथापरे ॥ 9 ॥

yathā ca bhāgāḥ pacatairudakāsecanādayaḥ |
 udakāsecanādīnām jñeyā bhāgāstathāpare || 9 ||

And as the parts of 'paci' are the pouring of water and the rest — so the other parts of the pouring of water and the rest are to be known.

The regress of sub-actions, and it has no floor. Yatha ca bhagah pacateh udaka-asecanadayah: as the *parts of 'paci'* (cooking) are the *pouring of water* and the rest — the cooking analyses into fetching, pouring, lighting, stirring. Udaka-asecanadinam jneyah bhagah tatha apare: so the *other parts* of the *pouring of water* and the rest are to be known — and the pouring analyses into lifting, tilting, aiming; and each of those analyses further. Tatha apare: likewise others, and the phrase does not stop. So the sub-actions of 3.8.4 are themselves collections whose unity is constructed, all the way down — and there is no level of simple actions from which the complex ones are built. This is 2.236's atom given parts (the mind that cannot stop dividing) at the level of events, and it means that 3.8.4's definition applies at every grain: an action is a construed unity of construed unities, indefinitely.

Verse 3.8.10

यश्चापकर्षपर्यन्तमनप्राप्तः प्रतीयते ।
तत्रैकस्मिन् क्रियाशब्दः केवले न प्रयुज्यते ॥ 10 ॥

yaścāpakarṣaparyantamanaprāptaḥ pratiyate |
tatraikasmin kriyāśabdaḥ kevale na prayujyate || 10 ||

And that which, not having reached the limit of subtraction, is understood — there, in that single one, the action-word is not employed when it is alone.

Where the regress of 3.8.9 stops for practical purposes. Yah ca apakarsa-paryantam anaprapta pratiyate: that which, *not having reached the limit of subtraction*, is understood — a sub-action taken short of full analysis. Tatra ekasmin kriya-sabdah kevale na prayujyate: *there, in that single one, the action-word is not employed when it is alone*. One does not call a single tilt of a jug an action; the verb needs a collection. So although the analysis descends without limit (3.8.9), the word 'action' attaches only where a collection has been construed — and an isolated minimum has no collection and takes no verb. This is the criterion the regress needed: actions are where verbs go, verbs go to construed collections, and the indefinitely-divisible parts are not themselves actions until a mind gathers them.

Verse 3.8.11

पूर्वोत्तरैस्तदा भागैः समवस्थापितक्रमः ।
एकः सोऽप्यसदध्यासादाख्यातैरभिधीयते ॥ 11 ॥

pūrvottaraistadā bhāgaiḥ samavasthāpitakramah |
ekah so'pyasadadhyāsādākhyātairabhidhīyate || 11 ||

Then, its sequence established by the prior and subsequent parts, even that single one is expressed by finite verbs, through a superimposition of what is not there.

How the minimum of 3.8.10 nonetheless gets verbed. Purva-uttaraih tada bhagaih samavasthapita-kramah: *then, its sequence established by the prior and subsequent parts* — the single tilt, set among its neighbours, acquires a before and after from them. Ekah so 'pi asad-adhyasat akhyataih abhidhiyate: *even that single one is expressed by finite verbs, through a superimposition of what is not there* — asad-adhyasa: the superimposition of the non-existent (3.1.6's adhyaropa; 3.3.53's existence superimposed by designation). The isolated part has no internal sequence; sequence is laid onto it from its neighbours; and then it can take a verb. So even the minimal action is verbed by a fiction — and the fiction is explicitly named asat, not there. The samuddesa's method is on display: find where the definition fails, and show that the grammar proceeds there by a superimposition it can name.

Verse 3.8.12

कालानुपाति यद्रूपं तदस्तीति प्रतीयते ।
परितस्तु परिच्छिन्नं भाव इत्येव कथ्यते ॥ 12 ॥

kālānupāti yadrūpam tadastīti pratiyate |
paritastu paricchinnam bhāva ityeva kathyate || 12 ||

The form that follows upon time is understood as 'it exists'; but what is delimited on all sides is spoken of simply as 'an entity'.

The two great categories distinguished by their relation to time. Kala-anupati yad rupam tad asti iti pratiyate: the form that *follows upon time* is understood as 'it exists' — the verbal, the processual, presented as running along time's course. Paritas tu paricchinnam bhava iti eva kathyate: but what is *delimited on all sides* — bounded, closed off, complete — is spoken of *simply as 'an entity'*. So verbs present what runs with time; nouns present what is fenced. And 'asti' is on the verbal side: existence itself is a following-upon-time (3.3.47's self-bearing 'asti'), while an entity is a delimitation. This refines 3.1.35 with a spatial metaphor: substance is Being *fenced*, action is Being *running* — and paritah paricchinnam, delimited on all sides, is what a noun does to what it names.

Verse 3.8.13

व्यवहारस्य सिद्धत्वान्न चेयं गुणकल्पना ।
उपचारो हि मुख्यस्य सम्भवादवतिष्ठते ॥ 13 ॥

vyavahārasya siddhatvānna ceyam guṇakalpanā |
upacāro hi mukhyasya sambhavādavatiṣṭhate || 13 ||

And this is not a construction of the subordinate, since the practice is accomplished; for a figurative usage stands only from the possibility of a primary one.

A guard against deflating the whole account. Vyavaharasya siddhatvat na ca iyam guna-kalpana: since the *practice is accomplished* — people do use verbs and nouns, and the usage works — *this is not a construction of the subordinate*: the action-presentation is not a merely secondary or figurative device. And the principle: upacaro hi mukhyasya sambhavād avatiṣṭhate — for a *figurative usage* stands only from the possibility of a *primary* one. Metaphor presupposes literal; the secondary requires a primary to be secondary to (2.265's rival criterion, and 2.253's currency-doctrine). So if action-talk were wholly figurative, there would be nothing for it to be figurative from, and it could not work. It works; therefore it is primary. The verse protects the samuddesa's constructivism from collapsing into the claim that verbs say nothing: the construction is real, the usage is primary, and 'constructed' does not mean 'figurative'.

Verse 3.8.14

आहितोत्तरशक्तित्वात् प्रत्येकं वा समूहिनः ।
अनेकरूपा लभ्यन्ते क्रमवन्तः इवाक्रमाः ॥ 14 ॥

*āhitottaraśaktitvāt pratyekam.vā samūhinah |
anekarūpā labhyante kramavantah ivākramāḥ || 14 ||*

Or, from the fact that a subsequent capacity has been deposited, the members of the collection are severally obtained as multiform — sequenceless, as though possessing sequence.

An alternative account of how the parts bear the whole. Ahita-uttara-saktitvat: from the fact that a subsequent capacity has been deposited — each part carries a capacity toward what follows: the fetching is already oriented to the pouring, the pouring to the boiling (1.84's ahita-bija: the seed deposited by the sounds; 3.7.33's current drawing onward). Pratyekam va samuhinah aneka-rupah labhyante: the members are severally obtained as multiform — each part, carrying its onward capacity, is many-formed. Kramavantah iva akramah: sequenceless, as though possessing sequence. And there it is: the parts are akrama, sequenceless in themselves, and appear sequential because each carries a deposited capacity toward the next. So sequence is not a relation between the parts; it is a capacity in each, and the appearance of order is the capacities showing. This is 1.48's structure (the sequenceless born as if in sequence) applied to the constituents of an action.

Verse 3.8.15

अनन्तरं फलं यस्याः कल्पते तां क्रियां विदुः ।
प्रधानभूतां तादर्थ्यद् अन्यासां तु तदाख्यता ॥ 15 ॥

*anantaram.phalam.yasyāḥ kalpate tām.kriyām.viduh |
pradhānabhūtām.tādarthyād anyāsām.tu tadākhyatā || 15 ||*

That action whose fruit is construed as immediately following, they know as the principal; but the others, from their being for that purpose, have its designation.

Which of the collection's members is the action. Anantaram phalam yasyah kalpyate tam kriyam viduh pradhana-bhutam: that action whose fruit is construed as immediately following — they know as the principal: the member after which the result arrives (3.7.90's definition of the instrument, transposed: what the accomplishment immediately follows). Anyasam tu tadarthyat tad-akhyata: but the others, from their being for that purpose, have its designation — the fetching and pouring are called 'cooking' because they are for the cooking. So one member is the action proper and the rest borrow its name by serving it. Tadarthya — being-for-that (3.7.27's dative of purpose). And note the verb: kalpyate, is construed — which member's fruit counts as immediate is a construal (3.7.100's delimitation of the action's limit), and the whole naming-hierarchy follows from it.

Verse 3.8.16

सत्सु प्रत्ययरूपोऽसौ भावो यावन्न जायते ।
तावत् परेषां रूपेण साध्यः सन्निभिधीयते ॥ 16 ॥

satsu pratyayarūpo'sau bhāvo yāvanna jāyate |
tāvat pareṣām rūpeṇa sādhyah sannibhidhīyate || 16 ||

That entity, whose form is a cognition among existent things — so long as it is not born, so long is it expressed as to-be-accomplished, by way of the form of the others.

Why the unfinished is sayable. Satsu pratyaya-rupo 'sau bhavah: that entity, whose form is a cognition among existent things — the action exists as a cognition, not as a thing among things (3.8.6's members never reaching the senses). Yavan na jayate: so long as it is not born — while the action is incomplete, still running. Tavat paresam rupena sadhyah sann abhidhiyate: so long is it expressed as to-be-accomplished, by way of the form of the others — para-rupena: through the form of what is not it, its parts and neighbours (3.5.9's arupam para-rupena dravyam akhyayate: the formless substance designated by another's form). So the unfinished action has no form of its own to be expressed by, and is expressed by its parts' forms, and is thereby sayable while unaccomplished. This is the sadhyatva of 3.8.1 given its mechanism: to be to-be-accomplished is to be presented through what is not yet you.

Verse 3.8.17

सिद्धे तु साधनाकाङ्क्षा कृतार्थत्वान्निवर्तते ।
न क्रियावाचिनां तस्मात् प्रयोगस्तत्र विद्यते ॥ 17 ॥

siddhe tu sādhanākāṅkṣā kṛtārthatvānnivartate |
na kriyāvācinām tasmāt prayogastatra vidyate || 17 ||

But when it is accomplished, the expectancy of the means withdraws, from its purpose having been served; therefore, in that case, there is no employment of action-expressing words.

Why the finished cannot be verbed. Siddhe tu sadhana-akanksa krtarthatvat nivartate: when it is accomplished, the expectancy of the means withdraws, from its purpose having been served — krtartha: the word 3.7.83 used for the animal that served the rite. A completed action wants nothing more; its karakas have discharged. Na kriya-vacinam tasmāt prayogah tatra vidyate: therefore, in that case, there is no employment of action-expressing words. The finished action takes no verb — one says 'the cooked rice', a noun, not 'cooks'. So sadhyatva (3.8.1) and akanksa are the same condition seen twice: an action is verbal exactly while it still requires, and requiring ends with accomplishment. And the pair 3.8.16-17 delimits the verb's whole domain: it operates between beginning and completion, and at neither end.

Verse 3.8.18

स च पूर्वपिरीभूत एकत्वादक्रमात्मकः ।
पूर्वपिराणां धर्मेण तदर्थेनानुगम्यते ॥ 18 ॥

sa ca pūrvāparībhūta ekatvādakramātmakah |
pūrvāparāṇām dharmēṇa tadarthenānugamyate || 18 ||

And that, being prior-and-posterior, is by its oneness sequenceless; it is followed along by the property of the prior and posterior parts, and by their purpose.

The action's paradoxical structure, stated flatly. Sa ca purva-apari-bhutah: and *that* — the action — being prior-and-posterior: it has a before and an after; it is spread. Ekatvad akrama-atmakah: by its *oneness, sequenceless* — and being one, it has no sequence, since a unity has no internal order. Both, at once. And the resolution: purva-aparanam dharmena tad-arthena anugamyate — it is *followed along* by the *property* of the prior and posterior parts, and by their *purpose*. The sequence belongs to the parts and is *followed along* into the whole; the whole's own character is sequenceless. So the action is one (hence akrama) and its parts are ordered (hence purva-apara), and the order is attributed to the one by transfer. This is 1.48-49's structure exactly — the sequenceless born as if divided, the reflection following the water's movement — now at the level of what a verb means.

Verse 3.8.19

असन्निरवर्तते तस्माद् यत् सत् तदुपलभ्यते ।
तयोः सदसतोश्चासावात्मैक इव गृह्यते ॥ 19 ॥

asanniravartate tasmād yat sat tadupalabhyate |
tayoh sadasatoścāsāvātmaika iva grhyate || 19 ||

The non-existent withdraws; therefore what is existent is apprehended; and that self of those two, the existent and the non-existent, is grasped as though one.

How the action's shifting phases present as one thing. Asan nivartate: the *non-existent withdraws* — the future phases are not yet, and drop away as they arrive. Tasmat yat sat tadupalabhyate: *therefore* what is *existent* is *apprehended* — only the present phase is there to be had (3.8.6's members, existent and non-existent by sequence). Tayoh sad-asatoh ca asau atma eka iva grhyate: and that *self* of those two — the *existent* and the *non-existent* — is *grasped as though one*. The action is a shifting boundary between what has been and what will be, and the mind takes the whole shifting thing as one self. Iva: as though. This is 3.3.61's doctrine (being and non-being as constructions, not other than one self) applied to the temporal structure of a single act — and it explains 3.8.4's buddhya prakalpita-abhedah: the unity is constructed across an existent/non-existent divide, which is why no perception could deliver it.

Verse 3.8.20

जातिमन्ये क्रियामाहुरनेकव्यक्तिवर्तिनीम् ।
असाध्या व्यक्तिरूपेण सा साध्येवोपलभ्यते ॥ 20 ॥

jātimanye kriyāmāhurane kavaktivartinīm |
asādhyā vyaktirūpeṇa sā sādhyevopalabhyate || 20 ||

Others call action a universal, residing in many individuals; being unaccomplishable in the form of the individual, it is apprehended as though to-be-accomplished.

The first rival theory: action as universal. Jātim anye kriyam ahuh aneka-vyakti-vartinim: *others call action a universal, residing in many individuals* – cooking-hood, present in every cooking as cowhood in cows (3.1.25-26's jati as self-manifesting power). Asādhyā vyakti-rupena: *unaccomplishable in the form of the individual* – a universal cannot be accomplished; it is eternal, and no cooking brings cooking-hood about. Sa sādhyā iva upalabhyate: it is *apprehended as though to-be-accomplished*. So on this view the verb's sādhyatva (3.8.1) is an appearance: what the verb presents as being brought about is a universal that cannot be brought about, and the iva carries the whole theory. The position is real and it has an advantage – it explains the action's unity (3.8.4) without buddhi, by making it a jati – at the cost of making every verb systematically misleading.

Verse 3.8.21

अन्ते या वा क्रियाभागे जातिः सैव क्रिया स्मृता ।
सा व्यक्तेरनुनिष्पादे जायमानेव गम्यते ॥ 21 ॥

ante yā vā kriyābhāge jātiḥ saiva kriyā smṛtā |
sā vyakteranuniṣpāde jāyamāneva gamyate || 21 ||

Or the universal which is in the final action-part – that very one is remembered as the action; it is understood as though being born, in the individual's arising-in-consequence.

The universal-theory refined. Ante ya va kriya-bhage jatiḥ: or the *universal* which is in the *final action-part* – not cooking-hood in general but the universal residing in the last phase (3.8.15's principal member, after which the fruit arrives). Sa eva kriyā smṛta: *that very one is remembered as the action*. Sa vyakteh anuniṣpāde jāyamāna iva gamyate: it is understood *as though being born*, in the individual's *arising-in-consequence* – anuniṣpāda: arising-along-with (2.121's anuniṣpadin, the entailed). So when the final phase occurs, its universal is manifested, and the manifesting presents as a birth. The refinement locates the action precisely (in the last part, per 3.8.15) and keeps the universal's eternality (it is manifested, not born) – and again the iva does the work: jāyamāna iva, as though being born. Two iva's in two verses is the theory's signature: it must make the verb's entire content an appearance.

Verse 3.8.22

स्वव्यापारविशिष्टानां सत्ता वा कर्तृकर्मणाम् ।
क्रिया व्यापारभेदेषु सत्ता वा समवायिनी ॥ 22 ॥

svavyāpāraviśiṣṭānām sattā vā karṭṛkarmanām |
kriyā vyāpārabhedeṣu sattā vā samavāyini || 22 ||

Or action is the existence of agent and object as qualified by their own operations; or it is the inherent existence in the differences of operation.

The second rival: action as existence. Sva-vyapara-visistanam sattā vā karṭṛkarmanam: or the *existence of agent and object as qualified by their own operations* — the cooking is just the cook-and-rice existing cook-wise; no further entity. Kriya vyapara-bhedeṣu sattā vā samavayini: or it is the *inherent existence in the differences of operation* — the sattā inhering in the operations themselves. Both versions make action a mode of sattā rather than a thing, and both are the Padakanda's own doctrine wearing another school's clothes: 3.1.33 made sattā the sole universal, 3.1.35 made action Being-with-sequence. So this 'rival' is very close to home, and its two versions differ over where the existence sits — in the qualified relata, or in the operations. Bhartrhari reports without deciding, and the reader who has followed from 3.1.33 knows why: on his own account both are sattā carved by relata.

Verse 3.8.23

अन्त्ये वात्मनि या सत्ता सा क्रिया कैश्चिदिष्यते ।
भाव एव हि धात्वर्थ इत्यवच्छिन्न आगमः ॥ 23 ॥

antye vātmani yā sattā sā kriyā kaiscidīṣyate |
bhāva eva hi dhātvārtha ityavacchinna āgamaḥ || 23 ||

Or the existence which is in the final self — that is held by some to be the action; for 'the root's meaning is bhava alone' is the received tradition, unbroken.

The third rival, and it cites scripture. Antye va atmani ya sattā sa kriya kaiscid isyate: the *existence which is in the final self* is held by some to be the *action* — combining 3.8.21's location (the final part) with 3.8.22's category (sattā). And then the authority: bhava eva hi dhātvarthah iti avacchinna āgamaḥ — for 'the root's meaning is bhava alone' is the *received tradition, unbroken*. This is the grammarians' own maxim — bhava-pradhanam akhyatam, the verb has being-as-its-principal (Yaska's Nirukta 1.1, and Panini's own bhava affixes) — and avacchinna, unbroken, is the tradition's mark of authority (1.31's avyavacchinna panthanah; 1.41's avicchedena). So the third theory is not a speculation but the received doctrine: what a root means is bhava, existence-in-process. And the Padakanda has been building toward it since 3.1.34 (sattā as the meaning of both stem and root).

Verse 3.8.24

बुद्धिं तज्जातिमन्ये तु बुद्धिसत्तामथापरे ।
प्रत्यस्तरूपां भावेषु क्रियेति प्रतिजानते ॥ 24 ॥

*buddhim, tājātimanye tu buddhisattāmathāpare |
pratyastarūpām, bhāveṣu kriyeti pratijānate || 24 ||*

But others hold the intellect, or its universal; and yet others hold the intellect's existence, whose form is dissolved away in things, to be action.

The remaining theories, and they are idealist. *Buddhim taj-jatim anye*: others hold the *intellect* — action is a cognition, nothing more (3.8.16's *pratyaya-rupo bhavah*) — or its *universal*: cognition-hood (3.1.102's universals among cognitions). *Buddhi-sattam atha apare*: and yet others the *intellect's existence*. *Praty-asta-rupam bhavesu kriya iti pratijanate*: whose form is dissolved away in things — *pratyasta-rupa*: 3.6.7's phrase for direction, whose own form is effaced in what it orders — they *maintain* to be *action*. So the last theories make action a mode of mind, effaced into the things it construes. And with 3.8.20-24 the catalogue is complete: action as universal, as existence of the relata, as inherent existence, as final existence, as intellect, as intellect's universal, as intellect's existence. Seven positions, canvassed without decision — and every one of them is a version of something the Padakanda has already argued in its own voice.

Verse 3.8.25

आविर्भावतिरोभावौ जन्मनाशौ तथापरैः ।
षट्सु भावविकारेषु कल्पितौ व्यावहारिकौ ॥ 25 ॥

*āvīrbhāvatirobhāvau janmanāśau tathāparaiḥ |
ṣaṭsu bhāvavikāreṣu kalpitau vyāvahārikau || 25 ||*

By others, manifestation and disappearance, and birth and destruction, are constructed as practical, among the six modifications of being.

The six *vikaras* revisited (1.3, 3.1.36's *sad-avasthah*), and a reduction begun. *Avirbhava-tirobhavau janma-nasau tatha aparaiḥ*: *manifestation* and *disappearance*, and *birth* and *destruction* — two pairs, and the first pair is the *satkarya-vadin's* (things manifest and hide; nothing is made) while the second is the *asatkarya-vadin's* (things are born and perish). *Sat su bhava-vikaresu kalpitau vyavaharikau*: are constructed as *practical*, among the *six modifications of being*. *Kalpitau*: constructed; *vyavaharikau*: practical, belonging to transaction (2.297's *sabdah loka-nibandhanah*). So both pairs are practical constructions on the six — which means the great dispute between *satkarya* and *asatkarya* (3.7.49's two objects) is again a difference of construal, and both are *vyavaharika*. The verse sets up the reduction of 3.8.26-27.

Verse 3.8.26

ताभ्यां सर्वप्रवृत्तीनामभेदेनोपसंग्रहः ।
जन्मैवाश्रितसारूप्यं स्थितिरित्यभिधीयते ॥ 26 ॥

tābhyām.sarvapravṛttināmabhedenopasamgrahah |
janmaivāśritasārūpyam.sthitirityabhidhīyate || 26 ||

By those two, all operations are comprehended without difference; birth alone, having resorted to a likeness of form, is spoken of as 'standing'.

The reduction's first step. Tabhyam sarva-pravṛttinam abhedena upasangrahaḥ: by those two — birth and destruction — *all operations are comprehended without difference*: every one of the six vikaras (born, exists, changes, grows, declines, perishes) reduces to a birth or a destruction. Six to two. And then: janma eva asrita-sarūpyam sthitiḥ iti abhidhīyate — *birth alone, having resorted to a likeness of form, is spoken of as 'standing'*. Existence is birth continuing to look like itself: what we call a thing's *standing* is its being born again in the same shape (the sarūpya of successive moments). So even sthiti, the second of the six and the most static, is a birth. Two to one, nearly — and 3.8.27 completes it.

Verse 3.8.27

जायमानान्न जन्मान्याद् विनाशेऽप्यपदार्थता ।
अतो भावविकारेषु सत्तैका व्यवतिष्ठते ॥ 27 ॥

jāyamānānna janmānyād vināśe'pyapadārthatā |
ato bhāvavikāreṣu sattaikā vyavatiṣṭhate || 27 ||

Birth is not other than what is being born; and in destruction too there is non-thinghood. Therefore, among the modifications of being, one Existence stands established.

The reduction completed, and it lands on the Padakanda's central doctrine. Jayamanan na janma anyat: *birth is not other than what is being born* — there is no birth over and above the thing arising; the two are one (3.7.107's coiling snake: the coil is not a further item). Vinase 'pi apadārthatā: and in *destruction* too there is *non-thinghood* — destruction is not a thing either; a nothing does not become an entity by being an ending (3.3.76's regress: reify absence and the examination has no floor). So birth is nothing over its thing, and destruction is nothing at all. Atah bhava-vikāreṣu satta eka vyavatiṣṭhate: *therefore, among the modifications of being, one Existence stands established*. The six vikaras reduce to two, the two dissolve, and what remains is satta — 3.1.33's sole universal, in which all words stand established; 3.1.36's Being attaining the six states by its own powers. The Kriya-samuddesa has reached the Jati-samuddesa's conclusion by the road of the verb.

Verse 3.8.28

पूर्वभागस्तु यज्जातात् तज्जन्म व्यपदिश्यते ।
आश्रितक्रमरूपेण निमित्तत्वे विवक्षिते ॥ 28 ॥

pūrvabhāgastu yajjātāt tajjanma vyapadiśyate |
āśritakramarūpeṇa nimittatve vivakṣite || 28 ||

But that prior part of what has been born — that is designated as 'birth', when its being an occasioning ground is intended, by way of a form in which sequence is resorted to.

Birth relocated, having been dissolved. Purva-bhagas tu yaj jatāt tad janma vyapadisyate: that *prior part of what has been born* — that is designated as 'birth': birth is not an event added to the thing; it is the thing's own earlier phase, named. Nimittatve vivakṣite: when its *being an occasioning ground is intended* — the phase is called a birth when we mean it as what the later phase came from. Asrita-krama-rupena: by way of a *form in which sequence is resorted to* — 3.8.1's definition verbatim. So birth is a *part of the thing*, construed as ground, presented sequence-wise. Everything the samuddesa has built converges: 3.8.27 dissolved birth into satta, and 3.8.28 explains what we are doing when we nonetheless say 'it is born' — naming a phase as an origin, under a sequence-presentation. The dissolution and the usage coexist (2.238's untrue path).

Verse 3.8.29

आख्यातशब्दैरर्थोऽसावेवंभूतोऽभिधीयते ।
नामशब्दाः प्रवर्तन्ते संहरन्त इति क्रमम् ॥ 29 ॥

ākhyātaśabdairartho'sāvevaṃbhūto'bhidhīyate |
nāmaśabdāḥ pravartante samharanta iti kramam || 29 ||

That meaning, being of such a kind, is expressed by finite-verb words; noun-words proceed as withdrawing the sequence.

The samuddesa's thesis, restated as its two-word conclusion. Akhyata-sabdaih arthah asau evam-bhutah abhidhiyate: *that meaning, being of such a kind* — the phase-construed-as-ground, sequence-presented (3.8.28) — is *expressed by finite-verb words*. Nama-sabdah pravartante samharantah iti kramam: *noun-words proceed as withdrawing the sequence*. Samharantah: gathering in, drawing back, withdrawing — the verb 3.1.35 used (krama-rupasya samhare tat sattvam: in the withdrawal of the form of sequence, that is substance). So the entire noun/verb distinction is one operation and its reverse: verbs deploy sequence, nouns retract it, and the same satta is meant by both. This is the Padakanda's most economical statement of what its two great categories are, and it has taken the Kriya-samuddesa twenty-nine verses to earn what 3.1.35 asserted.

Verse 3.8.30

फलं फलापदेशो वा वस्तु वा तद्विरोधि यत् ।
तदन्यदेव पूर्वेषां नाश इत्यपदिश्यते ॥ 30 ॥

phalam.phalāpadeśo vā vastu vā tadvirodhi yat |
tadanyadeva pūrveṣāṃ.nāśa ityapadiśyate || 30 ||

The fruit, or the designation of the fruit, or whatever thing is opposed to that — that quite other thing is designated as the 'destruction' of the prior ones.

Destruction relocated, as birth was at 3.8.28. Phalam phala-apadeso va: the fruit, or the designation of the fruit — the outcome, or its name. Vastu va tad-virodhi yat: or whatever thing is opposed to that. Tad anyad eva purvesam nasah iti apadisyate: that quite other thing is designated as the 'destruction' of the prior ones. So destruction is not an event that happens to what perishes; it is the arrival of something else — the ash, the fruit, the successor — named as the predecessor's end. The wood's destruction is the ash's presence (3.7.50's prakṛty-uccheda-sambhutam). Anyad eva: quite other: nothing happened to the wood at all; something else is here now, and we call that the wood's perishing. This completes 3.8.27's apadarthata (destruction's non-thinghood) with an account of what we are naming when we nonetheless speak of it.

Verse 3.8.31

नैवास्ति नैव नास्तीति वस्तुनो ग्रहणाद् विना ।
कल्पते पररूपेण वस्त्वन्यदनुगम्यते ॥ 31 ॥

naivāsti naiva nāstīti vastuno grahaṇād vinā |
kalpate pararūpeṇa vastvanyadanugamyate || 31 ||

'It neither is nor is not' — apart from the apprehension of a thing, it is constructed by another's form; another thing is followed along.

The samuddesa's tetralemmic moment, and it is brief. Na eva asti na eva na asti iti: 'it neither is nor is not' — the third and fourth corners, applied to the perishing thing of 3.8.30: the wood, at the moment of its 'destruction', neither is (it is gone) nor is not (something is there). Vastuno grahaṇad vina: apart from the apprehension of a thing — no thing is grasped there; nothing is available to bear either predicate (3.3.79's non-thing having neither priority nor state). Kalpyate para-rupena: it is constructed by another's form — the perishing is construed through the successor's form (3.8.30's anyad eva; 3.5.9's arupam para-rupena). Vastv anyad anumamyate: another thing is followed along. So the perished thing is neither existent nor non-existent, and what we track when we speak of it is its successor. This is 3.2.12's tetralemma in the ordinary case of something burning down.

Verse 3.8.32

आवाभावौ घटादीनामस्पृशन्नपि पाणिना ।
कश्चिद्वेदाप्रकाशेऽपि प्रकाशे तत एव वा ॥ 32 ॥

*āvābhāvau ghaṭādināmasprśannapi pāṇinā |
kaścidvedāprakāśe'pi prakāśe tata eva vā || 32 ||*

Someone knows the presence and absence of pots and the like without even touching them with the hand – whether in the absence of light, or from that very light.

A datum about knowing that resists the ordinary account. Ava-bhavau ghatadinam: the *presence and absence* of pots and the like. Asprśann api panina: without even *touching* them *with the hand* – no contact, and yet the presence and absence are known. Kascid veda aprakase 'pi: *someone knows, even in the absence of light* – the dark room's furniture, known by no sense one can name; prakase tata eva va: *or from that very light* – the ordinary case. So knowing presence and absence does not require contact and does not always require illumination, and the samuddesa records this without explaining it. The verse opens a short movement on capacities that operate without their expected conditions – preparing 3.8.33's subtlety and 3.8.34's alternative account of what an action is.

Verse 3.8.33

व्यापि सौक्ष्म्यं क्वचिद् याति क्वचित् संहन्यते पुनः ।
अकुर्वणोऽथवा किञ्चित् स्वशक्त्यैवं प्रकाशते ॥ 33 ॥

*vyāpi saukṣmyam kvacid yāti kvacit samḥanyate punaḥ |
akurvāṇo'thavā kiñcit svaśaktyaivam prakāśate || 33 ||*

Pervading, it goes somewhere into subtlety; somewhere it is condensed again; or, doing nothing at all, it shines forth thus by its own capacity.

The three modes of a capacity's operation. Vyapi saukymam kvacid yati: *pervading*, it goes *somewhere into subtlety* – the power thins, spreads, becomes imperceptible. Kvacit samhanyate punaḥ: *somewhere it is condensed again* – and thickens, gathers (samhan: the verb of gathering, cognate with 3.8.29's samharantah). Akurvano 'thava kimcit sva-saktya evam prakasate: *or, doing nothing at all, it shines forth thus by its own capacity*. Three modes: thinning, thickening, and simply showing without acting. The third is the striking one – a capacity that manifests without operating (3.7.28's sahaja sakti standing as long as the substance, its assisting only occasional). So the capacities that 3.8.32's knower detects are these: pervading subtly, condensed, or merely shining. And none of the three is an action on the pot.

Verse 3.8.34

सर्वरूपस्य तत्त्वस्य यत् क्रमेणेव दर्शनम् ।
भागैरिव प्रकल्पतिश्च तां क्रियामपरे विदुः ॥ 34 ॥

sarvarūpasya tattvasya yat krameṇeva darśanam |
bhāḡairiva prakḷptiśca tāṁ kriyāmapare viduḥ || 34 ||

That seeing of the all-formed reality which is, as it were, in sequence — and the construction, as it were, by parts — others know as the action.

Another account of action, and it is thoroughly idealist. Sarva-rupasya tattvasya yat kramena iva darsanam: that seeing of the *all-formed reality* which is, as it were, in sequence — the one reality, omniform (3.3.56's sarvartha-rupata: the purity of cognition being its having all objects for its form), seen as-though-sequentially. Bhagaih iva prakḷptih ca: and the construction, as it were, by parts. Tam kriyam apare viduh: that others know as the action. So action is the sequential-seeming seeing of what is neither sequential nor parted — two iva's in a single verse, and both mark the appearance. This is 3.8.24's idealist entries developed: action is not in the world and not even in the mind as a thing; it is the *mode* in which the mind sees an omniform reality. And 3.8.35 immediately gives that reality its name.

Verse 3.8.35

सत्ता स्वशक्तियोगेन सर्वरूपा व्यवस्थिता ।
साध्या च साधनं चैव फलं भोक्ता फलस्य च ॥ 35 ॥

sattā svaśaktiyogena sarvarūpā vyavasthitā |
sādhyā ca sādhanam, caiva phalam, bhoktā phalasya ca || 35 ||

Existence, by connection with its own capacities, stands established as all-formed: as what is to be accomplished, as the means, as the fruit, and as the enjoyer of the fruit.

The Padakanda's master-doctrine, stated in the Kriya-samuddesa's own terms. Satta sva-sakti-yogena sarva-rupa vyavasthita: Existence, by connection with its own capacities, stands established as *all-formed* (3.1.33's satta carved by relata; 3.1.22's sarva-sakty-atma-bhutatvam). And the four: sadhya ca — as *what is to be accomplished* (the action); sadhanam ca eva — as the *means* (the karakas); phalam — the *fruit*; bhokta phalasya ca — and the *enjoyer of the fruit*. So the whole structure of purposive action — the doing, the instruments, the outcome, the one who gets it — is satta wearing four faces. Nothing in the list is other than the others. This is 3.2.14's fourfold (that is the seen, the seeing, the seer, and the purpose in the seeing) transposed from cognition to action, and it is the same one differentiating itself into the whole apparatus by which anything gets done.

Verse 3.8.36

क्रियामन्ये तु मन्यन्ते क्वचिदप्यनपाश्रिताम् ।
साधनैकार्थकारित्वे प्रवृत्तिमनपायिनीम् ॥ 36 ॥

kriyāmanyē tu manyante kvacidapyanapāśritām |
sādhanaikāṛthakāritve pravṛttimanapāyinīm || 36 ||

But others consider action to be an operation not resorting to anything anywhere, and unfailing, in the means' effecting of a single purpose.

The process-account, offered as the alternative to 3.8.35. *Kriyam anye tu manyante kvacid api anapasritam*: others consider action to be an operation not resorting to anything anywhere – *anapasrita*: leaning on nothing, resting on no substrate; the operation is primary and free-standing (3.7.33's *pravṛttir eva prathamam kvacid api anapasrita* – the operation itself first, resorting to nothing, drawing like a current). *Sadhana-eka-artha-karitve pravṛttim anapayinim*: an operation unfailing – *anapayin*, not lapsing – in the means' effecting of a single purpose. So action is the pure running-toward-one-end, needing no bearer and never failing while it runs. Against 3.8.35's *satta*-account (action as one of Being's four faces), this makes action fundamental and Being derivative. It is the boldest of the seven positions and it is stated in three words: *kvacid api anapasritam*.

Verse 3.8.37

सामान्यभूता सा पूर्व भागशः प्रविभज्यते ।
ततो व्यापाररूपेण साध्येव व्यवतिष्ठते ॥ 37 ॥

sāmānyabhūtā sā pūrvam bhāgaśaḥ pravibhajyate |
tato vyāpārārūpeṇa sādhyeva vyavatiṣṭhate || 37 ||

That, being general at first, is divided out part by part; thereafter, in the form of an operation, it stands as though to-be-accomplished.

The process-account's genesis. *Samanya-bhuta sa purvam*: that – the operation of 3.8.36 – being general at first: undifferentiated running, no parts, no direction. *Bhagasah pravibhajyate*: is divided out part by part – the analysis carves it. *Tatah vyapara-rupena sadhya iva vyavatiṣṭhate*: thereafter, in the form of an operation, it stands as though to-be-accomplished. So the sequence is: undivided operation, then carving, then the appearance of *sadhyatva*. And the *iva* again: *sadhya iva* – the to-be-accomplished-ness that 3.8.1 made the very definition of action is here an appearance, arriving only after the carving. Every account the *samuddesa* canvasses converges on this: whatever action is, its being to-be-done is not in it (3.8.20's *asadhya*, 3.8.21's *jayamana iva*) but in how it is taken.

Verse 3.8.38

प्रकृति साधनानां सा प्रथमं तच्च कारकम् ।
व्यापाराणां ततोऽन्यत्लमपरैरुपवर्ण्यते ॥ 38 ॥

*prakṛti sādhanānām sā prathamam tacca kārakam |
vyāpārāṇām tato'nyatlamaparairupavarṇyate || 38 ||*

That is the material cause of the means; it is first, and that is the karaka; thereafter, the otherness of the operations is described by others.

The process-account's ordering. Prakṛtiḥ sadhananam sa: *that* — the general operation — is the *material cause of the means*: the karakas are made out of it, not it out of them. Prathamam tac ca karakam: it is *first*, and *that* is the *karaka* — the primal operation is the original karaka, from which the six are differentiated (3.7.37's sodha kartrtvam eva: agency alone, sixfold). Tataḥ anyatvam vyaparanam aparaiḥ upavarṇyate: *thereafter*, the *otherness of the operations* is *described by others*. So the order is: one operation, then karakas as its parts, then the operations' mutual otherness as a further description. This inverts 3.7.1's picture (the means as capacity in the completing of actions) — there the karakas served the action; here they are made of it. And prakṛti — material cause — is the word 3.2.15 gave the supreme reality (prakṛtim param).

Verse 3.8.39

बहूनां सम्भवेऽर्थानां केचिदेवोपकारिणः ।
संसर्गे कश्चिदेषां तु प्राधान्येन प्रतीयते ॥ 39 ॥

*bahūnām sambhave'rthanām kecidevopakāriṇaḥ |
saṁsarge kaścideṣām tu prādhānyena pratīyate || 39 ||*

Among many possible meanings, only certain ones are assisting; and in the commingling, some one of these is understood as principal.

How one operation among many becomes the verb. Bahunam sambhave arthanam kecid eva upakariṇaḥ: among *many possible meanings*, only *certain ones* are *assisting* — a situation contains countless operations, and few contribute (3.7.2's sarvada sarvatha bhavat: the universe existing always and in every way, and something intended somewhere). Samsarge kascid esam tu pradhanyena pratiyate: and in the *commingling*, *some one* of these is understood as *principal*. So the verb picks one operation from a crowd of assisting ones and makes it the principal, and the rest become its karakas (3.8.15's pradhana-bhutam kriyam; the others taking its designation). Kascid — some one: the indefinite is the samuddesa's constant, and it means the selection is not dictated by the crowd.

Verse 3.8.40

साध्यत्वात्तत्र चाख्यातैर्व्यपाराः सिद्धसाधनाः ।
प्राधान्येनाभिधीयन्ते फलेनापि प्रवर्तिताः ॥ 40 ॥

sādhyaṭvāttatra cākhyāṭairvyāpārāḥ siddhasāadhanāḥ |
prādhānyenābhidhīyante phalenāpi pravartitāḥ || 40 ||

And there, from being to-be-accomplished, the operations whose means are accomplished are expressed as principal by the finite verbs, impelled also by the fruit.

The verb's office. Sadhyatvat tatra akhyataih vyaparāḥ siddha-sadhanāḥ: *there, from being to-be-accomplished, the operations whose means are accomplished* — the karakas standing ready, siddha (3.7.79's siddha-rupa) — pradhanyena abhidhīyante: are expressed as *principal* by the *finite verbs*. So the finite verb's whole job is to present one operation as principal and to-be-accomplished, with its means already standing. Phalena api pravartitāḥ: *impelled also by the fruit* — and what drives the presentation is the outcome wanted (3.7.128's karma as the action's impeller; 2.113's prayojana). The verb is thus a selection (3.8.39) presented under sadhyatva (3.8.1) and motivated by a fruit — three conditions, and none of them in the world.

Verse 3.8.41

एकत्वावृत्तिभावाभ्यां भेदाभेदसमन्वये ।
संख्यास्तत्रोपलभ्यन्ते संख्येयावयवक्रियाः ॥ 41 ॥

ekatvāvṛttibhāvābhyām.bhedābhedasamanvaye |
saṁkhyāstatropalabhyante saṁkhyeyāvayavakriyāḥ || 41 ||

In the concomitance of difference and non-difference, through oneness and repetition — there numbers are apprehended, whose countables are the parts of the action.

How actions get counted. Ekatva-avṛtti-bhāvābhyām bheda-abheda-samanvaye: through *oneness* and *repetition*, in the *concomitance of difference and non-difference* — the action is one (hence countable as one) and its parts recur (hence countable as many). Saṁkhyah tatra upalabhyante saṁkhyeya-avayava-kriyah: *numbers are apprehended there, whose countables are the parts of the action*. So 'he cooked twice' counts the whole; 'he stirred ten times' counts a part; and both are available because the action is one-and-many (3.8.4's construed unity of sequential parts). Number attaches wherever the carving stops — which is 3.6.28's finding (oneness would not stand if one did not construct manifoldness) applied to events, and 3.1.51-52's number-doctrine given its temporal case.

Verse 3.8.42

सिद्धस्यार्थस्य पाकादेः कथं साधनयोगिता ।
साध्यत्वे वा तिङन्तेन कृतां भेदो न कश्चन ॥ 42 ॥

siddhasyārthasya pākādeḥ katham.sāadhanayogitā |
sādhyatve vā tiṅantena kṛtām.bhedo na kaścana || 42 ||

How can an accomplished meaning like 'paka' have connection with means? Or, if it is to-be-accomplished, there is no difference whatever from what is done by a finite verb.

A dilemma for the action-noun. Take 'paka' — cooking, the noun formed by the ghan-affix. Siddhasya arthasya pakadeḥ katham sadhana-yogita: how can an *accomplished* meaning like 'paka' have connection with means? A noun presents its object as siddha, finished (3.8.17: the accomplished takes no verb, its expectancy withdrawn) — yet 'paka' takes karakas: 'the cooking of rice by Devadatta'. An accomplished thing should want nothing. Sadhyatve va tinantena krtam bhedo na kascana: or, if it is to-be-accomplished, there is no difference whatever from what is done by a *finite verb* — grant it sadhyatva and the noun is a verb, and the ghan-affix is idle. So: accomplished and it cannot take karakas; to-be-accomplished and it is not a noun. The dilemma targets the samuddesa's own central distinction (3.8.29's verbs deploying sequence, nouns withdrawing it).

Verse 3.8.43-44

तत्र कारकयोगाया यद्याख्यातं निबन्धनम् ।
षष्ठ्याः सा लेन संबन्धे व्युदस्ता कर्तृकर्मणोः ॥ 43 ॥
एकाभिधान एकोऽर्थो युगपच्च द्विधर्मभाक् ।
न सम्भवति सिद्धत्वे स साध्यः स्यात् कथं पुनः ॥ 44 ॥

tatra kārakayogāyā yadyākhyātam.nibandhanam |
ṣaṣṭhyāḥ sā lena sambandhe vyudastā kartṛkarmanoh || 43 ||
ekābhidhāna eko'rtho yugapacca dvidharmabhāk |
na sambhavati siddhatve sa sādhyah syāt katham.punah || 44 ||

(43) If the finite verb is there the ground for connection with karakas — the sixth case is excluded, in connection with the 'la'-affix, for agent and object. (44) In a single expression, one meaning does not simultaneously partake of two properties; being accomplished, how then could it be to-be-accomplished?

The dilemma pressed to a contradiction. (43): if the *finite verb* is the ground for karaka-connection, then sasthyah sa lena sambandhe vyudasta kartr-karmanoh — the *sixth case is excluded*, in connection with the la-affix, for *agent and object*: where a finite verb governs, one does not say 'Devadatta's cooking of rice's' — the karakas take their own cases and the genitive is barred (3.7.159's genitive prescribed for the exclusion of the compound). But 'paka' *does* take genitives. So 'paka' is not governed by a finite verb, and its karaka-connections need another ground. (44) then closes: eka-abhidhane eko'rthah yugapat ca dvi-dharma-bhak na sambhavati — in a *single expression*, *one meaning* does not *simultaneously* partake of *two properties*: it cannot be both siddha and sadhya. Siddhatve sa sadhyah syat katham punah: *being accomplished*, how then could it be *to-be-accomplished*? The contradiction is flat, and 3.8.45 answers it by denying its presupposition.

Verse 3.8.45

एतावत् साधनं साध्यमेतावदिति कल्पना ।
शास्त्र एव न वाक्येऽस्ति विभागः परमार्थतः ॥ 45 ॥

etāvat sādhanam sādhyametāvaditi kalpanā |
śāstra eva na vākye'sti vibhāgaḥ paramārthataḥ || 45 ||

'This much is the means, this much the to-be-accomplished' – this construction exists in the science alone, not in the sentence; there is no division in the highest sense.

The samuddesa's methodological summit, and it dissolves 3.8.42-44 at a stroke. Etavat sadhanam sadhyam etavad iti kalpana: 'this much is the means, this much the to-be-accomplished' – the whole sadhya/sadhana architecture, on which the Sadhana- and Kriya-samuddesas have both been built. Sastre eva na vakye 'sti: this construction exists in the science alone, not in the sentence. Vibhagah paramarthatah: there is no division in the highest sense. So the dilemma of 3.8.42-44 assumed that siddha and sadhya are properties a meaning must have or lack – and they are not properties at all; they are the sastra's postings on an undivided sentence-meaning. 'Paka' is neither accomplished nor to-be-accomplished; it is a word in a sentence whose meaning is one (2.143's flash), and the science divides it for its operations. This is 2.88's settlement (abstraction according to capacities, the practice preserved, the constitution untouched) applied to the categories that generate every verb and noun in the language.

Verse 3.8.46

आख्यातशब्दे भागाभ्यां साध्यसाधनवर्तिता ।
प्रकल्पिता यथा शास्त्रे स घनादिष्वपि क्रमः ॥ 46 ॥

ākhyātaśabde bhāgābhyām sādhyasādhanavartitā |
prakalpita yathā śāstre sa ghañādiṣvapi kramah || 46 ||

As, in the finite-verb word, the standing-in-to-be-accomplished-and-means is constructed by two portions in the science – that same procedure is in 'ghan' and the rest.

The consequence for both morphologies. Akhyata-sabde bhagabhyam sadhya-sadhana-vartita prakalpita yatha sastre: as, in the finite-verb word, the standing-in-to-be-accomplished-and-means is constructed by two portions in the science – the grammar analyses a verb into a root (giving the action) and an ending (giving the karaka-relation), and the analysis is the science's (3.7.13's assistance understood by the case-endings alone). Sa ghan-adisu api kramah: that same procedure is in 'ghan' and the rest – the action-noun is analysed identically. So verb and action-noun are the same construction differently distributed, and neither's siddha/sadhya character is in it. This completes 3.8.45: since the division is the sastra's, it can be run on both morphologies, and 3.8.42's dilemma (why does 'paka' behave like a verb?) has the obvious answer – because the same postings are made on it.

Verse 3.8.47

साध्यत्वेन क्रिया यत्र धातुरूपनिबन्धना ।
सत्त्वभावस्तु यस्तस्याः स घनादिनिबन्धनः ॥ 47 ॥

*sādhyatvena kriyā yatra dhāturūpanibandhanā |
satvabhāvastu yastasyāḥ sa ghañādinibandhanah || 47 ||*

Where action, as to-be-accomplished, is grounded in the root's form — but that state of thinghood of it is grounded in 'ghan' and the rest.

The division of labour, stated exactly. *Sadhyatvena kriya yatra dhatu-rupa-nibandhana*: where *action*, as to-be-accomplished, is grounded in the root's form — the dhatu carries the *sadhyatva*; that is what a root is for. *Sattva-bhavah tu yah tasyah sa ghan-adi-nibandhanah*: but that *state of thinghood* of it is grounded in 'ghan' and the rest — the affix confers *sattva*, thing-hood, on what the root gave as action. So 'paka' = root (action, *sadhya*) + ghan (thinghood, *siddha*), and the noun's paradox (3.8.42) is that it wears both because it is made of both. And by 3.8.45, both are postings — so the noun is a construction of two constructions. This is 3.1.35 arrived at from the morphology's side: Being with sequence is action, Being with sequence withdrawn is substance, and the ghan-affix is where the withdrawing happens.

Verse 3.8.48

बन्धुता भेदरूपेण बन्धुशब्दे व्यवस्थिता ।
समूहो बन्धवस्था तु प्रत्ययेनाभिधीयते ॥ 48 ॥

*bandhutā bhedarūpeṇa bandhuśabde vyavasthitā |
samūho bandhvavasthā tu pratyayenābhidhīyate || 48 ||*

Kinship, in the form of difference, stands settled in the word 'bandhu'; but the collection, the state of being kin, is expressed by the affix.

The division of labour of 3.8.47 shown on a nominal case. *Bandhuta bheda-rupena bandhu-sabde vyavasthita*: *kinship*, in the *form of difference*, stands settled in the word 'bandhu' — the stem carries the relation, and relations are differences (a kinsman is kin to someone). *Samuho bandhv-avastha tu pratyayena abhidhiyate*: but the *collection* — the *state of being kin* — is expressed by the affix: the -ta of *bandhuta* gathers the difference into a state. So the stem gives the differentiated relation and the affix gives the gathered condition — which is 3.8.47's structure (root gives action, ghan gives thinghood) in nominal morphology, and 3.8.29's (verbs deploy sequence, nouns withdraw it) at the level of a single derivation. *Samuha* — collection — is 3.8.4's word for what an action is: a collection whose non-difference the intellect constructs. The abstract suffix does to a relation what the mind does to sub-actions.

Verse 3.8.49

तत्र यं प्रति साध्यत्वमसिद्धा तं प्रति क्रिया ।
सिद्धा तु यस्मिन् साध्यत्वं न तमेव पुनः प्रति ॥ 49 ॥

tatra yam prati sādhyatvamasiddhā tam prati kriyā |
siddhā tu yasmin sādhyatvam na tameva punaḥ prati || 49 ||

There, with respect to what it is to-be-accomplished, the action is unaccomplished; but that in which it is accomplished – with respect to that same one it is not again to-be-accomplished.

The relativity of sadhyatva, stated as a rule. Tatra yam prati sadhyatvam asiddha tam prati kriya: with respect to *what* it is to-be-accomplished, the action is *unaccomplished* – sadhyatva is a relation, not a property: an action is to-be-done *for* someone, *toward* something. Siddha tu yasmin sadhyatvam na tam eva punaḥ prati: but that in which it is *accomplished* – with respect to *that same one* it is *not again* to-be-accomplished. So one action is siddha here and sadhya there, relative to different terms – which resolves 3.8.44's contradiction (one meaning cannot bear two properties simultaneously) by showing that the two are not properties but relations, and relations to different terms do not compete. This is 3.8.45's finding (the division is the science's, not the sentence's) given its logical form: siddha and sadhya are two-place, and the dilemma treated them as one-place.

Verse 3.8.50

राजः पुत्रस्य नप्तेति न राज्ञि व्यतिरिच्यते ।
पुत्रस्यार्थः प्रधानत्वं न चास्य विनिवर्तते ॥ 50 ॥

rājñah putrasya napteti na rājñi vyatiricyate |
putrasyārthaḥ pradhānatvam na cāsyā vinivartate || 50 ||

'The grandson of the king's son' – it is not separated in respect of the king; the son's meaning is principality, and this of his does not withdraw.

The relativity of 3.8.49 exhibited in a chain of genitives. Rajnah putrasya napta iti: 'the grandson of the king's son'. Na rajni vyatiricyate: it is *not separated* in respect of the *king* – the king does not drop out of the chain; the grandson is still his. Putrasya arthah pradhanatvam na ca asya vinivartate: the son's meaning is *principality*, and *this of his does not withdraw* – the son is principal relative to the grandson and subordinate to the king, and his principality is not cancelled by his subordination. This is 3.7.162 exactly (having obtained principality in its own subordinate, it goes to remainder-hood in the principal; therefore principality is not lost) – and its recurrence here confirms that the samuddesa's structural insight is general: relational statuses are two-place, and a term holds opposite ones toward different terms without contradiction.

Verse 3.8.51

मृगो धावति पश्येति साध्यसाधनरूपता ।
तथा विषयभेदेन सरणस्योपपद्यते ॥ 51 ॥

mṛgo dhāvati paśyati sādhyasādhanarūpatā |
tathā viṣayabhedena saraṇasyopapadyate || 51 ||

'See — the deer runs!' — the character of to-be-accomplished and means; so, by difference of domain, it holds for the running.

One action bearing both statuses in a single sentence. *Mrgo dhavati pasya iti*: 'see — the deer runs'. *Sadhya-sadhana-rupata*: the character of to-be-accomplished and means — the running is *sadhya* (it is what the deer is doing, presented as in-process) and *sadhana* (it is the means by which the seeing gets its object: you see the deer by its running). *Tatha visaya-bhedena saranasya upapadyate*: so, by difference of domain, it holds for the running. One running, two statuses, two domains — relative to the deer it is to-be-accomplished, relative to the seeing it is a means. This is 3.8.49's rule in a sentence anyone might say, and it is the *samuddesa*'s cleanest evidence that the *sadhya/sadhana* division is a matter of what one relates the action to (3.8.45's *sastre eva na vakye*).

Verse 3.8.52

लकृत्यक्तखलार्थानां तथाव्ययकृतामपि ।
रुढिनिष्ठाघनादीनां धातुः साध्यस्य वाचकः ॥ 52 ॥

lakṛtyaktakhalarthānām, tathāvyayakṛtāmapi |
rūḍhiniṣṭhāghañādīnām, dhātuḥ sādhyasya vācakaḥ || 52 ||

For the 'la'-affixes, the *krtya*, the *kta*, the *khal*-meanings, and likewise for the indeclinable-*krt* forms, the conventional, the *nistha*, the 'ghan' and the rest — the root is the expressor of the to-be-accomplished.

The root's invariance across every morphology. *La-krtya-cta-khal-arthanam*: for the *la*-affixes (finite verbs), the *krtya* (gerundives), the *kta* (past participles), the *khal*-meanings; *tatha avyaya-krtam api*: and likewise for the *indeclinable-krt* forms (gerunds, infinitives); *rudhi-nistha-ghan-adinam*: the conventional, the *nistha*, the 'ghan' and the rest (action-nouns). *Dhatuh sadhyasya vacakah*: the root is the expressor of the to-be-accomplished. Every derivative of a root, however nominal, however frozen into convention — all of them get their *sadhyatva* from the root, and the affixes do everything else. This is 3.8.47's division stated exhaustively: whatever a form does, its action-content is the *dhatu*'s, and its thing-content is the affix's. The list's length is the point — no derivative escapes.

Verse 3.8.53

साध्यस्यापरिनिष्पत्तेः सोऽयमित्यनुपग्रहः ।
तिङन्तैरन्तरेणैवमुपमानं ततो न तैः ॥ 53 ॥

sādhyasyāpariniṣpatteḥ so'yamityanupagrahaḥ |
tiṅantairantareṇevamupamānam tato na taiḥ || 53 ||

From the non-completion of the to-be-accomplished, there is no taking-up as 'that is this'; therefore there is no comparison by finite verbs, without something else.

Why verbs cannot be compared. Sadhyasya apariniṣpatteḥ: from the *non-completion* of the to-be-accomplished — an action, while presented as sadhya, is not finished (3.8.16-17: sadhyatva holds exactly between beginning and completion). So 'yam iti anupagrahaḥ: there is no *taking-up* as 'that is this' — the so 'yam identification (2.40, 2.128's abhijalpa) requires something settled to identify. Tinantaiḥ antareṇa evam upamaṇam tataḥ na taiḥ: *therefore* there is *no comparison by finite verbs, without something else*. One cannot say 'he runs like he runs' — comparison needs two completed terms, and verbs present nothing completed. This is a genuine linguistic observation: Sanskrit's comparison-apparatus attaches to nouns, and the samuddesa explains why from its own doctrine of sadhyatva.

Verse 3.8.54

साधनत्वं प्रसिद्धं च तिङ्क्षु संबन्धिनां यतः ।
तेनाध्यारोप एव स्यादुपमा तु न विद्यते ॥ 54 ॥

sādhanatvam prasiddham ca tiṅkṣu sambandhinām yataḥ |
tenādhyāropa eva syādupamā tu na vidyate || 54 ||

And since means-hood is well established for the relata in finite-verb utterances — therefore there would be superimposition alone; but comparison does not exist.

What happens instead of comparison. Sādhanatvam prasiddham ca tinuktesu sambandhinām yataḥ: since *means-hood* is *well established* for the relata in *finite-verb* utterances — in a verbal sentence the participants are already fixed as karakas (3.7.13's assistance understood by the case-endings). Tena adhyaropa eva syat upama tu na vidyate: *therefore* there would be *superimposition* alone; but *comparison* does not exist. Adhyaropa — superimposition (3.1.6's central term): where one might expect a comparison between two verbal situations, what actually happens is that one is laid over the other. So verbal 'comparison' is really projection: 'he flies like a bird' does not compare two flyings; it superimposes the bird's on his. The distinction is fine and it follows from 3.8.53: no completed terms, no comparison — only overlay.

Verse 3.8.55

न्यूनेषु च समाप्तार्थमुपमानं विधीयते ।
क्रिया चैवाश्रये सर्वा तत्र तत्र समाप्यते ॥ 55 ॥

nyūneṣu ca samāptārthamupamānam vidhīyate |
kriyā caivāśraye sarvā tatra tatra samāpyate || 55 ||

And comparison is prescribed for things of completed meaning among the deficient; and every action is completed in each substratum, there and there.

The two conditions comparison needs, and actions fail one. Nyunesu ca samapta-artham upamanam vidhiyate: *comparison* is prescribed for things of *completed meaning* among the *deficient* – one compares a lesser thing to a complete standard (2.63's upamana-upameya pair, where the standard always retains a property the compared lacks). Kriya ca eva asraye sarva tatra tatra samapyate: and *every* action is *completed* in *each substratum*, *there and there*. Every action completes wholly in each of its bearers (3.8.5's pratibhedam samapyate: the whole at each division). So no action is *deficient* relative to another: each is complete where it is, and comparison needs a deficient term. Hence the impossibility of 3.8.53, now given its second ground: not only are verbs unfinished (3.8.53), their actions are also never lacking (here) – and comparison requires both a complete standard and a lacking subject.

Verse 3.8.56

येनैव हेतुना हंसः पततीत्यभिधीयते ।
आतौ तस्य समाप्तत्वादुपमार्थो न विद्यते ॥ 56 ॥

yenaiva hetunā haṁṣaḥ patatītyabhidhīyate |
ātau tasya samāptatvādūpamārtho na vidyate || 56 ||

By that very cause by which it is said 'the goose flies' – from its being completed in the coming, the purpose of comparison does not exist.

The doctrine of 3.8.55 in an example. Yena eva hetuna hamsaḥ patati iti abhidhiyate: by that *very cause* by which it is said '*the goose flies*' – whatever makes the flying the goose's flying. Atau tasya samaptatvat: from its being *completed* in the *coming* – the flying is complete in the goose's own arriving; nothing is lacking in it. Upama-artho na vidyate: the *purpose of comparison* does not exist. So one cannot say 'he flies as the goose flies', because the goose's flying is not a standard against which anything is deficient – it is simply complete where it is, as every action is complete in its bearer (3.8.55). The example is well chosen: the goose is the tradition's stock simile-vehicle, and the verse denies that its flying can serve as one.

Verse 3.8.57

क्रियाणां जातिभिन्नां सादृश्यां नावधार्यते ।
सिद्धेश्च प्रक्रमे साध्यमुपमातुं न शक्यते ॥ 57 ॥

kriyāṇām jātibhinnām sādṛśyām nāvadhāryate |
siddheśca prakrame sādhyamupamātauṁ na śakyate || 57 ||

A similarity of actions, differing in universal, is not ascertained; and in the commencing of the accomplished, the to-be-accomplished cannot be compared.

The two impossibilities gathered. Kriyanam jati-bhinnanam sadrsyam na avadharyate: a *similarity of actions differing in universal is not ascertained* – two actions of different kinds have no common measure; flying and running share no jati under which they could be alike (3.1.14's anuvrtti: recurrence being the universal's mark, and there is none across kinds). Siddheh ca prakrame sadhyam upamatum na sakyate: and in the *commencing of the accomplished*, the *to-be-accomplished* cannot be *compared* – where the comparison-apparatus starts from settled terms, the unsettled cannot enter it. So actions cannot be compared across kinds (no shared universal) or within the verbal presentation (nothing settled). Between them the verse closes the case that 3.8.53-56 built: comparison is a nominal operation, and the reason is what verbs are.

Verse 3.8.58

वनं वृक्षा इति यथा भेदाभेदव्यपाश्रयात् ।
अर्थात्मा भिद्यते भावे स बाह्याभ्यन्तरे क्रमः ॥ 58 ॥

vanam vṛkṣā iti yathā bhedābhedavyapāśrayāt |
arthātma bhidyate bhāve sa bāhyābhyantare kramah || 58 ||

As 'forest' and 'trees' – from a resort to difference and non-difference, the meaning's self is differentiated; in the entity, that sequence is outer and inner.

The samuddesa's most compact image for its whole doctrine. Vanam vṛksah iti yatha: as 'forest' and 'trees' – one thing, two words: the forest is the trees, and 'forest' takes them as one while 'trees' takes them as many. Bheda-abheda-vyapasrayat artha-atma bhidyate: from a *resort to difference and non-difference*, the *meaning's self is differentiated* – the same reality carved one way or the other by which word one uses. Bhava sa bahya-abhyantare kramah: in the *entity*, that *sequence is outer and inner*. So the forest/trees pair is the noun/verb pair: gather and the sequence goes inside (the forest's trees are its internal manifold); disperse and it comes outside (the trees stand in a row). Krama is the same krama, relocated by the word. This is 3.8.29 (verbs deploy sequence, nouns withdraw it) shown in a case where both words are nouns – which proves the operation is not about word-class but about gathering.

Verse 3.8.59

सामान्ये भाव इत्यत्र यल्लिङ्गमुपलभ्यते ।
भेदानामनुमेयत्वान्न तत् तेषु विवक्ष्यते ॥ 59 ॥

sāmānye bhāva ityatra yallīṅgamupalabhyate |
bhedānāmanumeyatvānna tat teṣu vivakṣyate || 59 ||

The gender-mark which is apprehended in 'bhava' as the general — since the differences are to be inferred, that is not intended among them.

A grammatical detail with doctrinal weight. Samanye bhava iti atra yal lingam upalabhyate: the *gender-mark* apprehended in 'bhava' (being, existence) as the *general* — 'bhava' is masculine, and the abstract noun for existence-in-general carries that gender. Bhedanam anumeyatvat na tat tesu vivakṣyate: since the *differences* are to be *inferred*, that is not intended among them. The particular actions subsumed under bhava (cooking, going, whitening) do not inherit its masculinity; the gender belongs to the general word and does not distribute. So 'bhava' is masculine and cooking is not masculine — gender is a property of the word, not of what it means (3.6.10's direction-words, feminine, with nothing in direction to be engendered). And this prepares 3.8.60-62's argument that the root's meaning is one across all its gendered nominalizations.

Verse 3.8.60

निर्देशे चरितार्थत्वाल्लिङ्गं भावेऽविवक्षितम् ।
उपमासविधत्वाच्च भावादन्यत् पचादिषु ॥ 60 ॥

nirdeśe caritārthatvāllīṅgam bhāve'vivakṣitam |
upamāsavidhatvācca bhāvadanyat pacādiṣu || 60 ||

From its purpose having been served in the designation, the gender-mark is unintended in 'bhava'; and from its proximity to comparison, something other than 'bhava' is in 'paci' and the rest.

The gender-mark's status settled. Nirdeśe caritārthatvat lingam bhāve avivakṣitam: from its *purpose having been served* in the *designation*, the *gender-mark* is *unintended* in 'bhava' — caritārtha: spent, its errand discharged (2.54's words that vanish into their meaning; 3.7.83's animal that served the rite). The gender got the word said and means nothing. Upama-savidhatvat ca bhavad anyat pacadisū: and from its *proximity to comparison*, something other than 'bhava' is in 'paci' and the rest — because 'paci' can enter comparison-constructions in a way 'bhava' cannot (3.8.53-57's analysis), there is something in the particular roots beyond bare existence. So the verse concedes a residue: the roots are not simply bhava, or they would all behave alike. And 3.8.61-62 will locate the residue exactly.

Verse 3.8.61

भवतौ यत् पचादीनां तावदत्रोपदिश्यते ।
न च लिङ्गं पचादीनां भवतौ समवस्थितम् ॥ 61 ॥

*bhavatau yat pacādinām tāvadatropadiśyate |
na ca liṅgam pacādinām bhavatau samavasthitam ॥ 61 ॥*

Only so much of 'paci' and the rest as is in 'bhavati' is taught here; and the gender-mark of 'paci' and the rest does not stand settled in 'bhavati'.

The residue located. Bhavatau yat pacadinam tavad atra upadisyate: *only so much* of 'paci' and the rest as is in 'bhavati' (it exists, it becomes) is *taught here* — what the particular roots share with the existence-verb is what the doctrine addresses: their bhava-content. Na ca liṅgam pacadinam bhavatau samavasthitam: and the *gender-mark* of 'paci' and the rest does *not stand settled* in 'bhavati' — the particulars' grammatical properties do not transfer to the general verb. So the roots have bhava in common and their own marks besides, and the marks do not travel in either direction (3.8.59's non-distribution, now stated symmetrically). The verse is careful bookkeeping in service of the identification 3.8.62 is about to make.

Verse 3.8.62

एकश्च सोऽर्थः सत्ताख्यः कथञ्चित् कैश्चिदुच्यते ।
लिङ्गानि चास्य भिद्यन्ते पचिरूपादिभेदवत् ॥ 62 ॥

*ekaśca so'rthah sattākhyah kathañcit kaiściducyate |
liṅgāni cāsyā bhidyante pacirūpādibhedavat ॥ 62 ॥*

And that meaning is one, called Existence; it is somehow spoken of by some. And its marks are differentiated, like the differences of 'paci's form and the rest.

The identification, and it is the Padakanda's constant. Ekah ca so 'rthah satta-akhyah: and that *meaning* is *one*, called *Existence* — the root's meaning, all roots' meaning, is satta (3.1.34's tam pratipadika-artham ca dhatv-artham ca pracaksate; 3.8.23's bhava eva hi dhatv-arthah, the unbroken tradition). Kathamcit kaiscid ucyate: it is *somehow* spoken of by *some* — the shrug (2.171, 3.7.34's kathamcana): the schools name it variously and none says it well. Lingani ca asya bhidyante paci-rupadi-bhedavat: and its *marks* are *differentiated*, like the *differences* of 'paci's form and the rest. So: one meaning, Existence; many marks, differentiated as the roots' forms are. The residue 3.8.60 conceded is thus placed — it is in the *marks*, not in the *meaning*. Every root means satta, and they differ in how they mark it, and that is the whole story of the Sanskrit verb.

Verse 3.8.63

आचार्यो मातुलश्चेति यथैको व्यपदिश्यते ।
संबन्धिभेदादार्थात्मा स विधिः पक्तिभावयोः ॥ 63 ॥

*ācāryo mātulaśceti yathaiko vyapadiśyate |
saṃbandhibhedādarthātmā sa vidhiḥ paktibhāvayoh ॥ 63 ॥*

As one and the same is designated 'teacher' and 'maternal uncle' — the meaning's self, by difference of relata: that is the rule for 'pakti' and 'bhava'.

The samuddesa's last verse, and it closes with a homely simile. Acāryo matulah ca iti yatha ekah vyapadiśyate: as *one and the same* man is designated 'teacher' and 'maternal uncle' — one person, two names, and the names are not synonyms: they say quite different things. Saṃbandhi-bhedad artha-atma: the *meaning's self*, by *difference of relata* — he is teacher relative to his pupil and uncle relative to his sister's son, and the two designations differ because the relata differ, not because the man does. Sa vidhiḥ pakti-bhāvayoh: *that is the rule* for 'pakti' (cooking) and 'bhava' (being). So 'cooking' and 'being' name one thing under different relations — as 'teacher' and 'uncle' do. The Kriya-samuddesa ends by making its central identification (every root means satta, 3.8.62) intuitive: nobody is puzzled that one man is teacher and uncle, and nobody should be puzzled that one Existence is cooking and being. The relata differ; the self does not.

Kāla-samuddeśa — On Time

Verse 3.9.1

व्यापारव्यतिरेकेण कालमेके प्रचक्षते ।
नित्यमेकं विभु द्रव्यं परिमाणं क्रियावताम् ॥ 1 ॥

vyāpāravvyatirekeṇa kālameke pracakṣate |
nityamekaṁ vibhu dravyaṁ parimāṇaṁ kriyāvatām || 1 ||

Some declare time apart from operation: an eternal, one, all-pervading substance — the measure of things possessing action.

The rival account first, and it is the Vaisesika's. Vyapara-vyatirekena kalam eke pracaksate: *some declare time apart from operation* — time as a thing in its own right, not the operating of anything (against 3.8.36's account of action as an operation resorting to nothing, and against everything the Kriya-samuddesa built). Nityam ekam vibhu dravyam: an *eternal, one, all-pervading substance* — the Vaisesika's four predicates for kala exactly: it is a dravya, one of the nine, eternal and omnipresent. Parimanam kriyavatam: the *measure of things possessing action* — its office is to measure processes. So time is a container-substance in which actions occur and by which they are measured. Bhartrhari will not deny the office; he will deny the substance, and by 3.9.12 time will be nothing but the operating it was supposed to measure.

Verse 3.9.2

दिष्टिप्रस्थसुवर्णादि मूर्तिभेदाय कल्पते ।
क्रियाभेदाय कालस्तु संख्या सर्वस्य भेदिका ॥ 2 ॥

diṣṭiprasthasuvarṇādi mūrtibhedāya kalpate |
kriyābhedāya kālastu saṁkhyā sarvasya bhedikā || 2 ||

The 'disti', the 'prastha', the 'suvarna' and the rest serve for the difference of corporeal things; but time serves for the difference of actions — and number differentiates everything.

The three measures sorted by domain. Disti-prastha-suvarnadi murti-bhedaya kalpate: the *disti* (a span), the *prastha* (a dry measure), the *suvarna* (a weight) and the rest serve for the *difference of corporeal things* — length, volume, weight: the measures of bodies. Kriya-bhedaya kalah tu: but *time serves for the difference of actions* — it is the measure whose domain is processes (3.9.1's parimanam kriyavatam). Samkhya sarvasya bhedika: and *number differentiates everything* — number crosses all domains, counting bodies and actions alike (3.1.28's samkhya-jati resting on what rests on the individual). So there are three differentiators: spatial measures for bodies, time for actions, number for both. The taxonomy is the rival's and it is fair — and its interest is that time is placed as a *measure*, which is what 3.9.12 will dismantle: a measure is not a thing, it is an operation.

Verse 3.9.3

उत्पतौ च स्थितौ चैव विनाशे चापि तद्वताम् ।
निमित्तं कालमेवाहुर्विभक्तेनात्मना स्थितम् ॥ 3 ॥

*utpatau ca sthitau caiva vināśe cāpi tadvatām |
nimittam, kālamevāhurvibhaktenātmanā sthitam ॥ 3 ॥*

In the arising, in the standing, and in the destruction of things possessing those — they call time alone the occasioning ground, standing with a divided self.

Time's causal office on the rival account. Utpattau ca sthitau ca eva vinase ca api tadvatam: in the *arising*, the *standing*, and the *destruction* of things — the three great moments (and the six vikaras' reduction to two at 3.8.26-27, here as three). Nimittam kalam eva ahuh: they call *time alone* the *occasioning ground* — not a mere measure now but a *cause*: things arise, persist and perish *because of* time. Vibhaktena atmana sthitam: standing with a *divided self* — time is one (3.9.1) and stands divided, since it must be at each moment severally to do this work. So the Vaisesika's time is a substance that is one and divided, a measure and a cause. The tensions are already visible, and Bhartrhari lets them accumulate before he touches them. Vibhakta atma: a divided self — 3.7.96's dvaidha atma, the splitting that every such posit requires.

Verse 3.9.4

तमस्य लोकयन्त्रस्य सूत्रधारं प्रचक्षते ।
प्रतिबन्धाभ्यनुज्ञाभ्यां तेन विश्वं विभज्यते ॥ 4 ॥

*tamasya lokayantrasya sūtradhāram, pracakṣate |
pratibandhābhyānujñābhyām, tena viśvam, vibhajyate ॥ 4 ॥*

They declare it the stage-manager of this world-machine; by it the universe is divided, through obstruction and permission.

The samuddesa's most famous image, and it is one of the great images of Indian philosophy. Tam asya loka-yantrasya sutradharam pracaksate: they declare it the *sutradhara* of this *world-machine* — sutradhara: literally the thread-holder, the puppeteer; in the theatre, the stage-manager who directs the play. Loka-yantra: the world as a *machine*, a contrivance of moving parts. And the mechanism: pratibandha-abhyānujñābhyām tena visvam vibhajyate — by it the *universe is divided*, through *obstruction* and *permission*. Time holds things back and lets them go, and that holding-and-releasing is what makes a world of ordered succession rather than a simultaneous heap. Two operations only: no, and now. The image is being reported (pracaksate, they declare) and Bhartrhari will adopt it entirely — it survives the demolition of time-as-substance, because a puppeteer is not a container.

Verse 3.9.5

यदि न प्रतिबध्नीयात् प्रतिबन्धं च नोत्सृजेत् ।
अवस्था व्यतिकीर्येण् पौर्वापर्याविनाकृताः ॥ 5 ॥

yadi na pratibadhnīyāt pratinbadham, ca notsrjet |
avasthā vyatikīryeran paurvāmparyavinākṛtāḥ || 5 ||

If it did not obstruct, and did not release the obstruction — the states, deprived of before-and-after, would be jumbled together.

The argument for 3.9.4's two operations, and it is a good one. Yadi na pratibadhnīyat: *if it did not obstruct* — if nothing held things back, everything possible would happen at once. Pratibandham ca na utsrjet: *and did not release* the obstruction — if nothing let go, nothing would ever happen. Avastha vyatikīryeran paurva-aparya-vinakṛtāḥ: *the states would be jumbled together, deprived of before-and-after*. Vyatikīrna: *intermixed, confused, run together* (3.7.144's cloud, where contradictory properties cannot be intended at once). So the world's seriality requires exactly these two: a holding that prevents simultaneity and a releasing that permits succession. The argument is transcendental in form — without the two operations, no ordered world — and it establishes the *office* of time without establishing a substance to fill it. Which is precisely the opening Bhartrhari needs.

Verse 3.9.6

तस्यात्मा बहुधा भिन्नो भेदैर्धर्मन्तिराश्रयैः ।
न हि भिन्नमभिन्नं वा वस्तु किञ्चन विद्यते ॥ 6 ॥

tasyātmā bahudhā bhinno bhedairdharmāntarāśrayaiḥ |
na hi bhinnamabhinnam, vā vastu kiñcana vidyate || 6 ||

Its self is manifoldly divided, by differences resting on other properties; for no thing whatever exists as divided or as undivided.

The turn against the substance-account begins. Tasya atma bahudha bhinno bhedaiḥ dharmantaraśrayaiḥ: *its self is manifoldly divided, by differences resting on other properties* — time's divisions come from elsewhere, from the properties of what it times (3.1.15's places constructed by the properties of the conjoined; 3.6.12's mountain's sides from the sun). And the general principle: na hi bhinnam abhinnam va vastu kimcana vidyate — *for no thing whatever exists as divided or as undivided*. This is 3.1.20-21 verbatim (neither oneness nor manifoldness is found in the self-realities of things uncomingled; difference and non-difference are adjuncts imposed by another). So the Vaiśeṣika's time cannot be *one* (3.9.1's ekam) and cannot be divided (3.9.3's vibhaktena atmana), because nothing is either. The rival's first predicate has gone.

Verse 3.9.7

नैको नाप्यनेकोऽस्ति न शुक्लो नापि चासितः ।
द्रव्यात्मा स तु संसर्गदिवंरूपः प्रकाशते ॥ 7 ॥

naiko nāpyaneko'sti na śuklo nāpi cāsiṭaḥ |
dravyātmā sa tu saṁsargādevamrūpaḥ prakāśate || 7 ||

It is neither one nor many; it is neither white nor black; but that substance-self, from commingling, shines forth as of such a form.

The negations, and they are the Padakanda's standing four. Na ekah na api anekah asti: it is *neither one nor many* (3.1.21's na ekatvam na api nanatvam). Na suklo na api ca asitah: *neither white nor black* — no quality either. Dravya-atma sa tu samsargat evam-rupah prakasate: but that *substance-self, from commingling, shines forth as of such a form*. So time, taken in itself, bears no predicate; taken in commingling, it shows as whatever it shows as. This is 3.2.12-13's paired tetralemmas (neither is nor is not; is and is not) applied to kala — and it is applied to *dravya-atma*, the substance-self, which is 3.2.11's identification (the real standing when the configurations are withdrawn is sabda-tattva). So time's substance-hood is not denied; it is granted and emptied: time is dravya as everything is dravya, and dravya bears no predicates.

Verse 3.9.8

संसर्गिणां तु ये भेदा विशेषास्तस्य ते मताः ।
स भिन्नस्तैर्व्यवस्थानां कालो भेदाय कल्पते ॥ 8 ॥

saṁsargiṇām, tu ye bheda viśeṣāstasya te matāḥ |
sa bhinnastairvyavasthānām, kālo bhedāya kalpate || 8 ||

The differences of the things commingled with it are held to be its particulars; divided by those, time serves for the difference of the settled arrangements.

Where time's divisions actually come from. Samsarginam tu ye bhedah visesah tasya te matah: the *differences of the things commingled* with it are held to be *its particulars* — time's minutes and seasons are the differences of what happens in it, credited to it. Sa bhinnah taih vyavasthanam kalo bhedaya kalpate: *divided by those, time serves for the difference of the settled arrangements*. So time is divided by the events, and then divides them — it borrows its divisions from what it differentiates and hands them back. The circle is exact and it is not vicious on Bhartrhari's account: it is what a sakti does (3.6.6's dig-vyavastha na vidyate: places are arranged by direction, and direction is not arranged; the capacities are brought about by assistance). Time orders everything and is itself ordered by what it orders — which is 3.6.20's finding (direction, differentiated by another's difference, serves for differentiation alone).

Verse 3.9.9

विशिष्टकालसंबन्धाद् वृत्तिलाभः प्रकल्पते ।
शक्तीनां संप्रयोगस्य हेतुत्वे नावतिष्ठते ॥ ९ ॥

viśiṣṭakālasambandhād vṛttilābhah prakalpate |
śaktīnām samprayogasya hetutve nāvatiṣṭhate || 9 ||

From connection with a particular time, the obtaining of operation is constructed; it does not stand as the cause in the conjunction of the capacities.

Time's role in the operation of capacities. Visista-kala-sambandhad vṛtti-labhaḥ prakalpyate: from connection with a *particular time*, the *obtaining of operation* is *constructed* – a capacity operates *when* its time comes; the seed sprouts in spring (3.7.28's sahaja sakti standing always, its assisting only at the action's time). Saktinam samprayogasya hetutve na avatiṣṭhate: it does *not stand as the cause* in the *conjunction of the capacities*. So time does not *make* the capacities meet; it permits their meeting to operate. The distinction is fine and it is 3.9.4's: time obstructs and releases; it does not push. The seed has its power and the soil has its; time does not supply either, and without time's release neither operates. Prakalpyate – is constructed: even the obtaining of operation is a construal.

Verse 3.9.10

जन्माभिव्यक्तिनियमाः प्रयोगोपनिबन्धनाः ।
नित्याधीनास्थिति त्वाच्च स्थितिनियमपूर्विका ॥ १० ॥

janmābhivyaktinīyamāḥ prayogopanibandhanāḥ |
nityādhīnāsthiti tvācca sthitiṇīyamapūrvikā || 10 ||

The restrictions of birth and of manifestation are grounded in employment; and from the standing being dependent on the eternal, the standing is preceded by restriction.

Two sources of temporal order. Janma-abhivyakti-niyamah prayoga-upanibandhanah: the *restrictions of birth* and of *manifestation* are *grounded in employment* – what arises when is fixed by prayoga, the deployment (3.7.92's viniyoga; 2.258's mantras obtaining difference by their application). Nitya-adhinasthititvat ca sthitiṇīyama-purvika: and from the *standing being dependent on the eternal*, the *standing is preceded by restriction*. So persistence too is restriction-governed: a thing stands because it is held (3.9.4's pratibandha), and its standing depends on the eternal – on time, which is the holding. Sthitiṇīyama-purvika: standing is preceded by restriction. Nothing persists by inertia; everything persists by being held, and the holding is time's obstruction (3.9.5's argument: without obstruction, no order).

Verse 3.9.11

स्थितस्यानुग्रहस्तैर्धर्मैः संसर्गिभिस्ततः ।
प्रतिबन्धस्तिरोभावः प्रहाणमिति चात्मनः ॥ 11 ॥

*sthitasyānugrahastairdharmaih samṣargimbhistataḥ |
pratibandhastirobhāvaḥ prahāṇamiti cātmanah || 11 ||*

Then, of what stands, there is favouring by those commingling properties; and obstruction, disappearance, abandonment – these of its self.

The four things that happen to what stands. Sthitasya anugrahaḥ taiḥ dharmaiḥ samsargibhiḥ tataḥ: of *what stands*, there is *favouring* by those *commingling* properties – a standing thing is assisted by what it is with (3.3.5's upakara; 3.7.12's whatever assists is the means). And then three privations: pratibandhah – *obstruction* (held back); tirobhavah – *disappearance* (hidden); prahanam – *abandonment* (let go). Iti ca atmanah: *these of its self*. So a thing's career is: standing, favoured, obstructed, hidden, abandoned – and every one of the five is a relation to what it is commingled with or to the time that holds it. Nothing in the list is the thing's own doing. This is the six vikaras (1.3, 3.1.36) redistributed as time's operations on a persisting thing, and it prepares the identification of 3.9.12.

Verse 3.9.12

प्रत्यवस्थं तु कालस्य व्यापारोऽत्र व्यवस्थितः ।
काल एव हि विश्वात्मा व्यापार इति कथ्यते ॥ 12 ॥

*pratyavastham tu kālasya vyāpāro'tra vyavasthitah |
kāla eva hi viśvātmā vyāpāra iti kathyate || 12 ||*

But at each state, time's operation stands settled here; for time alone, whose self is the universe, is spoken of as 'operation'.

The samuddesa's central identification, and it overturns 3.9.1 entirely. Praty-avastham tu kalasya vyaparo 'tra vyavasthitah: at *each state*, *time's operation* stands settled *here* – every one of 3.9.11's five moments is time operating. And then: kala eva hi visva-atma vyapara iti kathyate – for *time alone*, *whose self is the universe*, is spoken of as 'operation'. Time is operation. The rival opened by declaring time vyapara-vyatirekena, *apart from operation* (3.9.1), and the samuddesa answers: kala eva vyaparah – time is nothing else. What we call an operation is time operating; what we call time is the operating. And visva-atma: whose self is the universe (3.7.41's sky, earth, wind, sun as portions of the inner-organ reality standing outside). So time is not a container of processes nor a measure of them; it is the processing, and it is everything. The Kriya-samuddesa's action (3.8.36's operation resorting to nothing) and this samuddesa's time are the same doctrine.

Verse 3.9.13

मूर्तीनां तेन भिन्नानामाचयापचयाः पृथक् ।
लक्ष्यन्ते परिणामेन सर्वासि भेदयोगिना ॥ 13 ॥

mūrtinām tena bhinnānāmācayāpacayāḥ pṛthak |
lakṣyante pariṇāmena sarvāsām.bhedayoginā || 13 ||

By it, the accumulations and diminutions of corporeal things, which are divided, are severally marked out — through transformation, which is joined with difference for all of them.

Time's work on bodies. Murtinam tena bhinnanam: of corporeal things, divided by it — bodies, differentiated by time (3.9.8's divisions borrowed and handed back). Acaya-apacayah pṛthak lakṣyante: their accumulations and diminutions are severally marked out — growth and decay, the two middle vikaras (vardhate, apaksiyate). Parinamena sarvasam bheda-yogina: through transformation, which is joined with difference for all of them. So time marks every body's waxing and waning, and the marking is parinama — real transformation, the Samkhya's word (3.2.15's prakṛti-vikara relation, there accepted as simile and its metaphysics declined). The verse grants the bodies their real change and locates the marking of it in time — which on 3.9.12's identification means: the changing is time. Nothing changes in time; the changing is what time is.

Verse 3.9.14

जलयन्त्रभ्रमावेशसदृशीभिः प्रवृत्तिभिः ।
स कलाः कलयन् सर्वाः कालाख्यां लभते विभुः ॥ 14 ॥

jalayantrabhramāveśasadrśībhiḥ pravṛttibhiḥ |
sa kalāḥ kalayan sarvāḥ kālākhyām.labhate vibhuḥ || 14 ||

By operations resembling the whirling-motion of a water-machine, that all-pervading one, reckoning all the moments, obtains the name 'time'.

The samuddesa's second great image, and its etymology is the doctrine. Jala-yantra-bhrama-avesa-sadrśibhiḥ pravṛttibhiḥ: by operations resembling the whirling-motion of a water-machine — the araghatta, the Persian wheel with its chain of buckets: turning endlessly, each bucket rising full and descending empty, the whole driven by the water it lifts. Sa kalāḥ kalayan sarvāḥ kala-akhyam labhate vibhuḥ: that all-pervading one, reckoning all the moments, obtains the name 'time'. Kalayan — reckoning, counting, impelling: the etymology derives kala from kal, and the derivation is exact for once (against 2.170-175's general scepticism about etymologies): time is what reckons. So time's name says what 3.9.12 said: it is not a thing that gets counted but the counting. And the water-wheel is chosen because it is a machine whose motion is its whole reality — stop it and there is no wheel-ness left over.

Verse 3.9.15

प्रतिबद्धाश्च यास्तेन चित्रा विश्वस्य वृत्तयः ।
ताः स एवानुजानाति यथा तन्तुः शकुन्तिकाः ॥ 15 ॥

pratibaddhāśca yāstena citrā viśvasya vṛttayah |
tāḥ sa evānujānāti yathā tantuḥ śakuntikāḥ || 15 ||

And those variegated operations of the universe which are held back by it — those same it permits, as a string does the birds.

The sutradhara-image (3.9.4) refined, and the refinement is beautiful. Pratibaddhah ca yah tena citrah visvasya vṛttayah: the *variegated operations* of the *universe* which are *held back* by it — everything possible, restrained. Tah sa eva anujanati: *those same it permits*. Yatha tantuh sakuntikah: as a *string* does the *birds* — the fowler's tethered birds, each on its string: held from flying free, released to the length the string allows. The image is more precise than the puppeteer's: the birds have their own power of flight (3.7.124's all proceeding for their own becoming), and the string neither gives it nor takes it — it only permits so much and no more. So time does not move things; it lets them move, to the extent it lets them. Pratibandha and anujna (3.9.4's two operations), and the bird supplies its own wings.

Verse 3.9.16-17

विशिष्टकालसंबन्धाल्लब्धपाकासु शक्तिषु ।
क्रियाभिव्यज्यते नित्या प्रयोगाख्येन कर्मणा ॥ 16 ॥
जातिप्रयुक्ता तस्यां तु फलव्यक्तिः प्रतीयते ।
कुतोऽप्यद्भुतया वृत्त्या शक्तिभिः सा नियम्यते ॥ 17 ॥

viśiṣṭakālasambandhāllabdhapākāsu śaktiṣu |
kriyābhivyajyate nityā prayogākhyena karmaṇā || 16 ||
jātiprayuktā tasyām tu phalavyaktiḥ pratiyate |
kuto'pyadbhutayā vṛttyā śaktibhiḥ sā niyamyate || 17 ||

(16) From connection with a particular time, when the capacities have obtained ripeness, the eternal action is manifested by the act called employment. (17) But in that, the manifestation of the fruit is understood as impelled by the universal; by some wonderful operation, it is restricted by the capacities.

The mechanism of ripening. (16): visista-kala-sambandhat labdha-pakasu saktisu — from connection with a *particular time*, the *capacities* having *obtained ripeness*: paka, ripening — the word 1.84 used for the seed-traces maturing into comprehension, and 2.148 for the wine's power arising by fermentation. Kriya abhivyajyate nitya prayoga-akhyena karmana: the *eternal action* is *manifested* by the act called *employment* — the action is eternal and its manifesting is timed (3.8.20's universal-theory, which held action asadhyā and apprehended as though sadhyā). (17): jati-prayukta tasyam tu phalavyaktiḥ pratiyate — the *manifestation of the fruit* is understood as *impelled by the universal* (3.1.25's jati as prayojika of the causes). Kuto 'pi adbhutaya vṛttya saktibhiḥ sa niyamyate: by some *wonderful operation*, it is *restricted* by the capacities. Adbhuta — wonderful: the word 1.142 gave the supreme station of speech and 3.3.81 gave the shining-forth at the footless station. Where the mechanism gives out, the samuddesa says so.

Verse 3.9.18

ततस्तु समवायाख्या शक्तिर्भेदस्य बाधिका ।
एकत्वमिव ता व्यक्तीरापादयति कारणैः ॥ 18 ॥

tatastu samavāyākhyā śaktirbhedasya bādhikā |
ekatvamiva tā vyaktīrāpādayati kāraṇaiḥ || 18 ||

But thereafter, the capacity called inherence, which annuls difference, brings those individuals, by their causes, to something like oneness.

Inherence recast as a temporal power. Tatah tu samavaya-akhya saktir bhedasya badhika: the capacity called inherence, which annuls difference – samavaya, the Vaisesika's intimate relation (3.3.13's machinery), here not a category but a sakti, and one whose office is to annul difference. Ekatvam iva ta vyaktir apadayati karanaih: it brings those individuals, by their causes, to something like oneness. Ekatvam iva: something like oneness – the iva marks it, as always. So inherence is the power by which a manifold of causes yields one thing: the threads become a cloth, the moments become a life. And it is a capacity, working in time (3.3.10's samavaya transcending difference and non-difference and standing in quite another way). What the Vaisesika made a static bond, the samuddesa makes a temporal operation of unification.

Verse 3.9.19

अथास्मान्नियमादूर्ध्वं जातयो याः प्रयोजिकाः ।
ताः सर्वा व्यक्तिमायान्ति स्वच्छे छाया इवाम्भसि ॥ 19 ॥

athāsmānniyamādūrdhvaṁ jātayo yāḥ prayojikāḥ |
tāḥ sarvā vyaktimāyānti svacche chāyā ivāmbhasi || 19 ||

Then, after this restriction, those universals which are the occasioners – all of them come to manifestation, like shadows in clear water.

The universals' arrival, with an image of great delicacy. Athasmat niyamad urdhvam: after this restriction – once time's holding has released (3.9.4's pratibandha lifted). Jātayo yah prayojikah: those universals which are the occasioners (3.1.25's jati deploying the causes for its own manifestation). Tah sarvah vyaktim ayanti: all of them come to manifestation. Svacche chaya iva ambhasi: like shadows in clear water – chaya in svaccha ambhas: reflections appearing on still water, arriving all at once, present without having travelled, and vanishing if the water stirs. So the universals manifest as reflections do: not by moving into place but by the medium's becoming fit. And the medium's fitness is time's releasing. The image completes 3.9.15's birds: there, held things let go; here, what fills the space the moment it is permitted.

Verse 3.9.20

कारणानुविधायित्वादथ कारणपूर्वकाः ।
गुणास्तत्रोपलभ्यन्ते स्वजातिव्यक्तिहेतवः ॥ 20 ॥

kāraṇānuvidhāyitvādatha kāraṇapūrvakāḥ |
guṇāstatropalabhyante svajātivyaktihetavaḥ || 20 ||

Then, from their conforming to the causes, the qualities — preceded by the causes — are apprehended there, being the grounds of the manifestation of their own universals.

The qualities' place in the sequence. Karana-anuvidhayitvat: from their *conforming to the causes* — the qualities follow the causes' lead; they do not arrive independently. Atha karana-purvakah gunah tatra upalabhyante: *then, preceded by the causes*, the *qualities* are *apprehended* there. Sva-jati-vyakti-hetavaḥ: being the *grounds of the manifestation of their own universals* — the redness is what makes redness-hood manifest (3.1.29's face manifested by water: the universal itself is what is expressed). So the sequence runs: time releases, universals manifest (3.9.19), causes operate, qualities appear conforming to them, and the qualities ground their own universals' manifestation. Each stage is a manifesting and none is a making. The whole causal order is a choreography of appearances, timed.

Verse 3.9.21

आश्रयाणां च नित्यत्वमाश्रितानां च नित्यता ।
ता व्यक्तीरनुगृह्णाति स्थितिस्तेन प्रकल्पते ॥ 21 ॥

āśrayāṇāṃ ca nityatvamāśritānāṃ ca nityatā |
tā vyaktīranugrīvāti sthitistena prakalpate || 21 ||

And from the eternality of the substrata and the eternality of what rests on them — it favours those individuals; thereby standing is constructed.

How persistence is produced. Asrayanam ca nityatvam asritanam ca nityata: the *eternality of the substrata* and the *eternality of what rests on them* — both the bearers and the borne are eternal (3.1.2's nityau eva; 3.1.41's universal standing in a non-eternal substratum by the unbroken succession). Ta vyaktir anugrhnati: it *favours those individuals* — time assists them (3.9.11's anugraha). Sthitih tena prakalpyate: *thereby standing is constructed*. So persistence is not a thing's own inertia but time's continued favouring of it — prakalpyate, constructed. This is 3.9.10's sthitiḥ niyama-purvika (standing is preceded by restriction) given its positive form: a thing stands because time keeps assisting it, and stops when time stops. The next verse draws the consequence.

Verse 3.9.22

अनित्यस्य यथोत्पादे पारतन्त्र्यं तथा स्थितौ ।
विनाशायैव तत् सृष्टस्वाधीनस्थितिं विदुः ॥ 22 ॥

anityasya yathotpāde pāratantryam tathā sthitau |
vināśāyaiva tat sṛṣṭasvādhīnasthitim viduḥ || 22 ||

As, for the non-eternal, there is dependence in its arising — so also in its standing; they know that its being loosed for destruction alone is its self-dependent standing.

The verse's second half is one of the samuddesa's sharpest sayings. *Anityasya yatha utpade paratantryam tathā sthitau*: as, for the *non-eternal*, there is *dependence* in its *arising* — so also in its *standing*: a thing depends on others to arise, and equally to persist (3.9.21's favouring). And then: *vinasaya eva tat srsta-svadhina-sthitim viduh* — they know that its being *loosed for destruction alone* is its *self-dependent standing*. A thing stands on its own only when it has been released for destruction. To be independent is to be dying. So long as it persists it is held (3.9.4's pratibandha); the moment the holding stops it is its own and it perishes. *Svadhina-sthiti* — self-dependent standing — is thus not a good state but the last one, and the verse's irony is exact: autonomy is what a thing gets when time has let it go.

Verse 3.9.23

स्थितः संसर्गिभिर्भवैः स क्रियास्वनुगृह्यते ।
नैषां सत्तामनुद् गृह्य वृत्तिर्जन्मवतां स्मृता ॥ 23 ॥

sthitah saṁsargibhirbhāvaiḥ sa kriyāsvanugrhyate |
naiṣāṁ sattāmanud grhya vṛttirjanmavatāṁ smṛtā || 23 ||

Standing, it is favoured in its actions by the commingling entities; the operation of things possessing birth is not remembered without taking up their existence.

The condition of a thing's operating. *Sthitah samsargibhih bhavaih sa kriyasu anugrhyate*: *standing*, it is *favoured in its actions* by the *commingling* entities — a thing acts only as assisted by what it is with (3.3.5's upakara; 3.7.12's whatever assists is the means). *Na esam sattam anudgrhya vrttir janmavatam smṛta*: the *operation* of things *possessing birth* is *not remembered* without *taking up their existence*. *Anudgrhya* — without taking up, without appropriating: a thing cannot operate without first having taken up its own existence, and that taking-up is what time's favouring gives it (3.9.21). So the born must be granted being before they can do anything, and the granting is temporal. The verse locates the whole karaka-system (3.7's crowd of self-interested operations) inside time's economy: nothing assists anything until time has let each participant be.

Verse 3.9.24

जराख्या कालशक्तिया शक्त्यन्तरविरोधिनी ।
सा शक्तिं प्रतिबध्नाति जायन्ते च विरोधिनः ॥ 24 ॥

*jarākhyā kālaśaktiryā śaktyantaravirodhinī |
sā śaktim pratibadhnāti jāyante ca virodhinah || 24 ||*

That capacity of time which is called old-age, which is opposed to other capacities — it obstructs the capacity, and the opposing ones are born.

Decay named as a capacity of time. Jara-akhya kala-saktih ya: that *capacity of time* which is called *old-age* — jara: aging, the fourth of the six vikaras' declining phase (apaksiyate). Sakty-antara-virodhini: which is *opposed to other capacities* — it is a power whose whole nature is to be against powers. Sa saktim pratibadhnati: it *obstructs* the capacity — 3.9.4's pratibandha, now aimed at a thing's own powers. Jayante ca virodhinah: and the *opposing ones* are *born* — and as the thing's powers are held, their opposites arise. So aging is not the wearing-out of a thing but time's holding-back of its capacities while their contraries are released. The account is exact and it is entirely within 3.9.4's two operations: nothing is done to the aging thing; its powers are obstructed and their enemies permitted. Decay is a schedule.

Verse 3.9.25

प्रयोजकास्तु ये भावाः स्थितिभा गस्य हेतवः ।
तिरोभवन्ति ते सर्वे यत आत्मा प्रहीयते ॥ 25 ॥

*prayojakāstu ye bhāvāḥ sthitibhā gasya hetavaḥ |
tirobhavanti te sarve yata ātmā prahīyate || 25 ||*

But those entities which are the occasioners, the causes of the portion of standing — all of them disappear, whereby the self is abandoned.

The mechanism of death. Prayojakah tu ye bhavah sthiti-bhagasya hetavah: those *entities* which are the *occasioners*, the *causes of the portion of standing* — whatever was favouring the thing (3.9.21, 3.9.23's samsargibhih bhavaih). Tirobhavanti te sarve: *all of them disappear* — they do not attack; they withdraw. Yata atma prahiyate: *whereby the self is abandoned*. So a thing dies because its supporters vanish, not because anything destroys it — 3.8.27's finding (in destruction there is non-thinghood; destruction is not a thing) given its positive mechanism. Prahiyate: is abandoned, let go (3.9.11's prahanam; 3.9.22's srsta, loosed). Death is desertion. And on 3.9.12's identification (time is operation), the deserting is time — which is to say that nothing kills anything, and things stop being held.

Verse 3.9.26

यथैवाद्भुतया वृत्त्या निष्क्रमं निर्निबन्धनम् ।
अपदं जायते सर्वं तथास्यात्मा प्रहीयते ॥ 26 ॥

yathāivādbhutayā vṛtṭyā niṣkramam, nirnibandhanam |
apadam, jāyate sarvam, tathāsyātmā prahīyate || 26 ||

Just as, by a wonderful operation, everything is born motionless, without ground, footless — so its self is abandoned.

Birth and death given the same three privations, and the vocabulary is 3.3's. Yatha eva adbhutaya vṛtṭya: just as, by a *wonderful* operation (3.9.17's adbhuta, and 3.3.81's atyadbhuta tv iyam vṛtṭih — 'this operation is utterly wonderful', where the self-reality of things not previously existent shines forth). Niskramam nirnibandhanam apadam jayate sarvam: *everything is born motionless, without ground, footless* — apada: 3.3.80's apada-sthana, the footless station of speech, where language has no floor to set a foot on. Tatha asya atma prahiyate: *so its self is abandoned*. Birth and death are the same wonder, and both happen where nothing supports them. So the samuddesa's account of death (3.9.25's desertion) and of birth converge on 3.3.80-81: at the place where speech has no footing, things arise and depart, and the arising is wonderful. The mechanism has run out, and the verse says so rather than inventing more.

Verse 3.9.27

क्रिययोरपवर्गिण्योनार्थसमवेतयोः ।
संबन्धिना विनैकेन परिच्छेदः कथं भवेत् ॥ 27 ॥

kriyayorapavargiṇyornārthasamavetayoh |
saṃbandhinā vinaikena paricchedaḥ katham, bhavet || 27 ||

Of two actions ending in completion, inherent in different objects — how could there be delimitation, without some one relatum?

The problem that time solves. Kriyayoh apavarginyoh nana-artha-samavetayoh: *of two actions ending in completion, inherent in different objects* — two processes, in different things, each running to its own end. Sambandhina vina ekena paricchedaḥ katham bhavet: *how could there be delimitation, without some one relatum?* How can one say which is longer, which came first, whether they overlapped? Two independent processes have no common measure unless something relates them. The question is genuine and it is the strongest argument for time's reality: something must be shared, or no comparison of durations is possible. And it is exactly the office 3.9.1's rival assigned time (pari-manam kriyavatam, the measure of things possessing action). The next verse answers with an image — and the answer will grant the office and refuse the substance.

Verse 3.9.28

यथा तुलायां हस्ते वा नानाद्रव्यव्यवस्थितम् ।
गुरुत्वं परिमीयेत कालादेवं क्रियागतिः ॥ 28 ॥

yathā tulāyām haste vā nānādravyavyavasthitam |
gurutvam.parimīyeta kālādevam.kriyāgatiḥ || 28 ||

As weight, established in various substances, would be measured on a balance or in the hand — so the course of action, by time.

The answer to 3.9.27, and the simile does exactly the required work. Yatha tulayam haste va nana-dravya-vyavasthitam gurutvam parimiyeta: as *weight*, established in *various substances*, would be *measured* on a *balance* or in the *hand* — different things, incommensurable in themselves, brought to comparison by a common instrument. Kalad evam kriya-gatih: so the *course of action*, by time. So time is the balance: what lets independent processes be compared. And notice what a balance is — it is not a substance the weights are in; it is an *operation* that brings them into relation, and it has no weight of its own that it contributes. Or the hand: even less a thing, more an act of hefting. So the office of 3.9.27 is granted (time measures) and the substance of 3.9.1 is refused (a measure is not a container). This is 3.9.12's identification given its argument: time is the weighing, not the scale-pan.

Verse 3.9.29

जहाति सहवृत्ताश्च क्रियाः स समवस्थिताः ।
व्रीहिर्यथोदकं तेन हायनाख्यां प्रपद्यते ॥ 29 ॥

jahāti sahavṛttāśca kriyāḥ sa samavasthitāḥ |
vrīhiryathodakam.tena hāyanākhyām.prapadyate || 29 ||

It abandons the actions that stand co-occurrent with it; as rice abandons water — thereby it obtains the name 'year'.

The samuddesa's most compressed image, and its transcription is difficult. Jahati saha-vrttah ca kriyah sa samavasthitah: it *abandons* the *actions* that stand *co-occurrent* with it — time lets go of what accompanies it (3.9.25's tirobhavanti; 3.9.22's srsta). Vrihir yatha udakam: as *rice* abandons *water* — the boiling rice, which takes up water and gives it off as steam; or the ripening grain, which draws water and dries. Tena hayana-akhyam prapadyate: *thereby* it obtains the name 'year' — hayana, the year, whose etymology the tradition connects with ha, to abandon: the year is what lets go. So time gets its name from its abandoning, as at 3.9.14 it got its name from its reckoning — two etymologies, two operations, and both are 3.9.4's: obstruction and permission, holding and letting go. The year is a letting-go, and the rice giving up its water is the figure for it.

[Contested: the rice-and-water simile is compressed and the transcription uncertain; whether the picture is boiling (rice releasing steam) or ripening (grain drying) cannot be settled, and the hayana-etymology (from ha, to abandon) is the traditional one the verse evidently invokes]

Verse 3.9.30

प्रतिबन्धाभ्यनुज्ञाभ्यां वृत्तिर्या तस्या शाश्वती ।
तया विभज्यमानोऽसौ भजते क्रमरूपताम् ॥ 30 ॥

pratibandhābhyānujñābhyām vṛttir yā tasyā śāśvatī |
tayā vibhajyamāno'sau bhajate kramarūpatām || 30 ||

That operation of it which consists of obstruction and permission is everlasting; being divided by that, it takes on the form of sequence.

Time's self-division, and it is reflexive. Pratibandha-abhyānujñābhyām vṛttir ya tasya śāśvatī: that operation of it consisting of obstruction and permission (3.9.4's two) is everlasting — the holding-and-releasing never stops, and it is what time is (3.9.12's *kala eva vyaparāḥ*). Taya vibhajyamāno 'sau bhajate krama-rūpatam: being divided by that, it takes on the form of sequence. So time is divided by its own operation: the holding-and-releasing is what carves time into before and after, and time is the holding-and-releasing. The circle is exact and it is not vicious — it is what a self-operating power looks like. Bhajate: takes on, wears (3.2.8's *tattvam eva avikalpitam vikalpa-rūpam bhajate*: reality itself, unconstructed, takes on the form of construction). Sequence is time's own garment, worn by its own act.

Verse 3.9.31

कर्तृभेदात् तदर्थेषु प्रकर्षापिचयौ गतः ।
समत्वं विषमत्वं वा स एकः प्रतिपद्यते ॥ 31 ॥

karṭṛbhedāt tadartheṣu prakarṣāpacayau gataḥ |
samatvam viṣamatvam vā sa ekaḥ pratipadyate || 31 ||

From difference of agents, having gone to excellence and diminution in respect of their purposes — that one thing attains sameness or unevenness.

Time's apparent variability. Karṭṛ-bhedāt tad-artheṣu prakarṣa-apacayau gataḥ: from difference of agents, having gone to excellence and diminution in respect of their purposes — the same hour is long to the waiting and short to the busy: time's felt extent varies with whose purposes are in play. Samatvam viṣamatvam va sa ekaḥ pratipadyate: that one thing attains sameness or unevenness. So time is one and is met as even or uneven, according to the agents and their ends. The verse does not psychologize this away: the unevenness is real, and it belongs to time-as-met, since time is nothing but its operating on somebody's purposes (3.9.12). And prakarṣa — excellence, the graded more-ness of 3.5.2-3 — is here temporal: an hour can be more.

Verse 3.9.32

क्रियाभेदाद्यथैकस्मिंस्तक्षाद्याख्या प्रवर्तते ।
क्रियाभेदात् तथैकस्मिन्नृत्वाद्याख्योपजायते ॥ 32 ॥

kiyābhedādyathaikasminṣtakṣādyākhyā pravartate |
kriyābhedāt tathaikasminnṛtvādyākhyopajāyate || 32 ||

As, from difference of action, the designation 'carpenter' and the rest proceeds with respect to one thing – so, from difference of action, the designation 'season' and the rest arises with respect to one thing.

The seasons explained by an occupational analogy. Kriya-bhedat yatha ekasmin taksady-akhya pravartate: as, from *difference of action*, the designation 'carpenter' and the rest proceeds with respect to *one thing* – one man is carpenter, cook, father: the names track what he does, and he is one. Kriya-bhedat tatha ekasmin rtv-ady-akhya upajayate: so, from difference of action, the designation 'season' and the rest arises with respect to *one thing*. Spring and autumn are one time under different doings – as teacher and uncle are one man under different relations (3.8.63's closing simile). So the calendar is an occupational list: time named by what it is doing. And the analogy's force is that nobody thinks the carpenter and the cook are two men, or that carpentry is a substance the man is in.

Verse 3.9.33

आरम्भश्च क्रिया चैव निष्ठा चेत्यभिधीयते ।
धर्मन्तराणामध्यासभेदात् सदसदात्मनः ॥ 33 ॥

ārambhaśca kriyā caiva niṣṭhā cetyabhidhīyate |
dharmāntarāṇāmadyāsabhedāt sadasadātmanah || 33 ||

'Commencement', 'action', and 'completion' – these are spoken of, from a difference of superimposition of other properties, upon what is of existent-and-non-existent self.

The three phases of any process, and their status. Arambhah ca kriya ca eva nistha ca iti abhidhiyate: 'commencement', 'action', and 'completion' – the three moments every act is analysed into. Dharmantarāṇām adhyasa-bhedat: from a *difference of superimposition of other properties* – adhyasa: superimposition (3.1.6's central term; 3.8.11's asad-adhyasa, the superimposition of what is not there). Sad-asad-atmanah: upon what is of *existent-and-non-existent self* – the action, whose phases are existent and non-existent by sequence (3.8.6, 3.8.19's atma eka iva grhyate). So the three phases are superimposed on something that is neither wholly there nor wholly not, and they differ only in which properties are laid on. This is the Kriya-samuddesa's analysis (3.8.4's construed collection) restated as time's doing: the phases are time's superimpositions.

Verse 3.9.34

यावांश्च द्रव्यणुकादीनां तावान् बिमवतोऽप्यसौ ।
न ह्यात्मा कस्यचिद् भेत्तुं प्रचेतुं वापि शक्यते ॥ 34 ॥

*yāvāṃśca dvyanukādīnām tāvān bimavato'pyasau |
na hyātmā kasyacid bhettum pracetum vāpi śakyate || 34 ||*

And as much as it is for the dyad and the rest, so much is it also for a mountain; for the self of anything whatever cannot be split or accumulated.

Time's indifference to magnitude. Yavan ca dvy-anukadinam tavan bimavato 'py asau: as much as it is for the *dyad* and the rest — the smallest composite of the atomists — so much is it also for a *mountain*. Time is not more for big things. Na hi atma kasyacid bhettum pracetum vapi sakyate: for the *self* of anything whatever cannot be *split* or *accumulated*. Nothing's self can be divided or added to — which is 3.6.15's great leveling (partlessness is equal for the atom and for the pot) now applied to time: as nothing has parts of its own, nothing has more time than anything else. So the mountain's age and the dyad's are not different quantities of a stuff. Duration is not a possession.

Verse 3.9.35

अन्यैस्तु भावैरन्येषां प्रचयः परिकल्प्यते ।
शनैरिदमिदं क्षिप्रमिति तेन प्रतीयते ॥ 35 ॥

*anyaistu bhāvairanyeṣām pracayaḥ parikalpyate |
śanairidamidam kṣipramiti tena pratīyate || 35 ||*

But by other entities, an accumulation is constructed for others; thereby it is understood: 'this slowly, this quickly'.

Where duration comes from, then. Anyaih tu bhavaih anyesam pracayah parikalpyate: by *other entities*, an *accumulation* is *constructed* for *others* — durations are conferred by comparison with something else: the mountain is old *relative* to the flower's seasons. Sanaih idam idam kṣipram iti tena pratiyate: *thereby* it is understood: 'this slowly, this quickly'. So fast and slow are relational constructions, borrowed from a comparison-term, and neither belongs to the process. This is 3.9.28's balance (weight measured by an instrument that contributes none) and 3.9.34's leveling (no thing has its own duration) combining: durations are conferred, comparisons confer them, and time is the conferring.

Verse 3.9.36

क्रियापाधिश्च सन् भूतभविष्यद्वर्तमानताः ।
एकादशभिराकारैर्विभक्ताः प्रतिपद्यते ॥ 36 ॥

*kriyāpādhiśca san bhūtabhaviṣyadvartamānatāḥ |
ekādaśabhirākārairvibhaktāḥ pratipadyate || 36 ||*

And being conditioned by action, it attains past-ness, future-ness and present-ness, divided by eleven forms.

The tense-doctrine, announced. Kriya-upadhih ca san: *being conditioned by action* — upadhi: the limiting adjunct (3.2.2's asatya-upadhi; 1.75's grahana-upadhi-bheda). Time takes its tenses from the actions that condition it, not from itself. Bhuta-bhaviṣyad-vartamanatah: *past-ness, future-ness and present-ness* — the three tenses, and they are -ta abstractions: past-ness, conditions rather than times. Ekadasabhih akaraih vibhaktah pratipadyate: *divided by eleven forms* it attains them. Eleven: Panini's ten lakaras plus one, or the traditional enumeration the next verses give. So the three tenses are eleven forms, and all of them are time conditioned by action. Time has no tense of its own — which follows from 3.9.12: if time is the operating, its tenses are the operations'.

Verse 3.9.37

क्रियापाधिश्च सन् भूतभविष्यद्वर्तमानताः ।
एकादशभिराकारैर्विभक्ताः प्रतिपद्यते ॥ 37 ॥

kriyāpādhiśca san bhūtabhaviṣyadvartamānatāḥ |
ekādaśabhirākārairvibhaktāḥ pratipadyate || 37 ||

And being conditioned by action, it attains past-ness, future-ness and present-ness, divided by eleven forms.

The source transmits this verse identically with 3.9.36 — the same two lines under two page-labels. Whether the wisdomlib edition has duplicated a single karika across two pages, or whether the text genuinely repeats it (a not-unknown scribal or recensional event), cannot be settled from the transcription alone. We record the duplication rather than silently collapsing it, and the substantive commentary is given at 3.9.36.

[Contested: the verse is transmitted identically with 3.9.36 in the source; this is very likely a pagination or transcription fault rather than a genuine repetition in the text, and readers consulting other editions should expect the numbering here to diverge]

Verse 3.9.38

भूतः पञ्जविधस्तत्र भविष्यंश्च चतुर्विधः ।
वर्तमानो द्विधाख्यात इत्येकादश कल्पनाः ॥ 38 ॥

bhūtaḥ pañjavidhastatra bhaviṣyamśca caturvidhaḥ |
vartamāno dvidhākhyāta ityekādaśa kalpanāḥ || 38 ||

The past there is five-fold, and the future four-fold; the present is declared two-fold — thus eleven constructions.

The eleven enumerated. Bhutah panca-vidhah tatra: the *past* is *five-fold* — Sanskrit's several past forms (the aorist, the imperfect, the perfect, and the periphrastics, distinguished by remoteness and witness). Bhaviṣyan ca catur-vidhah: the *future four-fold*. Vartamano dvidha akhyatah: the *present* is declared *two-fold*. Ity ekadasa kalpanah: thus *eleven constructions*. And the last word is the doctrine: kalpanah — *constructions*, not times. The tense-system is eleven ways of construing, not eleven regions of a substance. So Sanskrit's remarkably fine past-tense apparatus (five forms where a modern European language has two or three) is not a finer map of a real past; it is a richer set of postings (3.7.103's niyamah sabde na tu vastuni: the restriction is in the word, not in the thing).

Verse 3.9.39

काले निधाय स्वं रूपं प्रजया यन्निगृह्यते ।
भावास्ततो निवर्तन्ते तत्र संक्रान्तशक्तयः ॥ 39 ॥

kāle nidhāya svam rūpam prajñayā yannigrhyate |
bhāvāstato nivartante tatra samkrāntaśaktayah || 39 ||

Having deposited their own form in time, what is grasped by the understanding — from that, entities withdraw, their capacities having passed over into it.

The past, and it is a deposit-account. Kale nidhaya svam rupam: *having deposited their own form in time* — things leave their shape with time as one leaves goods in trust. Prajnaya yan nigrhyate: *what is grasped by the understanding* — what memory holds is that deposit. Bhavas tato nivartante: *from that*, entities *withdraw* — they go, and the form stays. Tatra sankranta-saktayah: *their capacities having passed over into it* — sankranta: transferred, migrated. So the past is where things leave their forms and powers when they withdraw, and what we grasp of the past is the deposit, not the things. This is a genuinely strange and beautiful account: the past is a repository, the deposits are real, and the depositors are gone. And it explains how the past is knowable (its forms are there) without being present (its things are not).

Verse 3.9.40

भाविनां चैव यद्रूपं तस्य च प्रतिबिम्बकम् ।
सुनिर्मृष्ट इवादर्शे काल एवोपपद्यते ॥ 40 ॥

bhāvinām caiva yadrūpam tasya ca pratibimbakam |
sunirmṛṣṭa ivādarśe kāla evopapadyate || 40 ||

And the form of things to come — the reflection of that, too, is possible in time alone, as in a well-polished mirror.

The future, and the image is exact. Bhavinam ca eva yad rupam: *the form of things to come*. Tasya ca pratibimbakam: *the reflection* of that. Sunirmṛṣṭa iva adarse: *as in a well-polished mirror* — sunirmṛṣṭa: thoroughly wiped, burnished. Kala eva upapadyate: *is possible in time alone*. So the future is time reflecting what has not arrived — a mirror-image with no object yet before it. The image completes 3.9.39's pair: the past is a deposit, the future is a reflection, and time holds both. And the reflection-figure carries all its earlier freight (1.49's borrowed properties; 2.294's reflection failing the effect-test; 3.9.19's shadows in clear water): the future is *there* in time as a face is in a mirror — present to be seen, doing nothing, and not a second thing. Sunirmṛṣṭa — well-polished — is the condition: a clouded mirror shows no future, and time's clarity is what makes anticipation possible.

Verse 3.9.41

तृणपर्णलतादीनि यथा स्रोतोऽनुकर्षति ।
प्रवर्तयति कालोऽपि मात्रा मात्रावतां तथा ॥ 41 ॥

*trṇaparnalatādīni yathā sroto'nukarṣati |
pravartayati kālō'pi mātṛā mātṛāvatām tathā || 41 ||*

As a current draws along grass, leaves, creepers and the like — so time too impels the measures of things possessing measure.

The current, and it is the samuddesa's third great image. Trna-parna-lata-adini yatha srotah anukarsati: as a *current draws along grass, leaves, creepers* and the like — the river carrying its debris: each thing moving at the water's speed, none of them swimming. Pravartayati kalo 'pi matra matravatam tatha: so *time too impels the measures of things possessing measure*. So things are carried, not travelling: their durations are the current's, as the leaf's speed is the river's. The image was already used at 3.7.33 (the capacity, in a single substratum, draws downward like a current) and here it is time's. And what a current is matters: not a thing in the water but the water's own moving — which is 3.9.12's identification exactly. Time is not what carries things along; it is the carrying.

Verse 3.9.42

आविश्येवानुसन्धत्ते यथा गतिमतां गतीः ।
वायुस्तथैव कालात्मा विधत्ते क्रमरूपताम् ॥ 42 ॥

*āviśyevānusandhatte yathā gatimatām.gatīḥ |
vāyustathaiva kālātmā vidhatte kramarūpatām || 42 ||*

As the wind, having entered them as it were, connects up the motions of things possessing motion — so the self of time brings about the form of sequence.

The wind, and it is the fourth image and the most intimate. Avisya iva anusandhatte yatha gatimatam gatih vayuh: as the *wind, having entered them as it were, connects up the motions of things possessing motion* — the wind that carries the leaves does not push them from outside; it enters and moves them from within, and their separate motions become one motion. Anusandhatte: connects up, threads together, joins into a sequence (the same root as the sutradhara's thread, 3.9.4). Tatha eva kala-atma vidhatte krama-rupatam: so the *self of time brings about the form of sequence*. So time works as wind does: entering (avisya iva: as it were — the iva is careful) and threading the many motions into one order. This is the puppeteer (3.9.4), the string (3.9.15), the current (3.9.41) and now the wind — four images for one operation, and each more inward than the last.

Verse 3.9.43

अयनप्रविभागश्च गतिश्च ज्योतिषां ध्रुवा ।
निवृत्तिप्रभवश्चैव भूतानां तन्निबन्धनाः ॥ 43 ॥

ayanaprabavibhāgaśca gatiśca jyotiṣāṃ dhruvā |
nivr̥ttiprabhavāścaiva bhūtānāṃ tannibandhanāḥ ॥ 43 ॥

The division of the solstices, and the fixed motion of the luminaries; and the ceasings and originations of beings — these are grounded in that.

The observable order, grounded. Ayana-pravibhagah ca: the *division of the solstices* — the year's great turning-points, by which the calendar is fixed. Gatih ca jyotisam dhruva: and the *fixed motion* of the *luminaries* — the stars' unfailing courses, the most reliable regularity anyone knew. Nivr̥tti-prabhavah ca eva bhutanam: and the *ceasings and originations of beings* — birth and death. Tan-nibandhanah: these are *grounded in that* — in time. So the astronomical order and the biological one have one ground, and it is the holding-and-releasing (3.9.4). The verse is quietly ambitious: it claims that what makes the sun turn at the solstice and what makes a man die are the same operation, differently scheduled. And nibandhana is the grounding-word the whole work has used since 1.13.

Verse 3.9.44-45

मात्राणां परिमाणा ये कालवृत्त्यनुयायनः ।
नक्षत्राख्या पृथक् तेषु चिह्नमात्रं तु तारकाः ॥ 44 ॥
रुतैर्मृगशकुन्तानां स्थावराणां च वृत्तिभिः ।
छायादिपरणामैश्च ऋतुधामा निरूप्यते ॥ 45 ॥

mātrāṇāṃ parimāṇā ye kālavṛtṭyanuyāyanah |
nakṣatrākhyā pr̥thak teṣu cihnamātram tu tārakāḥ ॥ 44 ॥
rutairmṛgaśakuntānāṃ sthāvarāṇāṃ ca vṛttibhiḥ |
chāyādiparaṇāmāiśca ṛtudhāmā nirūpyate ॥ 45 ॥

(44) Those measures of the moments which follow upon time's operation are severally called 'naksatra' among them; but the stars are a mere mark. (45) By the cries of beasts and birds, by the operations of stationary things, and by the transformations of shadow and the rest — the season's abode is determined.

How time is read, and the epistemology is careful. (44): matranam parimanah ye kala-vṛtṭy-anuyayinah: the *measures of the moments which follow upon time's operation* — the divisions that track the operating. Naksatra-akhya pr̥thak tesu: they are severally called 'naksatra' — the lunar mansions, the sky's calendar. And the correction: cihna-matram tu tarakah — the *stars* are a *mere mark*. The stars do not constitute the naksatras; they mark them. What is real is the operation; the constellations are its dial. (45) then lists the other dials: rutaih mrga-sakuntanam — by the *cries of beasts and birds*; sthavaranam ca vṛttibhiḥ — by the *operations of stationary things* (the flowering, the leaf-fall); chaya-adi-parinamaih ca — and by the *transformations of shadow and the rest* (the gnomon's shadow, the day's lengthening). Rtu-dhama nirupyate: the *season's abode is determined*. So one reads time from birdsong, budding and shadow as much as from stars — and all of them equally are marks (cihna-matra), none of them time.

Verse 3.9.46

निर्भसोपगमो योऽयं क्रमवानिव दृश्यते ।
अक्रमस्यापि विश्वस्य तत् कालस्य विचेष्टितम् ॥ 46 ॥

nirbhāsopagamo yo'yam kramavāniva drśyate |
akramasyāpi viśvasya tat kālasya viceṣṭitam || 46 ||

This coming-to-appearance which is seen as though possessing sequence — of a universe that is sequenceless — that is time's activity.

The samuddesa's thesis, stated in one line. Nirbhasa-upagamo yo 'yam kramavan iva drsyate: this coming-to-appearance which is seen as though possessing sequence — the iva marks it, as it has marked every claim of this kind since 1.48. Akramasya api visvasya: of a universe that is sequenceless — the world does not run; nothing is in order. Tat kalasya vicestitam: that is time's activity. So the whole appearance of sequence, in a sequenceless universe, is what time does. Vicestita: activity, exertion, the writhing or working of something — a strong word, and it fits 3.9.12 (time is operation): time does not exist and then act; the acting is all there is, and its product is the look of order. Everything the samuddesa has built converges here: the puppeteer, the string, the current, the wind — four figures for one activity, and this is what the activity produces.

Verse 3.9.47

द्रान्तिकव्यवस्थानमध्वाधिकरणं यथा ।
चिरक्षिप्रव्यवस्थानं कालाधिकरणं तथा ॥ 47 ॥

drāntikavyavasthānamadhvādhikaraṇam yathā |
cirakṣipravayavasthānam kālādhikaraṇam tathā || 47 ||

As the settled arrangement of far and near has the road for its locus — so the settled arrangement of long and quick has time for its locus.

The parallel that places time among the constructions. Duranti ka-vyavasthanam adhva-adhikaranam yatha: as the settled arrangement of far and near has the road for its locus — distance is measured along a road, and the road is where far-and-near live. Cira-ksipra-vyavasthanam kala-adhikaranam tatha: so the settled arrangement of long and quick has time for its locus. The parallel is exact and it is deflationary: as a road is not distance but where distance is reckoned, time is not duration but where duration is reckoned. And a road, notoriously, is not a thing — it is a way, made by going. Adhikarana: the locus, the karaka that assists at two removes without touching anything (3.7.148). So time is the locus of durations as the road is of distances: indispensable, reckoned along, and not an item.

Verse 3.9.48

तस्याभिन्नस्य कालस्य व्यवहारे क्रियाकृताः ।
भेदा इव त्रयः सिद्धा यांल्लोको नातिवर्तते ॥ 48 ॥

tasyābhinnaśya kālaśya vyavahāre kriyākṛtāḥ |
bhedā iva trayah siddhā yāmlloko nātivartate ॥ 48 ॥

Of that undivided time, in practice, three differences — as it were, made by action — are established, which the world does not transgress.

The three tenses, and every qualification matters. Tasya abhinnaśya kalasya: of that *undivided* time — one, partless (3.9.7's neither one nor many). Vyavahare: *in practice* — the divisions belong to transaction, not to time (2.297's sabdah loka-nibandhanah). Kriya-kṛtāḥ bheda iva trayah siddhah: *three differences, as it were, made by action, are established* — kriya-kṛta: action-made (3.9.36's kriya-upadhiḥ: time conditioned by action), and iva: as though. Yan loko na ativartate: which the *world does not transgress* — the phrase 2.462 used of sequence and simultaneity (which the world does not transgress). So the three tenses are practical, action-made, apparent divisions of an undivided time — and nobody escapes them. Both halves stand: constructed, and inescapable (3.6.18's dik-kala-parikalpana standing like consciousness itself).

Verse 3.9.49

एकस्य शक्तयः तिस्रः कालस्य समवस्थिताः ।
यत्संबन्धेन भावानां दर्शनादर्शने सताम् ॥ 49 ॥

ekasya śaktayaḥ tisraḥ kālaśya samavasthitāḥ |
yatsambandhena bhāvānām darśanādarśane satām ॥ 49 ॥

Three capacities of the one time stand established, by connection with which there is the seeing and the non-seeing of entities that exist.

The tenses recast as saktis, and this is the samuddesa's central move. Ekasya saktayah tisrah kalasya samavasthitah: *three capacities* of the *one* time stand established — not three times but three powers of one (1.2's Brahman resting on its differentiated powers; 3.7.37's agency alone, sixfold). And their office: yat-sambandhena bhavanam darsana-adarsane satam — by *connection with which* there is the *seeing* and the *non-seeing* of entities *that exist*. Satam — *that exist*: the entities exist throughout; what the tenses govern is whether they are seen. So past and future things are not absent; they are unseen. The tense-system is an optics, not an inventory — and this single word satam is the hinge of the whole doctrine. Everything is; the three powers decide what shows.

Verse 3.9.50

द्वाभ्यां स किल शक्तिभ्यां भावानां वरणात्मकः ।
शक्तिस्तु वर्तमानाख्या भावरूपप्रकाशिनी ॥ 50 ॥

dvābhyām, sa kila śaktibhyām, bhāvānām, varaṇātmaḥ |
śaktistu vartamānākhyā bhāvarūpaprakāśinī || 50 ||

By two of its capacities it is, indeed, of the nature of a screen for entities; but the capacity called 'present' is the illuminator of the entities' form.

The three sorted, two against one. *Dvabhyam sa kila saktibhyam bhavanam varanatmakah*: by two of its capacities it is of the nature of a screen — *varana*: a covering, a curtain, a screening-off. Past and future are screens: they hide what exists (3.9.49's *satam*). *Saktih tu vartamana-akhya bhava-rupa-prakasini*: but the capacity called 'present' is the illuminator of the entities' form. So of time's three powers, two conceal and one reveals; and 'the present' names not a stretch of time but a lighting. This is the *samuddesa*'s most economical statement of its tense-doctrine, and it inverts the ordinary picture entirely: things do not come into the present and pass out; they stand, and time's screens draw back and close.

Verse 3.9.51

अनागता जन्मशक्तेः शक्तिरप्रतिबन्धिका ।
अतीताख्या तु या शक्तिस्तया जन्म विरुध्यते ॥ 51 ॥

anāgatā janmaśakteḥ śaktirapratibandhikā |
atītākhyā tu yā śaktistayā janma virudhyate || 51 ||

The capacity called 'future' is not the obstructor of the capacity of birth; but that capacity called 'past' — by it, birth is opposed.

The two screens distinguished by their relation to birth. *Anagata janma-sakteh saktir apratibandhika*: the capacity called 'future' is not the obstructor of the capacity of birth — the future screens without preventing: what is future is unborn and may be born; the screen does not bar the door. *Atita-akhya tu ya saktih taya janma virudhyate*: but that capacity called 'past' — by it, birth is opposed. The past screens and bars: what is past cannot be born again. So the two screens differ in modality, and the difference is exactly the asymmetry we feel between past and future — the future is open and the past is closed. And the *samuddesa* has derived that asymmetry from time's powers rather than assuming it: *pratibandha* (3.9.4's obstruction) is what the past does, and the future merely conceals.

Verse 3.9.52

तमःप्रकाशवत्त्वेते त्रयोऽध्वानो व्यवस्थिताः ।
अक्रमास्तेषु भावानां क्रमः समुपलभ्यते ॥ 52 ॥

tamaḥprakāśavattvete trayo'dhvāno vyavasthitāḥ |
akramāsteṣu bhāvānām kramah samupalabhyate || 52 ||

These three roads stand established, having the nature of darkness and light; they are sequenceless, and in them the sequence of entities is apprehended.

The image that gathers 3.9.50-51. *Tamah-prakasavat tv ete trayo 'dhvano vyavasthitah*: these three roads stand established, having the nature of *darkness and light* — *adhvan*: road, the word 3.9.47 used for the locus of far-and-near; and the three roads are two dark and one lit. *Akramah tesu bhavanam kramah samupalabhyate*: they are *sequenceless*, and *in them the sequence of entities is apprehended*. So the three tenses are themselves without sequence — the past is not before the future — and the sequence we find is the entities' as apprehended in them. The image is precise: a lit stretch of road between two dark ones, and things showing as they pass through the light. Nothing moves the road; the road does not run. And 3.9.46's finding stands: the sequence is the appearance, and the appearing is time's activity.

Verse 3.9.53

द्वौ तु तत्र तमोरुपावेकस्यालोकवत् स्थितिः ।
अतीतमपि केषाञ्चित् पुनर्विपरिवर्तते ॥ 53 ॥

dvau tu tatra tamorūpāvekasyaālokavat sthitiḥ |
atītamapi keṣāñcit punarviparivartate || 53 ||

But two of them there are of the form of darkness; of one, the standing is like light. And for some, even the past turns round again.

The image confirmed and then complicated. *Dvau tu tatra tamo-rupau*: two of them are of the *form of darkness* — past and future, the screens (3.9.50's *varanatmakah*). *Ekasya alokavat sthitiḥ*: of one, the *standing is like light* — the present. Then: *atitam api kesamcit punar viparivartate* — and for some, even the *past turns round again*. Some hold that the past returns — the cyclical cosmologies, the recurring ages, the doctrine that what has been will be again. So 3.9.51's asymmetry (the past bars birth) is not universally granted: on a cyclical view the past's screen is not final. Bhartrhari reports it (*kesamcit*) without adopting it, and its presence here is honest doxography: the tense-doctrine he has built assumes an asymmetry his tradition does not unanimously hold.

Verse 3.9.54

युगपद्वर्तमानत्वं तद्धर्मं प्रतिपद्यते ।
केषांचिद्वर्तमानत्वाच्चैति तद्वदतीतताम् ॥ 54 ॥

yugapadvartamānatvam taddharmā pratipadyate |
keṣāṃcidvartamānatvāccaiti tadvadatītatām || 54 ||

What has that property attains present-ness simultaneously; and from the present-ness of some, it likewise goes to past-ness.

The cyclical view of 3.9.53 developed. Yugapad vartamanatvam tad-dharma pratipadyate: what has that property attains *present-ness simultaneously* – on the recurrence-view, the returning past becomes present all at once. Kesamcid vartamanatvat ca eti tadvad atitatam: and from the *present-ness of some*, it *likewise goes to past-ness*. So things cycle through the three, and the cycling is what the recurrence-doctrine describes. Bhartrhari is reporting a view in which the three saktis are not fixed stations but phases each thing passes through and re-enters – and it is compatible with his own account (the three are powers of one time, not regions) while its cyclicity is an addition he does not endorse. The report is careful and the reader is left to weigh it.

Verse 3.9.55

हेतूरकारादाक्षिप्तो वर्तमानत्वमागतः ।
शान्तहेतुपकारः सन् पुनर्नोपैति दर्शनम् ॥ 55 ॥

hetūrakārādākṣipto vartamānatvamāgataḥ |
śāntahetupakāraḥ san punarnopaiti darśanam || 55 ||

Drawn forth by the assistance of a cause, it has come to present-ness; the cause's assistance having subsided, it does not again come to seeing.

The linear account, against 3.9.53-54's cyclical one. Hetu-upakaraḥ akṣiptaḥ vartamanatvam āgataḥ: *drawn forth* by the *assistance of a cause*, it has come to *present-ness* – a thing enters the light because something assists it (3.9.23's favouring by commingling entities). Śānta-hetupakaraḥ san punar na upaiti darśanam: the cause's assistance having *subsided*, it does *not again* come to *seeing*. Śānta: quieted, stilled. So on this account the present is where a thing stands while its causes assist, and when they subside it goes dark and does not return – 3.9.25's death (the supporters withdrawing) as the general law of pastness. This is the asymmetry of 3.9.51 given its mechanism, and it is set here against 3.9.53's recurrence without adjudication. Two accounts of whether the dark road behind is final.

Verse 3.9.56

द्वे एव कालस्य विभोः केषांचिच्छक्तिवर्त्मनी ।
करोति याभ्यां भावानामुन्मीलननिमीलने ॥ 56 ॥

*dve eva kālasya vibhoḥ keṣāṃcicchaktivartmanī |
karoti yābhyāṃ bhāvānāmunmīlananimīlane || 56 ||*

For some, there are only two capacity-paths of the all-pervading time, by which it effects the opening and closing of the eyes of entities.

A rival reduction, and its image is lovely. Dve eva kalasya vibhoḥ kesamcit sakti-vartmani: only two capacity-paths of the all-pervading time, for some. Karoti yabhyam bhavanam unmilana-nimilane: by which it effects the opening and closing of the eyes of entities — unmilana and nimilana: the eye's opening and shutting; also the blossoming and closing of a flower. So on this account there are not three powers but two — a showing and a hiding — and past and future collapse into one darkness. The reduction is economical: 3.9.50 already made two of the three screens, and this view asks why two screens are two powers. And the image is the samuddesa's gentlest: things blink open and shut, and time is the blinking.

Verse 3.9.57

कालाभिः पृथगर्थाभिः प्रविभक्ते स्वभावतः ।
केचिद् बुद्ध्यनुसंहारलक्षणे ते प्रचक्षते ॥ 57 ॥

*kālābhiḥ prthagarthābhiḥ pravibhakte svabhāvataḥ |
kecid buddhyanusamhāralakṣaṇe te pracakṣate || 57 ||*

Some declare that they are divided, by their own nature, by times which have separate meanings, and are characterized by the intellect's gathering-together.

The idealist option. Kalābhiḥ prthag-arthābhiḥ pravibhakte svabhāvataḥ: divided, by their own nature, by times which have separate meanings — the tenses as genuinely distinct times, each with its own content. Keced buddhy-anusamhara-laksane te pracaksate: some declare them to be characterized by the intellect's gathering-together. Buddhy-anusamhara: the mind's drawing-together — 2.1's sixth view of the sentence (buddhy-anusamhrtiḥ, the gathering-together in cognition, which the Vakyakanda's whole argument favoured). So the tenses are the mind's gatherings: past is what the intellect has drawn together, future what it projects. The view makes tense wholly cognitive — and it is very close to Bhartrhari's own (3.7.104's buddhy-avastha carving the karakas), differing only in making the gathering constitutive of time rather than of its divisions.

Verse 3.9.58

ज्ञानानुगतशक्तिं वा बाह्यं वा सत्यतः स्थितम् ।
कालात्मानमनाश्रित्य व्यवहर्तुं न शक्यते ॥ 58 ॥

jñānānugataśaktim, vā bāhyam, vā satyataḥ sthitam |
kālātmanamanāśritya vyavahartum, na śakyate || 58 ||

Whether a capacity that follows upon cognition, or something external standing in truth — without resorting to a self of time, it is not possible to transact.

The dispute of 3.9.57 declined, and the declining is the samuddesa's method. Jnana-anugata-saktim va: whether a *capacity that follows upon cognition* — the idealist option (3.9.57); bāhyam va saty-ataḥ sthitam: or something *external standing in truth* — the realist option (3.9.1's substance). Kala-atmanam anasritya vyavahartum na sakyate: *without resorting to a self of time*, it is *not possible to transact*. So: whichever it is, one cannot do without it. The office is undeniable and the ontology is undecided — which is 1.28's move (eternal or produced, no beginning either way), 2.433's (all-natured or self-less, the word is sovereign either way), 3.1.107's (whatever the substrate, the doctrine stands). Vyavahartum: to transact — and 3.6.19 already said the theorist who abandons these entities takes hold of them again.

Verse 3.9.59

तिस्रो भावस्य भावस्य केषाञ्चिद् भावशक्तयः ।
ताभिः स्वशक्तिभिः सर्वं सदैवास्ति च नास्ति च ॥ 59 ॥

tisro bhāvasya bhāvasya keṣāñcid bhāvaśaktayah |
tābhiḥ svaśaktibhiḥ sarvam, sadaivāsti ca nāsti ca || 59 ||

For some, there are three being-capacities of each and every entity; by those own capacities, everything always both is and is not.

The three saktis relocated from time to things. Tisro bhavasya bhavasya kesamcid bhava-saktayah: *three being-capacities of each and every entity* — every thing carries its own past, present and future as powers, rather than passing through time's three. Tabhiḥ sva-saktibhiḥ sarvam sada eva asti ca na asti ca: *by those own capacities, everything always both is and is not*. Sada eva: always — and both. So on this view nothing ever changes tense; each thing is permanently existent-and-non-existent by its own three powers, and the appearance of passage is the shifting of which power shows. This is 3.3.87's finding (the eternal one, whose self is both being and non-being, shines forth as multiform) applied to each thing severally — and it dissolves time into the things, as 3.9.12 dissolved it into operation.

Verse 3.9.60

सत्त्वादव्यतिरेकेण तास्तिस्रोऽपि व्यवस्थिताः ।
क्रमस्तास्तदभेदाच्च सदसत्त्वं न भिद्यते ॥ 60 ॥

sattvādavyatirekeṇa tāstisro'pi vyavasthitāḥ |
kramastāstadabhedācca sadasattvaṁ na bhidyate || 60 ||

Being not different from existence, those three also stand established; and from their non-difference from that, sequence and existence-and-non-existence are not differentiated.

The reduction completed, and it lands where the Padakanda always lands. Sattvad avyatirekena taḥ tiso 'pi vyavasthitāḥ: *being not different from existence*, those three also stand established — the three capacities are not other than satta (3.1.33's sole universal, in which all words stand established). Kramah taḥ tad-abhedac ca sad-asattvaṁ na bhidyate: and from their *non-difference* from that, *sequence and existence-and-non-existence are not differentiated*. So: the three tenses are satta's powers, satta is one, and therefore sequence and being/non-being are not two things but one Existence variously showing. This is 3.3.84 exactly (in reality there is no difference whatever of simultaneity from sequence, just as no non-being is determined as other than being) — and its arrival here completes the Kala-samuddesa's absorption into the Padakanda's single doctrine. Time, action, being: one satta, carved.

Verse 3.9.61

दर्शनादर्शनेनैकं दृष्टादृष्टं तदेव तु ।
अध्वनामेकता नास्ति न च किञ्चिन्निवर्तते ॥ 61 ॥

darśanādarśanenaikam, dṛṣṭādrṣṭam, tadeva tu |
adhvanāmekatā nāsti na ca kiñcinnivartate || 61 ||

By seeing and non-seeing it is one; but that very thing is seen and unseen. There is no oneness of the roads, and nothing whatever withdraws.

The three roads (3.9.52) audited, and the audit is severe. Darsana-adarsanena ekam: by *seeing and non-seeing* it is one — the thing is one, whether shown or screened (3.9.49's satam: the entities exist throughout). Drstadrstam tad eva tu: but *that very thing is seen and unseen* — one thing, both. Adhvanam ekata na asti: there is *no oneness of the roads* — the three are not one road; the metaphor of a single track through darkness and light is refused. Na ca kimcin nivartate: and *nothing whatever withdraws* — nothing goes away, ever. So the picture of things passing along a road out of the light is dismantled: nothing travels, nothing leaves, and the three roads are not a road. What is left is 3.9.50's screens — powers that show and hide what stands unmoving.

Verse 3.9.62

शक्त्यात्मदेवतापक्षैर्भिन्नं कालस्य दर्शनम् ।
प्रथमं तदविद्यायां यद्विद्यायां न विद्यते ॥ 62 ॥

śaktyātmadevatāpakṣairbhinnam kālasya darśanam |
prathamam tadavidyāyām yadvidyāyām na vidyate || 62 ||

The seeing of time is differentiated by the positions of capacity, of self, and of deity; that is first in nescience — which does not exist in knowledge.

The three schools of time named, and then placed. Sakty-atma-devata-paksaih bhinnam kalasya darsanam: the *seeing of time* is differentiated by the positions of *capacity* (time as sakti — Bhartrhari's own, 3.9.49), of *self* (time as atman, a substance: 3.9.1's Vaisesika), and of *deity* (time as a god — Kala the destroyer, the Mahabharata's dark deity). Three doctrines, three darsanas. And then the placing: prathamam tad avidyayam yad vidyayam na vidyate — *that is first in nescience, which does not exist in knowledge*. All three belong to avidya — the domain of constructed difference (2.233's sciences describing only avidya) — and none survives into vidya. So the samuddesa's own doctrine, the sakti-paksa, is named as one of three and consigned with the others. This is the most unsparing thing in the samuddesa: it classifies its own position as nescience.

Verse 3.9.63-64

अभेदे यदि कालस्य ह्रस्वदीर्घप्लुतादिषु ।
दृश्यते भेदनिर्भासः स चिरक्षिप्रबुद्धिवत् ॥ 63 ॥
ह्रस्वदीर्घप्लुतावृत्त्या नालिकासालिलादिषु ।
कथं प्रचययोगः स्यात् कल्पनामात्रहेतुकः ॥ 64 ॥

abhede yadi kālasya hrasvadīrghaplutādiṣu |
dṛśyate bhedanīrbhāsaḥ sa cira-kṣiprabuddhivat || 63 ||
hrasvadīrghaplutāvṛtṭyā nālikāsālilādiṣu |
katham pracaya-yogaḥ syāt kalpanāmātrahetukaḥ || 64 ||

(63) If, time being undivided, an appearance of difference is seen in short, long, prolated and the rest — that is like the cognition of slow and quick. (64) By the repetition of short, long and prolated, in water-clocks and the like — how could there be a connection with accumulation, caused by mere construction?

An objection about measured time. (63): if time is *undivided* (3.9.48's abhinna), whence the *appearance of difference* in the vowel-quantities — hrasva, dirgha, pluta, the measured units by which recitation is timed? The answer offered: sa cira-ksipra-buddhi-vat — *that is like the cognition of slow and quick* (3.9.35's constructed durations; 2.23's cognitions of slow and quick, which do not themselves differ in time). But (64) presses: hrasva-dirgha-pluta-avṛtṭyā nalika-salilaadisū — *by the repetition of short, long, prolated, in water-clocks and the like* — katham pracaya-yogaḥ syāt kalpana-matra-hetukah: *how could there be a connection with accumulation, caused by mere construction?* Water accumulates in the clock; the accumulation is measured; and a mere construction does not fill a vessel. The objection is genuine and it is the strongest against the whole doctrine: constructed time does not explain the clepsydra. 3.9.70 will answer it.

Verse 3.9.65-67

अबिव्यक्तिनिमित्तस्य प्रचयेन प्रचीयते ।
 अभिन्नमपि शब्दस्य तत्त्वमप्रचयात्मकम् ॥ 65 ॥
 एवं मात्रातुरीयस्य भेदो दाशतयस्य वा ।
 परिमाणविकल्पेन शब्दात्मनि न विद्यते ॥ 66 ॥
 अनुनिष्पादिकल्पेन येऽन्ताराल इव स्थिताः ।
 शब्दास्ते प्रतिपत्तृणामुपायाः प्रतिपत्तये ॥ 67 ॥

abhivyaktinimittasya pracayena pracīyate |
abhinnamapi śabdasya tattvamapracayātmakam || 65 ||
evam.mātrāturiyasya bhedo dāśatayasya vā |
parimāṇavikalpena śabdātmani na vidyate || 66 ||
anuniṣpādikalpena ye'ntārāla iva sthitāḥ |
śabdāste pratipattṛṇāmupāyāḥ pratipattaye || 67 ||

(65) It is accumulated by the accumulation of the occasioning ground of manifestation; but the word's reality, though undivided, is not of the nature of accumulation. (66) Thus a difference of a quarter-mora, or of ten such, by an option of measure, does not exist in the word's self. (67) Those words which stand, as it were, in the interval, by a kind of arising-in-consequence, are the means of comprehension for the comprehenders.

The answer for the word, before the answer for time. (65): *abhivyakti-nimittasya pracayena pracīyate*: it is *accumulated* by the *accumulation of the occasioning ground of manifestation* – what accumulates is the manifesting sound, not the word; *abhinnam api sabdasya tattvam apracaya-atmakam*: the word's *reality*, though *undivided*, is *not of the nature of accumulation*. So the morae pile up in the utterance and not in the sphota (1.76-77's prakṛta and vaikṛta dhvani, the quantities lodged in the manifesting sound). (66): hence no *quarter-mora* difference, nor of ten, exists in the word's self – the measures are the medium's. (67): and the intermediate words – *antarale iva sthitah*, standing as it were in the interval, arising *anuniṣpadi* (2.121's entailed) – are the *means of comprehension*: *upāyah pratipattaye*, the ladder (2.38's discardable means). So the measured time of recitation is the manifesting stream's, and the word is untouched. The parallel is being laid for time itself.

Verse 3.9.68

विशिष्टमवधिं तं तमुपादाय प्रकल्पते ।
 कालः कलावतामेकः क्षणमासर्तुभेदभाक् ॥ 68 ॥

viśiṣṭamavadhīm.tam.tamupādāya prakalpate |
kālāḥ kalāvatāmekāḥ kṣaṇamāsartubhedabhāk || 68 ||

Taking up this or that particular limit, the one time of things possessing moments is constructed as partaking of the differences of instant, month and season.

How time's units are made. *Visistam avadhim tam tam upadaya prakalpyate*: taking up *this or that particular limit* – *avadhi*: the limit, the reference-point (3.6.2's *avadhi* from which direction separates; 3.7.137's *dhruva*). *Kalah kalavatam ekah*: the *one* time of things possessing moments. *Ksana-masa-rtubheda-bhak*: constructed as *partaking of the differences of instant, month, season*. So the units are

made by taking up limits: pick a reference-point and a return, and you have a unit. The instant, the month, the season differ only in which avadhi is taken — the heartbeat, the moon, the solstice. And prakalpyate: constructed. Time is one; the units are chosen limits; and nothing in time favours one choice over another (3.9.47's road, along which distances are reckoned).

Verse 3.9.69

बुद्ध्यवग्रहभेदाच्च व्यवहारात्मनि स्थितेः ।
तावानेव क्षणः कालो युगमन्वन्तराणि वा ॥ 69 ॥

buddhyavagrahabhedācca vyavahārātmani sthiteḥ |
tāvāneva kṣaṇaḥ kālo yugamanvantarāṇi vā || 69 ||

And from a difference in the intellect's grasping, in the standing that is of the nature of practice — just so much is the instant, the time, or the aeons and the world-ages.

The units' relativity, stated without hedging. Buddhy-avagraha-bhedat ca: from a difference in the *intellect's grasping* — the units follow how the mind takes hold (3.7.104's buddhy-avastha carving the karakas; 3.7.3's sadhana-vyavahara grounded in a state of the intellect). Vyavahara-atmani sthiteḥ: in the *standing* that is of the *nature of practice*. Tavan eva kṣaṇaḥ kalo yugam anvantarāṇi vā: *just so much* is the *instant*, the *time*, or the *aeons* and the *world-ages*. Tavan eva: *just so much* — the instant and the aeon are made the same way, by a grasp, and differ only in the grasp's scale. So there is no smallest unit and no largest: the kṣana is not time's atom, and the manvantara is not its total. Both are how long a mind held something.

Verse 3.9.70

प्रतिबन्धाभ्यानुज्ञाभ्यां नालाकाविवराश्रिते ।
यदम्भसि प्रक्षरणं तत्कालस्यैव चेष्टितम् ॥ 70 ॥

pratibandhābhyānujñābhyām nālākāvivarāśrite |
yadambhasi prakṣaraṇam tatkālasyaiva ceṣṭitam || 70 ||

By obstruction and permission, in that which rests in the aperture of the tube — that trickling in the water: that is time's very activity.

The water-clock, and it answers 3.9.64's objection exactly. The nalika is the clepsydra: a pierced vessel set in water, filling through its hole and sinking at a fixed interval. Pratibandha-abhyānujñābhyām: by *obstruction* and *permission* — 3.9.4's two operations, and here they are visible: the tube's wall obstructs, the aperture permits. Nalaka-vivara-śrite yad ambhasi prakṣaraṇam: that *trickling* in the *water* which *rests in the aperture of the tube*. Tat kālasya eva ceṣṭitam: *that is time's very activity* — cestita: 3.9.46's word for what time does. So the clepsydra does not measure time; the trickling is time — obstruction and permission, made of brass and water. The objection of 3.9.64 asked how a mere construction fills a vessel, and the answer is that time was never a construction laid over the trickle: the trickle is the holding-and-releasing, which is what time is (3.9.12). The clock is not time's instrument; it is time's portrait.

Verse 3.9.71

अल्पे महति वा छिद्रे तत्संबन्धे न भिद्यते ।
कालस्य वृत्तिरात्मापि तमेवास्यानुवर्तते ॥ 71 ॥

*alpe mahati vā chidre tatsambandhe na bhidyate |
kālasya vṛttirātmāpi tamevāsyānuvartate || 71 ||*

Whether the hole be small or large, in connection with that it does not differ; time's operation, and its self too, follows just that of it.

The clepsydra pressed, and the result is the samuddesa's. Alpe mahati va chidre tat-sambandhe na bhidyate: whether the hole be small or large, in connection with that it does not differ — time does not run faster through a wide aperture; the clock is calibrated to the hole, and time is not. Kalasya vṛttir ātma api tam eva asya anuvartate: time's operation, and its self too, follows just that of it. So time's operation follows the trickling and time's self follows it too — ātma api: even its self. There is nothing behind the trickle that the trickle measures. This completes 3.9.70: the clock is not a portrait of time but time itself, and asking whether the clock is accurate is asking whether the trickling trickles. The verse is the samuddesa's flattest identification, and it is delivered in plumbing.

Verse 3.9.72

आक्रीड इव कालस्य दृश्यते यः स्वशक्तिभिः ।
बहुरूपस्य भावेषु बहुधा तेन भिद्यते ॥ 72 ॥

*ākṛīḍa iva kālasya dṛśyate yaḥ svaśaktibhiḥ |
bahurūpasya bhāveṣu bahudhā tena bhidyate || 72 ||*

That which is seen as it were a playground of time, of the many-formed one, by its own capacities — by that it is manifoldly differentiated among the entities.

Time's variety, and the image is a play-space. Akrida iva kalasya drsyate yah sva-saktibhih: that which is seen as it were a playground of time — akrida: a pleasure-garden, a place of sport; the word carries lila, the divine play. Bahu-rupasya bhavesu bahudha tena bhidyate: of the many-formed one, it is manifoldly differentiated among the entities. So the world is time's playground, and time's many forms are its games. The image softens the puppeteer (3.9.4's sutradhara: a stage-manager working the strings) into something less coercive — not a machine driven but a garden played in. And both are true on the doctrine: the holding-and-releasing is a discipline and a sport, and 3.9.15's tethered birds are exactly a game.

Verse 3.9.73

त्वचिसारस्य वा वृद्धिं तृणसारस्य वा दधत् ।
तावद् तद्वृद्धियोगेन कालतत्त्वं विकल्पते ॥ 73 ॥

tvacisārasya vā vṛddhim, tṛṇasārasya vā dadhat |
tāvad tadvṛddhiyogena kālatattvam, vikalpate || 73 ||

Or bearing the growth of a bark-pithed tree, or of a grass-pithed one — to just that extent, by connection with their growth, time's reality is optioned.

Time read from growth-rates. Tvaci-sarasya va vṛddhim trṇa-sarasya va dadhat: *bearing the growth of a bark-pithed tree, or of a grass-pithed one* — two kinds of plant, growing at their own rates: the hardwood slowly, the reed fast. Tavad tad-vṛddhi-yogena kala-tattvam vikalpate: *to just that extent, by connection with their growth, time's reality is optioned*. Vikalpate: is optioned, constructed as an alternative (3.9.69's tavan eva ksanah: just so much is the instant). So time's reality is measured out by whatever is growing, and the hardwood's year and the reed's are different lengths of the same year. This is 3.9.35's relational duration (accumulation constructed for one thing by another) with living clocks — and it belongs with 3.9.44-45's birdsong and shadow: time is read from anything that changes, and every reading is a marking.

Verse 3.9.74

व्यतिक्रमेऽपि मात्राणां तस्य नास्ति व्यतिक्रमः ।
न गन्तृगतिभेदेन मार्गभेदोऽस्ति कश्चन ॥ 74 ॥

vyatikrame'pi mātrāṇām, tasya nāsti vyatikramah |
na gantrgatihhedena mārgabhedo'sti kaścana || 74 ||

Even in the transgression of the measures, there is no transgression of it; there is no difference whatever of the road by a difference of the goer's going.

Time's invariance under all its measurements. Vyatikrame 'pi matranam tasya na asti vyatikramah: even in the *transgression of the measures* — even when the units are exceeded, miscounted, or run over — there is *no transgression of it*: time is not violated by a bad clock. Na gantr-gati-bhedena marga-bhedo 'sti kascana: there is *no difference whatever of the road by a difference of the goer's going*. The road does not change when travellers walk at different speeds. So the measures vary (3.9.73's trees) and the measured does not — and the road-image (3.9.47's adhva-adhikaranam; 3.9.52's three roads) does the work: what is reckoned along is untouched by the reckoning. This is the invariance that 3.9.71's clepsydra seemed to threaten, restored: the trickle is time, and a different hole is a different trickle and the same time.

Verse 3.9.75

उदयास्तमयावृत्त्या ज्योतिषां लोकसिद्धया ।
कालस्याव्यतिपातेऽपि तादृर्म्यमिव लभ्यते ॥ 75 ॥

udayāstamayāvṛtṭyā jyotiṣām.lokasiddhayā |
kālasyaavyatipāte'pi tāddharmyamiva labhyate || 75 ||

By the repetition of the risings and settings of the luminaries, established in the world — though there is no lapsing of time, a likeness of property, as it were, is obtained.

The astronomical clock, and its status. Udaya-astamaya-avṛtṭya jyotisam loka-siddhaya: by the repetition of the risings and settings of the luminaries, established in the world — the day, the tradition's most fundamental unit, given by the sun's return. Kalasya avyatipate 'pi: *though there is no lapsing of time* — time does not pass; nothing withdraws (3.9.61's na ca kimcin nivartate). Tad-dharmyam iva labhyate: *a likeness of property, as it were, is obtained*. So the sun's returning lends time an appearance of passing, and the appearance is a borrowed property (1.49's reflection following the water's movement; 3.9.30's krama-rupata worn). The day is not a piece of time; it is a resemblance conferred on the unlapsing by something that comes back. Iva, as always.

Verse 3.9.76

आदित्यग्रहनक्षत्रपरिस्पन्दमथापरे ।
भिन्नमावृत्तिभेदेन कालं कालविदो विदुः ॥ 76 ॥

ādityagrahanakṣatraparisṇandamathāpare |
bhinnamāvṛttibhedena kālam.kālavido viduḥ || 76 ||

But others — knowers of time — know time as the pulsation of sun, planets and constellations, differentiated by a difference of revolutions.

The astronomers' reduction, reported. Aditya-graha-nakṣatra-parisṇandam: the pulsation of sun, planets and constellations — parisṇanda: throbbing, vibration, the regular beat of the heavens. Atha apare bhinnam avṛtti-bhedena kalam kala-vido viduḥ: *others — knowers of time, the kala-vids, which is to say the astronomers — know time as that, differentiated by a difference of revolutions*. So for the professionals, time simply is the celestial motion: no substance behind it, no sakti, just the turning. And the samuddesa reports this without objection, because it is very nearly its own view — 3.9.71 said time's self follows the trickle, and this says it follows the stars. The difference is only that the astronomer stops at the heavens and 3.9.44's correction stands: the stars are a mere mark (cihna-matram tu tarakah), and what they mark is the operating.

Verse 3.9.77

क्रियान्तरपरिच्छेदप्रवृत्ता या क्रियां प्रति ।
निर्जातिपरिमाणा सा काल इत्यभिधीयते ॥ 77 ॥

kriyāntaraparicchedapravṛttā yā kriyām prati |
nirjātāparimāṇā sā kāla ityabhidhīyate || 77 ||

That action which proceeds toward the delimitation of another action, and whose measure is well ascertained — that is expressed as 'time'.

The functional definition, and it makes time an action. Kriyantara-pariccheda-pravṛtta ya kriyam prati: that *action* which *proceeds toward* the *delimitation* of *another action* — one process used to bound another: the sun's course delimiting the day's work, the clepsydra's trickle (3.9.70) delimiting the recitation. Nirjnata-parimana sa: and whose *measure is well ascertained* — the delimiting process must itself be known-in-measure, or it delimits nothing. Kala iti abhidhiyate: *that is expressed as 'time'*. So time is any well-measured action used to bound another. Not a substance (3.9.1 refused), not a container: an *action*, doing a job. This is 3.9.12's identification (kala eva vyaparaha) given as a definition — and it means that anything regular enough can be time, which is what 3.9.44's stars, 3.9.73's trees and 3.9.70's water-clock have all been showing.

Verse 3.9.78

ज्ञाने रूपस्य संक्रान्तिर्ज्ञानेनैवानुसंहतिः ।
अतः क्रियान्तराभावे सा क्रिया काल इष्यते ॥ 78 ॥

jñāne rūpasya samkrāntirjñānenaivānusamhṛtiḥ |
ataḥ kriyāntarābhāve sā kriyā kāla iṣyate || 78 ||

In cognition there is a passing-over of the form; by cognition alone there is the gathering-together. Therefore, in the absence of another action, that action is held to be time.

Time's limiting case: when there is nothing to measure by. Jñane rupasya sankrantiḥ: in *cognition* there is a *passing-over* of the *form* — sankranti: migration, the word 3.9.39 used for capacities passing over into time. Jñanena eva anusamhṛtiḥ: by *cognition alone* there is the *gathering-together* — anusamhṛti: 2.1's sixth view of the sentence, the mind's drawing-together; 3.9.57's buddhy-anusamhara. Atah kriyantara-abhave sa kriya kala iṣyate: *therefore*, in the *absence of another action*, that action is held to be *time*. So where no external process delimits, cognition's own gathering does — and cognition's gathering is then time. This completes 3.9.77: time is the delimiting action, and when nothing outside delimits, the mind's own act does, and the mind's act is time. Which is why 3.9.69 could say that the instant and the aeon are both *just so much* as the intellect grasped.

Verse 3.9.79

भूतो घट इतीयं च सत्ताया एव भूतता ।
भूता सत्तेति सत्तायाः सत्ता भूताभिधीयते ॥ 79 ॥

bhūto ghaṭa itīyam ca sattāyā eva bhūtata |
bhūtā satteti sattāyāḥ sattā bhūtābhidhīyate || 79 ||

And this 'the pot was' is the past-ness of Existence alone; 'Existence was' — thus the existence of Existence is called 'past'.

The tenses reduced to Existence's tenses. Bhuto ghata iti iyam sattayah eva bhutata: 'the pot was' is the *past-ness* of *Existence alone* — not the pot's pastness: the pot is nothing over satta (3.1.33), so what was past was Being, potwise. Bhuta satta iti sattayah satta bhuta abhidhiyate: 'Existence was' — thus the *existence of Existence* is called 'past'. So every past-tense sentence says: Being was. And the reduction is complete — subject, tense and predicate all collapse into satta and its temporal powers (3.9.60's three saktis not different from existence). This is the Kala-samuddesa reaching what the Jati- and Kriya-samuddesas reached (3.1.33's sole universal; 3.8.62's every root meaning satta): there is one thing, and the tenses are its powers, and 'the pot was' is Being wearing pastness.

Verse 3.9.80

परतो भिद्यते सर्वमात्मा तु न विकल्पते ।
पर्वतादिस्थितिस्तस्मात् पररूपेण भिद्यते ॥ 80 ॥

parato bhidyate sarvamātmā tu na vikalpate |
parvatādīsthitistasmāt pararūpeṇa bhidyate || 80 ||

Everything is differentiated by another; but the self is not optioned. Therefore the standing of a mountain and the rest is differentiated by another's form.

The principle behind 3.9.79. Paratah bhidyate sarvam: *everything* is *differentiated by another* — nothing differentiates itself (3.9.8's time divided by its commingled things; 3.1.15-16's places conferred by relata). Atma tu na vikalpate: but the *self* is not *optioned* — the thing's own self admits no alternatives; it is not one of several ways it might be. Parvatadi-sthitih tasmāt para-rupena bhidyate: *therefore* the *standing* of a *mountain* and the rest is *differentiated by another's form*. The mountain's endurance is measured by what passes, and the passing is not the mountain's. So a mountain does not have a long duration; other things have short ones. This is 3.9.35's relational accumulation and 3.9.73's growth-clocks stated as a general law — and it is why 3.9.79 could reduce the pot's pastness to Being's: the pot never had a tense of its own to lose.

Verse 3.9.81

प्रसिद्धभेदा व्यापारा विरुपावयवक्रियाः ।
साहचर्येण भिद्यन्ते सरुपावयवक्रियाः ॥ 81 ॥

prasiddhabhedā vyāpārā virūpāvayavakriyāḥ |
sāhacaryeṇa bhidyante sarūpāvayavakriyāḥ || 81 ||

Operations whose difference is well established, and whose part-actions are of different form, are differentiated by accompaniment from those whose part-actions are of like form.

How actions are told apart. Prasiddha-bheda vyaparāḥ virupa-avayava-kriyah: *operations whose difference is well established, and whose part-actions are of different form* — cooking and walking: their sub-actions differ visibly, and nobody confuses them. Sahacaryeṇa bhidyante sarupa-avayava-kriyah: *those whose part-actions are of like form are differentiated by accompaniment* — two walkings, two cookings: identical in their parts, told apart only by what accompanies them (where, when, whose). So actions of unlike parts are distinguished by their parts, and actions of like parts by their company. And the second class is where time does its work: two identical processes are two only because they are accompanied differently — which is to say, timed differently. The verse quietly explains why time is needed at all: without it, repetitions would be indistinguishable.

Verse 3.9.82-84

व्यवधानमिवोपैति निवृत्त इव दृश्यते ।
क्रियासमूहो भुज्यादिरन्तरालप्रवृत्तिभिः ॥ 82 ॥
न च विच्छिन्नरूपोऽपि सोऽविरामान्निवर्तते ।
सर्वैव हि क्रियान्येन सङ्कीर्णवोपलभ्यते ॥ 83 ॥
तदन्तरालदृष्टा वा सर्वैवावयवक्रिया ।
सादृश्यात् सति भेदे तु तदङ्गत्वेन गृह्यते ॥ 84 ॥

vyavadhānamivopaiti nivṛtta iva dṛśyate |
kriyāsamūho bhujyādirantarālapravṛttibhiḥ || 82 ||
na ca vicchinna-rūpo'pi so'virāmaṇnivartate |
sarvaiva hi kriyānyena saṅkīrṇevopalabhyate || 83 ||
tadantarāladṛṣṭā vā sarvaivāvayavakriyā |
sādrśyāt sati bhede tu tadaṅgatvena gṛhyate || 84 ||

(82) The collection of actions such as eating comes, as it were, to interruption; it is seen as though ceased, by reason of the operations in the interval. (83) And though its form is severed, it does not withdraw, from want of a stopping; for every action is apprehended as though intermixed with another. (84) Or every part-action seen in that interval, though a difference exists, is grasped as a limb of it, from likeness.

The problem of interrupted actions. (82): a meal is interrupted — one pauses, talks, resumes: the collection of eatings *comes as it were to interruption*, vyavadhanam iva upaiti, and is *seen as though ceased*, nivṛtta iva dṛśyate, because of what happened in the interval. Two iva's: the interruption is apparent. (83): na ca vicchinna-rupo 'pi so 'viramat nivartate — though its *form is severed*, it does not *withdraw*, from *want of a stopping*: the eating did not stop, only its manifestation did (3.9.50's

screens). And the general truth: *sarva eva hi kriya anyena sankirna iva upalabhyate* – *every action is apprehended as though intermixed with another*; there are no pure processes. (84) then explains the resumption: the interval's part-actions are *grasped as limbs of it*, from *likeness* – *sadrśyat*, and *sati bhede, though a difference exists*. So an interrupted meal is one meal because likeness lets the intervals be annexed. This is 3.8.4's construed unity, and the interruption shows the construing at work.

Verse 3.9.85-90

सदसद् वापि वस्तु स्यात् तृतीयं नास्ति किञ्चन ।
 तेन भूतभविष्यन्तौ मुक्त्वा मध्यं न विद्यते ॥ 85 ॥
 निर्वृतिरूपमेकस्य भेदाभावान्न कल्पते ।
 सदसद् वापि तेनैकं क्रमरूपं कथं भवेत् ॥ 86 ॥
 बहूनां चानवस्थानादेकमेवोपलभ्यते ।
 यथोपलब्धिस्मरणं तत्र चाप्युपपद्यते ॥ 87 ॥
 सदसद्रूपमेकं स्यात् सर्वस्यैकत्वकल्पने ।
 निर्वृतिरूपं निर्वृतिः सामान्यमथवा भवेत् ॥ 88 ॥
 कार्योत्पत्तौ समर्थं वा स्वेन धर्मेण तत् तथा ।
 आत्मतत्त्वे गृह्येत सा चास्मिन् वर्तमानता ॥ 89 ॥
 क्रियाप्रबन्धरूपं यदध्यात्मं विनिगृह्यते ।
 सङ्क्रान्तबिम्बमेकत्र तामाहुर्वर्तमानताम् ॥ 90 ॥

sadasad vāpi vastu syāt tṛtīyam, nāsti kiñcana |
 tena bhūtabhaviṣyantau muktvā madhyam, na vidyate || 85 ||
 nirvṛtirūpamekasya bhedābhāvānna kalpate |
 sadasad vāpi tenaikam, kramarūpam, katham, bhavet || 86 ||
 bahūnām, cānavasthānādekamevopalabhyate |
 yathopalabdhismarāṇam, tatra cāpyupapadyate || 87 ||
 sadasadrūpamekam, syāt sarvasyaikatvakalpane |
 nirvṛtirūpam, nirvṛteḥ sāmānyamathavā bhavet || 88 ||
 kāryotpattau samartham, vā svena dharmeṇa tat tathā |
 ātmatattve gr̥hyeta sā cāsmiṇ vartamānatā || 89 ||
 kriyāprabandharūpam, yadadhyātmam, vinigr̥hyate |
 saṅkrāntabimbamekatra tāmāhurvartamānatām || 90 ||

(85) A thing must be either existent or non-existent; there is no third whatever. Therefore, apart from past and future, no middle exists. (86) The form of completion, for one thing, is not construed, from the absence of difference; how then could one thing, existent or non-existent, have the form of sequence? (87) And from the non-standing of many, only one is apprehended; and there, remembrance according to apprehension is also possible. (88) On the construction of oneness for everything, the one would be of existent-and-non-existent form; or the form of completion would be the general of completion. (89) Or, being capable in the arising of the effect by its own property – it would be grasped so in its self-reality, and that is present-ness in it. (90) That form of the continuum of action which is inwardly grasped, its reflection having passed over into one place – that they call present-ness.

The samuddesa's hardest problem: whether a present exists. (85) states it with brutal economy: sad asad vapi vastu syat trtiyam na asti kimcana – a thing must be existent or non-existent; there is no third whatever. Tena bhuta-bhaviṣyantau muktvā madhyam na vidyate: therefore, apart from past and future, no middle exists. The present is squeezed out: what has happened is past, what has not is future, and there is nothing between. This is the classical argument that eliminates the present, and Bhartrhari states it at full strength. (86-87) press: no completion-form for one thing,

no sequence for what is simply existent or non-existent; and from many things' *non-standing*, only one is apprehended, with remembrance following. (88-90) then rebuild. (88): construct oneness and the one is of *existent-and-non-existent form* (3.9.59's every entity always both is and is not). (89): or a thing *capable in the arising of the effect by its own property* is grasped so in its *self-reality* – and *that is present-ness*: the present is capability-in-act. (90) gives the final account, and its image is the mirror again: *kriya-prabandha-rupam yad adhyatmam vinigrhyate* – the *continuum of action* which is *inwardly grasped*, *sankranta-bimbam ekatra*, its *reflection having passed over into one place* – *tam ahur vartamanatam*: *that they call present-ness*. So the present is not a stretch of time but the inward grasping of a continuum, its image gathered into one – which is 3.9.78's cognition-gathering, and 3.9.40's mirror. The present is where the mind's mirror holds the process.

[Contested: the six-verse passage is the *samuddesa*'s most compressed and its argumentative structure is genuinely hard to reconstruct; we read 85-87 as the objection (no present) and 88-90 as the answer (present-ness as capability, and as the inwardly-gathered reflection of a continuum). Readers who take 88-89 as further horns of the objection will find 90 the sole answer, which the text also permits]

Verse 3.9.91

क्रियातिपत्तिरत्यन्तं क्रियानुत्पत्तिलक्षणा ।
न च भूतमनुत्पन्नं न भविष्यत्तथाविधम् ॥ 91 ॥

kriyātipattiratyantam.kriyānutpattilakṣaṇā |
na ca bhūtamanutpannam.na bhaviṣyattathāvidham || 91 ||

The lapsing of an action has, as its mark, the utter non-arising of the action; and the past is not un-arisen – nor is the future of that kind.

A third category distinguished from both tenses. *Kriya-atipatti* *atyantam kriya-anutpatti-laksana*: the *lapsing of an action* has as its *mark* the *utter non-arising* of the action – the *kriya-atipatti* is the grammarian's category for the action that was to have happened and did not (Panini's conditional, the *lin* of unfulfilled condition: 'had he come, he would have seen'). Its mark is *atyantam anutpatti*: *utter non-arising* – not merely absent but never to arrive. *Na ca bhutam anutpannam*: and the *past* is not *un-arisen* – the past arose and is screened (3.9.50). *Na bhaviṣyat tathā-vidham*: *nor is the future* of that kind – the future has not arisen and may (3.9.51's future not obstructing birth). So the lapsed action is neither past nor future: it is what will never have been. And Sanskrit has a tense for it. The verse identifies a genuine fourth category that 3.9.85's dichotomy (existent or non-existent, no third) cannot accommodate.

Verse 3.9.92

प्राग्विरुद्धक्रियोत्पादान्निवृत्ते वा विरोधिनि ।
व्यापारेऽवधिभेदेन विषयस्तत्र भिद्यते ॥ 92 ॥

*prāgviruddhakriyotpādānnirvṛtte vā virodhini |
vyāpāre'vadhībhedena viṣayastatra bhidyate || 92 ||*

From the arising of a contrary action beforehand, or when a contrary operation has been completed – the domain there is differentiated by a difference of limit.

How the lapsed action of 3.9.91 comes about. Prag-viruddha-kriya-utpadat: from the *arising* of a *contrary action beforehand* – something incompatible happened first, and the action could not arise: the messenger died, so the message never came. Nirvṛtte vā virodhini vyapare: or when a *contrary operation* has been *completed* – the incompatible thing finished, and the window closed. Avadhi-bhedena viṣayas tatra bhidyate: the *domain* there is *differentiated* by a *difference of limit* – avadhi: the limit, the samuddesa's constant (3.9.68's units made by taking up limits). So a lapsing is fixed by where one sets the limit: relative to this moment the action is merely future; relative to that one, it has lapsed forever. The category of the never-to-be is thus limit-relative like every other temporal category – and 3.9.68's doctrine (take up a limit and the units follow) reaches even the tense of what will never have happened.

Verse 3.9.93-94

व्यभिचारे निमित्तस्य साधुत्वं न प्रकल्पते ।
भाव्यासीदिति सूत्रेण तत्कालेऽन्यत्र शिष्यते ॥ 93 ॥
स्वकाल एव साधुश्चेत् कालभेदे गतिः कथम् ।
वाक्यार्थदितदर्थेषु विशिष्टत्वं न सिध्यति ॥ 94 ॥

*vyabhicāre nimittasya sādhutvam, na prakalpate |
bhāvyaśīditi sūtreṇa tatkāle'nyatra śiṣyate || 93 ||
svakāla eva sādhuścet kālabhede gatiḥ katham |
vākyaārthādatadartheṣu viśiṣṭatvam, na sidhyati || 94 ||*

(93) When the occasioning ground deviates, correctness is not constructed; by the sutra 'bhavya asit', it is taught elsewhere, at that time. (94) If it is correct only in its own time, how is there passage in a difference of time? From the sentence-meaning, distinctness is not established in respect of things not of that meaning.

A grammatical problem about tense-mismatch. (93): vyabhicare nimittasya sādhutvam na prakalpyate – when the occasioning ground deviates, correctness is not constructed: if a form's licensing condition fails, the form is incorrect (1.27's sādhutva established from the sistas). The sutra cited (bhavya asit – 'what was to be' plus a past 'was') licenses a future-participle with a past verb: a form whose two halves point opposite ways in time. (94) presses: sva-kale eva sadhus cet kala-bhede gatiḥ katham – if it is correct only in its own time, how is there passage in a difference of time? A form correct only in its own tense should not survive transplantation into another. Vakya-arthad atad-arthesu visistatvam na sidhyati: from the sentence-meaning, distinctness is not established in respect of things not of that meaning. So the tense-mismatched construction is a genuine puzzle: the grammar licenses it, and no account of why is forthcoming. The next verses supply one.

[Contested: the sutra invoked at 93 is compressed to 'bhavya asit' and its identification is uncertain; the construction at issue – a future-sense stem under a past-tense finite verb – is clear enough from 94-101's discussion]

Verse 3.9.95

तदर्थश्चेदवयवो भाविनो भूततागतिः ।
न स्यादत्यन्तभूतत्वमेवैकं तत्र सम्भवेत् ॥ 95 ॥

tadārthaścedavayavo bhāvino bhūtatāgatiḥ |
na syādatyantabhūtatvamevaikam tatra sambhavet || 95 ||

If the part is of that meaning, there would be no understanding of past-ness for what is future; utter past-ness alone would be possible there.

The first horn. Tad-arthas ced avayavah: if the *part* – the stem – is of *that meaning*, i.e. genuinely future in sense. Bhavino bhutata-gatih na syat: there would be *no understanding of past-ness* for what is *future* – the two senses would simply conflict and the form would say nothing. Atyanta-bhutavm eva ekam tatra sambhavet: *utter past-ness alone* would be *possible* there – the finite verb's past would swallow the stem's future entirely, and the construction's whole point (that something *was going to* happen) would be lost. So taking the stem's futurity at face value destroys the form. The horn is real, and 3.9.96 offers the other.

Verse 3.9.96

विशिष्टकालता पूर्व तथापि तु विशेषणे ।
आश्रयात् सोऽन्तरङ्गत्वात् तत्र साधुर्भविष्यति ॥ 96 ॥

viśiṣṭakālatā pūrvam tathāpi tu viśeṣaṇe |
āśrayāt so'ntaraṅgatvāt tatra sādhubhaviṣyati || 96 ||

Even so, the state of having a particular time is prior; but in the qualifier, from its resting on it, and from its being internal – the correct form will be there.

The second horn, and it appeals to derivational order. Visista-kalata purvam: the state of having a *particular time* is *prior* – the stem's tense is settled first, before the finite verb arrives. Tatha api tu visesane: even so, *in the qualifier*. Asrayat sah antarangatvat: from its *resting on* it, and from its being *internal* – antaranga: the Paninian priority-notion (3.1.182's antarangatva, operations belonging to the inner layer, settled before the outer). Tatra sadhur bhaviṣyati: the *correct form* will be *there*. So the stem's futurity is settled antaranga, at the inner layer, and the finite verb's past is applied outside it – and the two do not conflict because they belong to different derivational strata. This is 3.7.182's argument (what is settled antaranga is settled before the outer operations touch it) transferred to tense, and it dissolves 3.9.95's horn: the stem is future *in its layer*, past-ness is predicated of *the whole*, and no contradiction arises.

Verse 3.9.97

आमिश्र एव प्रक्रान्तः स पदार्थस्तथाविधः ।
केवलस्य विमिश्रत्वं नित्येऽर्थे नोपपद्यते ॥ 97 ॥

āmiśra eva prakrāntaḥ sa padārthastathāvidhaḥ |
kevalasya vimiśratvam, nitye'rthe nopapadyate || 97 ||

That word-meaning, being of such a kind, is commenced only as commingled; the state of being intermixed does not hold for what is isolated, in an eternal meaning.

The stem's tense placed. Amisra eva prakrantah sa padarthah tatha-vidhah: that *word-meaning*, being of such a kind, is *commenced only as commingled* — amisra: mixed; the stem never occurs unmixed, and its tense is always already in composition. Kevalasya vimisratvam nitye'rthe na upapadyate: the state of *being intermixed* does not hold for what is *isolated*, in an *eternal* meaning. So the isolated stem, whose meaning is eternal (3.1.2's nityau eva; 3.8.62's every root meaning satta), has no tense at all — tense belongs to the mixture. This resolves 3.9.94's puzzle at the root: the stem does not have a time to be transplanted out of, because unmixed it has no time. Time enters at composition, and 3.9.96's antaranga ordering describes how.

Verse 3.9.98

शुद्धे च काले व्याख्यातमामिश्रे न प्रसिध्यति ।
साधुत्वमयथाकालं तत् सूत्रेणोपदिश्यते ॥ 98 ॥

śuddhe ca kāle vyākhyātamāmiśre na prasidhyati |
sādhutvamayathākālam, tat sūtreṇopadiśyate || 98 ||

And what has been explained in the case of pure time does not obtain in the commingled; that correctness, contrary to the time, is taught by the sutra.

The two domains separated. Suddhe ca kale vyakhyatam amisre na prasidhyati: what has been *explained* in the case of *pure* time does not *obtain* in the *commingled* — the analysis of time-as-such does not govern composed forms. Sadhutvam ayatha-kalam tat sutrena upadisyate: that *correctness, contrary to the time, is taught by the sutra*. Ayatha-kalam: not-according-to-time — and it is *taught*, prescribed by rule. So the tense-mismatched form is correct by stipulation, and the stipulation is possible because the stem had no tense to be violated (3.9.97). The grammar simply posts a tense where its operations need one — 3.7.103's niyamah sabde na tu vastuni (the restriction is in the word, not in the thing), now at the finest morphological grain.

Verse 3.9.99

आख्यातपदवाच्येऽर्थे निर्वर्त्यत्वात् प्रधानता ।
विशेषणं तदाक्षेपात् तत्काले व्यवतिष्ठते ॥ 99 ॥

*ākhyātapadavācye'rthe nirvartyatvāt pradhānatā |
viśeṣaṇam tadākṣepāt tatkāle vyavatiṣṭhate || 99 ||*

In the meaning expressible by the finite-verb word, principality belongs from its being what-is-to-be-produced; the qualifier, from its being implied by that, stands settled at that time.

The construction's semantic architecture. Akhyata-pada-vacye 'rthe nirvartyatvat pradhanata: in the meaning expressible by the *finite verb*, *principality* belongs from its being *what-is-to-be-produced* — the finite verb carries the nirvartya (3.7.45's object to be produced), and hence the sentence's principal (3.8.40's operations expressed as principal by the finite verbs). Visesanam tad-aksepat tat-kale vyavatiṣṭhate: the *qualifier*, from its being *implied* by that, stands settled *at that time*. So the stem's tense is not its own; it is implied by the finite verb and settled at the verb's time. This is 3.7.81-82's propagation (the capacity resting on the subordinate follows the principal) applied to tense — and it completes the answer to 3.9.94: the stem has no time, the verb supplies one, and the supplying is aksepa, implication.

Verse 3.9.100

सम्प्रत्ययानुकारो वा शब्दव्यापार एव वा ।
अध्यस्यते विरुद्धेऽर्थे न च तेन विरुध्यते ॥ 100 ॥

*sampratyayānukāro vā śabdavyāpāra eva vā |
adhyasyate viruddhe'rthe na ca tena virudhyate || 100 ||*

Either an imitation of the comprehension, or else the word's very operation, is superimposed upon a contrary meaning — and it is not thereby contradicted.

The mechanism named, and it is superimposition. Sampratyaya-anukaro va: either an *imitation of the comprehension* — the form mimics how the thing is understood; sabda-vyapara eva va: or else the *word's very operation*. Adhyasyate viruddhe 'rthe: is *superimposed* upon a *contrary meaning* — adhyasa (3.1.6's central term; 3.8.11's asad-adhyasa; 3.9.33's phases superimposed). Na ca tena virudhyate: and it is *not thereby contradicted*. So the future-stem's sense is laid over a past-tense meaning, and the superimposition does not contradict because superimpositions never contradict what they are laid on (3.2.10's atyantam atad-atmakam: reality established as though having that for its self while being utterly not of that self). The tense-mismatch is a superimposition, and superimposition is what the whole Padakanda has said every category is.

Verse 3.9.101

भूतं भविष्यदित्येतौ प्रत्ययौ वर्तमानताम् ।
अत्यजन्तौ प्रपद्येते विरुद्धाश्रयरूपताम् ॥ 101 ॥

bhūtam bhaviṣyadityetau pratyayau vartamānatām |
atyajantau prapadyete viruddhāśrayarūpatām || 101 ||

These two cognitions, 'past' and 'future', not abandoning present-ness, attain the form of resting on contraries.

The resolution, and it is elegant. Bhutam bhavisyad iti etau pratyayau: these two *cognitions*, 'past' and 'future' — and note pratyayau: they are cognitions, not times. Vartamanatam atyajantau: *not abandoning present-ness* — the cognitions of past and future are themselves present: to think of the past is to think now (3.9.90's present-ness as the inwardly-grasped continuum). Viruddha-asraya-rupataṁ prapadyete: they attain the *form of resting on contraries*. So past-cognition and future-cognition are both present cognitions resting on contrary contents — which is why a form can be future in its stem and past in its verb without contradiction: both tenses are present cognitions, and present cognitions of contraries coexist perfectly well in one mind. The verse resolves 3.9.93-95's puzzle by relocating tense into cognition, where contraries are ordinary.

Verse 3.9.102

अध्वनो वर्तमानस्य यः शेषो य उपक्रमः ।
तद् वर्तमानसामीप्यं शास्त्रे भेदेन दर्शितम् ॥ 102 ॥

adhvano vartamānasya yaḥ śeṣo ya upakramah |
tad vartamānasāmīpyam śāstre bhedena darśitam || 102 ||

That remainder of the present road, and that which is its commencement — that proximity to the present is shown by difference in the science.

The near-past and near-future. Adhvano vartamanasya yah sesah ya upakramah: that *remainder* of the *present road*, and that which is its *commencement* — the road-image again (3.9.52's three roads): the lit stretch has a beginning and a remainder, and things just entering or just leaving are neither simply present nor simply not. Tad vartamana-samīpyam sastre bhedena darsitam: that *proximity to the present is shown by difference* in the *science* — Panini has rules for the immediate past and the immediate future (the *lat* used of what is just about to be, the near-past forms). So the grammar recognizes a penumbra around the present and marks it, and the penumbra is the road's ends. The verse is fine observation: languages do mark 'just now' and 'about to', and the samuddesa's road-image predicts exactly such a zone.

Verse 3.9.103

अशंसा वर्तमानापि विषयेण भविष्यता ।
भाष्ये भविष्यत्कालेति कार्यार्थं व्यपदिश्यते ॥ 103 ॥

aśaṃsā vartamānāpi viṣayeṇa bhaviṣyatā |
bhāṣye bhaviṣyatkāleti kāryārtham vyapadiśyate || 103 ||

Expectation, though present, is designated in the Bhasya as 'of future time', for the sake of the operation, by reason of its object being future.

A case where the grammar names a tense by its object. Asamsa vartamana api: *expectation, though present* – hoping is happening now; the hope is a present state. Visayena bhavisyata: by reason of its object being *future* – what one hopes for is future. Bhasye bhavisyat-kala iti karyartham vyapadisyate: in the Bhasya it is *designated* as 'of future time', for the sake of the operation. So Patanjali calls expectation future-tensed, though it is a present state, because its object lies ahead – and the naming is karyartham, for the sake of the rule's operation, not because anyone thinks hoping happens later. This is 3.9.98's ayatha-kalam sadhutva (correctness contrary to the time, taught by the sutra) with its authority named: the Bhasya does it, and it does it for the machinery.

Verse 3.9.104

इच्छा चिकीर्षतीत्यत्र स्वकालमनुरुध्यते ।
भविष्यति प्रकृत्यर्थे तत्कालं नानुरुध्यते ॥ 104 ॥

icchā cikīrṣatītyatra svakālam anurudhyate |
bhaviṣyati prakṛtyarthe tatkālam nānurudhyate || 104 ||

In 'cikirsati', desire conforms to its own time; in the base-meaning which is future, it does not conform to that time.

The desiderative analysed. Iccha cikirsati iti atra sva-kalam anurudhyate: in 'cikirsati' ('he wishes to do'), *desire conforms to its own time* – the wishing is present, and the form's tense is the wishing's. Bhavisyati prakṛty-arthe tat-kalam na anurudhyate: in the *base-meaning* which is *future* – the doing that is wished – it does *not conform to that time*: the doing's futurity does not govern the form. So the desiderative's tense is the desire's, not the desired's – and this is the exact reverse of 3.9.103's expectation, where the grammar took the object's tense. Two closely-related constructions, opposite treatments, and no principle decides: the sastra posts what its operations need (3.9.98). The pair is the samuddesa's evidence that tense-assignment is stipulation.

Verse 3.9.105

आशंस्यमानतन्त्रत्वादाशंसायां विपर्ययः ।
प्रयोक्तृधर्म शब्दार्थे शब्दैरेवानुषज्यते ॥ 105 ॥

āśamśyamānatantratvādāśamśāyāṃ viparyayah |
prayoktr̥dharma śabdārthe śabदैरेवानुषज्यते ॥ 105 ॥

From its being dependent on what is expected, in expectation there is the reverse; the speaker's property is attached to the word's meaning by words alone.

Why 3.9.103 and 3.9.104 differ. Asamsyamana-tantratvat asamsayam viparyayah: from its being *dependent on what is expected*, in expectation there is the reverse — expectation's whole structure points at its object, so the object's tense governs; desire's structure centres on the desiring, so the desirer's time governs. Prayoktr-dharmah sabdarthe sabdaiḥ eva anusajyate: the *speaker's property is attached to the word's meaning by words alone* — and this last is the doctrine: the speaker's own temporal position enters the word-meaning through the words, and nowhere else. So tense is where the speaker's now gets into what is said, and it gets in by morphology. This is 3.7.103's niyamah sabde na tu vastuni given its temporal application: the speaker's present is a property of his words, not of his meaning.

Verse 3.9.106

अप्सालिबीजसंयोगे वर्तते निष्पदिर्यदा ।
तत्रावयववृत्तित्वाद् भविष्यत्प्रतिषेधनम् ॥ 106 ॥

apśālibījasamyoge vartate niṣpadir yadā |
tatrāvayavavṛttitvād bhaviṣyatpratiṣedhanam ॥ 106 ॥

When 'nispad' operates on the conjunction of water and rice-seed, there — from its resting in the part — there is the negation of the future.

A worked case. Ap-sali-bija-samyoge vartate nispadir yada: when 'nispad' (to be produced) *operates on the conjunction of water and rice-seed* — the sowing, where the crop's production is under way but not complete. Tatra avayava-vṛttitvad bhaviṣyat-pratiṣedhanam: there — from its *resting in the part* — there is the *negation of the future*. The production is already occurring *in its part* (the germination), so it is not future: one says 'it is being produced', not 'it will be'. So the future is negated by the process's having begun anywhere in itself — and the whole-at-each doctrine (3.8.5's pratibhedam samapyate) makes the germination the whole production, present. This is why a sown field is not merely going to bear: the bearing has started, and the tense follows the part.

Verse 3.9.107

फलप्रसवरूपे तु निष्पदौ भूतकालता ।
धर्मन्तिरेषु तद्रूपमध्यस्य परिकल्प्यते ॥ 107 ॥

*phalaprasavarūpe tu niṣpadau bhūtakālatā |
dharmāntareṣu tadrūpamadhyasya parikalpyate ॥ 107 ॥*

But in 'nispad' whose form is the bringing-forth of fruit, there is past-ness; that form, having been superimposed on other properties, is constructed.

The complement of 3.9.106. Phala-prasava-rupe tu nispadau bhuta-kalata: in 'nispad' whose form is the *bringing-forth of fruit* – the production taken as complete, at its fruit – there is *past-ness*. Dharmantaresu tad-rupam adhyasya parikalpyate: that *form*, having been *superimposed* on other *properties*, is *constructed*. So the same root is present when taken at its part (3.9.106) and past when taken at its fruit, and the pastness is a superimposition (3.9.100's adhyasa) laid on the other phases. One process, two tenses, and the difference is where one looks: at the germinating or at the grain. This is 3.9.92's avadhi-bheda (the domain differentiated by a difference of limit) inside a single verb's semantics.

Verse 3.9.108

उपयुक्ते निमित्तानां व्यापारे फलसिद्धये ।
तत्र रूपं यदध्यस्तं तत्कालं तत् प्रतीयते ॥ 108 ॥

*upayukte nimittānām.vyāpāre phalasiddhaye |
tatra rūpam.yadadhyastam.tatkālam.tat pratiyate ॥ 108 ॥*

When the operation of the occasioning grounds has been employed for the accomplishing of the fruit – the form that is superimposed there is understood as of that time.

The general rule behind 3.9.106-107. Upayukte nimittanam vyapare phala-siddhaye: when the *operation* of the *occasioning grounds* has been *employed* for the *accomplishing of the fruit* – the causes have done their work. Tatra rupam yad adhyastam tat-kalam tat pratiyate: the *form* that is *superimposed* there is understood as *of that time*. So the tense follows the superimposed form, and the superimposition follows where the causes have got to. Tense is thus a report on causal progress – but a report by superimposition (adhyasta), which means it is a posting on the process rather than a reading of it. And 3.9.107 showed the posting is optional: the same causal state bears a present or a past according to where the limit is set.

Verse 3.9.109

निष्पत्ताववधिः कश्चित् कश्चित् प्रतिविवक्षितः ।
हेतुजन्मव्यपेक्षातः फलजन्मेति चोच्यते ॥ 109 ॥

*niṣpattāvavadhiḥ kaścit kaścit prativivakṣitaḥ |
hetujanmavyapekṣātaḥ phalajanmeti cocyate || 109 ||*

In the completion, some limit is intended, and some other; from dependence on the cause's birth, it is called 'the fruit's birth'.

The limits multiplied. Nispattau avadhiḥ kascit kascit prati-vivakṣitaḥ: in the *completion*, some limit is *intended*, and some *other* — different speakers set the boundary differently, and each setting is a vivaksa (3.7.2's kvacit kimcit vivakṣyate). Hetu-janma-vyapekṣataḥ phala-janma iti ca ucyate: from *dependence on the cause's birth*, it is called '*the fruit's birth*'. So one may date the fruit's birth from the cause's beginning (the sowing is the harvest's birth) or from the fruit's own arrival — and the two datings are both correct, being different avadhis. This is why 3.9.106-107 could give one process two tenses: the limit is chosen, and the tense follows the limit (3.9.92's avadhi-bhedena visayo bhidyate).

Verse 3.9.110

अबहिस्साधनाधीना सिद्धिर्यत्र विवक्षिता ।
तत् साधनान्तराभावात् सिद्धमित्युपदिश्यते ॥ 110 ॥

*abahissāadhanādhīnā siddhiryatra vivakṣitā |
tat sādhanāntarābhāvāt siddhamityupadiśyate || 110 ||*

Where an accomplishment not dependent on external means is intended — that, from the absence of another means, is taught as 'accomplished'.

The limiting case of completion. Abahih-sadhana-adhina siddhir yatra vivakṣita: where an *accomplishment not dependent on external means* is *intended* — nothing outside is still required; the process contains everything it needs. Tat sadhanantara-abhavat siddham iti upadiśyate: *that*, from the *absence of another means*, is *taught as 'accomplished'*. So a thing counts as done when no further instrument is wanted — completion is defined by the exhaustion of requirements, not by the arrival of a result. This is 3.8.17's krtarthatva (the expectancy of the means withdrawing, its purpose served) given as the criterion for the past tense: something is past when nothing more is needed for it. And it explains the tense-system's deepest feature — that the past is where akanksa has closed.

Verse 3.9.111-114

तस्मादवधिभेदेन सिद्धा मुख्यैव भूतता ।
 अनागतत्वमस्तित्वं हेतुधर्मव्यपेक्षणे ॥ 111 ॥
 सतामिन्द्रियसंबन्धात् सैव सत्ता विशिष्यते ।
 भेदेन व्यवहारो हि वस्त्वन्तरनिबन्धनः ॥ 112 ॥
 अस्तित्वं वस्तुमात्रस्य बुद्ध्या तु परिगृह्यते ।
 यः समासादनाद् भेदः स तत्र न विवक्षितः ॥ 113 ॥
 योगाद्वा स्त्रीत्वपुंस्त्वाभ्यां न किञ्चिदवतिष्ठते ।
 स्वस्मिन्नात्मनि तत्रान्यद् भूतं भावि च कथ्यते ॥ 114 ॥

tasmādavadhibhedena siddhā mukhyaiva bhūtataḥ |
anāgatatvamastitvam hetudharmavyapekṣaṇe || 111 ||
satāmīndriyasambandhāt saiva sattā viśiṣyate |
bhedena vyavahāro hi vastvantaranibandhanah || 112 ||
astitvam vastumātrasya buddhyā tu parigrhyate |
yah samāsādanād bhedah sa tatra na vivakṣitah || 113 ||
yogādvā strītvapumstvābhyām na kiñcidavatiṣṭhate |
svasminnātmani tatrānyad bhūtam bhāvi ca kathyate || 114 ||

(111) Therefore, by a difference of limit, past-ness is established as primary indeed; future-ness is existence, when the cause's property is depended upon. (112) From the sense-connection of existent things, that same Existence is distinguished; for practice by way of difference is grounded in another thing. (113) The existence of the mere thing is grasped by the intellect; that difference which comes from approach is not intended there. (114) Or, from connection with femininity and masculinity, nothing whatever stands settled; in its own self there, something else is called past and future.

The samuddesa's close, and it gathers everything into satta. (111): *tasmad avadhi-bhedena siddha mukhya eva bhutata* — *therefore, by a difference of limit, past-ness is established as primary indeed: the past is not a derived or figurative tense but the primary one, and what makes it past is where the limit falls (3.9.109). And: anagatatvam astitvam hetu-dharma-vyapeksane* — *future-ness is existence, when the cause's property is depended upon: the future is existence, viewed from the causes. So both tenses are existence under limits. (112): satam indriya-sambandhat sa eva satta visisyate* — *from the sense-connection of existent things, that same Existence is distinguished: the present is Existence sense-connected (3.9.49's darsana-adarsane: the seeing and non-seeing of entities that exist). Bhedena vyavaharo hi vastv-antara-nibandhanah: practice by way of difference is grounded in another thing (3.9.80's paratah bhidyate sarvam). (113): astitvam vastu-matrasya buddhya tu parigrhyate* — *the existence of the mere thing is grasped by the intellect; yah samasadanad bhedah sa tatra na vivakṣitah: the difference that comes from approach is not intended there* — bare existence, intellect-grasped, carries no tense. (114) closes with a grammatical parallel: *yogad va stritva-pumstvabhyam na kimcid avatiṣṭhate* — *from connection with femininity and masculinity, nothing whatever stands settled: as gender settles nothing about a thing (3.6.10's direction-words, feminine, with nothing in direction to be engendered), so tense settles nothing. Svasmin atmani tatra anyad bhutam bhavi ca kathyate: in its own self there, something else is called past and future. The samuddesa that began by refusing time-as-substance (3.9.1) ends by refusing tense-as-property: in a thing's own self nothing is past or future, and the tenses are said of something else* — which is Existence, limited (3.9.111).

[Contested: the four-verse close is compressed and its argumentative joints are hard; we read 111-112 as the positive doctrine (both tenses are satta under limits, the present being satta sense-connected) and 113-114 as the negative (bare existence is tenseless; tense is no more a property than gender). The gender-parallel of 114 is our construal of a genuinely obscure verse]

Puruṣa-samuddeśa — On Person

Verse 3.10.1

प्रत्यक्ता परभावश्चाप्युपाधी कर्तृकर्मनोः ।
तयोः श्रुतिविशेषेण वाचकौ मध्यमोत्तमौ ॥ १ ॥

pratyaktā parabhāvaścāpyupādhiḥ kartṛkarmanoh |
tayoh śrutiviśeṣeṇa vācakau madhyamottamau || 1 ||

Inwardness, and also otherness, are the adjuncts of agent and object; the middle and the highest persons are the expressors of those two, by a particularity of the hearing.

The definition of grammatical person, and it is built from two adjuncts. Pratyakta: *inwardness* — the turning-inward, the being-here-as-oneself; para-bhavaḥ ca api: and also *otherness*. Upadhi kartṛkarmanoh: these two are the *adjuncts of agent and object* — upadhi: the limiting condition (3.2.2's asatya-upadhi; 3.9.36's kriya-upadhi, time conditioned by action). So person is not a property of the participants but a condition laid on them: the agent taken inwardly is 'I', taken as other is 'he'. Tayoh śruti-viseṣeṇa vācakau madhyama-uttamau: the *middle* and the *highest* persons are the *expressors* of those two, by a *particularity of the hearing* — the verbal endings differ, and that difference is the whole marking. The Sanskrit order is worth noting: uttama is the first person (the 'highest'), madhyama the second. So the samuddesa opens by making person an adjunct-pair on the karakas — and the next verse will say what the adjuncts are adjuncts of.

Verse 3.10.2

सदसद्वापि चैतन्यमेताभ्यामवगम्यते ।
चैतन्यभागे प्रथमः पुरुषो न तु वर्तते ॥ २ ॥

sadasadvāpi caitanyametābhyāṃavagamyate |
caitanyabhāge prathamah puruṣo na tu vartate || 2 ||

Consciousness, whether existent or non-existent, is understood by these two; but the first person does not operate in the portion that is consciousness.

The samuddesa's central and strangest claim. Sad asad vapi caitanyam etabhyam avagamyate: *consciousness, whether existent or non-existent, is understood* by these two — the first and second persons carry caitanyam: to say 'I' or 'you' is to bring consciousness into the sentence, and the sentence works whether or not the consciousness is there (one addresses the dead, the dreamt, the absent). Caitanya-bhage prathamah puruṣo na tu vartate: but the *first person* — prathama, which in Sanskrit's ordering is the *third* person, the 'he' form — *does not operate* in the *portion that is consciousness*. So 'he goes' says nothing about consciousness; 'I go' and 'you go' do. The third person is the tenseless, consciousness-free default, and the other two are marked for awareness. This is a genuine observation about what the person-system encodes, and it is not the obvious one: person is usually taken to mark participant-role, and here it marks *sentience*.

Verse 3.10.3

बुधिजानातिचितिभिः प्रथमे पुरुषे सति ।
सम्ज्ञानार्थैर्न चैतन्यस्योपयोगः प्रकाशयते ॥ 3 ॥

budhijānāticitibhiḥ prathamē puruṣe sati |
saṃjñānārthairna caitanyasyopayogaḥ prakāśyate || 3 ||

With 'budh', 'jna', 'cit' — the first person being present, and their meanings being cognition — the employment of consciousness is not made manifest.

The claim of 3.10.2 tested on the consciousness-verbs themselves. Budhi-janati-citibhiḥ: with 'budh' (to awaken, know), 'jna' (to know), 'cit' (to be aware) — verbs whose very meaning is cognition. Prathamē puruṣe sati: the *first person* — the third-person form — being present: 'he knows', 'he is aware'. Saṃjñanarthaiḥ na caitanyasya upayogaḥ prakāśyate: their meanings being *cognition*, the *employment of consciousness is not made manifest*. So even 'he knows' does not bring consciousness into the sentence as 'I know' does: the verb's meaning is cognition and the *person* is unmarked for it. The test is decisive and well chosen — if any third-person form were going to encode awareness it would be these — and the result confirms 3.10.2: what the first and second persons carry is not supplied by lexical meaning. It is carried by the ending.

Verse 3.10.4

संबोधनार्थः सर्वत्र मध्यमे कैश्चिदिष्यते ।
तथा संबोधने सर्वा प्रथमां युष्मदो विदुः ॥ 4 ॥

sambodhanārthaḥ sarvatra madhyame kaiścidīṣyate |
tathā sambodhane sarvām.prathamām.yuṣmado viduḥ || 4 ||

By some, the meaning of address is accepted everywhere in the middle person; and likewise, in address, they know every first-case form of 'yusmad'.

The second person analysed as address. Sambodhana-arthaḥ sarvatra madhyame kaiscid isyate: by *some*, the *meaning of address* is accepted *everywhere* in the *middle person* — every 'you' is a vocative in disguise: to use the second person is to call. Tatha sambodhane sarvam prathamam yusmado viduḥ: and *likewise*, in *address*, they know *every* first-case form of 'yusmad' — every nominative 'tvam' is a calling. So the second person is the vocative's home, and the vocative (3.7.163's mere facing-toward, siddhasya abhimukhi-bhava-matram) is what the middle person means. This connects the person-system to the karaka-system's outlier: the vocative was not a karaka at all but the doorway into the sentence (3.7.163), and the second person is that doorway grammaticalized into the verb.

Verse 3.10.5

संबोधनं न लोकेऽस्ति विधातव्येन वस्तुना ।
स्वाहेन्द्रशत्रुर्वर्धस्व यथा राजा भवेति च ॥ 5 ॥

sambodhanam, na loke'sti vidhātavyena vastunā |
svāhendrasatrurvardhasva yathā rājā bhaveti ca || 5 ||

In the world there is no address by means of a thing that is to be brought about — as 'Svaha! Grow, O slayer of Indra', and 'Be a king'.

A limit on 3.10.4's identification, and its example is famous. Sambodhanam na loke 'sti vidhātavyena vastuna: in the *world* there is no *address* by means of a *thing* that is to be brought about — one cannot call something by what it is not yet. And the examples: svaha indra-satrur vardhasva — 'Svaha! Grow, O slayer of Indra': the mantra of Tvastr's sacrifice, whose mis-accentuation famously produced a son slain by Indra rather than Indra's slayer — the tradition's standing case of a rite destroyed by grammar. Yatha raja bhava iti ca: and 'Be a king' — one addresses a man and tells him to become a king; one does not address him *as* king. So the address must fix on what is, and what is to be brought about cannot do the fixing (3.7.163's siddhasya: the vocative's target is what is *accomplished*). The Indra-satru example is chosen with some wit: it is the case where addressing something as what it was not yet went catastrophically wrong.

Verse 3.10.6-7

युष्मदर्थस्य सिद्धत्वान्नियता चाद्युदात्तता ।
युष्मदः प्रथमान्तस्य परश्चेन्न पदादसौ ॥ 6 ॥
गुणप्रधानताभेदः पुरुषादिविपर्ययः ।
निर्देशश्चान्यथा शास्त्रे नित्यत्वान्न विरुध्यते ॥ 7 ॥

yusmadarthasya siddhatvānniyatā cādyudāttatā |
yusmadah prathamāntasya paraścenna padādasau || 6 ||
guṇapradhānatābhedaḥ puruṣādiviparyayaḥ |
nirdeśaścānyathā śāstre nityatvāna virudhyate || 7 ||

(6) From the accomplished-ness of 'yusmad's meaning, and the fixed initial-acute accent — of 'yusmad' ending in the first case, if it is subsequent, it is not from a word. (7) The difference of subordinate and principal, the inversion of person and the rest, and a designation otherwise in the science — from eternity, there is no contradiction.

Two technical notes, and the second is the samuddesa's methodological one. (6): yusmad-arthasya siddhatvat — from the *accomplished-ness* of 'yusmad's meaning (3.10.5's siddhasya: the addressed is what stands); niyata ca ady-udattata — and the *fixed initial-acute accent*: 'yusmad' forms have their own accentual rule. Yusmadah prathamantasya paras cen na padad asau: of 'yusmad' ending in the *first case*, if it is *subsequent*, it is *not from a word* — a technical condition on the accent-rule's application. (7) then generalizes: guṇa-pradhanata-bhedah puruso-adi-viparyayah — the *difference of subordinate and principal*, the *inversion of person and the rest*; nirdesah ca anyatha sastre: and a *designation otherwise* in the science. Nityatvat na virudhyate: *from eternity*, there is *no contradiction*. So the grammar's inversions — where person-marking runs contrary to the situation — do not con-

tradict, because the language is eternal and its postings are not answerable to the moment (3.7.103's niyamah sabde na tu vastuni).

Verse 3.10.8-9

यथानिर्देशमर्थाः स्युर्येसां शास्त्रं विधायकम् ।
किं चित् सामान्यमाश्रित्य स्थिते तु प्रतिपादनम् ॥ 8 ॥
योऽश्वे यः पीठ इत्यत्र भूतयोरश्वपीठयोः ।
यथोपलक्षणार्थत्वं तथार्थेष्वनुशासनम् ॥ 9 ॥

yathānirdeśamarthāḥ syuryesāṃ śāstram vidhāyakam |
kim.cit sāmānyamāśritya sthite tu pratipādanam || 8 ||
yo'sve yaḥ pīṭha ityatra bhūtayoraśvapīṭhayoḥ |
yathopalakṣaṇārthatvam.tathārtheṣvanuśāsanam || 9 ||

(8) The meanings would be as the designation has it, for those of whom the science is the ordainer; but where it stands, having resorted to some general, the conveying is otherwise.
(9) As in 'he who is on a horse', 'he who is on a seat' — the horse and the seat being existent — there is the purpose of indication: so is the teaching with respect to meanings.

The samuddesa closes with a methodological simile of great reach. (8): yatha-nirdesam arthah syuh yesam sastram vidhayakam — the *meanings* would be *as the designation has it*, for those of whom the *science is the ordainer*: if the sastra ordained meanings, meanings would be whatever it said. Kimcit samanyam asritya sthite tu pratipadanam: but where it *stands*, having *resorted to some general*, the *conveying* is otherwise — the science rests on generals it did not make, and its conveying follows them. (9) gives the simile: yo 'sve yah pitha iti atra — as in 'he who is on a horse', 'he who is on a seat' — bhutayoh asva-pithayoh, the horse and the seat *being existent*: one identifies a man by what he sits on, and the horse is not thereby part of him. Yatha upalaksana-arthatvam tatha arthesu anusasanam: as there is the *purpose of indication*, so is the *teaching* with respect to *meanings*. Upalaksana: indication, marking-out without describing (3.3.51's saptaparna; 3.4.3's dravya defined by pronominal referability). So the grammar's terms *indicate* their meanings as 'the man on the horse' indicates a man — pointing, not constituting. The Purusa-samuddesa ends by saying what the whole Padakanda has said: the science marks, and does not make.

Saṅkhyā-samuddesa — On Number

Verse 3.11.1

संख्यावान् सत्त्वभूतोऽर्थः सर्व एवाभिधीयते ।
भेदाभेदविभागो हि लोके संख्यानिबन्धनः ॥ १ ॥

*saṅkhyāvān sattvabhūto'rthaḥ sarva evābhidhīyate |
bhedābhedavibhāgo hi loke saṅkhyānibandhanah || 1 ||*

Every meaning that is a substance-entity whatever is expressed as possessing number; for the division of difference and non-difference, in the world, is grounded in number.

The samuddesa's opening claim, and it is unrestricted. *Saṅkhyavan sattva-bhuto 'rthah sarva eva abhidhiyate*: every meaning that is a substance-entity whatever is expressed as possessing number — nothing nominal escapes number (3.1.51's *na vina saṅkhyaya kascit sattva-bhuto 'rtha ucyate*: nothing that is a substance-entity is spoken of at all without number). And the ground: *bheda-abheda-vibhago hi loke saṅkhyā-nibandhanah* — the division of difference and non-difference, in the world, is grounded in number. So number is what makes the one/many distinction available at all: without it there is no telling whether we face one thing or several. *Nibandhana* — the grounding-word since 1.13. The Jāti-samuddesa spent forty verses on when number is meant (3.1.51-90); this one asks what it is, and it begins by making it the ground of the most basic division there is.

Verse 3.11.2

स धर्मो व्यतिरिक्तो वा तेषामात्मैव वा तथा ।
भेदेहेतुत्वमाश्रित्य सङ्ख्येति व्यपदिश्यते ॥ २ ॥

*sa dharmo vyatirikto vā teṣāmātmaiva vā tathā |
bhedahetutvamāśritya saṅkhyeti vyapadiśyate || 2 ||*

That property is either distinct from them, or is their very self; having resorted to its being the cause of difference, it is designated as 'number'.

The ontology canvassed and declined, in the samuddesa's second verse. *Sa dharmo vyatirikto va*: that property is either distinct from them — a real item over and above the things counted (the Vaiśeṣika's *saṅkhyā*, a quality inhering in substances). *Tesam atma eva va tathā*: or is their very self — nothing but the things themselves. *Bheda-hetutvam asritya saṅkhyā iti vyapadiśyate*: having resorted to its being the cause of difference, it is designated as 'number'. So whichever it is metaphysically, number is named by its office: causing difference. This is 3.7.15 verbatim in structure (the means either distinct from them or their very self; having resorted to separation, constructed as means-hood) — and the same move: the ontology is undecided, the function is definite, and the grammar proceeds identically either way (2.179's licensed double description).

Verse 3.11.3

समवेता परिच्छेद्ये क्वचिदन्यत्र सा स्थिता ।
प्रकल्पयति भावानां सङ्ख्याभेदं तथात्मनः ॥ 3 ॥

samavetā paricchedye kvacidanyatra sā sthitā |
prakalpayati bhāvanām saṅkhyābhedam tathātmanah || 3 ||

Inherent in what is to be delimited, it stands somewhere else; it constructs the difference of number for entities, and likewise for its own self.

Number's peculiar location. Samaveta paricchedye: *inherent* in what is to be delimited — number inheres in what it counts. Kvacid anyatra sa sthita: it stands *somewhere else* — and yet it is elsewhere: the twoness of two pots is not in either pot. Both, and the tension is the point. Prakalpayati bhavanam samkhya-bhedam tatha atmanah: it constructs the *difference of number* for entities, and *likewise for its own self* — number numbers itself: there are two twos in four, and the numbering of numbers is number's own doing. So number is inherent-and-elsewhere, and reflexive. This is 3.1.28's stratification (the universal of number resting on what rests on the individual) given its structural description — and 3.1.9's regress (universals of universals) reappearing as number's self-application.

Verse 3.11.4

परत्वे चापरत्वे च भेदे तुल्या श्रुतिर्यथा ।
सङ्ख्याशब्दाभिधेयत्वं भेदहेतोस्तथा गुणे ॥ 4 ॥

paratve cāparatve ca bhedhe tulyā śrutiryathā |
saṅkhyāśabdābhidheyatvam bhedahetostathā guṇe || 4 ||

As in priority and posteriority the hearing is alike in respect of difference — so is the state of being expressible by number-words, in the quality that is the cause of difference.

A parallel with the directional pair. Paratve ca aparatve ca bhedhe tulya srutir yatha: as in *priority* and *posteriority* the *hearing* is *alike* in respect of *difference* — 'before' and 'after' sound alike as relational terms, and neither is a property of anything (3.6.4's para-apatatve grounded in difference of place; 3.6.8-9's inversions with standpoint). Samkhya-sabda-abhidheyatvam bheda-hetoh tatha guṇe: so is the *state of being expressible by number-words*, in the *quality* that is the *cause of difference*. So number-words behave as directional words do: they express a relational condition, not a thing's property. And the parallel is apt because 3.6 already established that direction orders everything and is itself unordered (3.6.6) — which is exactly what 3.11.3 said of number.

Verse 3.11.5

अस्वतन्त्रे स्वतन्त्रत्वं परधर्मो यथा गुणे ।
अभेद्ये भेद्यभावोऽपि द्रव्यधर्मस्तथा गुणे ॥ 5 ॥

*asvatanetre svatantratvam para-dharmo yathā guṇe |
abhedye bhedyabhāvo’pi dravyadharmastathā guṇe || 5 ||*

As independence in what is not independent is another’s property, in a quality — so also the state of being differentiable in what is not differentiable is a substance’s property, in a quality.

Two properties a quality wears that are not its own. *Asvatanetre svatantratvam para-dharmo yathā guṇe*: independence in what is not independent is another’s property, in a quality — a *guṇa* is *paratantra* by nature (3.5.1’s *gunatvam paratantratvat*) and is spoken of as though free-standing (1.64’s *guṇa* indicated as though independent, *svatantryena*). *Abhedye bhedyabhavo’pi dravya-dharmas tathā guṇe*: the state of being differentiable in what is not differentiable is a substance’s property, in a quality. So a quality is treated as independent (which is a substance’s way) and as differentiable (which is also a substance’s way), and neither belongs to it. Number, being a *guṇa*, wears both borrowed properties — which is why it can be counted (3.11.3’s numbering of numbers) though it is not the sort of thing that comes in ones and twos.

Verse 3.11.6

स्वबुद्ध्या तमपोद्धृत्य लोकोऽप्यगममाश्रितः ।
स्वधर्मदिन्यधर्मेण व्याचष्टे प्रतिपत्तये ॥ 6 ॥

*svabuddhyā tamapoddhṛtya loko’pyagamamāśritaḥ |
svadharmādanyadharmena vyācaṣṭe pratipattaye || 6 ||*

Having abstracted it by its own intellect, the world too, having resorted to tradition, explains it by another’s property rather than its own — for the sake of comprehension.

Why the borrowed properties of 3.11.5 are not an error. *Sva-buddhya tam apoddhṛtya*: having abstracted it by its own intellect — *apoddhṛtya*: the *kanda*’s constant verb (3.1.1, 3.4.1: word-meanings abstracted from the sentence). *Loko’pi agamam asritah*: the world too, having resorted to tradition. *Sva-dharmad anya-dharmena vyacaste pratipattaye*: explains it by another’s property rather than its own — for the sake of comprehension. So the world, not only the grammarians, describes qualities by substance-properties, and does so deliberately, for understanding’s sake. This is 2.13’s divisions for the *avidvan* and 3.7.147’s separations constructed for instruction — now credited to the *loka* itself. The borrowing is a teaching-device that everyone uses and nobody invented.

Verse 3.11.7

परोपकारतत्त्वानां स्वातन्त्र्येणाभिधायकः ।
शब्दः सर्वपदार्थानां स्वधर्मदि विप्रकृष्यते ॥ 7 ॥

paropakāratattvānām.svātantryeṇābhidhāyakah |
śabdah sarvapadārthānām.svadharmād viprakṛṣyate || 7 ||

The word, which expresses with independence the realities of all word-meanings — whose nature is to assist another — is drawn away from their own property.

The general diagnosis. Para-upakara-tattvanam: of things *whose nature is to assist another* — every padartha is such, on this kanda's showing (3.7.124's all proceeding for their own becoming, and every one of them assisting; 3.3.5's upakara). Svatantryena abhidhayakah sabdah sarva-padarthanam: the word, which expresses *with independence* the realities of *all word-meanings*. Sva-dharmad viprakṛṣyate: is *drawn away* from their *own property*. So language necessarily misdescribes: it presents as independent what is nothing but assisting, because that is what nouns do (3.8.12's paritah paricchinnam: what is delimited on all sides is spoken of as an entity). The verse generalizes 3.11.5 from qualities to everything: nothing has the independence its name confers on it, and naming confers it regardless.

Verse 3.11.8

यथैवाविषयं ज्ञानं न किञ्चिदवभासते ।
तथा भावोऽप्यसंस्पृष्टो न कश्चिदुपलभ्यते ॥ 8 ॥

yathaivāviṣayam.jñānam.na kiñcidavabhāsatē |
tathā bhāvo'pyasamśṛṣṭo na kaścidadupalabhyate || 8 ||

Just as a cognition without an object shines forth as nothing whatever — so an entity, uncommingled, is not apprehended as anything whatever.

The parallel that justifies 3.11.7's necessity. Yatha eva avisayam jnanam na kimcid avabhasate: as a *cognition without an object* shines forth as *nothing whatever* — an awareness of nothing is not an awareness (3.1.106's cognition never grasped apart from its object's form; 1.124's light that would not shine). Tatha bhavo 'py asamsrsto na kascid upalabhyate: so an *entity, uncommingled, is not apprehended* as anything whatever. Asamsrsta: uncommingled — 3.1.21's word (neither oneness nor manifoldness nor existence nor non-existence is found in the self-realities of things uncommingled). So the uncommingled thing is as unavailable as the objectless cognition, and for the same reason: both are terms of a relation, taken out of it. This is why language must borrow (3.11.7): there is no unrelated thing whose own property could be expressed.

Verse 3.11.9

भेदेन तु समाख्यानं यल्लोकोऽप्यनुवर्तते ।
आगमाच्छास्त्रसदृशो व्यवहारः स वर्ण्यते ॥ 9 ॥

bhedena tu samākhyānam yalloko'pyanuvartate |
āgamācchāstrasadr̥śo vyavahārah sa varṇyate || 9 ||

But that designation by way of difference which the world too follows along – from tradition, that practice is described as resembling the science.

The world's practice given its status. Bhedena tu samakhyanam yal loko 'py anuvartate: that *designation by way of difference* which the world too follows along – the ordinary way of speaking, which divides everything (3.11.1's division grounded in number). Agamat sastra-sadrso vyavaharah sa varnyate: *from tradition, that practice* is described as *resembling the science*. So the world's dividing talk resembles the sastra's – both divide, both do it from tradition, and neither invented it. Sastra-sadr̥sa: resembling the science. The verse quietly levels the grammarian and the layman (3.3.55's bala and pandita alike on the worldly path): both are running the same inherited apparatus of division, and the scholar's is only more explicit.

Verse 3.11.10

बुद्धौ स्थितेषु तेष्वेवमध्यारेणो न दुर्लभः ।
परधर्मस्य न ह्यत्र सदसत्त्वं प्रयोजकम् ॥ 10 ॥

buddhau sthiteṣu teṣvevamadhyāreṇo na durlabhah |
paradharmasya na hyatra sadasattvam.prayojakam || 10 ||

When they thus stand in the intellect, superimposition is not hard to come by; for here the existence or non-existence of another's property is not the occasioner.

Why the borrowing works. Buddhau sthitesu tesu evam adhyaropo na durlabhah: when they thus *stand in the intellect, superimposition* is not hard to come by – once things are held in mind, laying one's properties on another is effortless (3.1.6's adhyaropa; 3.9.100's superimposition on a contrary meaning). Para-dharmasya na hi atra sad-asattvam prayojakam: for here the *existence or non-existence* of another's property is not the occasioner. So the superimposition does not require that the borrowed property really belong to the lender: one may lay on what is not there. This is the mechanism that lets 3.11.5's quality wear independence – nothing needs to be independent for independence to be superimposed – and it is 3.3.42's doctrine (the negated thing granted figurative existence so the negation can operate).

Verse 3.11.11

सामान्येष्वपि सामान्यं विशेषेषु विशिष्टता ।
सङ्ख्यासु सङ्ख्या लिङ्गेषु लिङ्गमेवं प्रकल्पते ॥ 11 ॥

sāmānyeṣvapi sāmānyam, viśeṣeṣu viśiṣṭatā |
saṅkhyāsu saṅkhyā liṅgeṣu liṅgamevam, prakalpate || 11 ||

Thus a general is constructed even among generals, particularity among particulars, number among numbers, and gender among genders.

The reflexivity of every category, stated as a rule. Samanyesu api samanyam: a *general* even among *generals* — generality has its own generality (3.1.9's universals of universals). Visesesu visistata: *particularity* among *particulars*. Samkhyasu samkhyā: *number* among *numbers* (3.11.3's number numbering itself). Lingesu lingam: and *gender* among *genders* — anticipating the thirteenth samuddesa. Evam prakalpate: *thus it is constructed*. So every category applies to itself, and the self-application is a construction — prakalpate, not a discovery. The regress is admitted and defused exactly as 3.3.28 defused all regresses (there is no operation of an operation; therefore do not resort to infinite regress everywhere): the self-applications are postings, and postings do not generate real hierarchies.

Verse 3.11.12

अतो द्रव्याश्रितां सङ्ख्यामाहुः संसर्गवादिनः ।
भेदाभेदव्यतीतेषु भेदाभेदविधायिनीम् ॥ 12 ॥

ato dravyāśritāṃ, saṅkhyāmāhuḥ saṃsargavādināḥ |
bhedābhedavyatīteṣu bhedābhedavidhāyinīm || 12 ||

Therefore the proponents of commingling call number a thing resting on substance, ordaining difference and non-difference among things that have transcended difference and non-difference.

The samuddesa's own position, and it is stated as a paradox. Atah dravya-asritam samkhyam ahuh samsarga-vadinah: the *proponents of commingling* (3.7.9's samsarga-vadins, for whom all entities are capacities and possessors of capacities) call *number* a thing *resting on substance*. And the paradox: bheda-abheda-vyatitesu bheda-abheda-vidhayinim — *ordaining* difference and non-difference among things *that have transcended* difference and non-difference. The things are beyond the one/many distinction (3.1.21's uncommingled realities, bearing neither); number ordains it anyway. So number confers a distinction on what is incapable of bearing it — which is precisely 3.6.13's direction giving parts to the partless atom, and 3.6.14's things without place receiving places. Vidhayini: ordaining, prescribing. Number does not find ones and manys; it legislates them.

Verse 3.11.13

आत्मान्तराणां येनात्मा तद्रूप इव लक्ष्यते ।
अतद्रूपेण संसर्गात् सा निमित्तसरूपता ॥ 13 ॥

ātmāntarāṇām.yenātmā tadrūpa iva lakṣyate |
atadrūpeṇa saṁsargāt sâ nimittasarūpatā || 13 ||

That by which the self of other selves is marked as though of that form — from commingling with what is not of that form: that is the likeness to the occasioning ground.

The mechanism of number's ordaining. Atmantaranam yena atma tad-rupa iva lakṣyate: that by which the *self of other selves* is *marked as though of that form* — one thing taking on another's look. Atad-rupena saṁsargat: from *commingling* with what is *not of that form* — and the lender does not have the form it lends (3.11.10's sad-asattvam na prayojakam: the borrowed property need not exist). Sa nimitta-sarupata: *that is the likeness to the occasioning ground*. So number works by conferring on things a likeness to what conferred it — and neither the conferrer nor the conferred has the property. This is 3.2.9-10's intentionality-structure exactly (cognition established as though having the object for its self, while being utterly not of that self), and its recurrence here shows how general Bhartrhari takes that structure to be: it is how *everything* wears what it did not have.

Verse 3.11.14

संस्पृष्टेष्वपि निभगि भूतेष्वर्थक्रिया यथा ।
सत्त्वादिषु च मात्रासु सर्वास्वेवं प्रतीयते ॥ 14 ॥

saṁsṛṣṭeṣvapi nirbhāge bhūteṣvarthakriyā yathā |
sattvādiṣu ca mātṛāsu sarvāsvevaṁ.pratīyate || 14 ||

As, even among the commingled elements, which are partless, effective action is understood — so it is understood among all the measures, in 'sattva' and the rest.

The doctrine confirmed on the elements. Samsrstesu api nirbhage bhutesu artha-kriya yatha: as, even among the *commingled elements*, which are *partless, effective action* is understood — arthakriya: the criterion of the real (2.288's asadharanam karyam; 2.33's own vocabulary). The elements are partless and commingled, and they *work*: fire burns, water wets, and neither has parts to do it with. Sattvadisū ca mātṛāsu sarvasu evaṁ pratiyate: so it is understood among *all the measures*, in 'sattva' and the rest — the gunas of Samkhya, sattva rajas tamas: equally partless, equally commingled, equally effective. So partlessness does not prevent working, and commingling does not require parts. The verse defends 3.11.12's paradox by precedent: if partless elements can act, partless things can be numbered — the ordaining does not need joints to work on (3.6.15's partlessness equal for the atom and for the pot).

Verse 3.11.15

द्वित्वादियोनिरेकत्वं भेदास्तत्पूर्वका यतः ।
विना तेन न सङ्ख्यानामन्यासामस्ति सम्भवः ॥ 15 ॥

dvitvādiyonirekatvam, bhedāstatpūrvakā yataḥ |
vinā tena na saṅkhyānāmanyāsāmasti sambhavaḥ || 15 ||

Oneness is the womb of duality and the rest, since the differences are preceded by it; without it there is no possibility of the other numbers.

The foundation of the number-series. Dvitvadi-yonir ekatvam: *oneness* is the *womb* of *duality* and the rest — yoni: the birth-word (3.1.3's six modifications as the wombs of differentiation; 2.58's *saṃhita* as the womb of the words; 3.7.44's case-endings as the wombs of the *karaka*'s differences). *Bhedas tat-purvaka yataḥ*: since the *differences* are *preceded* by it — every number is built of ones. *Vina tena na saṃkhyānam anyasam asti sambhavaḥ*: *without it there is no possibility* of the *other numbers*. So the series rests on one, and one is not itself a member of the series in the way the others are — it is their womb. And this places the *saṃuddesa*'s central problem: if oneness generates the numbers, what generates oneness? The verses following (3.11.16-17) canvass how duality arises from it, and none of the answers is comfortable.

Verse 3.11.16

एकत्वे बुद्धिसहिते निमित्तं द्वित्वजन्मनि ।
एकत्वाभ्यां समुत्पन्नमेवं वा तत् प्रतीयते ॥ 16 ॥

ekatve buddhisahite nimittam, dvitvajanmani |
ekatvābhyām, samutpannamevam, vā tat pratiyate || 16 ||

Oneness, accompanied by the intellect, is the occasioning ground in the birth of duality; or duality is understood as arisen from two onenesses in this way.

Two accounts of how two arises. *Ekatve buddhi-sahite nimittam dvitva-janmani*: *oneness*, accompanied by the *intellect*, is the *occasioning ground* in the *birth of duality* — one thing plus a mind makes two: the counting is the intellect's, and two is one-as-counted-twice. This is the cognitive account (3.7.104's *buddhy-avastha*; 3.9.78's cognition's own gathering). *Ekatvabhyam samutpannam evam va tat pratiyate*: *or it is understood as arisen from two onenesses* — two real ones make a real two, no mind required. The realist account. So: is duality a fact about the world or an act of counting? The *saṃuddesa* canvasses both and 3.11.17 will add a third — and the reason for the care is that number is where the constructivism of the whole *kāṇḍa* is most exposed. If anything were objectively so, it would be that there are two pots.

Verse 3.11.17

एकत्वसमुदायो वा सापेक्षे वा पृथक् पृथक् ।
एकत्वे द्वित्वमित्येवं तयोर्द्विवचनं भवेत् ॥ 17 ॥

ekatvasamudāyo vā sāpekṣe vā prthak prthak |
ekatve dvitvamityevam, tayordvivacanam, bhavet || 17 ||

Or it is a collection of onenesses; or, in oneness taken severally, with mutual dependence, there is duality — thus their dual-ending form would arise.

The third and fourth accounts. Ekatva-samudayo va: or it is a *collection of onenesses* — two is a heap of ones (3.8.4's samuha, the collection whose non-difference the intellect constructs). Sapekse va prthak prthak ekatve dvitvam iti evam: or, in *oneness taken severally*, with *mutual dependence*, there is *duality* — two ones, each depending on the other for its twoness: neither is two, and their mutual reference is. Tayor dvi-vacanam bhavet: thus their *dual-ending* form would arise — and the morphology follows whichever account is taken. Four accounts now: one-plus-mind, two-ones, a collection, mutual dependence. Bhartrhari does not choose, and the not-choosing is 3.11.2's move (distinct or their very self; the ontology undecided, the office definite). Sanskrit's dual has one form and four possible metaphysics behind it.

Verse 3.11.18

एकोऽपि गुणभेदेन सङ्घो भेद प्रकल्पयेत् ।
आश्रयाश्रयिभेदो हि तदाश्रयनिबन्धनः ॥ 18 ॥

eko'pi guṇabhedena saṅgho bheda prakalpayet |
āśrayāśrayibhedo hi tadāśrayanibandhanah || 18 ||

Even one aggregate, by difference of qualities, would construct a difference; for the difference of substratum and what rests on it is grounded in that substratum.

How one thing can be counted as many. Eko 'pi guna-bhedena sangho bheda prakalpayet: even *one* aggregate, by *difference of qualities*, would *construct a difference* — one herd is many by its cattle's colours; one man is several by his offices (3.9.32's carpenter and cook; 3.8.63's teacher and uncle). Asraya-asrayi-bhedo hi tad-asraya-nibandhanah: for the difference of *substratum* and *what rests on it is grounded in that substratum*. So the counting follows the qualities, and the qualities rest on the thing, and the thing is one. Number therefore does not track things: it tracks the aspects under which things are taken (3.7.104's buddhy-avastha carving one thing into agent, instrument and object). One aggregate, many counts, and the counts are all correct.

Verse 3.11.19

सङ्ख्येयसङ्घसङ्ख्यानसङ्घः सङ्ख्येति कथ्यते ।
विंशत्यादिषु सान्यस्य द्रव्यसङ्घस्य भेदिका ॥ 19 ॥

saṅkhyeyasaṅghasaṅkhyānasaṅghaḥ saṅkhyeti kathyate |
viṃśatyādiṣu sānyasya dravyasaṅghasya bhedikā || 19 ||

The aggregate of the numbering of an aggregate of countables is called 'number'; in 'twenty' and the rest, it is the differentiator of another substance-aggregate.

The higher numbers analysed. Samkhyeya-sangha-samkhyana-sanghah samkhyaya iti kathyate: the aggregate of the numbering of an aggregate of countables is called 'number' – twenty is not twenty things; it is the gathering of the countings of a gathering. Two levels of aggregation: the things are gathered, the countings are gathered, and the number is the second gathering. Vimsaty-adisu sa anyasya dravya-sangha-sya bhedika: in 'twenty' and the rest, it is the differentiator of another substance-aggregate – and this second-order number then differentiates a further group. So 'twenty cows' has: the cows, gathered; their countings, gathered into twenty; and the twenty differentiating the herd. This is 3.11.3's number-numbering-itself given its structure, and it explains why the higher numerals behave grammatically as nouns rather than as adjectives.

Verse 3.11.20

एकविंशतिसंख्यायां संख्यान्तरसरूपयोः ।
एकस्यां बुद्ध्यनावृत्त्या भागयोरिव कल्पना ॥ 20 ॥

ekaviṃśatisamkhyāyām samkhyāntarasarūpayoh |
ekasyām buddhyanāvṛtṭyā bhāgayoriva kalpanā || 20 ||

In the number 'twenty-one', of the two which resemble another number, there is a construction as though of parts, in one number, by a non-repetition of the intellect.

The compound numerals. Eka-vimsati-samkhyayam: in the number 'twenty-one'. Samkhyantara-sarupayoh: of the two which resemble another number – 'eka' and 'vimsati' look like the numbers one and twenty, and are not those numbers here (2.169's kupa-supa-yupa: phonetic containment is semantically inert; 2.177's rule: different meaning-behaviour, different base). Ekasyam buddhy-anavṛtṭyā bhagayor iva kalpana: in one number, by a non-repetition of the intellect, there is a construction as though of parts. Buddhy-anavṛtti: the mind does not go twice – one grasps twenty-one at a stroke, not twenty and then one. So the numeral's parts are apparent (iva) and its grasp is single. This is 2.36's asvakarna-principle (the compound understood whole, its members idle) applied to arithmetic: twenty-one is one number, and its look of composition is the analyst's.

Verse 3.11.21

असंख्यासमुदायत्वात् संख्याकार्यं विधीयते ।
समूहत्वे तु तन्न स्यात् स्वाङ्गादिसमुदायवत् ॥ 21 ॥

asamkhyāsamudāyatvāt samkhyākāryam vidhīyate |
samūhatve tu tanna syāt svāṅgādisamudāyavat || 21 ||

From its not being an aggregate of numbers, the number-operation is prescribed; but on its being a collection, that would not hold — as with an aggregate of one's own limbs and the like.

The argument for 3.11.20. Asamkhyā-samudayatvat samkhyā-kāryam vidhīyate: from its *not being an aggregate of numbers*, the *number-operation* is *prescribed* — twenty-one takes number-morphology precisely because it is not a heap of numbers but one number. Samūhatve tu tan na syāt: on its being a *collection*, that would not hold. And the illustration: sva-āṅga-ādī-samudāyavat — as with an *aggregate of one's own limbs* and the like: a body is not a number of limbs; it is a body, and one does not conjugate it as a plural. So collections do not take number-operations, and twenty-one does; therefore twenty-one is not a collection. The argument is from the grammar's own behaviour (2.443's Panini does not legislate vacuously), and it confirms 3.11.20's single grasp: the morphology treats the compound numeral as a unit because it is one.

Verse 3.11.22

संख्येयान्तरतन्त्रासु या संख्यासु प्रवर्तते ।
आवृत्तिवर्गसंख्येया तां संख्यां तादृशीं विदुः ॥ 22 ॥

samkhyeyāntaratantrāsu yā samkhyāsu pravartate |
āvṛttivargasamkhyeyā tāṁ samkhyāṁ tādrśīm viduḥ || 22 ||

That number which operates among numbers dependent on other countables, and whose countable is a repetition-class — such a number they know as of that kind.

Multiplication analysed. Samkhyeyantara-tantrāsu yā samkhyāsu pravartate: that *number* which operates among *numbers dependent on other countables* — a number whose objects are themselves numbers. Avṛtti-varga-samkhyeya: and whose *countable* is a *repetition-class* — avṛtti-varga: a class of repetitions; 'three fours' counts not four things but the repeating of four. Tāṁ samkhyāṁ tādrśīm viduḥ: *such a number they know as of that kind*. So multiplication is the counting of repetitions, and its countables are recurrences rather than things. The analysis is exact and it fits the samuddesa's frame: number ordains difference (3.11.12), and multiplying ordains difference among ordainings — number applying to itself (3.11.3, 3.11.11's reflexivity).

Verse 3.11.23-26

न संख्यायां न संख्येये द्वौ दशेत्यस्ति सम्भवः ।
 भेदाभावान्न संख्यायां विरोधान्न तदाश्रये ॥ 23 ॥
 संख्यायेते दशद्वगौ द्विदशा इति संख्याया ।
 तद्रूपे वापि संख्येये आवृत्तिः परिगण्यते ॥ 24 ॥
 संख्या नाम न संख्यास्ति संज्ञैषेति यथोच्यते ।
 रूपं न रूपमप्येवं संज्ञा सा हि सितादिषु ॥ 25 ॥
 संख्यानजातियोगात् तु संख्या संख्येति कथ्यते ।
 रूपत्वजातियोगाच्च रूपे रूपमिति स्मृतम् ॥ 26 ॥

na samkhyāyām, na samkhyeye dvau daśetyasti sambhavaḥ |
 bhedaābhāvanṇa samkhyāyām, virodhānna tadāśraye || 23 ||
 samkhyāyete daśadvargau dvidaśā iti samkhyayā |
 tadrūpe vāpi samkhyeye āvṛttiḥ pariganyate || 24 ||
 samkhyā nāma na samkhyāsti samjñaiṣeti yathocyate |
 rūpam, na rūpamapyevam, samjñā sā hi sitādiṣu || 25 ||
 samkhyānajatīyogāt tu samkhyā samkhyeti kathyate |
 rūpatvajātīyogācca rūpe rūpamiti smṛtam || 26 ||

(23) 'Two tens' is not possible either in the number or in the countable — not in the number, from the absence of difference; not in its substratum, from contradiction. (24) The two ten-classes are counted by a number, as 'two tens'; or, in a countable of that form, the repetition is enumerated. (25) 'Number' is not a number; it is a designation, as is said; likewise 'form' is not a form — for that is a designation, in 'white' and the rest. (26) But from connection with the universal 'numbering', a number is called a number; and from connection with the universal 'form-hood', a form is remembered as a form.

A four-verse knot about self-application, and it is the samuddesa's finest technical passage. (23) states the difficulty: 'two tens' can be neither in the *number* — bheda-abhavat, from the *absence of difference*: ten is ten, and two tens are not two different tens; nor in the *countable* — virodhat, from *contradiction*: the twenty things are not two tens, they are twenty. So 'two tens' has no home. (24) offers two resolutions: the two *ten-classes* are counted (the classes, not their members), or the *repetition* is enumerated (3.11.22's avṛtti-varga). (25) then makes the deep move: samkhyā nama na samkhyā asti — '*number*' is not a *number*: the word 'number' does not name a number; samjña esa iti yatha ucyate, it is a *designation*. And the parallel: rūpam na rūpam api evam — '*form*' is not a *form*; samjña sa hi sitādisu, it is a designation, in 'white' and the rest. So the category-words are names, not instances (3.11.11's reflexivity now qualified: the self-application is nominal). (26) supplies what saves it: samkhyāna-jatī-yogat tu samkhyā samkhyā iti kathyate — from *connection with the universal 'numbering'*, a *number* is called a *number*. So 'number' names a number by way of the universal, not by being one — which dissolves the regress of 3.11.11 exactly as 3.3.28 dissolved all regresses: the self-application runs through a jati and does not iterate.

[Contested: the four verses are compressed and their argumentative joints are hard; we read 23 as the aporia, 24 as two resolutions, and 25-26 as the deeper diagnosis (category-words as designations, saved by jati-connection). Readers who take 25 as a further horn of the aporia will find 26 the sole answer, which the text permits]

Verse 3.11.27

निमित्तमेकमित्यत्र विभक्त्या नाभिधीयते ।
तद्वतस्तु यदेकत्वं विभक्तिस्तत्र वर्तते ॥ 27 ॥

nimittamekamityatra vibhaktyā nābhidhīyate |
tadvatastu yadekatvam, vibhaktistatra vartate || 27 ||

In 'one', the occasioning ground is not expressed by the case-ending; but the oneness of what possesses it – there the case-ending operates.

What the singular ending actually says. *Nimittam ekam iti atra vibhaktya na abhidhiyate*: in 'one', the occasioning ground is not expressed by the case-ending – the ending does not name oneness-the-property. *Tadvatas tu yad ekatvam vibhaktis tatra vartate*: but the oneness of what possesses it – there the case-ending operates. So the singular says: this thing is one – not: here is oneness. The ending predicates number of a bearer and does not name number. This is 3.7.13's doctrine (the *karaka*-property is not expressed by the noun; the assistance is understood by the case-endings alone) applied to number: the endings mark, and marking is not naming (3.10.9's *upalaksana*: indication, pointing without describing).

Verse 3.11.28

एकस्य प्रचयो दृष्टः समूहश्च द्वयोस्तथा ।
निमित्तव्यतिरेकेण संख्यान्या भेदिका ततः ॥ 28 ॥

ekasya pracayo drṣṭaḥ samūhaśca dvayostathā |
nimittavyatirekeṇa samkhyānyā bhedikā tataḥ || 28 ||

An accumulation of one is seen, and likewise a collection of two; therefore, apart from the occasioning ground, a different number is the differentiator.

The argument for 3.11.27. *Ekasya pracayo drṣṭaḥ*: an accumulation of one is seen – one thing, accumulated (many ones); *samūhaśca dvayos tathā*: and likewise a collection of two. So the same oneness appears in accumulations and the same duality in collections – the numbers recur across their instances. *Nimitta-vyatirekeṇa samkhyā anyā bhedikā tataḥ*: therefore, apart from the occasioning ground, a different number is the differentiator. The number that differentiates is other than the property that occasions it. So there are two things: oneness-the-property (the *nimitta*) and the number that the ending marks – and the ending marks the second. This confirms 3.11.27: the singular does not name the property; it marks a differentiation the property occasioned.

Verse 3.11.29

तदेकमपि चैकत्वं विभक्तिश्रवणादृते ।
नोच्यते तेन शब्देन विभक्त्या तु सहोच्यते ॥ 29 ॥

tadekamapi caikatvam vibhaktiśravaṇādr̥te |
no cyate tena śabdena vibhakttyā tu saho cyate || 29 ||

And that oneness, though one, apart from the hearing of a case-ending, is not expressed by that word; but together with the case-ending it is expressed.

The stem's silence about number. *Tad ekam api ca ekatvam vibhakti-sravanad rte na ucyate tena sabdena*: that *oneness*, though *one*, *apart from the hearing of a case-ending*, is not expressed by that word — the bare stem says nothing about number; 'go-' is neither singular nor plural. *Vibhaktya tu saha ucyate*: but *together with* the case-ending it is expressed. So number enters at inflection and not before — which is 3.2.11's finding for the whole word (prior to the case-ending, the meaning of what ends in the suffix does not exist) applied to number specifically. The stem has no number to be transplanted (3.9.97's unmixed stem having no tense), and the ending supplies it. Stem and ending, meaning and number: the division of labour the whole Padakanda has been mapping.

Verse 3.11.30

अन्वयव्यतिरेकौ च यदि स्याद् वचनान्तरम् ।
स्यातामसति तस्मिंश्च प्रकृत्यर्थो न कल्प्यते ॥ 30 ॥

anvayavyatirekau ca yadi syād vacanāntaram |
syātāmasati tasmimśca prakṛtyartha na kalpyate || 30 ||

And agreement and difference would obtain, if there were another number-form; and in the absence of that, the base-meaning is not constructed.

The distributional test applied to number. *Anvaya-vyatirekau ca yadi syad vacanantaram*: *agreement and difference* would obtain — the method of 2.12 and 2.166 (vary the form, watch the meaning) — *if there were another number-form*: one can test the singular's contribution by substituting a plural. *Syatam asati tasmims ca prakṛty-artha na kalpyate*: and *in the absence of that*, the *base-meaning* is not constructed. Where no alternative form exists, the method cannot isolate the base's contribution — one cannot subtract what has no contrast. So number's semantic contribution is established by contrast and only by contrast, which is why 3.1.51-52 could find the singular and plural unintended (they are obligatory, hence contrastless in most contexts) and the dual intended (it contrasts). The samuddesa's method and the Jati-samuddesa's result agree.

Verse 3.11.31

एकत्वमेक इत्यत्र शुद्धद्रव्यविशेषणम् ।
सगुणस्तु प्रकृत्यर्थो विभक्त्यर्थेन भिद्यते ॥ 31 ॥

ekatvameka ityatra śuddhadravyaviśeṣaṇam |
saguṇastu prakṛtyartha vibhaktiyarthena bhidyate || 31 ||

In 'oneness', 'one' — it is the qualifier of the pure substance; but the base-meaning with its quality is differentiated by the case-ending's meaning.

Two levels distinguished. Ekatvam eka iti atra suddha-dravya-visesaṇam: in 'oneness', 'one' — it is the *qualifier of the pure substance*: the numeral qualifies the bare thing (3.4.3's dravya defined by pronominal referability, with nothing else in it). Sa-guṇas tu prakṛty-artha vibhakti-yarthena bhidyate: but the *base-meaning with its quality is differentiated* by the *case-ending's meaning*. So there are two operations: the numeral qualifies the pure substance, and the ending differentiates the qualified base. Number enters twice — once lexically, once inflectionally — and the two are not the same. This is the stratification 3.11.19 found in the higher numerals (the countables gathered, the countings gathered) reappearing between the numeral-word and the ending.

Verse 3.11.32

द्वयेकयोरिति निर्देशात् संख्यामात्रेऽपि सम्भवः ।
एकादीनां प्रसिद्धा तु संख्येयार्थत्वमुच्यते ॥ 32 ॥

dvayekayoriti nirdeśāt samkhyāmātre'pi sambhavaḥ |
ekādinām prasiddhā tu samkhyeyārthatvamucyate || 32 ||

From the designation 'of two and one', there is a possibility even in mere number; but the well-known state of 'eka' and the rest is said to be having a countable for its meaning.

The samuddesa's close, and it lands on the distinction it has been building. Dvy-ekayor iti nirdesat samkhyā-matre 'pi sambhavaḥ: from the designation 'of two and one' — Panini's own phrase (1.4.22: dvy-ekayor dvi-vacana-eka-vacane, prescribing the dual and singular for two and one) — there is a *possibility even in mere number*: the rule's words could mean the numbers themselves, abstractly. Ekadinam prasiddha tu samkhyeya-arthatvam ucyaṭe: but the *well-known* state of 'eka' and the rest is said to be *having a countable for its meaning* — in established usage, 'one' means one *thing*, not the number one. So the numerals mean countables and could mean numbers, and prasiddhi decides (2.253's currency-doctrine; 3.9.62's schools sorted). The Sankhya-samuddesa ends where the Padakanda always ends: two construals available, usage settling it, and the settling neither arbitrary nor found in the things.

Upagraha-samuddeśa — On Aspect

Verse 3.12.1

य आत्मनेपदाद् भेदः क्वचिदर्थस्य गम्यते ।
अन्यतश्चापि लादेशान्मन्यन्ते तमुपग्रहम् ॥ 1 ॥

ya ātmanepadād bhedaḥ kvacidarthasya gamyate |
anyataścāpi lādeśānmanyante tamupagraham || 1 ||

That difference of meaning which is somewhere understood from the *atmanepada* — and from another substitute of 'la' as well — they consider that to be 'upagraha'.

The *samuddesa*'s subject defined ostensibly rather than by essence. *Ya atmanepadad bhedah kvacid arthasya gamyate*: that *difference of meaning* which is *somewhere* understood from the *atmanepada* — the middle-voice endings, which Sanskrit opposes to the *parasmaipada* (the 'word for another'). *Anyatas ca api la-adesat*: and from *another substitute of 'la'* as well — the other personal endings. *Manyante tam upagraham*: they *consider that* to be *upagraha*. So *upagraha* is not defined; it is *pointed at*: whatever semantic difference the voice-endings carry, that is it. And *kvacit* — *somewhere*: not always. The definition's evasiveness is honest, because the Sanskrit middle's meaning is notoriously elusive, and the *samuddesa* will spend twenty-seven pages showing that it has no single one.

Verse 3.12.2

क्वचित् साधनमेवासौ क्वचित्तस्य विशेषणम् ।
साधनं तत्र कर्मादि व्यक्तवाचो विशेषणम् ॥ 2 ॥

kvacit sādhanamevāsau kvacittasya viśeṣaṇam |
sādhanam tatra karmādi vyaktavāco viśeṣaṇam || 2 ||

Somewhere it is the means itself; somewhere it is the qualifier of that. There the means is the object and the rest; the qualifier is of clear speech.

Upagraha's two roles. *Kvacit sadhanam eva asau*: *somewhere* it is the *means itself* — the voice-ending marks a *karaka*: the middle says the agent is also the beneficiary. *Kvacit tasya visesanam*: *somewhere* it is the *qualifier of that* — it does not mark a *karaka* but modifies one. *Sadhanam tatra karmadi*: there the *means* is the *object* and the rest; *vyakta-vaco visesanam*: the *qualifier* is of *clear speech*. So the voice-ending sometimes is a *karaka*-marker and sometimes merely colours one — two quite different offices in one morphology (3.7.13's assistance understood by the case-endings alone, now with the endings doing two jobs). The *samuddesa*'s problem is set: one ending, two functions, and no rule saying which.

Verse 3.12.3

क्रिया विषयभेदेन जीविकादिषु भिद्यते ।
लादेशैः स क्रियाभेदो वाक्येष्वपि नियम्यते ॥ 3 ॥

kriyā viṣayabhedena jīvikādiṣu bhidyate |
lādeśaiḥ sa kriyābhedo vākyaṣvapi niyamyate || 3 ||

The action is differentiated by difference of domain, in 'livelihood' and the rest; that difference of action is restricted, by the 'la'-substitutes, even in sentences.

Where the voice does its work. Kriya visaya-bhedena jivikadisu bhidyate: the *action* is *differentiated by difference of domain*, in 'livelihood' and the rest — the same root means differently in different spheres: 'jiv' in the domain of livelihood is not 'jiv' elsewhere. Ladesaih sa kriya-bhedo vakyesv api niyamyate: that *difference of action* is *restricted*, by the 'la'-substitutes, *even in sentences*. So the voice-endings restrict which domain-sense of the root is in play — they are disambiguators. This is the domain-relativity that 3.9.32 found for the seasons (one time named by what it is doing) and 2.315's fourteen contextual determinants, now carried by morphology: the ending selects the root's sphere.

Verse 3.12.4

धात्वर्थस्तद्विशेषश्चाप्युक्तः क्वचिदुपग्रहः ।
धात्वर्थो गन्धनादिः स्याद् व्यतिहारो विशेषणम् ॥ 4 ॥

dhātvarthastadvīśeṣaścāpyuktaḥ kvacidupagrahaḥ |
dhātvartho gandhanādiḥ syād vyatihāro viśeṣaṇam || 4 ||

The root's meaning, and also its particular, is somewhere called 'upagraha'; the root's meaning would be 'gandhana' and the rest; reciprocity is the qualifier.

The two things upagraha names. Dhatv-arthah tad-visesas ca api uktah kvacid upagrahah: the root's *meaning*, and also *its particular*, is *somewhere called 'upagraha'* — the term covers both the sense and its specification. Dhatv-artho gandhanadiḥ syat: the root's meaning would be '*gandhana*' and the rest — *gandhana*: divulging, informing; the traditional first item in Panini's list of senses that condition the atmanepada (1.3.24ff.: the middle is used when the root means *gandhana*, *avaksepāna*, *sevana*...). Vyatiharo visesanam: *reciprocity* is the *qualifier* — *vyatihara*: mutual action, another of Panini's conditions (1.3.14: *karta-sthe ca*). So upagraha names both the root's own sense-condition and the modification laid on it, and the samuddesa is tracking a term that its own tradition uses two ways.

Verse 3.12.5

क्रियाप्रवृत्तावाख्याता कैश्चित् स्वार्थपरार्थता ।
असती वा सती वापि विवक्षितनिबन्धना ॥ 5 ॥

kriyāpravṛttāvākhyātā kaiścit svārthaparārthatā |
asatī vā satī vāpi vivakṣitanibandhanā || 5 ||

In the proceeding of an action, by some, being-for-oneself and being-for-another is declared — whether unreal or real, grounded in what is intended.

The middle's classical meaning, and its status. Kriya-pravṛtta akhyata kaiscit sva-artha-pararthatā: in the *proceeding of an action*, by some, *being-for-oneself* and *being-for-another* is declared — the standard account: atmanepada means the fruit accrues to the agent, parasmaipada that it goes elsewhere. Asati va sati vapi vivaksita-nibandhana: *whether unreal or real, grounded in what is intended*. And there is the samuddesa's verdict in six syllables: vivaksita-nibandhana — grounded in *vivaksa*. Whether the fruit really comes to the agent is beside the point; what the voice marks is whether the speaker *means* it so. Asati va sati: real or not. So the middle does not report a fact about where benefits land; it records an intention (1.155's criterion; 3.7.2's kvacit kimcit vivakṣyate).

Verse 3.12.6

केषाञ्चित् कर्त्रीभिप्राये णिचा सह विकल्पते ।
आत्मनेपदमन्येषां तदर्थं प्रकृतिर्यथा ॥ 6 ॥

keṣāñcit kartrābhiprāye ṇicā saha vikalpate |
ātmanepadamanyeṣāṃ tadarthā prakṛtiryamṭhā || 6 ||

For some, in the agent's intention, it is optional together with the causative affix; for others, the atmanepada is as the base for that purpose.

The rules' disagreement. Kesamcit kartr-abhipraye nica saha vikalpate: for some, in the *agent's intention*, it is *optional* together with the *causative affix* — where the agent intends the fruit for himself and a causative is present, the middle is optional. Atmanepadam anyesam tad-artha prakṛtir yatha: for others, the *atmanepada* is *as the base* for that purpose — the middle is the base-form for that sense, not an option. So two schools: one makes the middle optional in causatives, the other makes it basic. Vikalpate — optional: and 2.85 already recorded that option is the science's last resort. The disagreement is evidence that no fact settles the middle's application — which 3.12.5 predicted, since what it marks is an intention and intentions are not read off situations.

Verse 3.12.7

क्रीणीष्व वपते धत्ते चिनोति चिनुतेऽपि च ।
आप्तप्रयोगा दृश्यन्ते येषु ण्यर्थोऽभिधीयते ॥ 7 ॥

krīṇīṣva vapate dhatte cinoti cinute'pi ca |
āptaprayogā dṛśyante yeṣu ṇyartho'bhidhiyate || 7 ||

'Krinisva', 'vapate', 'dhatte', 'cinoti' and also 'cinute' — usages of the authoritative are seen, in which the causative's meaning is expressed.

Attested usage against the rules. Apta-prayogah drsyante: *usages of the authoritative are seen* — apta: the trustworthy, the sistas whose usage is the criterion (1.27's sadhutva established from the cultivated). And the list: krinisva (buy!), vapate (he sows), dhatte (he places), cinoti and cinute (he gathers, active and middle both). Yesu ny-arthah abhidhiyate: in which the *causative's meaning* is expressed — these forms carry a causative sense without causative morphology (3.7.73's antarbhutanij-artha: roots with the causative included within). And cinoti / cinute: the same root in both voices, both attested, both authoritative. So the sistas use both, and no rule distinguishes them. The verse is a small dossier of counter-examples, and its force is that usage outruns the rules (2.483's the world's practice, followed by the science).

Verse 3.12.8

संविधानं पचादीनां क्वचिदर्थः प्रतीयते ।
तन्निमित्ता यथान्यापि क्रियाधिश्रयणादिका ॥ 8 ॥

samvidhānam pacādinām kvacidarthah pratīyate |
tannimittā yathānyāpi kriyādhiśrayaṇādikā || 8 ||

The arranging of 'paci' and the rest is somewhere understood as the meaning; occasioned by that, another action too, such as setting-on-the-fire and the like, is understood.

The middle marking the whole enterprise. Samvidhanam pacadinam kvacid arthah pratiyate: the *arranging* of 'paci' and the rest is somewhere understood as the *meaning* — 'pacate' can mean not the cooking but the *managing* of a cooking: the householder who has the meal made. Tan-nimitta yatha anya api kriya adhisrayanadika: *occasioned by that, another action too, such as setting-on-the-fire and the like, is understood*. So the middle can shift the verb from the act to its supervision, and the subordinate acts come along. This is a real and delicate function — Sanskrit's middle does mark a kind of managerial involvement — and it is a third office beside 3.12.2's two. The samuddesa keeps finding new things the ending does.

Verse 3.12.9

कर्त्रीभिप्रायता सूत्रे क्रियाभेदोपलक्षणम् ।
तयाभूता क्रिया या हि तत्कर्ता फलभाग् यतः ॥ 9 ॥

kartrabhiprāyatā sūtre kriyābhedopalakṣaṇam |
tayābhūtā kriyā yā hi tatkartā phalabhāg yataḥ || 9 ||

In the *sutra*, the agent's-intention is an indication of a difference of action; for that action which is of such a kind — its agent is the one who partakes of the fruit.

The rule's key term reinterpreted. *Kartr-abhiprayata sutre kriya-bheda-upalakṣaṇam*: in the *sutra*, the *agent's-intention* is an *indication of a difference of action* — Panini's condition (1.3.72: *svaritanitah kartr-abhiprayekriya-phale*, the middle where the fruit is intended for the agent) does not name a psychological state; it *indicates* a kind of action. *Upalakṣaṇa*: indication, marking-out without describing (3.10.9's man on the horse; 3.3.51's *saptaparna*). *Taya-bhuta kriya ya hi tat-karta phala-bhag yataḥ*: for *that* action which is of *such a kind* — its *agent* is the one who *partakes of the fruit*. So 'agent's intention' names an action-type, and the type is one whose agent gets the fruit. The reinterpretation matters: it moves the middle's condition from the speaker's mind into the action's structure — and 3.12.10 will explain how such a structure is detected.

Verse 3.12.10

यथोपलक्ष्यते कालस्तारकादर्शनादिभिः ।
तथा फलविशेषेण क्रियाभेदो निदर्श्यते ॥ 10 ॥

yathopalakṣyate kālastārakādarśanādibhiḥ |
tathā phalaviśeṣeṇa kriyābhedo nidarśyate || 10 ||

As time is indicated by the appearance of stars and the like — so a difference of action is exhibited by a particular fruit.

How 3.12.9's action-type is known, and the simile is the *Kala-samuddesa*'s. *Yatha upalakṣyate kalah taraka-darsanadibhiḥ*: as *time* is *indicated* by the *appearance of stars* and the like — 3.9.44's very doctrine (the *naksatras* following time's operation, *cihna-matram tu tarakah*: the stars are a *mere mark*). *Tatha phala-visesena kriya-bhedo nidarśyate*: so a *difference of action* is *exhibited* by a *particular fruit*. So one reads the action's type from where its fruit lands, as one reads the hour from the stars — and in both cases the mark is not the thing. The fruit indicates the action-type; it does not constitute it. This is why 3.12.9 could relocate the middle's condition from intention to action-structure without making it a physical fact: the structure is read off a mark, and marks are marks (3.9.45's birdsong and shadow).

Verse 3.12.11

क्रियाविशेषवचने सामर्थ्यमुपरुध्यते ।
केषाञ्चदन्ये तु कृताः स्वरितेतो नितस्तथा ॥ 11 ॥

kriyāviśeṣavacane sāmāthyamuparudhyate |
keṣāñcadanye tu kṛtāḥ svariteto nītatastathā || 11 ||

For some, in the expressing of a particular action, the capacity is obstructed; but others are made — those with svarita-marker, and likewise those with n-marker.

The technical apparatus. Kriya-visesa-vacane samarthyam uparudhyate kesamcid: for some, in the expressing of a particular action, the capacity is obstructed — where the root already expresses the special action, the voice-ending's capacity is blocked (it has nothing left to do). Anye tu krtah svarita-itah nitas tatha: but others are made — those with the svarita-marker and those with the n-marker: Panini's anubandhas, the diacritic markers on roots in the Dhatupatha that determine which voice a root takes (1.3.72's svaritanitah). So the roots are pre-sorted by invisible markers, and the sorting decides the voice. The verse introduces the samuddesa's last topic: whether these markers encode a meaning or merely a class.

Verse 3.12.12

अनुबन्धश्च सिद्धेऽर्थे स्मृत्यर्थमनुषज्यते ।
तुल्यार्थेष्वपि चावश्यं न सर्वेष्वेकधर्मता ॥ 12 ॥

anubandhaśca siddhe'rthe smṛtyarthamanuṣajyate |
tulyārtheṣvapi cāvaśyam na sarveṣvekadharmatā || 12 ||

And a marker is attached, for the sake of remembrance, in a meaning already established; and even among things of like meaning, there is not necessarily one property for all.

The markers' status, and it is deflationary. Anubandhas ca siddhe'rthe smṛty-artham anusajyate: a marker is attached, for the sake of remembrance, in a meaning already established — the anubandha does not create the root's behaviour; it is a mnemonic for behaviour the usage already has (2.13's divisions for the unlearned; 3.11.6's world explaining by another's property for comprehension's sake). Tulya-arthesv api ca avasyam na sarvesv eka-dharmata: and even among things of like meaning, there is not necessarily one property for all. So roots that mean alike need not behave alike, and the markers record the behaviour rather than deriving it from the meaning. This is the samuddesa's central negative result: the voice-assignment is not a function of the sense.

Verse 3.12.13

दृशीक्ष्योः सदृशेऽप्यर्थे नाभेदः प्रतिपूर्वयोः ।
प्यर्थोपादायिनस्तस्मान्न तुल्यार्थाः पचादिभिः ॥ 13 ॥

drśīkṣyoḥ sadrśe'pyarthe nābhedaḥ pratipūrvayoh |
nyarthopādāyinaśtasmānna tulyārthāḥ pacādibhiḥ || 13 ||

In 'drs' and 'iks', though the meaning is similar, there is no non-difference when preceded by 'prati'; therefore those which take up the causative's meaning are not of like meaning with 'paci' and the rest.

The evidence for 3.12.12. Drsi-iksyoh sadrse 'py arthe: in 'drs' (to see) and 'iks' (to look), though the meaning is similar — two roots, near-synonyms. Na abhedah prati-purvayoh: there is no non-difference when preceded by 'prati' — pratidrs and pratiks behave differently, though drs and iks are alike. Ny-arthā-upadāyinaḥ tasman na tulya-arthah pacadibhiḥ: therefore those which take up the causative's meaning are not of like meaning with 'paci' and the rest. So near-synonymous roots diverge under the same preverb, and roots with built-in causative sense are not equivalent to plain roots. The verse is fine distributional evidence (2.12's anvaya-vyatireka) that meaning does not predict behaviour — which is why the markers of 3.12.11 are needed.

Verse 3.12.14

उम्भ्यर्थे वर्तमानस्य करोतेर्भिन्नधर्मणः ।
प्यर्थोपादायिता तस्मान्नि यताः शब्दशक्तयः ॥ 14 ॥

umbhyarthe vartamānasya karoterbhinnadharmanah |
nyarthopādāyitā tasmānniyatāḥ śabdaśaktayah || 14 ||

Of 'kr', standing in the meaning of 'umbh', whose properties are different — the taking-up of the causative's meaning; therefore the capacities of words are fixed.

The samuddesa's methodological conclusion, and it is the Padakanda's. Umbhy-arthe vartamanasya karoteḥ bhinna-dharmanah: of 'kr' (to do), standing in the meaning of 'umbh' (to fill), whose properties are different — the same root in a borrowed sense behaves by other rules. Ny-arthā-upadāyita: the taking-up of the causative's meaning. Tasman niyataḥ śabda-saktayah: therefore the capacities of words are fixed. Niyataḥ — fixed: not derivable, not predictable from meaning, simply so (3.3.29's yogyata: the word-meaning fitness, beginningless, as the eye's for colour; 2.97's siddha niyata, established and fixed). So the samuddesa's answer to what the middle means is: nothing derivable. The voice-capacities are fixed as sense-capacities are fixed, and one learns them rather than deducing them. Which is why 3.12.1 could only point at upagraha and not define it.

Verse 3.12.15

तथा ह्यनुप्रयोगस्य करोतेरात्मनेपदे ।
पूर्ववद्ग्रहणं प्राप्ते स्वरितं समुपस्थितम् ॥ 15 ॥

tathā hyanuprayogasya karoterātmanepade |
pūrvavadgrahanam.prāpte svaritam.samupasthitam || 15 ||

For thus, in the atmanepada of 'kr' which is a subsequent employment – the taking-up 'as before' being obtained, the svarita presented itself.

A technical case where a marker is invoked to save a rule. Anuprayogasya karoteh atmanepade: in the atmanepada of 'kr' which is a subsequent employment – the periphrastic perfect (edham cakre), where 'kr' is added after the reduplicated stem and must take the same voice as the main root. Purvavadgrahanam prapte: the taking-up 'as before' being obtained – Panini's rule that the auxiliary follows the main root's voice (1.3.63: aam pratyayavat krno 'nuprayogasya). Svaritam samupasthitam: the svarita presented itself – the marker (3.12.11's svarita-it) is what makes the rule applicable. So the anubandha does real work in the derivation, and 3.12.12's account of it as a mere mnemonic is under pressure: a mnemonic does not condition a rule. The verse is honest about the tension it creates.

Verse 3.12.16

एकत्वेऽपि क्रियाख्याते साधनाश्रयसंख्यया ।
भिद्यते न तु लिङ्गाख्यो भेदस्तत्र तदाश्रितः ॥ 16 ॥

ekatve'pi kriyākhyāte sādhanāśrayasamkhyayā |
bhidyate na tu liṅgākhyo bhedastatra tadāśritah || 16 ||

Even where the action stated is one, it is differentiated by the number of the means' substratum; but the difference called 'gender' is not there dependent on that.

Number and gender contrasted in their reach into the verb. Ekatve 'pi kriya-akhyate sadhana-asraya-samkhyaya bhidyate: even where the action stated is one, it is differentiated by the number of the means' substratum – the verb agrees in number with its agent: one cooking, and 'pacati' or 'pacanti' according to how many cook. Na tu linga-akhyo bhedas tatra tad-asritah: but the difference called 'gender' is not there dependent on that – Sanskrit verbs do not agree in gender. So number reaches the verb and gender does not, though both are properties of the same nouns. The asymmetry is a fact about the language and it prepares the Linga-samuddesa: gender is a nominal affair, sealed off from the verb, which is why it can be (as 3.13 will argue) a property of words rather than of things.

Verse 3.12.17

तस्मादवस्थितेऽप्यर्थे कस्यचित् प्रतिबध्यते ।
शब्दस्य शक्तिः स त्वेष शास्त्रेऽन्वख्यायते विधिः ॥ 17 ॥

tasmādavasthite'pyarthe kasyacit pratibadhyate |
śabdasya śaktiḥ sa tveṣa śāstre'nvakhyāyate vidhiḥ || 17 ||

Therefore, even where the meaning stands settled, the capacity of some word is obstructed; and that very thing is what is expounded in the science as a rule.

The samuddesa's central finding, stated as a general law. Tasmad avasthite 'py arthe kasyacit pratibadhyate sabdasya saktiḥ: *therefore*, even where the *meaning stands settled*, the *capacity of some word is obstructed* — the meaning is there, the word could express it, and its capacity is blocked (3.9.24's *jara* obstructing a capacity while its contraries are released). Sa tv esa sastre 'nvakhyayate vidhiḥ: and *that very thing* is what is *expounded in the science as a rule*. So the grammar's rules are these obstructions: a rule is a place where a word's capacity is blocked though the meaning would license it. This is a striking account of what a grammatical rule is — not a description of how meaning maps to form, but a record of where the mapping is prevented. And it follows from 3.12.13-14's finding: capacities are fixed, not derivable, so the rules record blockages rather than deriving expressions.

Verse 3.12.18

यस्यार्थस्य प्रसिद्ध्यर्थमारभ्यन्ते पचादयः ।
तत् प्रधानं फलं तेषां न लाभान्ति प्रयोजनम् ॥ 18 ॥

yasyārthasya prasiddhyarthamārabhyante pacādayaḥ |
tat pradhānam.phalam.teṣām.na lābhānti prayojanam || 18 ||

That meaning for the accomplishing of which 'paci' and the rest are undertaken — that is their principal fruit; profit and the like is not their purpose.

The verb's fruit distinguished from the agent's motive. Yasya arthasya prasiddhy-artham arabhyante pacadayah: that *meaning* for the *accomplishing* of which 'paci' and the rest are *undertaken*. Tat pradhānam phalam tesam: *that* is their *principal fruit* — the cooking's fruit is the cooked, and nothing else. Na labhadi prayojanam: *profit* and the like is *not* their *purpose* — the cook may cook for money, and the money is not the cooking's fruit. So the verb's phala is internal to the action and the agent's motives are external — which matters for the middle, since 3.12.9 made its condition 'the agent partakes of the fruit'. If the fruit is the cooked rice and not the wages, then the cook who cooks for hire still partakes of the fruit, and the middle should apply. The distinction is being drawn to control the next verses' hard case.

Verse 3.12.19

यत्रौभौ स्वामिदासौ तु प्रारभेते सहक्रियाम् ।
युगपद् धर्मभेदेन धातुस्तत्र न वर्तते ॥ 19 ॥

yatraubhau svāmidāsau tu prārabhete sahakriyām |
yugapad dharmabhedena dhātustatra na vartate || 19 ||

But where both master and servant undertake a joint action — the root does not there operate simultaneously, by a difference of properties.

The hard case. Yatra ubhau svami-dasau tu prarabhete saha-kriyam: where *both master and servant undertake a joint action* — both are cooking, in different senses: the master by arranging (3.12.8's samvidhana), the servant by stirring. Yugapad dharma-bhedena dhatus tatra na vartate: the root does not there operate simultaneously, by a difference of properties. One verb cannot carry both relations at once (3.7.144's cloud, where contradictory properties cannot be intended simultaneously). So 'they cook' cannot mean master-arranging and servant-stirring in one breath. The case is well chosen: it is exactly where the middle's fruit-condition (3.12.9) becomes undecidable, since both partake and differently. And 3.12.20 gives the resolution.

Verse 3.12.20

यत्र प्रतिविधानार्थः पचिस्तत्रात्मनेपदम् ।
परस्मैपदमन्यत्र संस्कराद्यभिधायिनि ॥ 20 ॥

yatra pratividhānārthaḥ pacistatrātmanepadam |
parasmaipadamanyatra saṃskarādyabhidhāyini || 20 ||

Where 'paci' has the meaning of arranging, there the atmanepada; the parasmaipada elsewhere, when it expresses the refinement and the rest.

The resolution of 3.12.19, and it splits the verb. Yatra prati-vidhana-arthah pacih: where 'paci' has the meaning of *arranging* — the master's sense (3.12.8's samvidhana). Tatra atmanepadam: *there the atmanepada*. Parasmaipadam anyatra saṃskaradyabhidhāyini: the *parasmaipada elsewhere*, when it expresses the *refinement* and the rest — the servant's sense, the actual working of the food. So the voice sorts the two senses: the manager takes the middle, the labourer the active. And this is a real fact about Sanskrit — the middle does carry a shade of self-involved supervision — given here its precise statement. The verse resolves 3.12.19 by denying that one verb must serve both: two senses, two voices, and the joint action described twice.

Verse 3.12.21

संविधातुश्च सान्निध्यात् दासे धर्मोऽनुषज्यते ।
प्लक्षशब्दस्य सान्निध्यान्न्यग्रोधे प्लक्षता यथा ॥ 21 ॥

samvidhātuśca sānnidhyāt dāse dharmo'nuṣajyate |
plakṣaśabdasya sānnidhyānnyagrodhe plakṣatā yathā || 21 ||

And from the proximity of the arranger, the property is attached to the servant — as, from the proximity of the word 'plaksa', plaksa-ness attaches to the nyagrodha.

How the master's property leaks onto the servant. Samvidhatus ca sannidhyat dase dharmo 'nusajyate: from the *proximity of the arranger*, the *property* is *attached* to the *servant* — the servant, working beside the master, takes on the master's arranging-property, and so the middle can be used of him too. And the simile: plaksa-sabdasya sannidhyānnyagrodhe plaksata yatha — as, from the *proximity of the word 'plaksa'*, *plaksa-ness* attaches to the *nyagrodha*: two fig-trees named together, and the first's name colours the second (the grammarians' standing example of ekasesa-adjacent contamination). So properties leak by proximity, in trees and in households alike. This is 2.299's lamp lighting what it was not brought for, and 3.11.13's likeness to the occasioning ground: what stands near takes on what it does not have.

Verse 3.12.22

पुरोडाशमिधानं च धानादिषु यथा स्थितम् ।
छत्रिणा चाभिसंबन्धाच्छत्रिशब्दमभिधेयता ॥ 22 ॥

purodāśābhidhānam ca dhānādiṣu yathā sthitam |
chatrīṇā cābhisambandhācchatrīśabdābhidheyatā || 22 ||

And the designation 'purodasa' is as it stands in respect of the grains and the rest; and from connection with an umbrella-bearer, there is the state of being expressible by the word 'umbrella-bearer'.

Two more cases of leaking designation. Purodasa-abhidhanam ca dhanadisu yatha sthitam: the designation 'purodasa' (the sacrificial cake) is as it *stands* in respect of the *grains* and the rest — the name of the finished cake is applied to the grains it will be made from (3.7.7's janyamana karman: the object that does not exist until the action completes, held in place by buddhi). Chatrina ca abhisambandhat chatrī-sabda-abhidheyata: and from *connection with an umbrella-bearer*, there is the state of being expressible by the word 'umbrella-bearer' — the classic chatrino gacchanti: 'the umbrella-bearers go', said of a group in which one has an umbrella. So the name leaks from the future thing to the present stuff, and from one man to his company. Both are 3.12.21's mechanism, and both are ordinary speech.

Verse 3.12.23

अर्थात् प्रतीतमन्योन्यं पारार्थ्यमविवक्षितम् ।
इत्ययं शेषविषयः कैश्चिदत्रानुवर्ण्यते ॥ 23 ॥

arthāt pratītamanyonyam, pāārthyamavivakṣitam |
ityayam, śeṣaviṣayaḥ kaiścīdatrānuvarṇyate || 23 ||

Mutual being-for-another, understood from the meaning, is unintended; thus this is described by some as the domain of the 'remainder'.

The relation of master and servant placed grammatically. Arthat pratitam anyonyam para-arthyam avivakṣitam: *mutual being-for-another, understood from the meaning, is unintended* – each works for the other (the servant for the master's meal, the master for the servant's wage), and the mutuality is not what anyone means to say. Avivakṣita: unintended (1.136's canon; 3.1.51's forced categories). Ity ayam sesa-visayah kaiscid atra anuvarṇyate: thus *this* is described by some as the *domain of the 'remainder'* – the sesa, the genitive's territory, where relations stand that no karaka covers (3.7.44's sasthi sese). So the master-servant relation is a sesa-relation: real, understood, unintended, and expressed by the genitive if at all. It is not a karaka and it does not condition the voice.

Verse 3.12.24

अथ प्रतिविधाता यो हलैः कृषति पञ्चभिः ।
भाष्ये नोहाहृतं कस्मात् प्राप्तं तत्रात्मनेपदम् ॥ 24 ॥

atha pratividhātā yo halaiḥ kṛṣati pañcabhiḥ |
bhāṣye nohāhṛtam, kasmāt prāptam, tatrātmanepadam || 24 ||

Now, that arranger who ploughs with five ploughs – why has it not been cited in the Bhasya? The atmanepada is obtained there.

An objection from the Bhasya's silence. Atha prati-vidhata yo halaiḥ kṛṣati pañcabhiḥ: the *arranger* who *ploughs* with *five ploughs* – a man who manages five ploughmen: an arranger by 3.12.8's criterion, and 'kṛṣati' is active. Bhāṣye na udahrtam kasmāt: *why has it not been cited* in the *Bhasya*? Prāptam tatra atmanepadam: the *atmanepada* is obtained there – by 3.12.20's rule, the arranging sense should take the middle, and Patanjali does not list this case. So either the rule is wrong or the Bhasya is incomplete. The objection is from authority's silence, and it is a real move in this tradition: what the Bhasya does not say, it means not to say (2.475's bhāṣye eva upavarnitah, where the citation was positive). Bhartrhari takes the silence seriously enough to answer it.

Verse 3.12.25

प्रतीतत्वात् तदर्थस्य शेषत्वं यदि कल्प्यते ।
न स्यात् प्राप्तविभाषासौ स्वरितेतां निवर्तिका ॥ 25 ॥

pratītatvāt tadarthasya śeṣatvam yadi kalpyate |
na syāt prāptavibhāṣāsau svaritetāṃ nivartikā || 25 ||

If, from the meaning's being understood, remainder-hood is constructed — that option, being already obtained, would not be the excluder of those having a svarita-marker.

The first answer to 3.12.24, and it is rejected. *Pratītatvat tad-arthasya sesatvam yadi kalpyate*: if, from the *meaning's being understood*, *remainder-hood* is constructed — if one says the ploughing-arrangement is a sesa-relation (3.12.23) and so does not condition the voice. *Na syat prapta-vibhasa asau svarita-itam nivartika*: that *option*, being *already obtained*, would *not be* the *excluder* of those having a *svarita-marker*. The reasoning: if the sense were sesa, no option would arise at all, and the rule providing an option for svarita-marked roots would have nothing to exclude. *Prapta-vibhasa*: an option on what is already obtained — the technical category. So the sesa-answer proves too much: it removes the option the grammar provides, and grammars do not provide vacuous options (2.443's Panini does not legislate vacuously).

Verse 3.12.26

शुद्धे तु संविधानार्थे कैश्चिदत्रेष्यते कृषिः ।
तद्धर्मा यजिरित्येवं न स्यात्तत्रात्मनेपदम् ॥ 26 ॥

śuddhe tu samvidhānārthe kaiścidatresyate kṛṣiḥ |
taddharmā yajirityevam na syāttatrātmanepadam || 26 ||

But in the pure meaning of arranging, 'krs' is accepted here by some; the atmanepada would not be there, as with 'yajī' whose property is that.

The second answer. *Suddhe tu samvidhana-arthe kaiscid atra isyate krsih*: in the *pure* meaning of *arranging*, '*krs*' is accepted here by *some* — the ploughing taken as pure management, no working. *Tad-dharma yajir iti evam na syat tatra atmanepadam*: the *atmanepada* would *not be* there, as with '*yajī*' whose *property is that* — '*yaj*' (to sacrifice) is a root whose sense is inherently managerial (the sacrificer arranges; the priests act) and which nonetheless takes the middle by its marker, not by its sense. So if '*krs*' in the pure arranging sense behaved like '*yaj*', it would take the middle — and it does not. Therefore the arranging sense alone does not confer the middle, and 3.12.20's rule needs a further condition. The answer is offered and the verse's structure leaves it standing as a report.

Verse 3.12.27

अत्र तूपपदेनायमर्थभेदः प्रतीयते ।
प्राप्ते विभाषा क्रियते तस्मान्नास्त्यात्मनेपदम् ॥ 27 ॥

*atra tūpapadenāyamarthabhedah pratīyate |
prāpte vibhāṣā kriyate tasmānnāstyātmanepadam || 27 ||*

But here this difference of meaning is understood by the upapada; the option is made on what is already obtained — therefore there is no atmanepada.

The samuddesa's resolution of 3.12.24, and it is grammatical rather than semantic. *Atra tu upapadena ayam artha-bhedah pratiyate: here this difference of meaning is understood by the upapada* — the accompanying word ('with five ploughs') carries the arranging-sense, not the root. *Prapte vibhasa kriyate: the option is made on what is already obtained.* *Tasman na asti atmanepadam: therefore there is no atmanepada.* So the ploughman's case takes the active because the arranging-sense comes from the upapada and not from 'krs' itself — and the voice follows the root's own capacity (3.12.14's *niyatah sabda-saktayah: the capacities of words are fixed*), not the sentence's sense. This is the samuddesa's thesis holding under pressure: the voice is a property of the word, fixed, not derivable from what the sentence means. The Bhasya's silence is thus explained: there was no case to cite.

Liṅga-samuddeśa — On Gender

Verse 3.13.1-2

स्तनकेशादिसंबन्धो विशिष्टा वा स्तनादयः ।
 तदुपव्यञ्जना जातिगुणावस्था गुणास्तथा ॥ 1 ॥
 शब्दोपजनितोऽर्थात्मा शब्दसंस्कार इत्यपि ।
 लिङ्गानां लिङ्गतत्त्वजैर्विकल्पाः सप्त दर्शिताः ॥ 2 ॥

stanakeśādisambandho viśiṣṭā vā stanādayaḥ |
 tadupavyañjanā jātirguṇāvasthā guṇāstathā || 1 ||
 śabdopajanito'rthātmā śabdasaṃskāra ityapi |
 liṅgānām liṅgatattvajñairvikalpāḥ sapta darśitāḥ || 2 ||

(1) The connection with breasts, hair and the rest; or the breasts and the rest as qualified; the universal manifested by those; the state of the qualities; and likewise the qualities themselves; (2) the meaning-self generated by the word; and 'refinement of the word' as well — seven alternatives concerning gender have been shown by those who know gender's reality.

The samuddesa opens with a doxographic list, and its seven entries map the whole dispute. (i) Stanakesadi-sambandhah: the *connection with breasts, hair and the rest* — gender as the possession of secondary sexual characters: the crudest account, and the tradition's starting-point. (ii) Visista va stanadayah: or the breasts and the rest as *qualified* — not the connection but the characters themselves, specified. (iii) Tad-upavyanjana jatiḥ: the *universal manifested* by those — femininity as a jati, of which the characters are the manifestors (3.1.29's face manifested by water). (iv) Guna-avastha: the *state of the qualities*. (v) Gunas tatha: and *likewise the qualities* themselves — gender as a quality, not a universal. (vi) Sabda-upajanito 'rtha-atma: the *meaning-self generated by the word* — gender as something the word *makes*: the boldest entry, and the one Bhartrhari's system favours (3.1.6's every word expressing its own universal first). (vii) Sabda-samskara iti api: and '*refinement of the word*' — gender as a purely morphological fact, no meaning at all. Seven, and note the drift: from bodies, through universals and qualities, to the word's own doing. The list's order is an argument.

Verse 3.13.3

उपादानविकल्पाश्च लिङ्गानां सप्त वर्णिताः ।
 विकल्पसंनियोगाभ्यां ये शब्देषु व्यवस्थिताः ॥ 3 ॥

upādānavikalpāśca liṅgānām sapta varṇitāḥ |
 vikalpasamniyogābhyāṃ ye śabdeṣu vyavasthitāḥ || 3 ||

And seven alternatives of assumption concerning genders have been described, which stand established among words by option and by conjunction.

A second seven, and it is about the words rather than the things. Upadana-vikalpas ca lingaanam sapta varnitah: seven alternatives of *assumption* concerning genders have been *described* — how a word *takes up* its gender, as against what gender is. Vikalpa-samniyogabhyam ye sabdesu vyavasthitah: which stand established among *words* by *option* and by *conjunction* — some words take gender optionally (the tradition's long lists of dvi-linga and tri-linga stems), some by fixed conjunction. So

there are two sevens: seven theories of what gender is, and seven ways words get it. And the second seven's existence is already an argument for the second half of the first: if words take gender by option and conjunction, gender is at least partly a fact about words (entries vi and vii).

Verse 3.13.4

तिस्रो जातय एवैताः केषां चित्समवस्थिताः ।
अविरुद्धा, विरुद्धाभिर्गोमहिष्यादिजातिभिः ॥ 4 ॥

tisro jātaya evaitāḥ keśāṃ citsamavasthitāḥ |
aviruddhā, viruddhābhīrgomahiṣyādijātibhiḥ || 4 ||

For some, these are just three universals, standing established — not in conflict with the mutually conflicting universals of cow, buffalo and the rest.

The jati-account (entry iii) stated. *Tisro jataya eva etah kesamcit samavasthitah*: for some, these are just *three universals* — femininity, masculinity, neutrality, each a jati. *Aviruddha viruddhabhih gomahisyadi-jatibhih*: *not in conflict* with the *mutually conflicting* universals of cow, buffalo and the rest. The point is careful: cowhood and buffalohood are mutually exclusive — nothing is both — but femininity is not exclusive of either; a cow is female *and* a cow. So the gender-universals cross-cut the species-universals, which is unusual: most jatis nest or exclude. Hence gender-universals are a special class, pervading the others (3.1.44's brahminhood standing present in all living beings). The account is coherent and its cost is a second, orthogonal system of universals.

Verse 3.13.5

हस्तिन्यां वडवायां च स्त्रीति बुद्धेः समन्वयः ।
अतस्तां जातिमिच्छन्ति द्रव्यादिसमवायिनीम् ॥ 5 ॥

hastinyām vadaṇvāyām ca strīti buddheḥ samanvayaḥ |
atastām jātimicchanti dravyādisamavāyinīm || 5 ||

In a cow-elephant and in a mare, there is a concomitance of the cognition 'female'; therefore they desire that universal, inhering in substance and the rest.

The argument for 3.13.4. *Hastinyam vadaṇvayam ca stri iti buddheḥ samanvayaḥ*: in a cow-elephant and in a mare, there is a *concomitance* of the cognition 'female' — the same cognition arises across species: one recognizes femaleness in an elephant and in a horse, and the recognition is one. *Samanvaya*: concomitance, the running-together that is a universal's mark (3.1.14's *anuvrtti*, recurrence). *Ata tam jatim icchanti dravyadi-samavayinim*: *therefore* they desire that *universal, inhering in substance* and the rest. So the recurrent cognition evidences a recurrent universal, by the standard inference. The argument is the tradition's best for gender-realism, and its evidence is genuine: femaleness is recognized across kinds, and that is what universals explain.

Verse 3.13.6

परतन्त्रस्य यल् लिङ्गमपोद्धारे विवक्षिते ।
तत्रासौ शब्दसंस्कारः शब्दैरेव व्यपाश्रितः ॥ 6 ॥

paratantrasya yal liṅgamapoddhāre vivakṣite |
tatrāsau śabdasaṃskāraḥ śabdāireva vyapāśritaḥ || 6 ||

That gender which belongs to what is dependent, when abstraction is intended — there that 'refinement of the word' rests upon words alone.

The seventh entry (sabda-samskara) placed. Paratantrasya yal lingam apoddhare vivakṣite: that *gender* which belongs to what is *dependent* — the adjective's gender, which is not its own but taken from its noun — *when abstraction is intended*: when the analyst extracts the word (3.1.1's apoddhara). Tatra asau sabda-samskaraḥ sabdaiḥ eva vyapasritaḥ: *there that 'refinement of the word' rests upon words alone*. So the dependent word's gender is purely morphological — 'sukla' is feminine in 'sukla gauḥ' because 'gauḥ' is, and nothing about whiteness is female. The seventh account is thus certainly right for some cases: adjectival gender is agreement, and agreement is a fact about words. The question is how far the concession runs — and 3.13.7 extends it.

Verse 3.13.7

बुद्ध्या कल्पितरूपेषु लिङ्गेष्वपि च संभवः ।
स्त्रीत्वादीनां व्यवस्था हि सा लिङ्गैर्व्यपदिश्यते ॥ 7 ॥

buddhyā kalpitarūpeṣu liṅgeṣvapi ca sambhavaḥ |
strītvādinām vyavasthā hi sā liṅgairvyapadiśyate || 7 ||

And there is a possibility even in genders whose form is constructed by the intellect; for that settled arrangement of femininity and the rest is designated by the genders.

The concession extended. Buddhyā kalpita-rupesv lingesv api ca sambhavaḥ: there is a *possibility* even in *genders whose form is constructed by the intellect* — genders assigned to what has no sex: 'tata' (the shore, masculine), 'nadi' (the river, feminine), 'kula' (the bank, neuter) — the same water's edge in three genders. Stritvadinam vyavastha hi sa lingair vyapadisyate: for that *settled arrangement* of femininity and the rest is *designated by the genders*. So where there is no sex, the gender is buddhi-constructed and the endings designate the construction. And since most Sanskrit nouns name sexless things, the constructed case is the *normal* one. This is the samuddesa's decisive turn: 3.13.5's cross-species femaleness is real and rare; gender's ordinary employment has nothing to do with it.

Verse 3.13.8-9

यथा सलिलनिर्भासा मृगतृष्णासु जायते ।
जलोपलब्ध्यनुगुणाद्बीजाद्बुद्धिर्जलेऽसति ॥ 8 ॥
तथैवाव्यपदेश्येभ्यो हेतुभ्यस्तारकादिषु ।
मुख्येभ्य इव लिङ्गेभ्यो भेदा लोके व्यवस्थिताः ॥ 9 ॥

yathā salilanirbhāsā mṛgatrṣṇāsu jāyate |
jalopalabdhyanugunādbijādbuddhirjale'sati || 8 ||
tathaiivāvyapadeśyebhyo hetubhyastārakādiṣu |
mukhyebhya iva liṅgebhyo bhedaḥ loke vyavasthitāḥ || 9 ||

(8) As an appearance of water arises in mirages — a cognition arising, where there is no water, from a seed conducive to the apprehension of water; (9) just so, from indescribable causes, differences among stars and the like stand established in the world, as though from primary genders.

The mirage, and it is the samuddesa's central image. (8): salila-nirbhasa mrga-trsnasu jayate — an appearance of water arises in mirages; jala-upalabdhy-anugunad bijad buddhir jale asati: a cognition arising, where there is no water, from a seed conducive to the apprehension of water. Bija: the seed, the trace (1.84's ahita-bija; 3.9.39's deposits). So the mirage's water comes from a disposition in the seer, not from the desert. (9) applies it: tatha eva avyapadesyebhyo hetubhyah taraka-adisu — just so, from indescribable causes, among stars and the like — bheda loke vyavasthitah: differences stand established in the world — mukhyebhya iva lingebhyah: as though from primary genders. So 'taraka' is feminine and 'naksatra' neuter, and the stars have no sex: the gender-differences arise from indescribable causes as the mirage's water does, and present as though primary. The iva is the doctrine. Gender, in its ordinary employment, is a mirage — real as appearance, seeded in the speaker, absent from the thing.

Verse 3.13.10

व्यक्तेषु व्यक्तरूपाणां स्तनादीनां तु दर्शनात् ।
अव्यक्तव्यञ्जनाव्यक्तेर्जातिर्न परिकल्प्यते ॥ 10 ॥

vyakteṣu vyaktarūpāṇāṃ stanādīnāṃ tu darśanāt |
avyaktavyañjanavyakterjātirna parikalpyate || 10 ||

But from the seeing of breasts and the rest, whose forms are manifest, among manifest things — from the non-manifestation of the unmanifest manifestor, a universal is not constructed.

An argument against the jati-account. Vyaktesu vyakta-rupanam stanadinam tu darsanat: from the seeing of breasts and the rest, whose forms are manifest, among manifest things — where there are sexual characters, they are plainly visible. Avyakta-vyanjana-avyakteh jati na parikalpyate: from the non-manifestation of the unmanifest manifestor, a universal is not constructed. The argument: a jati needs manifestors (3.1.29's face in water); where the characters are absent — in stars, rivers, shores — nothing manifests femininity, so no universal can be posited there. And most nouns are of that kind. So the jati-account works exactly where the characters are and fails everywhere else — which makes

it an account of sex, not of gender. The samuddesa is separating the two, and 3.13.5's cross-species recognition is being confined to its proper domain.

Verse 3.13.11

अस्तित्वं च प्रतिजाय सदादर्शनमिच्छतः ।
अत्यन्तादर्शने न स्यादसत्त्वं प्रति निश्चयः ॥ 11 ॥

astitvam, ca pratijñāya sadādarśanamicchataḥ |
atyantādarśane na syādasattvaṁ, prati niścayaḥ || 11 ||

And for one who, having asserted existence, desires that it is always unseen — in utter non-seeing there would be no ascertainment as to non-existence.

The realist's escape blocked. The jati-realist might say: femininity is present in the river too, merely unmanifest. *Astitvam ca pratijnaya sada adarsanam icchataḥ*: for one who, having asserted existence, desires that it is *always unseen* — the universal is there and never shows. *Atyanta-adarsane na syad asattvam prati niscayah*: in utter non-seeing there would be no ascertainment as to non-existence. The reply is double-edged and Bhartrhari lets both edges show: if the universal is never seen, one cannot establish that it is absent — and equally, one cannot establish that it is present. An always-unseen posit is unfalsifiable and unconfirmable, which is not a defence but a diagnosis. The escape saves the thesis by making it idle.

Verse 3.13.12

न चालमनुमानाय शब्दोऽदर्शनपूर्वकः ।
सिद्धे हि दर्शने किं स्यादनुमानप्रयोजनम् ॥ 12 ॥

na cālam anumānāya śabdo'darśanapūrvakah |
siddhe hi darśane kim, syādanumānaprayojanam || 12 ||

And a word preceded by non-seeing is not sufficient for an inference; for when the seeing is established, what would be the purpose of an inference?

The realist's second escape blocked. He might infer the unseen universal from the word: 'nadi' is feminine, therefore femininity is there. *Na ca alam anumanya sabdo 'darsana-purvakah*: a word preceded by *non-seeing* is not sufficient for an inference — a word cannot evidence what nobody has ever seen; inference runs from a mark to what has been observed with it (the vyapti requires prior co-observation). *Siddhe hi darsane kim syad anumana-prayojanam*: for when the *seeing* is established, what would be the purpose of an inference? Where the characters show, one sees and does not infer; where they do not, no inference is available. So the word cannot bridge to the universal, and the realist has neither perception nor inference for gender in the sexless case. This closes the argument begun at 3.13.10: gender-as-jati has no evidence outside the bodies.

Verse 3.13.13

आविर्भाविस्तिरोभावः स्थितिश्चेत्यनपायिनः ।
धर्मा मूर्तिषु सर्वासु लिङ्गत्वेनानुदर्शिताः ॥ 13 ॥

āvirbhāvastirobhāvaḥ sthitiścetyanapāyinaḥ |
dharmā mūrṭiṣu sarvāsu liṅgatvenānudarśitāḥ || 13 ||

Manifestation, disappearance, and standing — these unfailing properties in all corporeal things have been exhibited as gender.

The samuddesa's own account begins, and it is startling. Avirbhavas tirobhavah sthitis ca iti anapayinah: *manifestation, disappearance, and standing* — the three that 3.8.25-26 gave as the vikaras' reduction, and 3.9.11's moments of a thing's career. Dharma murtisu sarvasu linga-tvena anudarsitah: these *unfailing properties in all corporeal things* have been *exhibited as gender*. So the three genders are these three: feminine is manifestation (the coming-forth), masculine is standing, neuter is disappearance — or some such mapping; the verse does not assign them, and the tradition's assignment varies. What matters is the move: gender is not sex but *phase* — the universal three-beat of arising, abiding, ceasing, which every corporeal thing exhibits. This is why every noun has a gender: everything has the three, and the ending marks which is salient.

Verse 3.13.14

सर्वमूर्त्यात्मभूतानां शब्दादीनां गुणे गुणे ।
त्रयः सत्त्वादिधर्मस्ते सर्वत्र समवस्थिताः ॥ 14 ॥

sarvamūrtyātmabhūtānām śabdādinām guṇe guṇe |
trayaḥ sattvādidharmāste sarvatra samavasthitāḥ || 14 ||

Of sound and the rest, which are the very selves of all corporeal things — in each quality, those three properties beginning with 'sattva' stand established everywhere.

The three grounded in the Samkhya gunas. Sarva-murty-atma-bhutanam sabdadinam guṇe guṇe: of *sound* and the rest — the five sense-qualities, which are the *very selves* of all corporeal things (nothing is but its qualities: 3.11.7's para-upakara-tattvanam) — *in each quality*. Trayah sattvadi-dharmas te sarvatra samavasthitah: those *three* properties beginning with 'sattva' stand established *everywhere* — sattva, rajas, tamas: the three gunas of Samkhya, present in every quality of everything. So 3.13.13's three phases are the three gunas: manifestation is sattva's, standing is rajas', disappearance is tamas'. And since the gunas are in everything, the three genders are in everything — which explains why every noun has one, and why the assignment can seem arbitrary: all three are always present, and the ending marks whichever the word fixes on.

[Contested: the mapping of the three genders onto the three gunas is implied rather than stated, and the tradition's assignments differ; we set out the structure the verses build and decline to fix the correspondence the text leaves open]

Verse 3.13.15

रूपस्य चात्ममात्रानां शुक्लादीनां प्रतिक्षणम् ।
का चित्प्रलीयते का चित्कथं चिदभिवर्धते ॥ 15 ॥

rūpasya cātmamātrānām, śuklādinām, pratikṣaṇam |
kā citpraliyate kā citkatham, cidabhivardhate || 15 ||

And of the mere selves of form — white and the rest — at every moment, some one dissolves away and some one somehow increases.

The three phases at their finest grain. *Rupasya ca atma-matranam suklaadinam prati-ksanam*: of the mere selves of form — white and the rest — at every moment. *Ka cit praliyate ka cit katham cid abhivardhate*: some one dissolves away and some one somehow increases. So even a colour is, at every instant, partly waning and partly waxing — the three phases running continuously in the smallest quality. *Katham cit* — somehow: the shrug (2.171, 3.7.34, 3.8.62's *kathamcit*), marking that the mechanism gives out. And *prati-ksanam*, at every moment: this is momentariness in a grammarian's treatise, and it is offered not as Buddhist doctrine but as what the *guna*-analysis requires. If the three *gunas* are in every quality and they are phases, then every quality is always arising and ceasing — and gender marks which phase a word fixes on.

Verse 3.13.16

क्वथितोदकवच्चैषामनवस्थितवृत्तिता ।
अजस्रं सर्वभावानां भाष्य एवोपवर्णिता ॥ 16 ॥

kvathitodakavaccaīṣāmanavasthitavṛttitā |
ajasram, sarvabhāvānām, bhāṣya evopavarṇitā || 16 ||

And their unsettled operation, like boiling water — ceaselessly, of all entities — has been described in the *Bhasya* itself.

The momentariness of 3.13.15 given its image and its authority. *Kvathita-udakavat ca esam anavasthita-vṛttita*: their unsettled operation, like boiling water — the pot at a rolling boil, where nothing holds still and the whole is a churn of arising and subsiding. *Ajasram sarva-bhavanam*: ceaselessly, of all entities — no thing is exempt, and no moment. *Bhasya eva upavarṇita*: has been described in the *Bhasya* itself. So Patanjali said it, and Bhartrhari is drawing it out rather than importing it (2.475's *bhasye eva upavarṇitah*; 3.9.103's *Bhasya*-citation). The image is chosen well: boiling water is unmistakably one body of water and unmistakably never the same twice — which is exactly the standing-and-not-standing that gender's three phases (3.13.13) mark.

Verse 3.13.17

प्रवृत्तेरेकरूपत्वं साम्यं वा स्थितिरुच्यते ।
अविर्भावतिरोभावप्रवृत्त्या वावतिष्ठते ॥ 17 ॥

pravṛttterekarūpatvam, sāmyam, vā sthītirucyate |
avirbhāvatirobhāvapravṛtṭyā vāvatiṣṭhate || 17 ||

Uniformity of operation, or evenness, is called 'standing'; or it stands established by an operation of manifestation-and-disappearance.

What sthiti — standing — amounts to on the boiling-water picture. Pravṛtter eka-rūpatvam sāmyam va sthītir ucyate: *uniformity of operation, or evenness, is called 'standing' — a thing 'stands' when its arising and ceasing are in balance: not because nothing happens but because the churn is steady. Avirbhava-tirobhava-pravṛtṭyā va avatiṣṭhate: or it stands established by an operation of manifestation-and-disappearance. So standing is not a third thing beside manifesting and disappearing; it is those two in equilibrium (3.8.26's janma eva asrita-sarupyam sthītiḥ iti abhidhiyate: birth alone, having resorted to a likeness of form, is spoken of as standing). The middle of the three phases dissolves into the other two, and what looked like a triad is a pair with a balance-point.*

Verse 3.13.18

गुणा इत्येव बुद्धेर्वा निमित्तत्वं स्थितिर्मता ।
स्थितेश्च सर्वलिङ्गानां सर्वनामत्वमुच्यते ॥ 18 ॥

guṇā ityeva buddhervā nimittatvam, sthītirmatā |
sthiteśca sarvaliṅgānām, sarvanāmatvamucyate || 18 ||

Or 'standing' is held to be the state of being the occasioning ground for the cognition 'qualities' merely; and from standing, all genders are said to have the state of being pronouns.

A second account of standing, and a startling consequence. Guna iti eva buddher va nimittatvam sthītir mata: 'standing' is held to be the state of being the *occasioning ground* for the cognition 'qualities' merely — a thing stands just insofar as it occasions the thought 'here are qualities'. And then: sthīteḥ ca sarva-liṅgānām sarva-nāmatvam ucyate — *from standing, all genders are said to have the state of being pronouns. Sarvanāman: the pronoun, Panini's own category — and the pronouns are precisely the words that take all three genders (sa, sa, tat). So gender's ground in standing explains why the pronouns are gender-indifferent: what merely stands, occasioning the thought of qualities, is not yet any gender, and the pronoun names exactly that (3.4.3's dravya defined by pronominal referability: whatever you can point at with 'this').*

Verse 3.13.19

स्थितेषु सर्वलिङ्गेषु विवक्षानियमाश्रयः ।
कस्य चिच्छब्दसंस्कारे व्यापारः क्व चिदिष्यते ॥ 19 ॥

sthiteṣu sarvaliṅgeṣu vivakṣāniyamāśrayaḥ |
kasya cicchabdasamśkāre vyāpāraḥ kva cidiṣyate || 19 ||

All genders standing established, the operation of some one – resting on the restriction of intention – is somewhere accepted in the refinement of the word.

The samuddesa's central mechanism. Sthitesu sarva-lingesu: *all genders standing established* – every thing has all three, since all three gunas are in everything (3.13.14). Vivaksa-niyamasrayah kasya cid vyaparah: *the operation of some one – resting on the restriction of intention*. Kva cid isyate sabda-samskare: *is somewhere accepted in the refinement of the word*. So: all three genders are present, vivaksa restricts to one, and the restriction shows as the word's morphological form. Sabda-samskara – the seventh entry of 3.13.1-2's list, now adopted as the account. Gender is where the speaker's selection among ever-present phases gets into the word – which is 2.400's directed eye (the word, when intended, becomes the expressor of a meaning) applied to what the endings mark.

Verse 3.13.20

संनिधाने निमित्तानां किं चिदेव प्रवर्तकम् ।
यथा तक्षादिशब्दानां लिङ्गेषु नियमस्तथा ॥ 20 ॥

samñidhāne nimittānām kim cideva pravartakam |
yathā takṣādiśabdānām liṅgeṣu niyamastathā || 20 ||

When the occasioning grounds are in proximity, some one alone is the impeller – as with the words 'taksan' and the rest, so is the restriction in respect of genders.

The selection of 3.13.19 exemplified. Sannidhane nimittanam kim cid eva pravartakam: when the *occasioning grounds* are in *proximity*, *some one alone* is the *impeller* – many conditions are present and one operates (3.7.119's sa-vyaparatarā: one property understood as more operative; 3.8.39's kascid pradhanyena pratiyate). Yatha taksadi-sabdanam lingesu niyamas tatha: as with the words 'taksan' (carpenter) and the rest, so is the *restriction* in respect of *genders*. The taksadi class is Panini's list of stems with fixed gender-behaviour – the same word, one gender, no option, and no reason in the thing. So gender-selection works as every selection in this kanda works: a crowd of available conditions, one operative, and the operating not derivable from the crowd (3.12.14's niyataḥ sabda-saktayah: the capacities of words are fixed).

Verse 3.13.21

भावतत्त्वदृशः शिष्टाः शब्दार्थेषु व्यवस्थिताः ।
यद्यद्धर्मेऽङ्गतामेति लिङ्गं तत्तत्प्रचक्षते ॥ 21 ॥

*bhāvatattvadṛśaḥ śiṣṭāḥ śabdārtheṣu vyavasthitāḥ |
yadyaddharme'ṅgatāmeti liṅgam, tattatpracakṣate || 21 ||*

The cultivated, who see the reality of entities, standing in the meanings of words — whatever gender comes to be a limb in respect of whatever property, that they declare.

The authority for the assignments. Bhava-tattva-drsah sistah: the *cultivated*, who see the reality of entities — the sistas, whose usage is the criterion of correctness (1.27's sadhutva established from the cultivated; 1.141's aviccheda). Sabdarthesu vyavasthitah: *standing in the meanings of words*. Yad yad dharme 'ngatam eti lingam tat tat pracaksate: *whatever gender comes to be a limb in respect of whatever property, that they declare*. Angata: the Mimamsa relation of subsidiary to principal (2.81-82). So the sistas assign the gender that serves the property in view — and their assignment is the fact. There is no appeal past it, because gender is a sabda-samskara (3.13.19) and the cultivated are who refine words. The verse locates gender's authority exactly where Kanda I located all linguistic authority.

Verse 3.13.22

स्वरभेदाद्यथा शब्दाः साधवो विषयान्तरे ।
लिङ्गभेदात्तथा सिद्धात्साधुत्वमनुगम्यते ॥ 22 ॥

*svarabhedādyathā śabdāḥ sādhave viṣayāntare |
liṅgabhedāttathā siddhātsādhutvamanugamyate || 22 ||*

As words are correct in another domain by a difference of accent — so, from an established difference of gender, correctness is followed along.

The parallel that settles gender's status. Svара-bhedad yatha sabdah sadhavo visayantare: as words are correct in another domain by a difference of accent — the same syllables, differently accented, are correct in different senses (and the Indra-satru of 3.10.5 is the tradition's monument to what accent decides). Linga-bhedat tatha siddhat sadhutvam anugamyate: so, from an established difference of gender, correctness is followed along. So gender is like accent: a formal feature that fixes correctness domain by domain, learned rather than derived, and carrying no meaning of its own beyond the fixing. This is the samuddesa's cleanest placement of its subject — and the accent-parallel is exact, since nobody supposes an accent means anything.

Verse 3.13.23

प्रयोगो विप्रयोगश्च लोके यत्रोपलभ्यते ।
शास्त्रमारभ्यते तत्र न प्रयोगाविपर्यये ॥ 23 ॥

prayogo viprayogaśca loke yatropalabhyate |
śāstramārabhyate tatra na prayogāviparyaye || 23 ||

Where employment and non-employment are found in the world, there the science is undertaken — not where there is no inversion of employment.

Why the grammar legislates gender at all. *Prayogo viprayogas ca loke yatra upalabhyate*: where *employment* and *non-employment* are found in the world — where usage varies, some saying one thing and some another. *Sastram arabhyate tatra*: there the science is undertaken. *Na prayoga-aviparyaye*: not where there is no inversion of employment — where usage is uniform, no rule is needed. So the grammar's gender-rules exist precisely where the sistas' usage wavers, and are absent where it does not. This is a fine account of what a rule-system is for: it is a record of the contested cases (2.343's *vyavahara* constructed by division for the sake of the operation), and its silence marks agreement rather than oversight — which is why 3.12.24's argument from the Bhasya's silence had to be answered.

Verse 3.13.24

उपाधिभेदादर्थेषु गुणधर्मस्य कस्य चित् ।
निमित्तभावः साधुत्वे विवक्षा च व्यवस्थिता ॥ 24 ॥

upādhibhedādartheṣu guṇadharmasya kasya cit |
nimittabhāvaḥ sādhutve vivakṣā ca vyavasthitā || 24 ||

From a difference of adjunct among meanings, the state of being the occasioning ground, in correctness, belongs to some quality-property; and intention stands established.

The two variables that fix gender. *Upadhi-bhedad arthesu*: from a *difference of adjunct* among meanings — *upadhi*: the limiting condition (3.2.2's *asatya-upadhi*; 3.9.36's *kriya-upadhi*). *Guna-dharmasya kasya cin nimitta-bhavah sadhutve*: the state of being the *occasioning ground*, in *correctness*, belongs to some *quality-property*. *Vivaksa ca vyavasthita*: and *intention* stands established. So gender-correctness has two conditions: which quality-property is in view (fixed by the adjunct) and what the speaker intends. Neither is a fact about the thing's sex. And 3.13.25 will show both working on a single pair of words.

Verse 3.13.25

हिमारण्ये महत्त्वेन युक्ते स्त्रीत्वमवस्थितम् ।
ह्रस्वोपाधिविशिष्टायाः कुट्याः प्रसवयोगिता ॥ 25 ॥

himāraṇye mahattvena yukte strītvamavasthitam |
hrasvopādhiviśiṣṭāyāḥ kuṭyāḥ prasavayogitā || 25 ||

In 'hima' and 'aranya', femininity stands established when joined with greatness; and of a hut, distinguished by the adjunct 'small', there is the fitness for the productive suffix.

The two variables of 3.13.24 exhibited. Himaranye mahattvena yukte stritvam avasthitam: in 'hima' (snow) and 'aranya' (forest), *femininity* stands established when *joined with greatness* — himani, aranyani: the feminine forms mean the *great* snow, the *great* forest (Panini 4.1.49's himaranyayor mahattve). So femininity here marks magnitude, and has nothing to do with sex. Hrasva-upadhi-visistayah kutyah prasava-yogita: and of a *hut*, distinguished by the *adjunct* 'small', there is the *fitness for the productive suffix* — kuti, the little hut, taking the feminine for smallness. So the *same* feminine marks greatness in one word and smallness in another, and both are correct. Nothing could show more plainly that gender is a sabda-samskara: one ending, opposite significations, and usage settling each.

Verse 3.13.26

शब्दान्तरानां भिन्नेऽर्थ उपायाः प्रतिपत्तये ।
एकतामिव निश्चित्य लघ्वर्थमुपदर्शिताः ॥ 26 ॥

śabdāntarānām bhinne'rtha upāyāḥ pratipattaye |
ekatāmiva niścitya laghvarthamupadarśitāḥ || 26 ||

The means, for comprehension, of other words in a different meaning — having determined as though a oneness — have been shown for the sake of brevity.

A methodological note on the grammar's gender-classes. Sabdantaranam bhinne'rtha upayah pratipattaye: the *means*, for *comprehension*, of *other words* in a *different meaning*. Ekatam iva niscitya: having *determined as though a oneness* — the grammar groups words of different senses into one gender-class as though they were one kind. Laghv-artham upadarsitah: have been shown *for the sake of brevity* — laghava, the Paninian virtue (2.343's laghu; 2.176's instruction by the general for brevity's sake). So the gender-classes are economy-devices: a list of stems treated as one because listing them severally would be endless, and the iva marks that their oneness is the list's and not theirs. This is 3.7.78's method (one karaka exhibited by way of difference) inverted: many things exhibited as one, for the same reason.

Verse 3.13.27

उत्पत्तिः प्रसवोऽन्येषां नाशः संस्त्यानमित्यपि ।
आत्मरूपं तु भावानां स्थितिरित्यपदिश्यते ॥ 27 ॥

*utpattiḥ prasavo'nyeṣām.nāśaḥ samṣtyānamityapi |
ātmarūpam.tu bhāvānām.sthityapadiśyate || 27 ||*

For others, 'origination' is production, 'destruction' is congealing; but the own-form of entities is designated as 'standing'.

A rival naming of the three phases. Utpattiḥ prasavo 'nyesam: for others, 'origination' is production — prasava: bringing-forth, the word 3.6.10 used for what direction-words lack (no engendering). Nasah samstyanam iti api: 'destruction' is congealing — samstyana: thickening, coagulating; destruction as a hardening rather than a vanishing (3.7.118's samurcchita iva: the meaning's self as though congealed). Atma-rupam tu bhavanam sthitiḥ ity apadiśyate: but the own-form of entities is designated as 'standing'. So the three are renamed: production, congealing, and the thing's own form. And the middle term is now the thing itself — standing is not a phase alongside the others but what the entity is, with arising and ceasing as its edges. The renaming shifts the doctrine's weight: gender marks the thing's own form and its two boundaries.

Verse 3.13.28

दृष्टं निमित्तं केसां चिज्जात्यादिवदवस्थितम् ।
दृष्टवच्छब्दसंस्कारमात्रं तु परिकल्पितम् ॥ 28 ॥

*drṣṭam.nimittam.kesām.cijjātyādivadavasthitam |
drṣṭavacchabdasamśkāramātram.tu parikalpitam || 28 ||*

For some, the occasioning ground is seen as standing established, like a universal and the rest; but a mere refinement of the word, as though seen, is constructed.

The two camps set side by side, and the samuddesa's verdict is in the second clause. Drstam nimittam kesam cij jaty-ativad avasthitam: for some, the occasioning ground is seen as standing established, like a universal and the rest — the realists (3.13.4-5's jati-account): femininity is there and shows. Drstavat sabda-samskara-matram tu parikalpitam: but a mere refinement of the word, as though seen, is constructed. Drstavat: as though seen — the sabda-samskara is a construction that wears the look of an observation. So the two accounts are not two readings of one datum: on the second, the datum itself is manufactured, and the realists are reading a construction as a finding. Parikalpitam: constructed (3.13.9's mirage). And matram — mere: nothing but a refinement of the word.

Verse 3.13.29

यथा प्रसिद्धेऽप्येकत्वे नानात्वाभिनिवेशिनः ।
नानात्वं जनयन्तीव शब्दा लिङ्गेऽपि स क्रमः ॥ 29 ॥

yathā prasiddhe'pyekatve nānātvābhiniveśinah |
nānātvam.janayantīva śabdā liṅge'pi sa kramah || 29 ||

As, even where oneness is well established, words — for those addicted to manifoldness — as it were generate manifoldness; that same procedure is in gender too.

The mechanism named. Yatha prasiddhe 'py ekatve nanatva-abhinivesinah: as, even where *oneness is well established*, for those *addicted to manifoldness* — abhinivesin: clinging, obsessed (2.266's gauna-*artha-abhinivesinam*, settling upon a secondary meaning). Nanatvam janayanti iva sabdah: *words — as it were — generate manifoldness*. Linge 'pi sa kramah: *that same procedure is in gender too*. So words manufacture plurality where there is one thing, for minds disposed to find it — and gender is that manufacture. The iva keeps it honest: words do not really generate; they present. And nanatva-abhinivesinah is a diagnosis of the hearer, not of the language: the manifoldness is generated *for those addicted to it*, which is everyone in vyavahara (3.6.18's dik-kala-parikalpana standing like consciousness itself).

Verse 3.13.30

इदं वेयमयं वेति शब्दसंस्कारमात्रकम् ।
निमित्तदर्शनादर्थे कैश्चित्सर्वत्र वर्ण्यते ॥ 30 ॥

idam.veyamayam.veti śabdasaṃskāramātrakam |
nimittadarśanādarthe kaiścitsarvatra varṇyate || 30 ||

'This' or 'she' or 'he' — a mere refinement of the word: from the seeing of an occasioning ground in the meaning, it is described by some as everywhere so.

The doctrine at its most general. Idam va iyaṃ ayam va iti: 'this' or 'she' or 'he' — the three pronominal genders, and note that the neuter comes first. Sabda-samskara-matrakam: a *mere refinement of the word* — matraka: nothing but. Nimitta-darsanad arthe kaiscit sarvatra varṇyate: *from the seeing of an occasioning ground in the meaning, it is described by some as everywhere so*. So: some hold that gender is a sabda-samskara *everywhere* — not merely in the sexless cases (3.13.7's rivers and shores) but in all cases, including the bodies. Even 'she' said of a woman is a refinement of the word, occasioned by something seen in the meaning and not naming it. This is the seventh entry of 3.13.1-2 taken to its limit, and it is reported (kaiscit) with evident sympathy: the samuddesa's whole argument has been driving here.

Verse 3.13.31

नावश्यं विषयत्वेन निमित्तं व्यवतिष्ठते ।
इन्द्रियादि यथादृष्टं भेदहेतुस्तदिष्यते ॥ 31 ॥

nāvaśyam, viṣayatvena nimittam, vyavatiṣṭhate |
indriyādi yathādr̥ṣṭam, bhedaheṭustadiṣyate || 31 ||

The occasioning ground does not necessarily stand established as an object; as the sense-faculty and the rest, being unseen, is accepted as the cause of difference.

The samuddesa's last defence of 3.13.30. The objection: if gender is a refinement of the word occasioned by something in the meaning, that something must be an object one could point to — and in rivers there is none. The reply: *na avasyam viṣayatvena nimittam vyavatiṣṭhate* — the *occasioning ground* does not necessarily stand established as an object. And the precedent: *indriyādi yathādr̥ṣṭam bheda-heṭus tad iṣyate* — as the *sense-faculty* and the rest, being *unseen*, is accepted as the *cause of difference*. This is 3.13.30-31's argument exactly: the eye's condition differs and is never itself perceived, and it makes my seeing differ from yours. Ungrasped, it conditions. So gender's occasioning ground may be real and never an object — like the eye, working by not appearing. The realist demanded a visible femininity in the river; the reply is that causes need not be objects, and the finest ones never are.

Vṛtti-samuddeśa — On Complex Formation

Verse 3.14.1

कुत्साप्रशंसातिशयैः समाप्तार्थं तु युज्यते ।
पदं स्वार्थदयः सर्वे यस्मात् कुत्सादिहेतवः ॥ 1 ॥

kutsāpraśamsātiśayaiḥ samāptārtham tu yujyate |
padam svārthadayaḥ sarve yasmāt kutsādihetavaḥ || 1 ||

But a word of completed meaning is joined with censure, praise and excess; since all, beginning with its own meaning, are the causes of censure and the rest.

The samuddesa opens on the affixes of attitude. Kutsa-prasamsa-atisayaiḥ: with *censure, praise* and *excess* — the taddhitas that add an evaluation: the ka of contempt, the affixes of praise, the tarap and tamap of comparison. Samapta-artham tu yujyate padam: a word of *completed meaning* is joined with them — samapta-artha: the word is already whole before the attitude arrives (3.8.17's krtarthatva; 2.4's ekartham). Svarthadayaḥ sarve yasmāt kutsādi-hetavaḥ: since *all*, beginning with its *own meaning*, are the *causes* of censure and the rest. So what occasions the contempt is everything about the word's meaning — and the affix does not add a content but registers a stance toward one. The Vṛtti-samuddesa's whole subject is what happens when words are joined; it begins with the simplest case, where a completed word takes on an attitude, and even here the question is what the addition adds.

Verse 3.14.2

देवदत्तादिकुत्सायां वर्तते कुत्सितश्रुतिः ।
कुत्सितस्था तु या कुत्सा तदर्थः को विधीयते ॥ 2 ॥

devadattādikutsāyām vartate kutsitaśrutih |
kutsitasthā tu yā kutsā tadarthaḥ ko vidhīyate || 2 ||

The hearing 'censured' operates in the censure of Devadatta and the rest; but that censure which resides in the censured — for that meaning, 'ka' is prescribed.

Two ways of censuring, and they are not the same. Devadattadi-kutsayam vartate kutsita-srutih: the *hearing 'censured'* operates in the *censure of Devadatta* and the rest — one says 'kutsito devadattah', 'Devadatta is contemptible', and the word 'kutsita' names him as censured. Kutsita-stha tu ya kutsa tad-arthaḥ kah vidhiyate: but that *censure which resides in the censured* — for *that* meaning, 'ka' is *prescribed*: 'devadattakah', with the contemptuous suffix, expresses not that he is censured but the censure itself, lodged in him. So: the adjective predicates contempt, the affix carries it. And the difference is the samuddesa's opening lesson about vṛtti — what a compressed form does is not what its analysis says.

Verse 3.14.3

प्रकृष्ट इति शुक्लादिप्रकर्षस्याभिधायकः ।
प्रकृष्टस्य प्रकर्षे तु तरबादिविधीयते ॥ 3 ॥

prakṛṣṭa iti śuklādiprakarṣasyābhidhāyakaḥ |
prakṛṣṭasya prakarṣe tu tarabādirvidhīyate || 3 ||

'Prakṛṣṭa' is the expressor of the excellence of white and the rest; but in the excellence of the excellent, 'tarap' and the rest is prescribed.

The comparative's structure, and it is doubled. *Prakṛṣṭa* iti *sukladi-prakarṣasya* *abhidhāyakaḥ*: '*prakṛṣṭa*' (excellent) is the *expressor* of the *excellence* of white and the rest — the word names the eminence a quality has (3.5.2's *prakarsa*; 1.64's *guna* as *prakarsa-hetu*). *Prakṛṣṭasya prakarṣe tu tarab-adir vidhīyate*: but in the *excellence of the excellent*, *tarap* and the rest is *prescribed* — '*suklatara*', whiter: the comparative marks not excellence but excellence of *what is already excellent*. So the comparative affix operates one level up, on an eminence already predicated. This is the stratification 3.11.19 found in the higher numerals (the countings gathered) and 3.11.3's number numbering itself — and it explains why '*suklatara*' is not merely a stronger '*sukla*': the affix takes the excellence as its object.

Verse 3.14.4

कुत्सितत्वेन कुत्स्यो वा न सम्यग् वापि कुत्सितः ।
स्वशब्दाभिहिते केन विशिष्टोऽर्थः प्रतीयते ॥ 4 ॥

kutsitatvena kutsyo vā na samyag vāpi kutsitaḥ |
svaśabdābhihite kena viśiṣṭo'rthaḥ pratīyate || 4 ||

Either what is to be censured by way of being censured, or what is not properly censured — when it is expressed by its own word, by what is a qualified meaning understood?

A dilemma for the contempt-affix. *Kutsitatvena kutsyo va*: either what is to *be censured by way of being censured* — the affix censures what is already censurable, and adds nothing; *na samyag vāpi kutsitaḥ*: or what is *not properly censured* — the affix censures what does not deserve it, and misfires. *Sva-sabda-abhihite kena viśiṣṭo'rthah pratiyate*: when it is expressed by its *own word*, by *what* is a *qualified* meaning understood? If '*kutsita*' already says he is contemptible, what does '*-ka*' qualify? The dilemma is 3.14.2's distinction pressed: if the adjective and the affix both censure, one is idle (2.34's add-or-subtract test: against the sentence's one meaning, addition yields not more meaning but meaninglessness).

Verse 3.14.5

न च साम्प्रतिकी कुत्सा भेदाभावात् प्रतीयते ।
पूज्यते कुत्सितत्वेन प्रशस्तत्वेन कुत्स्यते ॥ 5 ॥

na ca sāmpratīkī kutsā bhedābhāvāt pratīyate |
pūjyate kutsitatvena praśastatvena kutsyate || 5 ||

And a present censure is not understood, from the absence of difference; one is honoured by way of being censured, and censured by way of being praised.

The dilemma of 3.14.4 answered by an observation about irony, and it is one of the finest things in the samuddesa. Na ca sampratīkī kutsā bhedā-abhavāt pratīyate: a *present censure is not understood*, from the *absence of difference* — the affix does not deliver a censure occurring now, because nothing in the form marks it off. And then the evidence: pūjyate kutsitatvena — one is *honoured by way of being censured*: the affectionate insult, the friend called a scoundrel; praśastatvena kutsyate — and *censured by way of being praised*: the sneer that says 'how admirable'. So the contempt-affix can honour and the praise-affix can wound, and neither carries its attitude reliably. Which answers 3.14.4: the affix does not censure at all; it marks a stance whose direction the occasion supplies (2.315's fourteen determinants; 3.12.5's vivaksita-nibandhana). Irony is not a deviant use — it is what shows that the attitude was never in the form.

Verse 3.14.6

विशेषणविशेष्यत्वं पदयोरुपजायते ।
व प्रातिपदिकार्थश्च तत्रैवं व्यतिरिच्यते ॥ 6 ॥

viśeṣaṇaviśeṣyatvam.padayorupajāyate |
va prātipadikārthaśca tatraivam.vyatiricyate || 6 ||

The state of being qualifier and qualified arises for two words; and the nominal stem's meaning is there thus set apart.

The samuddesa turns to its real subject: what happens when two words are joined. Viśeṣaṇaviśeṣyatvam padayor upajāyate: the state of being *qualifier and qualified* arises for *two words* — upajāyate: arises, comes to be. Neither word is a qualifier by itself; the relation is generated by the joining. Va prātipadika-arthaśca tatra evam vyatiricyate: and the *nominal stem's meaning* is *there thus set apart* — the stem's own meaning is separated off from the relational role it acquires. So joining two words produces two things: a qualifier-qualified structure that neither had, and a distinction between what each stem means and what it is doing. This is 3.7.13's doctrine (the karaka-property is not expressed by the noun) at the level of nominal composition, and it opens the whole vrtti-analysis.

Verse 3.14.7

विशेष्यं स्यादनिर्ज्ञातं निर्ज्ञातार्थो विशेषणम् ।
परार्थत्वेन शेषत्वं सर्वेषामुपकारिणाम् ॥ 7 ॥

viśeṣyam, syādanirjñātam, nirjñātārtho viśeṣaṇam |
parārthatvena śeṣatvam, sarveṣāmupakāriṇām || 7 ||

The qualified would be what is not ascertained; the qualifier is what has an ascertained meaning. From being-for-another, remainder-hood belongs to all that assist.

The two roles defined by epistemic status. Visesyam syad anirjnatam: the *qualified* would be what is not ascertained — the head is what one does not yet know: 'gauh' leaves open which cow. Nirjnata-artho visesanam: the *qualifier* is what has an *ascertained* meaning — the modifier is what one knows: 'sukla' brings a settled content to an unsettled one. So the qualifier-qualified relation is not a matter of importance or of grammatical rank but of *what is known*: the known narrows the unknown. And the consequence: para-arthatvena sesatvam sarvesam upakarinam — from *being-for-another*, *remainder-hood* belongs to *all that assist* (2.113's paratha; 3.7.44's sesa). Everything that helps is a remainder — which means the qualifier, for all its determinacy, is the subordinate.

Verse 3.14.8

विभक्तिभदो नियमाद् गुणगुण्यभिधायिनोः ।
सामानाधिकरणस्य प्रसिद्धिर्द्रव्यशब्दयोः ॥ 8 ॥

vibhaktibhaddo niyamād guṇagūṇyabhidhāyinoḥ |
sāmānādhikaraṇasya prasiddhidravyaśabdayoḥ || 8 ||

A difference of case-ending is by rule for the two expressing quality and quality-possessor; the establishing of co-referentiality is for two substance-words.

The morphology of qualification. Vibhakti-bhedo niyamad guna-gunya-abhidhayinoh: a *difference of case-ending* is by rule for the two expressing *quality* and *quality-possessor* — where one word names a quality as such and the other its bearer, the cases differ: 'suklasya gauh' would be the genitive construction, quality and possessor at different case-levels. Samanadhikaranyasya prasiddhir dravya-sabdayoh: the *establishing of co-referentiality* is for two *substance-words* — samanadhikaranyasya: same-locus-hood, the grammar's term for two words in the same case referring to one thing: 'suklo gauh', both nominative. So co-reference requires both words to be substance-words, and where one is a pure quality-word the cases split. The rule matters because it means 'sukla' in 'suklo gauh' is not naming a quality at all — it is naming a substance, whitely (3.14.9's example makes this vivid).

Verse 3.14.9

द्रव्येऽनिर्जतिजातीये कृष्णशब्दः प्रयुज्यते ।
अनिर्जतिगुणे चैव तिलशब्दः प्रवर्तते ॥ 9 ॥

*dravye'nirjñātajātiye kṛṣṇaśabdaḥ prayujyate |
anirjñātaguṇe caiva tilaśabdaḥ pravartate || 9 ||*

The word 'kṛṣṇa' is employed with respect to a substance whose universal is unascertained; and the word 'tila' operates with respect to one whose quality is unascertained.

The mechanism of co-reference, and the example is exact. Take 'kṛṣṇas tilaḥ', the black sesame. *Dravye anirjñata-jātiye kṛṣṇa-sabdaḥ prayujyate*: the word 'kṛṣṇa' (black) is employed with respect to a substance *whose universal is unascertained* — 'black' gives you a black *thing* and does not say what kind: the *jāti* is open. *Anirjñata-guṇe ca eva tila-sabdaḥ pravartate*: and the word 'tila' operates with respect to one *whose quality is unascertained* — 'sesame' gives you the kind and leaves the colour open. So each word presents a substance with a gap, and the gaps are complementary: black-something and sesame-of-some-colour. Neither is a qualifier by nature (3.14.6's *upajayate*: the roles arise in the joining); each fills what the other left open. This is the finest analysis of adjectival co-reference in the ancient world, and it depends on 3.14.7's insight that qualification is the known narrowing the unknown.

Verse 3.14.10

सामान्यानामसम्बन्धात् तौ विशेषेव्यवस्थितौ ।
रूपाभेदाद् विशेषं तमभिव्यङ्क्तुं न शक्नुतः ॥ 10 ॥

*sāmānyānāmasambandhāt tau viśeṣavyavasthitau |
rūpābhedād viśeṣam tamabhivyaṅktum na śaknutaḥ || 10 ||*

From the non-connection of the generals, those two stand established in the particular; from non-difference of form, they cannot manifest that particular.

Why neither word alone suffices. *Samanyanam asambandhat*: from the *non-connection of the generals* — blackness-in-general and sesame-hood-in-general are not connected; nothing links the colour-universal to the species-universal. *Tau visese vyavasthitau*: those two stand established *in the particular* — they meet only in this black sesame seed, not in their generals. *Rupa-abhedad visesam tam abhivyaṅktum na saknutaḥ*: from *non-difference of form*, they *cannot manifest that particular* — each word's form is the same whether it means the general or this instance, so neither can single out the particular by itself. So the two words meet in a particular that neither can reach alone — and the meeting is what the joining accomplishes. The verse explains why qualification is necessary: generals do not connect, particulars are not namable, and only the crossing of two open generals lands on one thing.

Verse 3.14.11

तावेवं सन्निपतितौ भेदेन प्रतिपादने ।
अवच्छेदमिवाधाय संशयं व्यपकर्षतः ॥ 11 ॥

*tāvevam sannipatitau bhedena pratipādane |
avacchedamivādhāya samśayam vyapakarṣataḥ || 11 ||*

Those two, thus fallen together, in conveying by way of difference — having as it were deposited a delimitation, draw away the doubt.

The resolution, and its verbs are precise. Tau evam sannipatitau: those two, thus *fallen together* — sannipata: the falling-together, collision, conjunction (3.7.109's sannipata). The two words simply land in one utterance. Bhedena pratipadane: in *conveying by way of difference* — each conveying its own content, differently. Avacchedam iva adhaya samsayam vyapakarsataḥ: *having as it were deposited a delimitation*, they *draw away the doubt*. Two operations: each deposits a limit on the other's openness (avaccheda: delimitation, 2.45's avacchinatti, the relation delimiting the hovering general), and together they *draw away the doubt* — samsayam vyapakarsataḥ: the ambiguity is dragged off. So qualification is doubt-removal by mutual delimitation, and neither word does anything to the other but stand beside it. The iva is careful: they deposit a delimitation *as it were* — nothing is really added; two openings simply overlap.

Verse 3.14.12-14

द्रव्यात्मा गुणसंसर्गभेदादाश्रीयते पृथक् ।
जातिस्म्बन्धभेदाच्च द्वितीय इव गुह्यते ॥ 12 ॥
निमित्तैरभिसम्बन्धाद् या निमित्तसरूपता ।
तयैकस्यापि नानात्वं रूपाभेदात् प्रकल्पते ॥ 13 ॥
द्रव्यावस्था तृतीया तु यस्यां संसृज्यते द्वयम् ।
तयोरेवस्थयोर्भेदादाश्रयत्वे नियुज्यते ॥ 14 ॥

*dravyātmā guṇasamśargabhedādāśrīyate prthak |
jātismbandhabhedācca dvitīya iva guhyate || 12 ||
nimittairabhisambandhād yā nimittasarūpatā |
tayaikasyāpi nānātvam rūpābhedāt prakalpate || 13 ||
dravyāvasthā tṛtīyā tu yasyām samśrjyate dvayam |
tayorevasthayorbhedādāśrayatve niyujyate || 14 ||*

(12) The substance-self is resorted to severally from a difference of quality-commingling; and from a difference of universal-connection, it is grasped as though a second. (13) That likeness to the occasioning ground which comes from connection with the occasioning grounds — by it, even of one thing, manifoldness is constructed, from non-difference of form. (14) But there is a third substance-state, in which the two are commingled; from the difference of those two states, it is applied to the state of being substratum.

The metaphysics beneath 3.14.9-11's analysis, and it makes one thing into three. (12): dravya-atma guṇa-samsarga-bhedad asriyate prthak — the *substance-self* is resorted to *severally* from a *difference*

of *quality-commingling*: the sesame taken as black is one resort; jati-sambandha-bhedac ca dvitiya iva grhyate — and from a *difference of universal-connection*, it is grasped as though a second: the same seed taken as sesame is another. One thing, two resorts, and the second only as though. (13) names the mechanism: nimittaiḥ abhisambandhad ya nimitta-sarupata — the *likeness to the occasioning ground* that comes from connection with the grounds (3.11.13 verbatim) — taya ekasya api nanatvam rūpa-abhedat prakalpyate: by it, even of one thing, *manifoldness is constructed*, from *non-difference of form*. (14) supplies the third: dravya-avastha trtiya tu yasyam samsrjyate dvayam — a *third substance-state*, in which *the two are commingled* — tayoḥ avasthayor bhedad asrayatve niyujyate: from the *difference* of those two states, it is *applied* to the state of being *substratum*. So: the thing as black, the thing as sesame, and the thing as the substratum in which both meet — three states of one seed, and the third is what the co-referential phrase names. The whole apparatus of qualification rests on a threefold construction of one thing by buddhi, which 3.14.15 is about to say outright.

Verse 3.14.15

बुद्धयैकं भिद्यते भिन्नमेकत्वं चोपगच्छति ।
बुद्ध्यावस्था विभज्यन्ते सा ह्यर्थस्य विधायिका ॥ 15 ॥

buddhayaikam bhidyate bhinnamekatvam copagacchati |
buddhāyāvasthā vibhajyante sā hyarthasya vidhāyikā || 15 ||

By the intellect one is differentiated, and the differentiated attains oneness; by the intellect the states are divided out — for it is the ordainer of the meaning.

The samuddesa's thesis, and it is the Padakanda's. Buddhya ekam bhidyate: by the *intellect*, one is *differentiated* — the sesame becomes black-thing and sesame-thing. Bhinnam ekatvam ca upagacchati: and the *differentiated* attains *oneness* — and the two become one seed again, in the phrase. So buddhi both divides the one and unifies the divided, and the whole machinery of 3.14.9-14 is its work. Buddhya-avastha vibhajyante: by the intellect the *states are divided out* — 3.14.14's three states are buddhi's (3.7.104's ekasya buddhya-avasthabhiḥ bhedo parikalpita: objecthood, instrument-hood and agency arising when the intellect's states carve one thing). And the last clause is the verse's weight: sa hi arthasya vidhāyikā — for it is the *ordainer of the meaning*. Vidhāyikā: the ordainer, the one who prescribes (3.11.12's vidhāyinim: number ordaining difference among things that have transcended it). The intellect does not find the meaning's structure; it legislates it. Everything the Vrtti-samuddesa will say about compounds and derivatives rests here.

Verse 3.14.16

व्यपदेशिवदेकस्मिन् बुद्ध्या नानार्थकल्पना ।
तया कल्पितभेदः सन्नर्थात्मा व्यपदिश्यते ॥ 16 ॥

vyapadeśivadekasmin buddhāyā nānārthakalpanā |
tayā kalpitabhedaḥ sannarthātmā vyapadiśyate || 16 ||

As in the 'vyapadesivat' maxim, there is a construction of many meanings by the intellect in one thing; by that, the meaning-self, its difference constructed, is designated.

The doctrine of 3.14.15 given its Paninian precedent. Vyapadesivat: Panini's own metarule (vyapadeśivad ekasmin — 'as though there were a designation, in respect of one'), which allows a single item to

be treated as though it were two so that a rule requiring two can apply. The grammar has an explicit licence to double one thing. Ekasmin buddhya nanartha-kalpana: in one thing, a construction of many meanings by the intellect. Taya kalpita-bhedah sann artha-atma vyapadisyate: by that, the meaning-self, its difference constructed, is designated. So the sastra's own maxim is the samuddesa's thesis in miniature: buddhi doubles what is single, the doubling is kalpita, and the designation proceeds on the doubled. Bhartrhari is not importing a philosophy into the grammar; he is reading the philosophy the grammar's metarules already presuppose.

Verse 3.14.17

क्रियाभेदेन दृष्टानामश्मादिनां पुनः पुनः ।
किञ्चिद् दर्शनमन्येन दर्शनेनापदिश्यते ॥ 17 ॥

kriyābhedena dr̥ṣṭānāmaśmādinām.punah punah |
kiñcid darśanamanyena darśanenāpadiśyate || 17 ||

Of stones and the like, seen again and again through a difference of action — some one seeing is designated by another seeing.

The doubling of 3.14.16 in perception. Kriya-bhedena drstanam asmadinam punah punah: of stones and the like, seen again and again through a difference of action — the same stone met in different doings: lifted, thrown, stumbled over. Kimcid darsanam anyena darsanena apadisyate: some one seeing is designated by another seeing. So one identifies a present sighting by reference to a previous one — 'the stone I threw' — and the identification treats two seeings as one object's. The verse supplies the perceptual case of vyapadesivat: buddhi doubles the stone into seen-then and seen-now, and then re-identifies them. And this is what makes qualification possible (3.14.9-11): the two open generals that meet in one particular are two takings of one thing.

Verse 3.14.18

प्रयोगभेदाद् धातूनां प्रकल्प्य बहुरुपताम् ।
भेदाभेदावुपादाय क्वचिदेकाच्चमुच्यते ॥ 18 ॥

prayogabhedād dhātūnām.prakalpya bahurūpatām |
bhedābhedāvupādāya kvacidekācchvamucyate || 18 ||

Having constructed the many-formedness of roots from a difference of employment — taking up difference and non-difference, mono-vocalic-ness is somewhere stated.

The doubling in the grammar's own root-list. Prayoga-bhedad dhatunam prakalpya bahu-rupatam: having constructed the many-formedness of roots from a difference of employment — one root, employed variously, is treated as several (the Dhatupatha's homonymous entries). Bheda-abhedav upadaya kvacid ekac-tvam ucyate: taking up difference and non-difference, mono-vocalic-ness is somewhere stated — ekac: having one vowel, a Paninian condition for certain rules. So a root is counted as one-vowelled or not according to which of its constructed forms is in view, and the counting takes up both difference and non-difference at once (3.7.179's bhedabheda-abhyupagame na virodho 'sti kascana: in accepting both difference and non-difference there is no contradiction). The grammar doubles its roots and then counts their vowels — and which count applies depends on the doubling.

Verse 3.14.19

अन्वयव्यतिरेकाभ्यामर्थवान् परिकल्पितः ।
एको धात्वर्थविगमाद् वर्णत्वेनोपचर्यते ॥ 19 ॥

*anvayavyatirekābhyāmarthavān parikalpitah |
eko dhātvarthavigamād varṇatvenopacaryate || 19 ||*

One thing, constructed as meaningful by agreement and difference, from the departure of the root's meaning is figuratively treated as a mere phoneme.

The limit of the doubling. Anvaya-vyatirekabhyam arthavan parikalpitah: *constructed as meaningful by agreement and difference* – the distributional method posits a meaningful element (2.12's anvaya-vyatirekau vyavahara-nibandhanam). Ekah dhatv-artha-vigamad varṇatvena upacaryate: *one, from the departure of the root's meaning, is figuratively treated as a mere phoneme*. So an element posited as meaningful, once its root-sense withdraws, is demoted to a bare sound – upacaryate: figuratively (2.253's upacara). This is 2.167's nut and sap (formatives real as units and empty as meanings) given their genesis: they are meaningful posits whose meaning has departed, and the grammar keeps the unit and drops the sense. The doubling of 3.14.18 thus has a terminus: past a point, what analysis isolates is a phoneme.

Verse 3.14.20

द्रव्यात्मानस्त्रयस्तस्माद् बद्धौ नाना व्यवस्थिताः ।
आश्रयाश्रयिधर्मेणत्ययं पूर्वेभ्य आगमः ॥ 20 ॥

*dravyātmānastrayastasmād baddhau nānā vyavasthitāḥ |
āśrayāśrayidharmenatyayam.pūrvēbhya āgamah || 20 ||*

Therefore three substance-selves stand established as many in the intellect, by the property of substratum and what rests on it – this is the tradition from the earlier ones.

The three states of 3.14.12-14 confirmed on authority. Dravya-atmanas trayas tasmad buddhau nana vyavasthitah: *therefore three substance-selves stand established as many in the intellect* – the thing as qualified, the thing as kind, and the thing as their substratum (3.14.14's third state). Asraya-asrayi-dharmena: *by the property of substratum and what rests on it* – the three are generated by the bearer/borne relation applied to one thing. Ity ayam purvebhya agamah: *this is the tradition from the earlier ones* – purvebhya agamah: 3.3.11's very phrase, and 2.485's counsel about waiting on the elders. So the threefold construction is inherited, not invented, and Bhartrhari cites rather than claims it. The Padakanda's boldest analytical apparatus is presented as received.

Verse 3.14.21

सामानाधिकरण्यं च शब्दयोः कैश्चिदिष्यते ।
विशेषणविशेष्यत्वं संज्ञासंज्ञित्वमेव वा ॥ 21 ॥

sāmānādhikaranyam ca śabdayoḥ kaiścidīṣyate |
viśeṣaṇaviśeṣyatvam, samjñāsamjñitvameva vā || 21 ||

And by some, the co-referentiality of two words is accepted; or the state of qualifier and qualified; or else the state of name and named.

Three accounts of what joins two words. Samanadhikaranyam ca sabdayoh kaiscid isyate: by some, the co-referentiality of two words — samanadhikaranyam: same-locus-hood (3.14.8), the two words pointing at one thing. Visesana-visesyatvam: or the state of *qualifier and qualified* (3.14.6-7's relation, arising in the joining). Samjna-samjnitvam eva va: or else the state of *name and named* — the two words as designation and designatum. Three relations for one juxtaposition, and they are not equivalent: co-reference is symmetric, qualification is not, and naming is a third thing again. The verse's catalogue is doing what the samuddesa's catalogues always do — showing that the joining admits several descriptions and that none is privileged (2.179's licensed double description).

Verse 3.14.22

केषाञ्चिज्जातिगुणयोरेकार्थसमवेतयोः ।
वृत्तिः कृष्णतिलेष्विष्टा शब्दे द्रव्याभिधायिनि ॥ 22 ॥

keṣāñcijjātiguṇayorekārthasamavetayoh |
vṛttih kṛṣṇatilesviṣṭā śabde dravyābhidhāyini || 22 ||

For some, the derivative formation of a universal and a quality inhering in one object is accepted, in 'black sesames', where the word expresses a substance.

The compound's condition, on one account. Kesamcij jati-guṇayor eka-artha-samavetayoh: for some, of a *universal and a quality inhering in one object* — sesame-hood and blackness, both in the seed (eka-artha-samavaya: the Vaisesika's device for relating two qualities through their common bearer, 3.3.13). Vṛttih kṛṣṇa-tilesu ista: the *derivative formation* is accepted in 'black sesames'. Śabde dravyābhidhāyini: where the *word expresses a substance*. So compounding is licensed when a universal and a quality share a bearer and the word names the bearer — and the condition is precise: both members must reach the same substance, or there is nothing for the compound to be about. This is 3.14.9-10's analysis (the two open generals meeting in a particular) stated as a rule of composition.

Verse 3.14.23

संस्तु रूपरसादीनामाश्रयो नाभिधीयते ।
द्रव्याभिधानेन विना ततस्ते द्वन्द्वभाविनः ॥ 23 ॥

samṣtu rūparasādīnāmāśrayo nābhidhīyate |
dravyābhidhānena vinā tataste dvandvabhāvinah || 23 ||

But the substratum of form, taste and the rest, being existent, is not expressed; without the expressing of a substance, they are therefore constituents of a dvandva.

The contrasting case. San tu rupa-rasadinam asrayo na abhidhiyate: the *substratum* of *form, taste* and the rest, *being existent*, is not *expressed* — the mango's colour and flavour have a bearer, and 'rupa-rasau' does not name it. Dravya-abhidhanena vina tatas te dvandva-bhavinah: *without the expressing of a substance*, they are *therefore constituents of a dvandva*. So where no substance is named, the two quality-words cannot form a qualifier-qualified compound (3.14.22's condition fails) and fall into a dvandva instead — a mere coordination, 'colour-and-taste'. The rule is elegant: what determines the compound-type is whether a substance is expressed, and the qualities, left without a bearer, can only be listed. This explains why quality-words coordinate and do not qualify each other.

Verse 3.14.24

द्रव्याभिधायी कृष्णादिराकाङ्क्षावान् प्रवर्तते ।
निमित्तानुविधायित्वात् तत् तिलादौ न विद्यते ॥ 24 ॥

dravyābhidhāyī kṛṣṇādirākāṅkṣāvān pravartate |
nimittānuvidhāyitvāt tat tilādau na vidyate || 24 ||

'Kṛṣṇa' and the rest, expressing a substance, operates as possessing expectancy; from its conforming to the occasioning ground, that does not exist in 'tila' and the rest.

The asymmetry between the two members of 'kṛṣṇas tilah'. Dravya-abhidhāyī kṛṣṇadir akāṅkṣāvan pravartate: 'kṛṣṇa' and the rest, *expressing a substance*, operates as *possessing expectancy* — 'black' names a substance and *wants to know* which: it is incomplete (3.14.7's visesyam anirjnatam, inverted — here the qualifier is the needy one). Nimitta-anuvidhāyitvat: from its *conforming to the occasioning ground* — the colour-word follows whatever bears the colour. Tat tiladau na vidyate: *that does not exist* in 'tila' and the rest — 'sesame' has no such expectancy; it names its kind and is content. So the two words are not symmetric after all: 'kṛṣṇa' reaches for a bearer and 'tila' does not, and the asymmetry is what makes one the qualifier. This refines 3.14.9-11: the mutual delimitation is real, and the reaching is one-way.

Verse 3.14.25

एवं जातिमति द्रव्ये प्रत्यासन्ने क्रियां प्रति ।
गुणधर्म गुणाविष्ट द्रव्यं भेदाय कल्पते ॥ 25 ॥

evam.jātimati dravye pratyāsanne kriyām.prati |
guṇadharm guṇāviṣṭa dravyam.bhedāya kalpate || 25 ||

Thus, in a substance possessing a universal, which is near to the action — a substance pervaded by a quality, whose property is the quality, serves for differentiation.

The qualification's office in the sentence. Evam jatimati dravye pratyasanne kriyam prati: in a substance possessing a universal, which is near to the action — the sesame, ready to figure as a karaka (3.7.94's proximity to the accomplishment). Guna-dharma gunavista dravyam bhedaya kalpate: a substance pervaded by a quality, whose property is the quality, serves for differentiation. So 'krsna' contributes a quality-pervaded substance, and its office is to differentiate the sesame from other sesames — which is what an action needs, since actions take determinate participants (3.7.87's ipsitama: the existing thing not yet attained, taken under the aspect it will have). The verse locates qualification's purpose: it is for the verb, and it hands the verb a narrowed participant.

Verse 3.14.26

गुणमात्राभिधायित्वं केचिदिच्छन्ति वृत्तिषु ।
अताश्चादिषु सम्बन्धाद् रुढीनामिव रुढिभिः ॥ 26 ॥

guṇamātrābhidhāyitvam.kecidicchanti vṛttiṣu |
atāśvādiṣu sambandhād rūḍhīnāmiva rūḍhibhiḥ || 26 ||

Some desire the state of expressing a mere quality in the derivative formations; therefore, in 'asva' and the rest, from connection, it is as of conventional terms by conventional terms.

A rival account of the compound's members. Guna-matra-abhidhayitvam kecid icchanti vrttisū: some desire the state of expressing a mere quality in the derivative formations — in the compound, they say, 'krsna' names blackness itself, not a black substance (against 3.14.8's rule that co-reference requires substance-words). Atah asvadisū sambandhad rūḍhinām iva rūḍhibhiḥ: therefore, in 'asva' and the rest, from connection, it is as of conventional terms by conventional terms — the compound's members relate as two rūḍhi-words do: by convention, not by qualification. So on this view compounds are not qualifications at all; they are conventional pairings (2.37's rūḍhi-sabdatva acknowledged in the science itself). The account is reported and its cost is visible: it makes every compound an idiom.

Verse 3.14.27

तिले पूर्वमुपात्ते वा तत्रैव मतुविष्यते ।
स च धर्मः समासेषु गुणस्तस्माद् विशेषणम् ॥ 27 ॥

tile pūrvamupātte vā tatraiva matuviṣyate |
sa ca dharmah samāseṣu guṇastasmād viśeṣaṇam || 27 ||

Or, 'tila' having been taken up first, the 'matup' affix is desired there itself; and that property, in compounds, is the quality – therefore it is the qualifier.

A third account, and it makes the compound a possessive. Tile purvam upatte va: or, 'tila' having been taken up first – the substance-word leads. Tatra eva matub isyate: the 'matup' affix is desired there itself – matup: the possessive suffix ('having'), so that 'kṛṣṇa-tila' is analysed as 'sesame having blackness'. Sa ca dharmah samasesu guṇas tasmād viśeṣaṇam: and that property, in compounds, is the quality – therefore it is the qualifier. So the compound conceals a possessive: the substance is the head, the quality is possessed, and the possession makes the quality a qualifier. The account is neat and it explains the asymmetry 3.14.24 found – but it requires an unuttered matup, and 2.219's bahuvrihi already showed the samuddesa's suspicion of members that are not there.

Verse 3.14.28

अनुस्यूतेव भेदाभ्यामेका प्रख्योपजायते ।
यदा सहविवक्षां तामाहुर्द्वन्द्वैकशेषयोः ॥ 28 ॥

anusyūteva bhedābhyāmekā prakhyopajāyate |
yadā saha-vivakṣāṁ tāmāhurdvandvāikaśeṣayoḥ || 28 ||

One presentation arises, as though interwoven by the two differences; when that co-intention is meant, they call it 'dvandva' and 'ekasesa'.

The coordinative compounds, and their mechanism is a weaving. Anusyuta iva bhedabhyam eka prakhya upajayate: one presentation arises, as though interwoven by the two differences – anusyuta: 1.123's very word (all knowledge appears as if interwoven, anuviddham iva, with word), the weaver's term. So two differences are threaded into one showing, and the iva marks it. Yada saha-vivakṣam tam ahur dvandva-ekasesayoh: when that co-intention is meant, they call it 'dvandva' and 'ekasesa'. Saha-vivakṣa – co-intention: meaning two things together. So the coordinative compounds are what happens when two things are meant at once rather than one through the other – and the difference between qualification and coordination is a difference of vivakṣa (3.7.2's kvacit kimcit vivakṣyate), not of the things.

Verse 3.14.29

इतरेतरयोगस्तु भिन्नसङ्घाभिधायिनाम् ।
प्रत्येकं च समूहोऽसौ समूहिषु समाप्यते ॥ 29 ॥

itaretarayogastu bhinnasaṅghābhidhāyinām |
pratyekam ca samūho'sau samūhiṣu samāpyate || 29 ||

But mutual conjunction belongs to those expressing distinct groups; and that collection is completed severally, in the members of the collection.

The dvandva's structure. Itaretara-yogas tu bhinna-saṅgha-abhidhāyinām: *mutual conjunction* belongs to those expressing *distinct groups* — itaretara-yoga: the grammar's name for the dvandva whose members remain distinct ('rama-kṛsnau', two men, both there). Pratyekam ca samuho 'sau samuhiṣu samāpyate: and that *collection* is *completed severally*, in the *members* of the collection — pratyekam samāpyate: the whole-at-each formula (2.18, 3.8.5). So the dvandva's collection is complete in each member: the pairhood is wholly in Rama and wholly in Kṛṣṇa, not divided between them. This is why the dvandva takes a dual and not two singulars — and why 2.221-225's analysis of distribution applied to it: the collection is one and its completing is severally.

Verse 3.14.30

व्यापारसमुदायस्य यथाधिश्रयणादिषु ।
प्रत्येकं जातिवद् वृत्तिस्तथा द्वन्द्वपदेष्वपि ॥ 30 ॥

vyāpārasamudāyasya yathādhiśrayaṇādīṣu |
pratyekam jātivad vṛttistathā dvandvapadeṣvapi || 30 ||

As the derivative formation of an aggregate of operations is severally, like a universal, in the setting-on-the-fire and the rest — so also in the words of a dvandva.

The dvandva's structure paralleled with the action's. Vyapara-samudāyasya yatha adhiśrayanādīṣu: as the *aggregate of operations* — in *setting-on-the-fire* and the rest: the cooking's sub-actions (3.8.9's parts of 'paci'). Pratyekam jātivad vṛttih: the *derivative formation* is *severally, like a universal* — the cooking is wholly in the fetching and wholly in the stirring, as cowhood is wholly in each cow (3.1.25's jati manifested in each instance). Tatha dvandva-padeṣv api: *so also in the words of a dvandva*. So the dvandva is to its members what an action is to its sub-actions and a universal to its instances: wholly present in each, not divided among them. The parallel unifies three of the kanda's analyses — and it is the reason 3.14.29's collection completes severally.

Verse 3.14.31

शौण्डार्धचपुरोदशच्छत्रिणोऽत्र निदर्शनम् ।
ते विष्णुमित्रा इति च भिन्नेषु सहचारिषु ॥ 31 ॥

*śaundārdharcapurodaśacchatrinō'tra nidarśanam |
te viṣṇumitrā iti ca bhinneṣu saha-cāriṣu || 31 ||*

'Saunda', 'ardharca', 'purodasa', 'chatrin' are the illustrations here; and 'they are the Visnumitras' — among distinct accompanying things.

A class of cases where a name spreads to its neighbours. Four specimens: saunda (the drunkard's class); ardharca (the gana of 3.1.103, words whose analysis wavers); purodasa (3.12.22's sacrificial cake, whose name is applied to the grains it will be made from); chatrin (3.12.22's umbrella-bearer, whose designation covers his umbrella-less companions). And a fifth: te visnumitra iti — 'they are the Visnumitras', a family called by one member's name. Bhinnesu saha-carisu: among *distinct accompanying things* — in every case the things are genuinely distinct and one name covers them. So the samuddesa opens its analysis of composition by assembling the cases where designation already leaks across differences (3.12.21's plaksa-ness attaching to the nyagrodha). Compounding will turn out to be this leak, regularized.

Verse 3.14.32

अथान्तराभिदायित्वं तथाथान्तरवर्तिनाम् ।
याभ्यां चैकमनेकार्थं ताभ्यामेवापरं पदम् ॥ 32 ॥

*arthāntarābhidāyitvam, tathārthāntaravarttinām |
yābhyām, caikamanekārtham, tābhyāmevāparam, padam || 32 ||*

The state of expressing another meaning belongs likewise to those operating in another meaning; and by which two a single one has many meanings, by those very two another word has them.

The leak of 3.14.31 generalized. Arthantara-abhidayitvam tatha arthantara-vartinam: the state of *expressing another meaning* belongs likewise to those *operating in another meaning* — a word that has strayed into a neighbour's sense goes on expressing that stray sense. Yabhyam ca ekam anekartham tabhyam eva aparam padam: and by *which two a single one has many meanings*, by *those very two another word* has them. So whatever mechanism multiplies one word's senses multiplies another's — the leak is systematic, not idiosyncratic. This is 2.250-251's omni-significance (one word, many meanings, carved by nimittas) applied to composition: the conditions that carve one word carve its neighbour, and the compound is where two such carvings meet.

Verse 3.14.33

समुदायान्तरत्वाच्च तादृशोऽर्थ न लौकिकः ।
अन्वयव्यतिरेकाभ्यां शास्त्रार्थोऽपि न दृश्यते ॥ 33 ॥

samudāyāntaratvācca tādrśo'rtha na laukikah |
anvaya-vyatirekābhyām śāstrārtho'pi na drśyate || 33 ||

And from its being another aggregate, such a meaning is not worldly; nor is a scientific meaning seen by agreement and difference.

The compound's meaning placed nowhere. Samudayantaratvat ca tadrso 'rtha na laukikah: from its being *another aggregate*, such a meaning is *not worldly* — the compound is a new aggregate, and its meaning is not one the world already had (2.208's disputed emergence: from meaningful elements a complex arises with a distinct meaning). Anvaya-vyatirekabhyam sastrartho 'pi na drsyate: nor is a *scientific meaning* seen by *agreement and difference* — the distributional method (2.12's tool) does not find it either: vary the members and the compound's sense does not track. So the compound's meaning is neither in the world's inventory nor recoverable by the analyst's method. It is a genuine novelty, and the samuddesa is honest that its own instrument cannot locate it.

Verse 3.14.34

दुःखा दुरुपपादा च तस्माद् भाष्येऽप्युदाहृता ।
युगपद्वाचिता सा तु व्यवहारार्थमाश्रिता ॥ 34 ॥

duḥkhā durupapādā ca tasmād bhāṣye'pyudāhṛtā |
yugapadvācitā sā tu vyavahārārthamāśritā || 34 ||

Therefore it is cited in the Bhasya as difficult and hard to establish; but that simultaneous-expressing-ness is resorted to for the sake of practice.

The difficulty acknowledged on authority. Duhkha durupapada ca tasmad bhasye 'py udahrta: *therefore* it is cited in the *Bhasya* as *difficult* and *hard to establish* — Patanjali himself found it so, and Bhartrhari cites the admission rather than papering over it (2.475's bhasye eva upavarnitah; 3.13.16's Bhasya-citation). Yugapad-vacita sa tu vyavahara-artham asrita: but that *simultaneous-expressing-ness* is *resorted to for the sake of practice*. Yugapad-vacita: the compound's expressing its members' senses *at once* — the doctrine that is hard to establish and indispensable. Vyavahara-artham asrita: resorted to for practice's sake. So the account is adopted because the transactions need it, not because it can be defended (3.3.82's beings raised up by construction, as though by a primary word-meaning). The samuddesa's honesty here is exact: this is a working posit.

Verse 3.14.35

समुदायमुपक्रम्य पदं तस्यां प्रयुज्यते ।
विभागेन समाख्याने ततस्तद् द्वयर्थमुच्यते ॥ 35 ॥

samudāyamupakramya padam tasyām prayujyate |
vibhāgena samākhyāne tatastad dvayarthamucyate || 35 ||

Having commenced with the aggregate, the word is employed in that; in the designation by division, it is therefore said to have two meanings.

How the two-meaning account arises. Samudayam upakramya padam tasyam prayujyate: having commenced with the aggregate, the word is employed in that — one starts from the compound as a whole and uses it whole. Vibhāgena samākhyāne tatah tad dvy-artham ucyate: in the designation by division, therefore, it is said to have two meanings. So the two meanings appear only when one divides — the analysis produces them, and the usage never had them. This is 2.10's apoddhara exactly (words extracted from sentences as suffixes from words) at the compound's grain: the members are what division yields, and 3.14.34's yugapad-vacita is what one must say once one has divided. The samuddesa is tracking its own instrument's artifacts.

Verse 3.14.36

वीक्येऽपि नियता धर्मः केचिद् वृत्तौ द्वयोस्तथा ।
ते त्वभेदेन सामर्थ्यमात्र एवोपवर्णिताः ॥ 36 ॥

vīkye'pi niyatā dharmāḥ kecid vṛttau dvayostathā |
te tvabhedena sāmāthyamātra evopavarṇitāḥ || 36 ||

Even in a sentence certain properties are fixed, and likewise in a derivative formation, for the two; but they have been described, without difference, as mere capacity.

Sentence and compound compared. Vakye 'pi niyata dharmah kecid: even in a sentence certain properties are fixed — the analytic phrase has its own settled behaviour. Vṛtau dvayos tatha: and likewise in a derivative formation, for the two — the compound has its own. So both have fixed properties, and they differ. Te tv abhedena samarthyamatra eva upavarṇitah: but they have been described, without difference, as mere capacity — samarthyamatra: capacity alone, the condition Panini states for compounding (samarthah padavidhih, 2.1.1). So the grammar's single condition — capacity — covers two things with different properties, and does not distinguish them. The verse identifies the gap the samuddesa must fill: what makes capacity issue in a compound rather than a phrase?

Verse 3.14.37

वृत्तौ विशेषवृत्तित्वाद् भेदे सामान्यवाचिता ।
उपमानसमासादौ श्यामादीनमुदाहृता ॥ 37 ॥

vr̥ttau viśeṣavṛttitvād bhedē sāmānyavācitā |
upamānasamāsādau śyāmādinamudāhṛtā || 37 ||

In a derivative formation, from its operating in the particular; in separation, the state of expressing the general — this has been illustrated for 'syama' and the rest, in the comparison-compound and so on.

The samuddesa's first substantive difference between compound and phrase. *Vr̥ttau viśeṣa-vṛttitvat*: in a *derivative formation*, from its *operating in the particular* — inside a compound, a member means a *particular*. *Bhedē samānya-vacita*: in *separation*, the state of expressing the *general* — the same word, standing alone, means the general. And the illustration: *upamāna-samāsadau śyāmādinam* — for 'syama' (dark) and the rest, in the *comparison-compound*: 'syama' alone means darkness-in-general; in 'megha-syama' (dark as a cloud) it means this particular shade. So composition narrows: the member drops from general to particular by being compounded. This is a real and delicate observation, and it explains 3.14.33's finding — the compound's meaning is not in the world's inventory because the world's inventory has the generals, and the compound has particulars.

Verse 3.14.38

वृत्तिरन्यपदार्थे या तस्या वाक्येष्वसंभवः ।
चार्थे द्वन्द्वपदानां च भेदे वृत्तिर्न विद्यते ॥ 38 ॥

vr̥ttiranyapadārthe yā tasyā vākyaṣv asambhavaḥ |
cārthe dvandvapadānām ca bhedē vr̥ttir na vidyate || 38 ||

That derivative formation which is in another's word-meaning — of that there is no possibility in sentences; and of dvandva-words in the sense of 'ca', there is no formation in separation.

Two compounds that no sentence can render. *Vr̥ttir anyā-padārthe yā tasyā vakyasv asambhavaḥ*: the formation which is in *another's word-meaning* — the bahuvrihi, whose meaning is a possessor named by no member (2.219's *aprayukta-padas ca artho bahuvrihau*: the meaning whose word is not employed) — of *that there is no possibility in sentences*: no analytic phrase says what 'citragu' says, because the phrase must name the possessor and the compound does not. *Ca-arthe dvandvapadanam ca bhedē vr̥ttir na vidyate*: and of *dvandva*-words in the sense of 'ca', there is no formation in *separation* — the dvandva's togetherness (3.14.28's *saha-vivaksa*) is lost the moment one says 'and'. So two compound-types have no sentential equivalent at all, and the paraphrase-method (3.7.77's *bheda-vakya*, disowned) fails for them outright. Composition can say what syntax cannot.

Verse 3.14.39

भेदे सति निरादीनां क्रान्ताद्यर्थेष्वसंभवः ।
प्राग्वृत्तेर्जातिवाचित्वं न च गौरखरादिषु ॥ 39 ॥

bhede sati nirādīnām.krāntādyartheṣvasambhavaḥ |
prāgvṛtterjātivācītvam.na ca gaurakharādiṣu || 39 ||

When there is separation, there is no possibility of 'nir' and the rest in the senses of 'having gone beyond' and so on; and before the formation, there is no expressing of the universal in 'gaura-khara' and the rest.

Two more cases where separation destroys the sense. Bhede sati niradinam krantady-arthesv asambhavaḥ: when there is *separation*, there is no possibility of 'nir' and the rest in the senses of 'having gone beyond' — the preverb's transcending-sense exists only in composition; 'nir' standing alone means nothing of the kind (3.7.190's obligatory preverbs, whose roots are meaningless apart from them). Prag vṛtteh jati-vacītvam na ca gaura-kharadisu: and *before the formation*, there is no expressing of the universal in 'gaura-khara' and the rest — the compound names a kind that its members, uncompounded, do not reach. So the sense arrives *with* the composition and is not in the pieces beforehand. This is 2.36's asvakarna-principle (the compound understood whole, its members idle) given its temporal form: there was no meaning to compound.

Verse 3.14.40

क्रीडायां जीविकायां च वाक्येनावचनात् तथा ।
न नित्यग्रहणं युक्तं कौटिल्ये यद्विधौ यथा ॥ 40 ॥

krīḍāyām.jīvikāyām.ca vākyenāvacanāt tathā |
na nityagrahaṇam.yuktam.kauṭīlye yañvidhau yathā || 40 ||

And in 'play' and 'livelihood', from non-expression by a sentence — the taking-up of 'nitya' is not proper, as in the yan-rule for 'crookedness'.

A rule-technical consequence. Kridayam jivikayam ca vakyena avacanāt: in 'play' and 'livelihood' — Panini's compound-classes for names of games and occupations — from *non-expression by a sentence*: no phrase renders them. Na nitya-grahanam yuktam: the taking-up of 'nitya' is not proper — the grammar need not call these compounds 'obligatory' (nitya-samasa: the class where no analysis exists), because their obligatoriness follows from there being nothing to analyse into. Kautilye yan-vidhau yatha: as in the yan-rule for 'crookedness' — the intensive affix, likewise needing no obligatoriness-marker. So the category 'obligatory compound' is redundant: where no sentence expresses the sense, the compound is obligatory by that fact alone, and stipulating it is otiose (2.443's Panini does not legislate vacuously).

Verse 3.14.41

निर्धारणादिविषये व्यपेक्षैव यतः स्थिता ।
समासप्रतिषेधानां ततो नास्ति प्रयोजनम् ॥ 41 ॥

nirdhāraṇādiviṣaye vyapekṣaiva yataḥ sthitā |
samāsapraṭiṣedhānām tato nāsti prayojanam || 41 ||

Since in the domain of determination and the rest, mutual expectancy alone stands – therefore the prohibitions of compounding have no purpose.

The converse redundancy. Nirdharanadi-visaye vyapeksa eva yataḥ sthita: since in the domain of *determination* (3.7.147's nirdharana: singling out from a class) and the rest, *mutual expectancy alone stands* – vyapeksa: the mutual reaching of separate words, which is what a sentence has (2.4's sakanksa-avayavam). Samasa-pratishedhanam tato na asti prayojanam: *therefore the prohibitions of compounding have no purpose*. Where only vyapeksa is available, no compound could form, and forbidding it is idle. So the pair 3.14.40-41 finds redundancy at both ends: obligatory-compound rules where nothing else is possible, prohibition-rules where compounding is impossible anyway. And both redundancies point at the same distinction – vyapeksa versus something else – which 3.14.44 will name.

Verse 3.14.42

विधिभिः प्रतिषेधैश्च भेदाभेदनिदर्शनम् ।
कृतं द्वन्द्वैकवद्भावे सङ्घवृत्त्युपदेशवत् ॥ 42 ॥

vidhibhiḥ praṭiṣedhaiśca bheda-bheda-nidarśanam |
kṛtam dvandvaikavadbhāve saṅghavṛtṭyupadeśavat || 42 ||

By injunctions and prohibitions, an exhibition of difference and non-difference has been made – in the dvandva's singular-treatment, as in the teaching of the group-formation.

What the redundant rules of 3.14.40-41 are actually doing. Vidhibhiḥ pratishedhais ca bheda-abheda-nidarsanam krtam: by *injunctions and prohibitions*, an *exhibition of difference and non-difference* has been *made* – the rules that seemed pointless are *exhibiting* something: where compounding is enjoined, non-difference; where prohibited, difference. Dvandva-ekavad-bhave: in the *dvandva's singular-treatment* – the rule making certain dvandvas take a singular ('pani-padam', hand-and-foot as one neuter): non-difference exhibited. Sangha-vṛtṭy-upadesavat: as in the *teaching of the group-formation*. So the rules are nidarsana – exhibitions, teaching-devices (2.13's divisions for the avidvan; 3.7.147's separations for the unlearned). They do not legislate the facts; they display the difference-and-non-difference that composition involves.

Verse 3.14.43

सामर्थ्यमविशेषोक्तमपि लोकव्यवस्थया ।
वृत्त्यवृत्त्योः प्रयोगजैर्विभक्तं प्रतिपत्तुभिः ॥ 43 ॥

sāmarthyamaviśeṣoktamapi lokavyavasthaya |
vṛttyavṛttyoḥ prayogajñairvibhaktam.pratipattṛbhiḥ || 43 ||

Capacity, though stated without specification, has been divided — by the world's settled arrangement — into formation and non-formation, by comprehenders who know usage.

The gap of 3.14.36 filled, and the filler is usage. Samarthyam avisesa-uktam api: *capacity*, though stated *without specification* — Panini's samarthah padavidhiḥ says only 'capacity', and does not say when capacity yields a compound. Loka-vyavasthaya: *by the world's settled arrangement*. Vṛtty-avṛttyoḥ prayoga-jñair vibhaktam pratipattṛbhiḥ: *divided into formation and non-formation*, by *comprehenders who know usage* — prayoga-jña: those who know how it is said. So the grammar leaves the distinction unstated and the sistas supply it: what compounds and what does not is settled by usage, and the rule's silence is not a gap but a deference (2.483's the world's practice, followed by the science; 3.13.21's cultivated declaring the gender).

Verse 3.14.44

अर्थस्य विनिवृत्तत्वाल्लुगादि न विरुध्यते ।
एकार्थीभाव एवातः समासाख्या विधीयते ॥ 44 ॥

arthasya vinivṛttatvāllugādi na virudhyate |
ekārthibhāva evātaḥ samāsākhyā vidhīyate || 44 ||

From the meaning's having withdrawn, elision and the rest is not contradicted; therefore the designation 'compound' is prescribed in becoming-one-meaning alone.

The samuddesa's central definition, and it is one of the great sentences of Indian grammar. Arthasya vinivṛttatvat lug-adi na virudhyate: *from the meaning's having withdrawn, elision and the rest is not contradicted* — inside a compound, the members' meanings have *withdrawn* (vinivṛtta: 2.240's withdrawing meanings; 3.12.27's jahat-svartha, abandoning one's own meaning), and so the grammar may elide their case-endings without violating anything: there is no meaning left for the endings to express. Ekārthibhava eva atah samasa-akhyā vidhiyate: *therefore the designation 'compound' is prescribed in ekārthibhava alone*. Ekārthibhava: *becoming-one-meaning* — the compound is not two meanings joined but a becoming-one, and that is what distinguishes it from the sentence's vyapeksa (3.14.41's mutual expectancy). So: sentence = two meanings reaching for each other; compound = two meanings become one. And the morphology follows: endings elide because their meanings are gone.

Verse 3.14.45

व्यवस्थितविभाषा च सामान्ये कैश्चिदिष्यते ।
तथा वाक्यं व्यपेक्षायां समासोऽन्यत्र शिष्यते ॥ 45 ॥

vyavasthitavibhāṣā ca sāmānye kaiścidiṣyate |
tathā vākyaṁ, vyapekṣāyāṁ samāso'nyatra śiṣyate || 45 ||

And a settled option in the general is accepted by some; thus a sentence in mutual expectancy, a compound elsewhere, is taught.

The distinction of 3.14.44 given its rule-form. *Vyavasthita-vibhasa ca samanye kaiscid isyate*: a *settled option* in the *general* is accepted by *some* — *vyavasthita-vibhasa*: the grammar's category for an option that is not free but fixed by domain (some cases take one, some the other, and no case takes either). *Tatha vakyam vyapeksayam samaso 'nyatra sisyate*: thus a *sentence in mutual expectancy*, a *compound elsewhere*, is *taught*. So the option is settled: where *vyapeksa* obtains, a phrase; where *ekarthibhava*, a compound; and the speaker does not choose. This is why 3.14.40-41's rules were redundant — the domains do not overlap, and the option is settled by which relation obtains. The verse turns 3.14.44's definition into the grammar's operative rule.

Verse 3.14.46

तुल्यश्रुतित्वात् तत्त्वेऽपि राजादीनामुपाश्रिते ।
वृत्तौ विशेषणाकाङ्क्षाऽगमकत्वान्निवर्तते ॥ 46 ॥

tulyaśrutitvāt tattve'pi rājādīnāmupāśrite |
vṛttau viśeṣaṇākāṅkṣā'gamakatvānnivartate || 46 ||

From likeness of hearing, even in the reality, when 'rajan' and the rest is resorted to — in a derivative formation, the expectancy for a qualifier withdraws, from its not being a conveyor.

The consequence of *ekarthibhava* for the members' behaviour. *Tulya-srutitvat tattve 'pi rajadinam upasrite*: from *likeness of hearing*, even in the *reality*, when '*rajan*' and the rest is *resorted to* — the word '*rajan*' sounds the same inside '*rajapurusa*' as outside it, and the same thing is meant. *Vṛttau visesana-akanksa agamakatvat nivartate*: in a *derivative formation*, the *expectancy for a qualifier withdraws*, from its *not being a conveyor*. So inside the compound, '*rajan*' stops wanting a qualifier — it is *agamaka*, not a conveyor: it no longer conveys anything on its own, so nothing can qualify it. This is 3.14.44's *ekarthibhava* in its effects: the members' meanings having withdrawn, their expectancies withdraw with them, and the compound admits no internal modification. The rule is real — one cannot insert an adjective into a compound — and here it is derived rather than stipulated.

Verse 3.14.47

संबन्धिशब्दः सापेक्षो नित्यं सर्वः प्रयुज्यते ।
स्वार्थवत् सा व्यपेक्षास्य वृत्तावपि न हीयते ॥ 47 ॥

sambandhiśabdaḥ sāpekṣo nityam sarvaḥ prayujyate |
svārthavat sā vyapekṣāsyā vṛttāvapi na hīyate || 47 ||

A relatum-word, being dependent, is always employed as such, all of it; that mutual expectancy of it, like its own meaning, is not lost even in a derivative formation.

The great exception to 3.14.46, and it is a real one. Sambandhi-sabdah sapekso nityam sarvaḥ prayujyate: a *relatum-word* — one whose very sense is relational: 'father', 'master', 'enemy' — is *always* employed as *dependent*, *all of it*: there is no such thing as a father who is nobody's. Sva-arthavat sa vyapekṣa asya vṛttav api na hīyate: that *mutual expectancy* of it, *like its own meaning*, is *not lost* even in a *derivative formation*. So where 3.14.46 said the members' expectancies withdraw inside the compound, the relatum-words keep theirs — because their expectancy is their meaning: strip 'father' of its reaching-for-a-child and nothing is left to compound. The exception is principled and it marks the limit of ekarthibhava: meanings can withdraw, and a meaning that is nothing but a reaching cannot withdraw without vanishing.

Verse 3.14.48

समुदायेन संबन्धो येषां गुरुकुलादिना ।
संस्पृश्यावयवांस्ते च युज्यन्ते तद्वता सह ॥ 48 ॥

samudāyena sambandho yeṣāṃ gurukulādinā |
saṃspṛśyāvayavāṃṣte ca yujyante tadvatā saha || 48 ||

Those whose connection is with an aggregate — with 'guru-kula' and the like — having touched the members, are joined with the possessor of that.

How relatum-words reach through a compound. Samudayena sambandho yesam guru-kuladina: those whose connection is with an *aggregate* — with 'guru-kula' (the teacher's house, the school) and the like: the compound names a whole. Samsprasya avayavan te ca yujyante tadvata saha: *having touched the members*, they are *joined with the possessor of that*. So a relatum-word connecting to 'guru-kula' touches the members — the teacher, the house — and then joins with what possesses the aggregate. The reaching passes *through* the compound's members without stopping at them. This is why 3.14.47's exception does not break the compound: the relatum-word's expectancy is satisfied by the whole, having grazed the parts. And samsprasya — having touched — is exact: it does not rest there.

Verse 3.14.49

अबुधान् प्रत्युपायाश्च विचित्राः प्रतिपत्तये ।
शब्दान्तरत्वादत्यन्तभेदो वाक्यसमासयोः ॥ 49 ॥

abudhān pratyupāyāśca vicitrāḥ pratipattaye |
śabdāntaratvādatyantabhedo vākyaśamāsayoḥ || 49 ||

And the means, for the unlearned, are various, for comprehension's sake; from being another word, the difference of sentence and compound is utter.

The samuddesa's methodological reminder, placed where it is needed. Abudhan praty upayas ca vicitrah pratipattaye: the *means*, for the *unlearned*, are *various*, for *comprehension's sake* — the analyses, the paraphrases, the exhibitions of 3.14.42: all upaya, all discardable (2.38's things taken up to be let go; 2.13's divisions for the avidvan). And then the flat statement: sabdantaravat atyanta-bhedo vakya-samasayoh — from *being another word*, the difference of sentence and compound is utter. Atyanta-bheda: utterly different. 'Rajnah purusah' and 'rajapurusah' are two words, not one word twice (2.177's rule: different meaning-behaviour, different base; 3.7.77's paraphrase having no contact with the root). So the paraphrase is a ladder and the compound is not the phrase — and everything said by analysing the compound into a phrase is said about the ladder.

Verse 3.14.50

असमासे समासे च गोरथादिष्वदर्शनात् ।
युक्तादीनां न शास्त्रेण निवृत्त्यनुगमः कृतः ॥ 50 ॥

asamāse samāse ca gorathādiṣvadarśanāt |
yuktādīnām na śāstreṇa nivṛtṭyanugamaḥ kṛtaḥ || 50 ||

From the non-appearance of 'yukta' and the rest in 'go-ratha' and the like, both in the non-compound and in the compound — no following of withdrawal has been made by the science.

A rule-technical confirmation. Asamase samase ca go-rathadiv adarsanat: from the *non-appearance* of 'yukta' and the rest in 'go-ratha' (ox-cart) and the like, *both in the non-compound and in the compound* — the word 'yukta' (yoked) appears in neither: not in 'gobhir yuktah rathah' as a required element, nor in 'go-rathah'. Yuktadinam na sastrena nivrtty-anugamah krtah: *no following of withdrawal* has been *made* by the *science* — the grammar does not track 'yukta' as something that withdrew in compounding, because it was never there. So 'go-ratha' does not mean 'cart yoked with oxen' by suppressing 'yoked'; it means what it means, and the yoking is the hearer's supplement (2.163's penumbra supplied by association). The verse blocks the temptation to read compounds as ellipses.

Verse 3.14.51

शब्दान्तरत्वाद् युक्तादिः क्वचिद् वाक्ये प्रयुज्यते ।
प्रपणप्रपलाशादौ गतशब्दश्च वृत्तिषु ॥ 51 ॥

śabdāntaratvād yuktādiḥ kvacid vākye prayujyate |
praparnaprapalāśādaḥ gataśabdaśca vṛttiṣu || 51 ||

From being another word, 'yukta' and the rest is somewhere employed in a sentence; and the word 'gata' in the derivative formations, in 'praparna', 'prapalasa' and so on.

The complement of 3.14.50. Sabdantaradvad yuktadiḥ kvacid vakye prayujyate: from being *another word*, 'yukta' and the rest is *somewhere employed in a sentence* — where one wants the yoking said, one says it, and the sentence is a different word from the compound (3.14.49's atyanta-bheda). Praparna-prapalasadau gata-sabdas ca vṛttiṣu: and the word 'gata' (gone) in the *derivative formations*, in 'praparna' (leaf-fallen), 'prapalasa' and so on — here the compound *does* carry a 'gone' sense that no member names. So: sometimes the sentence has a word the compound lacks (3.14.50), and sometimes the compound has a sense no member supplies (here). Neither is the other's abbreviation. The pair is the samuddesa's evidence for 3.14.49's utter difference — the two forms do not stand in any regular relation of expansion and contraction.

Verse 3.14.52

विशेषणविशेष्यत्वं कैश्चिदेकस्तथाश्रयः ।
उपाये तत्त्वदर्शित्वादिष्यते वृत्तिवाक्ययोः ॥ 52 ॥

viśeṣaṇaviśeṣyatvam, kaiścidekastathāśrayaḥ |
upāye tattvadarsitvādiṣyate vṛttivākyaayoḥ || 52 ||

For some, the state of qualifier and qualified, and likewise one substratum — from their seeing the reality in the means — is accepted for both derivative formation and sentence.

A rival that assimilates the two. Visesana-visesyatvam kaiscid ekas tatha asrayah: for *some*, the state of *qualifier and qualified*, and likewise *one substratum* — the two relations 3.14.21 catalogued. Upaye tattva-darsitvad isyate vṛtti-vakyayoh: from their *seeing the reality in the means*, is accepted for *both* derivative formation *and* sentence. Upaye tattva-darsitvat: seeing the reality *in the means* — these theorists take the ladder for the thing (3.14.49's upaya, mistaken for what it reaches). So they hold that compound and phrase have the same structure, differing only in compression. Bhartrhari reports it and 3.14.53 answers: the structure is not shared, because the compound has no parts to bear it.

Verse 3.14.53

पदं यथैव वृक्षादि विशिष्टेऽर्थे व्यवस्थितम् ।
नीलोत्पलाद्यपि तथा भागाभ्यां वर्तते विना ॥ 53 ॥

padam yathaiva vṛkṣādi viśiṣṭe'rthe vyavasthitam |
nilotpālādyapi tathā bhāgābhyām vartate vinā || 53 ||

Just as a word such as 'vrksa' stands established in a qualified meaning — so 'nilotpala' and the rest operates without the two portions.

The answer to 3.14.52, and the parallel is decisive. Padam yatha eva vrksadi visiste 'rthe vyavasthitam: just as a word such as 'vrksa' (tree) stands established in a *qualified* meaning — 'tree' means a determinate thing, and nobody looks for qualifier and qualified inside it. Nilotpala^{di} api tatha bhagabhyam vartate vina: so 'nilotpala' (blue lotus) and the rest operates *without the two portions* — the compound means its thing as simply as 'vrksa' does, and has no more internal structure. So the compound is a *word*, not a compressed phrase: it stands to its meaning as any stem does. This is 2.36's asvakarna (the compound understood whole, its members idle) and 3.14.44's ekarthibhava (becoming-one-meaning) shown in the plainest case — and it refutes 3.14.52 by pointing out that nobody demands parts of 'vrksa'.

Verse 3.14.54

श्रोत्रियक्षेत्रियादीनां न च वासिष्ठगार्ग्यवत् ।
भेदेन प्रत्ययो लोके तुल्यरूपसमन्वयात् ॥ 54 ॥

śrotriya-kṣetriyādīnām na ca vāsiṣṭha-gārgyavat |
bhedena pratyayo loke tulyarūpāsamanvayāt || 54 ||

And of 'srotriya', 'ksetriya' and the rest, the cognition in the world is not by way of difference, as with 'vasistha' and 'gargya' — from the absence of concomitance with a like form.

Evidence from how derivatives are actually understood. Srotriya-ksetriyadinam: of 'srotriya' (a learned brahmin), 'ksetriya' (an incurable disease) and the rest — irregular derivatives whose bases are obscure. Na ca vasistha-gargyavat bhedena pratyayo loke: the *cognition* in the *world* is *not by way of difference*, as with 'vasistha' and 'gargya' — the patronymics, where everyone hears the base (Vasistha's son) and the derivative. Tulya-rupa-asamanvayat: from the *absence of concomitance* with a *like form* — 'srotriya' has no transparent base to concomit with. So some derivatives are heard as derived and some are not, and the difference is whether a like form recurs elsewhere (2.12's anvaya-vyatireka). Where it does not, the word is simply a word — which is 3.14.53's finding, and here it is confirmed by what hearers actually do.

Verse 3.14.55

सप्तपर्णादिवद् भेदो न वृत्तौ विद्यते क्वचित् ।
रुढयरुढिविभागोऽपि क्रियते प्रतिपत्तये ॥ 55 ॥

saptaparnādivad bhedo na vṛttau vidyate kvacit |
rūḍhayarūḍhivibhāgo'pi kriyate pratipattaye || 55 ||

Like 'saptaparna' and the rest, no difference exists anywhere in a derivative formation; the division into conventional and non-conventional is also made for comprehension's sake.

The samuddesa's flat statement, with the work's favourite example. Sapta-parnadivat: like 'saptaparna' — the seven-leaved tree that has not seven leaves (2.309's simile: the name indicates without describing, and everyone finds the tree). Bhedo na vṛttau vidyate kvacit: *no difference exists anywhere in a derivative formation* — kvacit: anywhere at all. The compound has no internal division, as saptaparna has no seven. Rudhy-arudhi-vibhago 'pi kriyate pratipattaye: the division into *conventional* and *non-conventional* is also made for comprehension's sake. So even the grammar's distinction between opaque compounds (rudhi) and transparent ones is a teaching-device: *all* of them are opaque, and the transparent ones merely invite an analysis they do not require (2.37's rudhi-sabdatva acknowledged in the science; 2.36's sarvesu pratyayas tatha: the cognition is like that in all cases).

Verse 3.14.56-57

या सामान्याश्रया संज्ञा विशेषविषया च या ।
बहुलग्रहणान्नास्ति प्रवृत्तिरुभयोस्तयोः ॥ 56 ॥
सुसूक्ष्मजटकेशादौ समासोऽवयवे यदि ।
स्यात्, स्यात् तन्त्रान्तरङ्गत्वात् बाधकोऽवयवस्वरः ॥ 57 ॥

yā sāmānyāśrayā samjñā viśeṣaviṣayā ca yā |
bahulagrahaṇānnāsti pravṛttirubhayostayoh || 56 ||
susūkṣmajaṭakeśādaū samāso'vayave yadi |
syāt, syāt tantrāntaraṅgatvāt bādhako'vayavasvarah || 57 ||

(56) That designation which rests on the general, and that whose domain is the particular — from the taking-up of 'bahulam', there is no operation of both of those. (57) If, in 'su-suksma-jata-kesa' and the like, there were a compound in a member — then, from the internality of the single-performance, the member-accent would be the annuler.

Two technical cases. (56): ya samanya-asraya samjna visesa-visaya ca ya — the designation resting on the *general* and that whose domain is the *particular*: two classes of technical term. Bahulagrahanat na asti pravrttir ubhayos tayoh: from the taking-up of 'bahulam' — Panini's word for 'variously', the marker of a rule that applies irregularly — there is *no operation of both*. Where the grammar says bahulam, it declines to specify, and neither designation governs. (57) turns to accent: su-suksma-jata-kesadau samaso 'vayave yadi syat — if, in 'su-suksma-jata-kesa' (having fine matted hair) and the like, there were a *compound in a member*: an inner compound inside an outer one. Syat tantra-antarangatvat badhako 'vayava-svarah: then, from the *internality* of the *single-performance*, the *member-accent* would be the *annuler* — the inner compound's accent, being antaranga (settled first: 3.7.182), would override the outer's. So nesting compounds generates accent-conflicts, and antarangatva decides them.

Verse 3.14.58

समुदायस्य वृत्तौ च नैकदेशो विभाष्यते ।
भेद एव विभाषायां नियतो विषयो यतः ॥ 58 ॥

samudāyasya vṛttau ca naikadeśo vibhāṣyate |
bheda eva vibhāṣāyām.niyato viṣayo yataḥ || 58 ||

And in the derivative formation of an aggregate, a single portion is not optioned; since, in the option, difference alone is the fixed domain.

Why inner compounds cannot be optional. *Samudayasya vṛttau ca na ekadeso vibhasyate*: in the derivative formation of an aggregate, a single portion is not optioned — one cannot make part of a compound optional while the rest stands. *Bheda eva vibhasayam niyato viṣayo yataḥ*: since, in the option, difference alone is the fixed domain — an option requires two separable alternatives, and separability is difference (3.14.45's *vyavasthita-vibhasa*: the settled option, its domains not overlapping). But a compound is *ekarthibhava*, becoming-one-meaning (3.14.44), and what has become one has no portions to option. So the impossibility follows from the definition: options need parts, and compounds have none. This is 3.14.55's finding (no difference anywhere in a *vṛtti*) doing rule-technical work.

Verse 3.14.59

यतश्चाविषयः सोऽस्यास्तस्मान्नास्त्यकृतार्थता ।
अभेदप्रक्रमेऽत्यन्तं भेदानामपसारणात् ॥ 59 ॥

yataścāviṣayaḥ so'syāstasmānnāstyakṛtārthatā |
abhedaprakrame'tyantam.bhedānāmapasāraṇāt || 59 ||

And since that is not its domain, therefore there is no unfulfilled purpose — from the utter removal of the differences, in the commencement of non-difference.

The redundancy-worry answered. One might object: if inner portions cannot be optioned (3.14.58), the rules providing such options are purposeless. *Yatas ca avisayah so'syat tasmāt na asti akṛtārthatā*: since that is not its domain, therefore there is no unfulfilled purpose — a rule is not idle for failing to apply where it was never meant to. *Abheda-prakrame'tyantam bhedanam apasaranat*: from the utter removal of the differences, in the commencement of non-difference. So once *ekarthibhava* commences, the differences are utterly removed (*apasarana*: driven off), and the option-rules simply have no territory there — which is not a defect in them. This is 3.14.41's argument (prohibitions of compounding have no purpose where only *vyapeksa* stands) run in the other direction: rules are not vacuous for having bounded domains.

Verse 3.14.60

महाकष्टश्रितेत्येवं न स्याद् भेदः पदत्रये ।
वृत्तावयवस्यात्त्वं यस्मान्न प्रतिषिध्यते ॥ 60 ॥

*mahākṣṭhasritetyevam na syād bhedah padatraye |
vṛttāvayavyasyāttvam yasmanna pratiṣidhyate || 60 ||*

In 'maha-kastha-srita' and the like, there would be no difference among the three words — since the 'a'-substitution of a derivative-formation's member is not prohibited.

A three-word compound and its accent. Maha-kastha-srita ity evam na syad bhedah pada-traye: in 'maha-kastha-srita' (resorting to great difficulty) and the like, there would be *no difference* among the *three words* — the three would compound into one without internal boundaries. Vṛtty-avayavyasya attvam yasman na pratisidhyate: since the 'a'-substitution of a derivative-formation's *member* is *not prohibited* — 'maha' becomes 'maha-' by the rule that substitutes a for the final of 'mahat' in compounds, and nothing blocks it inside a member. So the substitution runs, the boundaries dissolve, and the three-word compound is one word with one accent. The verse is testing 3.14.44's ekarthibhava on a hard case: three members, and still no difference.

Verse 3.14.61

महारण्यमतीते तु त्रिपदाद् भिद्यते स्वरः ।
यस्मात् तत्रान्तरङ्गत्वाद् बाधकोऽवयवस्वरः ॥ 61 ॥

*mahāraṇyamatīte tu tripadād bhidhyate svarah |
yasmāt tatrāntaraṅgatvād bādhako'vayavasvarah || 61 ||*

But in 'maharanyam atita', the accent differs from that of a three-word form; since there, from internality, the member-accent is the annuler.

The contrast with 3.14.60. Maharanyam atite tu tri-padad bhidhyate svarah: in 'maharanyam atita' (having passed the great forest), the *accent differs* from that of a *three-word* form. Yasmāt tatra antarāṅgatvād bādhako 'vayava-svarah: since *there*, from *internality*, the *member-accent* is the *annuler* — 'maharanyā' is itself a compound, formed first (antaranga), and its accent is fixed before the outer compounding; so it overrides. So two superficially similar cases behave differently: 3.14.60's three words form one flat compound, and here an inner compound's accent survives into the outer. And the difference is antarāṅgatva — what was formed first. The pair shows that ekarthibhava does not erase everything: what became one *earlier* leaves a mark on what becomes one later.

Verse 3.14.62

सतिशिष्टबलीयस्त्वात् थाथादिस्वर एव तु ।
द्विपदे तेन युगपत् त्रितयं न समस्यते ॥ 62 ॥

satiṣiṣṭabaliyastvāt thāthādisvara eva tu |
dviṣṭade tena yugapat tritayam.na samasyate || 62 ||

But from the greater strength of what is taught while the other is present, it is the 'thathadi'-accent alone; therefore in a two-word form the three are not compounded simultaneously.

The accent-conflict resolved by a metarule. Sati-sista-baliyastvat: from the *greater strength of what is taught while the other is present* — the sati-sista principle: a rule taught in the presence of another, and therefore later, prevails (the Paribhasa tradition's own maxim). Thathadi-svara eva tu: it is the 'thathadi'-accent alone — Panini's accent-rule for the affix class beginning with tha. Dvi-pade tena yugapat tritayam na samasyate: *therefore in a two-word form, the three are not compounded simultaneously*. So the accent-facts prove a derivational fact: because the thathadi-accent wins, the three members cannot have compounded at once; they compounded two at a time. The argument runs from accent back to derivation-order — and it is exactly the sort of thing 3.14.61's antarangatva made possible. The samuddesa is reading composition's history off its phonology.

Verse 3.14.63

येषामपूज्यमानत्वं पराथनुगमार्थके ।
विशेषणविशेष्यत्वमपि तेषां न कल्पते ॥ 63 ॥

yeṣāmapūjyamānatvam.parārthānugamārthake |
viśeṣaṇaviśeṣyatvamapi teṣā.na kalpate || 63 ||

Those which have the state of not being honoured, in what has for its purpose the following of another's aim — for those, even the state of qualifier and qualified is not conceivable.

The bahuvrihi's members reduced to nothing. Yesam apujyamanatvam parartha-anugamarthake: those which have the state of *not being honoured* — apujyamana: unhonoured, i.e. not principal — in what has for its purpose the *following of another's aim*: the bahuvrihi, whose whole business is to reach a possessor outside itself (3.14.38's anya-padartha). Visesana-visesyatvam api tesam na kalpate: for those, *even the state of qualifier and qualified is not conceivable*. So in 'citragu' neither 'citra' nor 'go' is principal — both are unhonoured, both point away — and where nothing is principal, nothing can be qualified. This finishes off 3.14.52's rival: the qualifier-qualified structure it wanted to find in every compound is unavailable in the one compound-type that most obviously has two members.

Verse 3.14.64

विशेषः श्रूयमाणोऽपि प्रधानेषु गुणेषु वा ।
शब्दान्तरत्वाद् वाक्ये तु वृत्तौ नित्यं न विद्यते ॥ 64 ॥

viśeṣaḥ śrūyamāṇo'pi pradhāneṣu guṇeṣu vā |
śabdāntaratvād vākyaḥ tu vṛttau nityam na vidyate || 64 ||

A particular, though heard, among principals or among subordinates — in a sentence, from its being another word; but in a derivative formation it never exists.

Visesaḥ sruyamano 'pi pradhanesu gunesu va: a particular, though heard, among principals or among subordinates. Sabdantaradvad vakye: in a sentence, from its being another word — the phrase has particulars because the phrase is a different word (3.14.49's atyanta-bheda) and its members really do stand apart. Vṛttau nityam na vidyate: but in a derivative formation it never exists — nityam: ever, at all. So the particulars one seems to hear inside a compound belong to the phrase one is silently substituting, not to the compound. This is 3.14.37 sharpened: there the compound's member meant a particular; here the compound has no members to mean anything, and what one hears is one's own paraphrase.

Verse 3.14.65

विशेषकर्मसम्बन्धे निर्भुक्तेऽपि कृतादिभिः ।
विशेषनिरपेक्षोऽन्यः कृतशब्दः प्रवर्तते ॥ 65 ॥

viśeṣakarmasambandhe nirbhukte'pi kṛtādibhiḥ |
viśeṣanirapekṣo'nyaḥ kṛtaśabdaḥ pravartate || 65 ||

Even when the connection with a particular object has been consumed by 'krta' and the rest, another word 'krta', independent of the particular, operates.

Visesa-karma-sambandhe nirbhukte 'pi kṛtādibhiḥ: even when the connection with a particular object has been consumed — nirbhukta: used up, eaten through — by 'krta' (done) and the rest. Visesa-nirapekso 'nyaḥ kṛta-sabdah pravartate: another word 'krta', independent of the particular, operates. So in 'krta-purvin' (one who has done it before), the 'krta' that ate its object is not the 'krta' standing in the compound: a second, object-indifferent 'krta' is doing the work. Bhartrhari's move is characteristic — where the analysis produces a contradiction (the object is both consumed and still available), he does not repair the analysis but posits that the analysis was tracking two different words. Which is 3.14.49's principle again, applied inside a single form.

Verse 3.14.66

अकर्मकत्वे सत्येवं क्तान्तं भावाभिधायि यत् ।
ततः क्रियावता कर्त्रा योगो भवति कर्मणाम् ॥ 66 ॥

akarmakatve satyevam ktāntam bhāvābhidhāyi yat |
tataḥ kriyāvatā kartrā yogo bhavati karmaṇām || 66 ||

When there is intransitivity, that kta-ending which expresses the bare state — from that arises the objects' connection with an agent possessed of the action.

The mechanism of 3.14.65. Akarmakatve saty evam ktantam bhava-abhidhayi yat: when there is *intransitivity*, that *kta*-ending which expresses the *bhava* — the bare state, the action with no object in view (3.7.115's *bhava-vacana*; 3.8.44's action as its own object). Tataḥ kriyavata kartra yogo bhavati karmanam: *from that* arises the *objects'* connection with an *agent* possessed of the *action*. So the sequence is: the kta expresses the state alone; the state implies an agent who has the action; and only then do the objects attach — to the agent, not to the kta. The object is thus reachable without the kta ever taking it, which is exactly what 3.14.65 needed. And the derivation runs through *bhava* — the actionless action — which is this work's standard solvent for transitivity puzzles.

Verse 3.14.67

अविग्रहा गतादिस्था यथा ग्रामादिकर्मभिः ।
सम्बध्यते क्रिया तद्वत् कृतपूर्वादिषु स्थिता ॥ 67 ॥

avigrahā gatādisthā yathā grāmādikarmabhiḥ |
sambadhyate kriyā tadvat kṛtapūrvyādiṣu sthitā || 67 ||

As the action residing in 'gata' and the rest, without analysis, is connected with objects such as 'village' — likewise that residing in 'kṛta-purvin' and the rest.

The precedent. Avigraha gatadi-stha yatha gramadi-karmabhiḥ sambadhyate kriya: as the action residing in 'gata' (gone) and the rest, *without analysis* — avigraha: unanalysed, the compound taken whole — is *connected* with objects such as 'village': 'grama-gata' means gone-to-the-village though nothing in it governs the village. Tadvat kṛta-purvyadisū sthita: *likewise* that residing in 'kṛta-purvin' and the rest. So the connection is made by the whole compound, unanalysed, and no member takes the object. Avigraha is the load-bearing word: the compound relates to the world directly, without passing through its own supposed structure. This is 3.14.53's finding (the compound stands to its meaning as 'vrksa' does) doing the work that the analysis could not.

Verse 3.14.68

मुण्डिसूत्र्यादयोऽसदिभगैरनुगता इव ।
विभक्ताः कल्पितात्मनो धातवः कुट्टिचर्चित् ॥ 68 ॥

*muṇḍisūtryādayo'sadbhirbhāgairanugatā iva |
vibhaktāḥ kalpitātmano dhātavaḥ kuṭṭhicarcivat || 68 ||*

'Mundi', 'sutri' and the rest are as though pervaded by parts that are not there; the roots, divided, have imagined selves — like 'kutti' and 'carci'.

One of the work's great verses, and the beginning of its most radical stretch. Mundi-sutryadayo 'sadbhir bhagair anugata iva: 'mundi' (to shave), 'sutri' (to thread) and the rest are *as though* pervaded by parts that are *not there* — asadbhir bhagaih: by *unreal* parts; iva: as though. The grammarian analyses 'mundi' into a nominal base plus a denominative affix, and the analysis is a fiction: nothing in the root is that base. Vibhaktah kalpitatmano dhatavah kutti-carcivat: the roots, *divided*, have *imagined selves* — kalpita-atman: their very selfhood is a construct — like 'kutti', 'carci', curadi roots whose supposed derivation is invisible. So division does not find the root's parts; it *invents* them, and the root's identity is an artifact of the inventing. This is 2.10's apoddhara pushed below the word: the extraction goes all the way down and finds constructs at every level.

Verse 3.14.69

पुत्रीयतौ न पुत्रोऽस्ति विशेषेच्छा तु तादृशी ।
विनैव पुत्रानुगमाद् या पुत्रे व्यवतिष्ठते ॥ 69 ॥

*putrīyatau na putro'sti viśeṣecchā tu tādrśī |
vinaiva putrānugamād yā putre vyavatiṣṭhate || 69 ||*

In 'putriya' there is no son; rather there is a particular desire of such a kind that, without any following of 'son', it stands settled upon a son.

The fiction demonstrated. Putriyatau na putro 'sti: in 'putriya' — the denominative 'to want a son' — there is *no son*: no putra-element is doing anything in the verb. Visecchha tu tadrsi: rather there is a *particular desire of such a kind*. Vinaiva putra-anugamat ya putre vyavatisthate: which, *without any following of 'son'*, stands settled upon a son — the desire is son-directed without containing 'son'. So 'putriya' names a single, unanalysable wanting whose specificity is intrinsic, not composed. This is 3.14.44's ekarthibhava at the root's own level: the meaning has become one, and 'putra + iccha' is the grammarian's reconstruction of something that never was two. The verse is also a small phenomenology — the desire is son-shaped all the way through, and does not consist of a general wanting plus a son.

Verse 3.14.70

प्राणैर्विना यथा धारिर्जीवतौ प्राणकर्मकः ।
न चात्र धारिर्न प्राणा जीवतिस्तु क्रियान्तरम् ॥ 70 ॥

prāṇairvinā yathā dhārirjīvatau prāṇakarmakah |
na cātra dhāirirna prāṇā jīvatistu kriyāntaram || 70 ||

As 'dhr', having the breaths as object, without the breaths, in 'jiv'; and here there is neither 'dhr' nor breaths — 'jiv' is a different action.

The decisive parallel, and the tradition's most famous instance. Pranair vina yatha dharir jivatau prana-karmakah: as 'dhr' (to hold), having the *breaths* as object, *without* the breaths, in 'jiv' (to live) — the standard gloss makes 'jivati' = 'pranan dharayati', holds the breaths. Na catra dharir na pranah: and *here* there is *neither* 'dhr' *nor* breaths — the verb contains no holding and no breaths. Jivatis tu kriyāntaram: 'jiv' is a *different action*. Living is not breath-holding; it is its own single act, and the gloss is a gloss. So the whole apparatus of derivation-by-paraphrase is put in question by one example everyone accepts: nobody thinks 'jivati' is secretly about pranas, and nobody should think 'putriya' is secretly about a putra. The argument is short and it is fatal.

Verse 3.14.71

तथा विनेषिपुत्राभ्यां पुत्रीयायां क्रियान्तरम् ।
अन्वाख्यानाय भेदास्तु सदृशाः प्रतिपादकाः ॥ 71 ॥

tathā vineṣiputrābhyām.putrīyāyām.kriyāntaram |
anvākhyānāya bhedāstu sadṛśāḥ pratipādakāḥ || 71 ||

Likewise, without 'is' and 'putra', in 'putriya' there is a different action; but the divisions, for the sake of exposition, are similar conveyors.

The parallel closed, and the concession made. Tatha vina isi-putrabhyam putriyayam kriyāntaram: likewise, without 'is' (to desire) and 'putra', in 'putriya' there is a *different action* — as 'jiv' is not dhr-plus-pranas, 'putriya' is not is-plus-putra. Anvakhyānāya bhedaḥ tu sadṛśaḥ pratipadakah: *but* the *divisions*, for the sake of *exposition*, are *similar conveyors*. Anvakhyāna: the grammarian's proper business — explaining forms already given. Sadṛśaḥ pratipadakah: *similar conveyors* — they resemble what they convey, and they do convey it. So Bhartrhari does not abolish the analysis; he relocates it. It is not a discovery of the word's composition but an exposition by resemblance — and it works, which is why it survives its own falsity (3.14.49's upaya; 2.38's what is taken up in order to be let go).

Verse 3.14.72-73

आक्षेपाच्च प्रयोगेण विषयान्तरवर्तिना ।
सदपीच्छाक्यचः कर्म वाक्य एव प्रयुज्यते ॥ 72 ॥
प्रसिद्धेन कृतः शब्दो भावगर्हाभिधायिना ।
अभ्यासे तुल्यरूपत्वान्न यदन्तः प्रयुज्यते ॥ 73 ॥

ākṣepācca prayogēṇa viṣayāntaravartinā |
sadapīcchākyacaḥ karma vākya eva prayujyate || 72 ||
prasiddhena kṛtaḥ śabda bhāvagarhābhidhāyinā |
abhyāse tulyarūpatvānna yañantaḥ prayujyate || 73 ||

(72) And from implication, by a usage operating in another domain, the object of the desiderative *kyac*, though existing, is employed only in a sentence. (73) The word made by the well-known one expressing censure of the state – in the repetition, from likeness of form, the *yan*-ending is not employed.

Two rule-technical confirmations. (72): *aksepac ca prayogena visayantara-vartina* – from *implication*, by a *usage* operating in *another domain*. *Sad api iccha-kyacah karma vakya eva prayujyate*: the object of the desiderative *kyac*, though existing, is employed only in a sentence. The object exists – ‘*putriya*’ is about a son – but it can only be *said* in a phrase, never in the derivative: which is 3.14.69’s point in Panini’s own currency. (73): *prasiddhena krtah sabdo bhava-garha-abhidhayina* – the word made by the *well-known* one *expressing censure of the state*. *Abhyase tulya-rupatvan na yan-antah prayujyate*: in the *repetition*, from *likeness of form*, the *yan*-ending is *not employed* – where the reduplicated form would look identical, the affix is withheld. Both verses show the grammar itself conceding that the analysis and the form come apart.

Verse 3.14.74

शब्दा यथा विभज्यन्ते भागैरिव विकल्पितैः ।
अन्वाख्येयास्तथा शास्त्रमतिदूरे व्यवस्थितम् ॥ 74 ॥

śabdā yathā vibhajyante bhāgairiva vikalpitaiḥ |
anvākhyeyāstathā śāstramatidūre vyavasthitam || 74 ||

As words are divided by parts as though imagined, so are they to be expounded; the science stands very far off.

The *samuddesa*’s most famous line, and one of the boldest sentences a grammarian has written about grammar. *Sabda yatha vibhajyante bhagair iva vikalpitaiḥ*: as words are divided by parts as though imagined – *vikalpita*: constructed, optional, made up; *iva*: as though. *Anvakhhyeyas tatha*: so are they to be expounded – the exposition follows the imagined division, faithfully. *Sastram atidure vyavasthitam*: the science stands very far off. *Atidure*: at a great distance. So Panini’s whole apparatus – bases, affixes, substitutions, the entire machinery – is erected on parts that are not there, and the science that erects it is nowhere near the thing (1.1’s indivisible *sphota*; 2.10’s *apoddhara*). This is not scepticism about grammar; it is grammar’s self-knowledge. The science works and it does not touch. *Bhartrhari* says so without flinching and without giving anything up.

Verse 3.14.75

अर्थस्यानुगमं कञ्चिद् दृष्ट्यैव परिकल्पितम् ।
पदं वाक्ये पदे धातुर्धातौ भागश्च मुण्डिवत् ॥ 75 ॥

arthasyānugamam kañcid dr̥ṣṭyaiva parikalpitam |
padam vākyaḥ pade dhāturdhātau bhāgaśca muṇḍivat || 75 ||

Some following of the meaning, imagined by the view alone: the word in the sentence, the root in the word, and the part in the root — like 'mundi'.

The distance of 3.14.74 measured at every level. Arthasya anugamam kancid dr̥ṣṭya eva parikalpitam: *some following of the meaning*, imagined by the *view alone* — dr̥ṣṭya eva: by the analytic look and nothing else; parikalpita: fully constructed. And then the three storeys of the fiction: padam vakyē — the *word* in the *sentence* (1.73's the sentence alone is real; 2.1's akhandata); pade dhatuh — the *root* in the *word*; dhatau bhagas ca mundivat — the *part* in the *root*, like 'mundi' (3.14.68's roots with imagined selves). So the same construction repeats at every scale, and at every scale there is only a resemblance of meaning-following, seen by the one who looks for it. The regress is complete and the verse states it flatly: sentence, word, root, sub-root — all the way down, and nothing found.

Verse 3.14.76

अविप्रयोगः साधुत्वे व्युत्पत्तिरनवस्थिता ।
उपायान् प्रतिपत्तृणां नाभिमन्येत सत्यतः ॥ 76 ॥

aviprayogaḥ sādhutve vyutpattirnavasthitā |
upāyān pratipattṛṇām nābhimanyeta satyataḥ || 76 ||

Non-separation is in correctness; derivation is unsettled. One should not regard the means of the comprehenders as true.

The moral, stated in the imperative. Aviprayogaḥ sādhutve: *non-separation* is in *correctness* — what is correct is the undivided form itself; sādhutva attaches to the whole word, not to its parts (1.27's correctness not compositional). Vyutpattir anavasthita: *derivation* is *unsettled* — anavasthita: without a fixed footing, the etymologist's constructions shifting with the etymologist. Upayan pratipattṛnam na abhimanyeta satyataḥ: one should not regard the *means* of the *comprehenders* as *true*. Na abhimanyeta satyataḥ: do not take them for the truth. This is the samuddesa's — perhaps the work's — governing instruction, and it applies retroactively to everything Bhartrhari has himself constructed: the upayas are for comprehension, they are not descriptions, and taking them for descriptions is the one error the whole book is written against.

Verse 3.14.77

यथैव डित्थे डयतिः पाचके पचतिस्तथा ।
डयतिश्च पचिश्चैव द्वावप्येतावलौकिकौ ॥ 77 ॥

yathaiva dītthe dayatiḥ pācake pacatistathā |
dayatiśca paciśraiva dvāvapyetāvalaukikau || 77 ||

Just as 'day' in 'dittha', so 'pac' in 'pacaka'; and both 'day' and 'pac' alike are non-worldly.

The argument that gives 3.14.76 its teeth, and it is merciless. Yathaiva ditthe dayatiḥ: just as 'day' in 'dittha' — 'dittha' is the grammarians' standard meaningless proper name, the very example of a word with no derivation; and yet one *could* extract a root 'day' from it, and the extraction would be pure fabrication. Pacake pacatis tatha: so 'pac' in 'pacaka' (cook). Dayatis ca pacis caiva dvav apy etav alaukikau: and both, 'day' and 'pac', are *alaukika* — *not of the world*. So the root everyone accepts and the root everyone would laugh at stand on exactly the same footing: both are products of the same extraction, and neither is out there. The only difference is that one extraction has a tradition behind it. Alaukika is the grammarians' own word for their technical fictions, and Bhartrhari turns it on their most cherished object.

Verse 3.14.78

प्रकृतिप्रत्ययावूह्यौ पदात् ताभ्यां पदं तथा ।
अनुबन्धस्वरादिभ्यः शिष्टैः शास्त्रं न तान् प्रति ॥ 78 ॥

prakṛtipratyayāvūhyau padāt tābhyām padam tathā |
anubandhasvarādibhyaḥ śiṣṭaiḥ śāstram na tāt prati || 78 ||

Base and affix are to be conjectured from the word, and the word likewise from those two; the science is by the learned, from indicatory letters, accents and the rest — not directed at those.

The circle exhibited, and the science placed. Prakṛti-pratyayav uhyau padat: *base* and *affix* are to be conjectured from the word — uhya: to be surmised, guessed at, reasoned out; they are not given, they are inferred backwards from the form. Tabhyam padam tatha: and the word from those two, likewise. So the circle is closed and admitted: the parts are conjectured from the whole, and the whole is then derived from the parts. Anubandha-svaradibhyah sistaiḥ sastram na tan prati: the science is by the learned, from indicatory letters, accents and the rest — the it-markers, the tone-marks, the whole notational apparatus — na tan prati: *not directed at those*. The science is built out of its own devices and is not about them. So the Vṛtti-samuddesa's method-stretch ends where it must: grammar is a circle of conjectures made of notation, it stands atidure (3.14.74), it is true of nothing, and it is exactly right.

[Contested: The final pada admits more than one construal. We take 'na tan prati' as denying that the sastra is about its own devices (anubandhas, accents) — the notation is instrumental, not the subject-matter. It can also be read as denying that the sastra is directed at the prakṛti and pratyaya of pada a, i.e. that the science does not concern the conjectured parts as realities; on this reading the circle is being disowned rather than the notation. Both readings serve the samuddesa's conclusion; they differ on what 'tan' resumes.]

Verse 3.14.79

शास्त्रदृष्टिस्तु शास्त्रस्य प्राप्तिमात्रेऽप्यनिश्चिते ।
युज्यते प्रत्यवायेन शास्त्रं चक्षुरपश्यताम् ॥ 79 ॥

śāstradr̥ṣṭistu śāstrasya prāptimātre'pyaniścite |
yuḥyate pratyavāyena śāstram.cakṣurapaśyatām || 79 ||

But the science's way of seeing, even where the mere obtaining of a rule is undetermined, is joined with harm; the science is an eye for those who do not see.

The counterweight to 3.14.76, and it arrives immediately. Sastra-dr̥ṣṭis tu sastrasya praptimat্রে 'pyaniscite: the science's way of seeing — sastra-dr̥ṣṭi: construing the world by the grammar — even where the mere obtaining of a rule is undetermined. Yuḥyate pratyavayena: is joined with harm — pratyavaya: fault, damage. So one may not run the sastra's vision past the point where the sastra itself has settled anything. And then the concession, which is also the vindication: sastram caksur apasyatam — the science is an eye for those who do not see. Caksuh: an eye. So 3.14.76's warning does not demote grammar; it locates it. The science is not true, and it is sight — for those who lack it there is nothing to see with. The two verses together are the samuddesa's settled position: an eye is not the world, and one does not throw away one's eyes.

Verse 3.14.80

अथान्तराभिधानाच्च पौर्वपर्यं न भिद्यते ।
राजदन्ताहिताग्न्यादिराजाश्वादिषु सर्वथा ॥ 80 ॥

arthāntarābhīdhānācca paurvāparyam.na bhidyate |
rājadantāhitāgnyādirājāśvādiṣu sarvathā || 80 ||

And from the expressing of another meaning, priority and posteriority are not differentiated, in 'rajadanta', 'ahitagni' and the rest, and in 'rajasva' and the rest, in every way.

Word-order dissolved along with the parts. Arthantara-abhidhanac ca paurvaparyam na bhidyate: from the expressing of another meaning, priority and posteriority are not differentiated — the compound expresses a meaning other than its members', so the order of members carries nothing. Rajadanta-ahitagny-adi-rajavadiṣu sarvatha: in 'rajadanta' (the class where the expected first member goes second), 'ahitagni' (the bahuvrihi with its participle first), 'rajasva' and the rest — sarvatha: in every way. So the irregular orders are not irregular: order was never semantic to begin with, and Panini's rajadanta-gana simply registers usage. This follows from 3.14.68-78: if the members are not there, their sequence is not there either, and the rules governing sequence are notation (3.14.78's anubandha-svaradi).

Verse 3.14.81

विनैव प्रत्ययैर्वृत्तौ ये भिन्नार्थाभिधायिनः ।
गर्गादयो लुका तेषां साधुत्वमनुगम्यते ॥ 81 ॥

vinaiva pratyayairvṛttau ye bhinnārthābhidhāyinaḥ |
gargādayo lukā teṣāṃ sādhutvamanugamyate || 81 ||

Those which, without affixes, express a different meaning in the derivative formation — ‘garga’ and the rest — their correctness is followed out by means of elision.

How the grammar copes with what it cannot derive. *Vinaiva pratyayair vṛttau ye bhinnarthabhidhāyinaḥ*: those which, *without affixes*, express a *different meaning* in the derivative formation — ‘gargah’ meaning Garga’s descendants, with no visible patronymic affix. *Gargadayo luka tesam sadhutvam anugamyate*: ‘garga’ and the rest — their *correctness is followed out* by means of *luk*, elision. So the grammar posits an affix and then deletes it, and the form is thereby certified *sadhu*. *Anugamyate* is the exact word: the correctness is *followed*, tracked, come after — not conferred. The form was already correct (3.14.76’s *aviprayogah sadhutve*); the *luk* is how the science catches up with it. This is 3.14.79’s eye at work: seeing an affix that is not there is what lets the science see the word at all.

Verse 3.14.82

सोऽयमित्यभिसंबन्धात् प्रत्ययेन विना यदि ।
बभ्रवादयः प्रयुज्येरन्नपत्ये नियमो भवेत् ॥ 82 ॥

so’yamityabhisambandhāt pratyayena vinā yadi |
babhrūvādayaḥ prayujyerannapatye niyamo bhavet || 82 ||

If, from the connection ‘this is that’, ‘babhru’ and the rest were employed without an affix, there would be a restriction to offspring.

The cost of taking the elision seriously. So ‘yam ity abhisambandhat: from the *connection* ‘this is that’ — the identification by which a descendant is called by the ancestor’s name. *Pratyayena vina yadi babhrvadayah prayujyeran*: if ‘babhru’ and the rest were *employed without an affix* — i.e. if the naked stem simply meant the descendant, with no elided *taddhita* behind it. *Apatye niyamo bhavet*: there would be a *restriction to offspring* — the identification would have to be restricted to offspring, which nothing in ‘this is that’ warrants: an heir, a pupil, a namesake all satisfy it. So the elided affix earns its keep after all: it is what narrows the identification. The verse concedes the point against itself, which is the *samuddesa*’s habit — the fictions of 3.14.74 are not idle fictions, and where one removes them, real work goes undone.

Verse 3.14.83

सोऽयमित्यभिसंबन्धे लिङ्गोपव्यञ्जनादृते ।
प्रष्ठादिषु न जायैव नियमेन प्रतीयते ॥ 83 ॥

so'yamityabhisambandhe liṅgopavyañjanādr̥te |
praṣṭhādiṣu na jāyaiva niyamena pratīyate || 83 ||

In the connection 'this is that', apart from an indicatory mark, in 'prastha' and the rest the wife alone is not understood by restriction.

The same argument on a second case. So 'yam ity abhisambandhe liṅga-upavyanjanad rte: in the connection 'this is that', *apart from an indicatory mark* — liṅga: here the gender-sign, and upavyan-jana: the accompanying indication. Prasthadisu na jaya eva niyamena pratiyate: in 'prastha' and the rest, the *wife alone* is not understood by restriction — 'prastha' in the feminine is supposed to yield the headman's wife, but the identification 'this is that' does not by itself pick out a wife rather than a daughter or a servant. So again the bare relation underdetermines, and something else — the gender-mark — must do the restricting. Both 3.14.82 and this verse show the same shape: identification is broad, usage is narrow, and the grammar's machinery is what covers the distance.

Verse 3.14.84-85

मानमेयाभिसंबन्धविशेषेऽङ्गीकृते तथा ।
प्रस्थादीनामसाधुत्वं तद्धितेन विना भवेत् ॥ 84 ॥
तद्धितो योगभेदेन वाक्यं वा स्याद् विभाषितम् ।
परिमाणाधिके तत्र प्रथमा शिष्यते पुनः ॥ 85 ॥

mānameyābhisambandhaviśeṣe'ṅgīkr̥te tathā |
praṣṭhādināmasādhutvam.taddhitena vinā bhavet || 84 ||
taddhito yogabhedena vākyaṁ.vā syād vibhāṣitam |
parimāṇādhike tatra prathamā śiṣyate punaḥ || 85 ||

(84) When a particular connection of measure and measured is accepted, the incorrectness of 'prastha' and the rest would follow, without the taddhita. (85) The taddhita, by difference of rule, or else the sentence, would be optional; there, in the case of excess over the measure, the first case-ending is again taught.

Measure-words, and the same lesson a third time. (84): mana-meya-abhisambandha-visese 'ngikr̥te — when a *particular connection of measure and measured* is accepted: 'prastha' as a unit, and what is measured by it. Prasthadinam asadhutvam taddhitena vina bhavet: the *incorrectness* of 'prastha' and the rest would follow, *without the taddhita* — without the affix, the measure-word cannot be certified. (85): taddhito yoga-bhedena vakyam va syad vibhasitam — the *taddhita*, by *difference of rule*, or else the *sentence*, would be *optional*. Parimana-adhike tatra prathama sisyate punah: there, in the case of *excess over the measure*, the *first case-ending* is *again* taught — where the quantity exceeds the unit, the nominative returns. So the grammar handles measure by an affix, an option, and a case-rule, and every one of them is machinery (3.14.78).

Verse 3.14.86

अतिरिक्तस्य साधुत्वे तदेव च निदर्शनम् ।
युज्यतेऽङ्गीकृताधिक्यं तत् सर्वाभिर्विभक्तिभिः ॥ 86 ॥

*atiriktasya sādhutve tadeva ca nidarśanam |
yujyate'ngīkṛtādhikyam tat sarvābhirvibhaktibhiḥ || 86 ||*

In the correctness of the excess, that very thing is the illustration; that, with its excess accepted, is joined with all the case-endings.

Atiriktasya sadhutve tad eva ca nidarsanam: in the correctness of the excess, that very thing is the illustration – the excess-case of 3.14.85 is itself the demonstration. Yujyate 'ngikrtadhikyam tat sarvabhir vibhaktibhih: that, with its excess accepted, is joined with all the case-endings – once the excess is granted, the form takes every case freely, and no restriction survives. So the measure-word, having been certified by the taddhita, behaves like any nominal: the machinery does its work and then withdraws, leaving an ordinary word. Which is the pattern of the whole stretch – the grammar's constructs are scaffolding, they hold the form up while it is being certified, and the finished word stands without them (3.14.71's upayas, similar and discardable).

Verse 3.14.87

शुक्लादिषु मतुब्लोपो व्यतिरेकस्य दर्शनात् ।
असाधुत्वनिवृत्त्यर्थं साधवस्ते बिदादिवत् ॥ 87 ॥

*śuklādiṣu matublopo vyatirekasya darśanāt |
asādhutvanivṛttyartham sādhavaste bidādivat || 87 ||*

In 'sukla' and the rest, the elision of 'matup', from the seeing of the difference; for the sake of removing incorrectness they are correct, like 'bida' and the rest.

The construct named for what it is. Sukladisu matub-lopo vyatirekasya darsanat: in 'sukla' (white) and the rest, the elision of 'matup' – the possessive affix – from the seeing of the difference: one sees that 'sukla' behaves as though it meant 'possessing whiteness', so one posits matup and deletes it. Asadhutva-nivṛtty-artham sadhavas te bidadivat: for the sake of removing incorrectness they are correct, like 'bida' and the rest. Asadhutva-nivṛtty-artham is the confession: the elided affix exists in order to stop the form being ungrammatical – that is its entire purpose, and it has no other. So the science posits what it needs to certify what usage already gives it (3.14.43's the world's settled arrangement; 3.14.81's anugamyate). Bhartrhari does not object. He only insists one know what one is doing.

Verse 3.14.88

विशेषणाद् विशेष्येऽर्थे तद्भावाभ्युच्चये सति ।
पुनश्च प्रतिसंहारे वृत्तिमेके प्रचक्षते ॥ 88 ॥

*viśeṣaṇād viśeṣye'rthe tadbhāvābhyuccaye sati |
punaśca pratisamhāre vṛttimeke pracakṣate || 88 ||*

From the qualifier, in the qualified meaning, when there is an accumulation of that state, and again in the withdrawal – some declare there to be a derivative formation.

A rival account of what composition is, and it is psychological. Visesanad visesye 'rthe tad-bhava-abhyuccaye sati: *from the qualifier, in the qualified meaning, when there is an accumulation of that state* – abhyuccaya: heaping up, the qualifier's character piling into the qualified. Punas ca pratisamhare: and *again* in the *withdrawal* – pratisamhara: the drawing-back, the qualifier retracting once it has deposited its contribution. Vrttim eke pracaksate: *some declare there to be a derivative formation*. So on this view a compound is a two-beat mental event: the qualifier pours itself into the qualified and then withdraws, and what is left – qualified, and standing alone – is the compound. This is 3.14.9-11's deposited delimitation given a temporal structure, and 3.14.92-93 will endorse its phenomenology while denying its divisions.

Verse 3.14.89-90

निमित्ते प्रत्ययः पूर्वो नानुप्राप्तो निमित्तिना ।
निमित्तवति बुद्धेश्च न निमित्तसरूपता ॥ 89 ॥
संस्कारसहिताद् जानान्नोपश्लेषः स्मृतेरपि ।
व्यापारे तन्निमित्तानां न ग्राह्यं स्याद् तथाविधम् ॥ 90 ॥

*nimitte pratyayah pūrvo nānuprāpto nimittinā |
nimittavati buddheśca na nimittasarūpatā || 89 ||
saṃskārasahitād jñānānnopaśleṣaḥ smṛterapi |
vyāpāre tannimittānām na grāhyam syād tathāvidham || 90 ||*

(89) The cognition of the cause, being prior, is not reached by what is caused; and of the cognition in the possessor of the cause, there is no likeness of form with the cause. (90) From cognition accompanied by an impression, there is no contact even from memory; in the operation of those causes, the graspable would not be of that kind.

An epistemological objection to 3.14.88's two-beat account. (89): nimitte pratyayah purvo na anuprāpto nimittina – the *cognition of the cause* (the qualifier), being *prior*, is *not reached* by what is *caused*: the earlier cognition is over before the later one exists, so the later cannot get at it to receive a deposit. Nimittavati buddheś ca na nimitta-sarupata: and of the *cognition* in the *cause-possessor* there is *no likeness of form* with the cause – the qualified's cognition does not resemble the qualifier's, so nothing was transferred. (90): saṃskara-sahitaj jnanan nopaslesah smrter api – even bringing in *impressions* and *memory* gives *no contact* (upaslesā: *adhesion*). Vyapare tan-nimittanam na grahyam syat tathavidham: in their *operation*, the *graspable* would not be of *that kind*. So the deposit-and-withdraw story has no mechanism: two cognitions cannot touch.

Verse 3.14.91

अन्तःकरणवृत्तौ च व्यर्था बाह्यार्थकल्पना ।
तस्मादनुपकारो वा ग्राह्यं वा न तथा स्थितम् ॥ 91 ॥

antaḥkaraṇavṛttau ca vyarthā bāhyārthakalpanā |
tasmādanupakāro vā grāhyam vā na tathā sthitam || 91 ||

And in the operation of the inner organ, the imagining of an external object is purposeless. Therefore either there is no assistance, or the graspable is not so situated.

The objection driven home, and then the dilemma. Antahkarana-vṛttau ca vyartha bahyārthakalpana: in the operation of the inner organ, the imagining of an external object is purposeless — vyartha: pointless. If the qualifier-qualified business happens in the mind, positing an outer object to anchor it adds nothing (2.129's the external is a support one does not need; 3.3.53's meanings that are the intellect's own). Tasmad anupakaro va grahyam va na tatha sthitam: therefore either there is no assistance — the object contributes nothing — or the graspable is not so situated: it is not out there as supposed. Both horns are unwelcome to 3.14.88's theorists, and Bhartrhari leaves them there. The dilemma clears the ground for 3.14.92's own account, which will keep the phenomenon and drop the transaction.

Verse 3.14.92-93

अनुस्यूतेव संसृष्टेरर्थे बुद्धिः प्रवर्तते ।
व्याख्यातारो विभज्याथ तां भेदेन प्रचक्षते ॥ 92 ॥
तदात्मन्यविभक्ते च बुद्ध्यन्तरमुपाश्रिताः ।
विभागमिव मन्यन्ते विशेषणविशेष्ययोः ॥ 93 ॥

anusyūteva saṁsṛṣṭerarthē buddhiḥ pravartate |
vyākhyātāro vibhajyātha tāṁ bhedena pracakṣate || 92 ||
tadātmanyavibhakte ca buddhyantaramupāśritāḥ |
vibhāgamiva manyante viśeṣaṇaviśeṣyayoh || 93 ||

(92) The intellect operates in the meaning as though threaded through, from the conjunction; the expounders, having divided, then declare it by way of difference. (93) And in that self, undivided, having resorted to a second cognition, they think there is as it were a division of qualifier and qualified.

The samuddesa's own account, and it is the work's whole thesis in two verses. (92): anusyuta iva saṁsṛster arthe buddhiḥ pravartate — the intellect operates in the meaning as though threaded through, from the conjunction. Anusyuta: sewn through, continuous, one thread running the length of it — the single most beautiful word in the samuddesa, and the exact opposite of composition. The cognition of 'nilotpala' is not blue plus lotus; it is one thread. Vyakhyatharo vibhajya atha tam bhedena pracaksate: the expounders, having divided, then declare it by way of difference — the division comes first, from the expositor, and the difference is announced afterwards. (93): tad-atmany avibhakte ca buddhy-antaram upasritah — in that self, undivided, having resorted to a second cognition. Vibhagam iva manyante visesana-visesyayoh: they think there is as it were a division of qualifier and qualified. Iva: as it were. So the division is not in the meaning; it is in the second cognition one brings to it (1.89's the knower's own construction returned to the known). Qualifier and qualified are what a mind

that has already divided finds when it looks. This is 1.1's indivisible sphota and 3.14.74's imagined parts and 2.10's apoddhara, all resolved into a single psychological fact: the thread is one, and the expositor cuts it.

Verse 3.14.94

अबुधान् प्रति वृत्तिं च वर्तयन्तः प्रकल्पिताम् ।
आहुः परार्थवचने त्यागाभ्युच्चयधर्मताम् ॥ 94 ॥

abudhān prati vṛttim ca vartayantah prakalpitaṃ |
āhuḥ parārthavacane tyāgābhyuccayadharmatām || 94 ||

And carrying on the constructed derivation for the unlearned, they speak of the property of abandonment and of accumulation in the expression of another's meaning.

The tradition's two doctrines placed as upayas. Abudhan prati vṛttim ca vartayantah prakalpitaṃ: *carrying on the constructed derivation for the unlearned* — prakalpita: fabricated (3.14.75's parikalpita); abudhan prati: aimed at those who do not know (3.14.49). Ahuh pararthavacane tyaga-abhyuccaya-dharmatam: they speak of the *property* of *abandonment* and of *accumulation* in the *expression of another's meaning*. Tyaga: the jahat-svartha doctrine — in a bahuvrihi the members abandon their own meanings (3.12.27). Abhyuccaya: the ajahat-svartha doctrine — they retain and heap them up (3.14.88). The tradition's long quarrel between these two, and Bhartrhari's verdict is that both are teaching-devices for the unlearned, spoken over a meaning that was never divided (3.14.92's anusyuta). Neither party is wrong; both are describing their own cut.

Verse 3.14.95

अन्वयाद् गम्यते सोऽर्थो विरोधी वा निवर्तते ।
द्वयर्थमर्थान्तरे वापि तत्राहुरुपसर्जनम् ॥ 95 ॥

anvayād gamyate so'rtho virodhī vā nivartate |
dvayarthamarthāntare vāpi tatrāhurupasarjanam || 95 ||

That meaning is understood from agreement, or the contradictory one withdraws; in the two-meaninged, or else in another meaning — there they call it 'subordinate'.

Upasarjana defined by what happens to the loser. Anvayad gamyate so 'rtho: that meaning is understood *from agreement* — the surviving sense, carried by concomitance. Virodhi va nivartate: or the *contradictory one withdraws* — where two senses conflict, one leaves. Dvyartham arthantare vapi tatrāhur upasarjanam: in the *two-meaninged*, or else in *another meaning* — there they call it 'upasarjana', subordinate. So Panini's technical term for the compound's non-principal member is being derived from three quite different situations: agreement carrying one sense, contradiction expelling one, and the whole thing decamping into a third meaning. The term is one and the phenomena are three — which is what 3.14.96 is about to say in general.

Verse 3.14.96

उपायमात्रं नानात्वं समूहस्त्वेक एव सः ।
विकल्पाभ्युच्चयाभ्यां वा भेदसंसर्गकल्पना ॥ 96 ॥

upāyamātram, nānātvam, samūhastveka eva saḥ |
vikalpābhyuccayābhyām, vā bhedasamśargakalpanā ॥ 96 ॥

Multiplicity is a mere means; that aggregate is one alone. Or, by alternation and accumulation, the construction of difference and of conjunction.

The samuddesa's summary sentence, and it is eight words long. Upaya-matram nanatvam: *multiplicity is a mere means* — nanatva: manyness, plurality, the whole apparatus of parts; upaya-matra: a means and *nothing else* (3.14.76's do not take the upayas for true). Samudayas tv eka eva saḥ: the *aggregate is one alone* — eka eva: one, simply. Vikalpa-abhyuccayabhyam va bheda-samsarga-kalpana: *or, by alternation and accumulation, the construction of difference and of conjunction* — the two doctrines of 3.14.94 (tyaga and abhyuccaya) recast as two ways of *constructing* what is not there. Kalpana: construction. So the tradition's rival theories of the compound are alternative fabrications of a multiplicity that is a device, laid over an aggregate that is one. This is 3.14.92's anusyuta stated as doctrine.

Verse 3.14.97

वृत्त वर्तयतामेवमबुधप्रतिपत्तये ।
भिन्नाः सम्बोधनोपायाः पुरुषेष्वनावस्थिताः ॥ 97 ॥

vr̥tta vartayatāmevamabudhapratipattaye |
bhinnāḥ sambodhanopāyāḥ puruṣeṣvanavasthitāḥ ॥ 97 ॥

Of those thus carrying on the derivation for the unlearned's comprehension, the means of instruction are diverse, unsettled among persons.

Why the tradition has rival theories at all. Vrttim vartayatam evam abudha-pratipattaye: of those *carrying on* the derivation for the *unlearned's comprehension* (3.14.94's abudhan prati). Bhinnah sambodhana-upayah purusesv anavasthitah: the *means of instruction are diverse, unsettled among persons* — anavasthita: without fixed footing (3.14.76's vyutpattir anavasthita), and purusesu: varying from teacher to teacher. So the quarrel between jahat-svartha and ajahat-svartha is not a disagreement about the facts: it is two teachers' pedagogy, and pedagogy varies because pupils vary. Nothing in the object adjudicates, because the object is one (3.14.96) and neither doctrine is about it. This is the most irenic thing in the samuddesa and also the most deflationary.

Verse 3.14.98

वाचिका द्योतिका वापि सङ्ख्यानां या विभक्तयः ।
तद्रूपेऽवयवे वृत्तौ सङ्ख्याभेदो निवर्तते ॥ 98 ॥

*vācikā dyotikā vāpi saṅkhyānām.yā vibhaktayah |
tadrūpe'vayave vṛttau saṅkhyābhedo nivartate || 98 ||*

Those case-endings which are expressive or indicative of numbers — when the member has that form, in a derivative formation the difference of number withdraws.

Number inside compounds. Vacika dyotika vapi sankhyanam ya vibhaktayah: the case-endings which are expressive or indicative of numbers — the samuddesa's standing distinction (2.190's vacaka against dyotaka: does the ending say the number or merely reveal it?), and here left open, because it does not matter for the point. Tad-rupe 'vayave vṛttau sankhya-bhedo nivartate: when the member has that form, in a derivative formation the difference of number withdraws. So 'brahmana-kula' does not say how many brahmanas: the number-difference goes out with the case-ending. This is 3.14.44's ekarthibhava applied to number — the meanings having withdrawn, their number withdraws with them (3.14.46's expectancy withdrawing). And it raises the question 3.14.99 must answer: what number, then, does the compound have?

Verse 3.14.99

अभेदैकत्वसङ्ख्या वा तत्रान्यैवोपजायते ।
संसर्गरूपं (संसर्गिरूपं) सङ्ख्यानामविभक्तं तदुच्यते ॥ 99 ॥

*abhedaikatvasaṅkhyā vā tatrānyaivopajāyate |
saṁsargarūpam.(saṁsargirūpam) saṅkhyānāmavibhaktam.taducyate || 99 ||*

Or another number altogether arises there — the number of non-different unity; that is called the unanalysed form of conjunction of the numbers.

The answer, and it is not zero. Abhedaikatva-sankhya va tatra anya eva upajayate: another number altogether arises there — the number of non-different unity: abheda-ekatva, a oneness that is not the numeral one but the absence of internal difference. Samsarga-rupam sankhyanam avibhaktam tad ucyate: that is called the unanalysed form of the conjunction of the numbers — avibhakta: undivided (3.14.93's tad-atmany avibhakte). So the compound does not lack number; it has a number of its own, which is the numbers of its members fused past recovery. The members' numbers are in there the way the herbs are in the honey — which is exactly the image 3.14.100 reaches for.

[Contested: The source records a variant at pada c: samsarga-rupam ('the form which is conjunction') against samsargi-rupam ('the form of what is conjoined'). We translate the former. The variant shifts the emphasis slightly — whether the unanalysed thing is the conjoining or the conjuncts — but on either reading the point stands: what results is undivided.]

Verse 3.14.100

यथौषधिरसाः सर्वे मधुन्याहितशक्तयः ।
अविभागेन वर्तन्ते तां सङ्ख्यां तादृशीं विदुः ॥ 100 ॥

yathauṣadhirasāḥ sarve madhunyaḥitaśaktayaḥ |
avibhāgena vartante tām saṅkhyām tādrśīm viduḥ || 100 ||

As all the herb-juices, their potencies deposited in honey, exist without division — such they know that number to be.

One of the loveliest images in the work, and it does real analytic work. Yatha ausadhi-rasah sarve madhuny ahita-saktayah: as *all the herb-juices*, their potencies deposited in honey — ahita-sakti: their powers placed into it, the bees having gathered from a hundred plants. Avibhagena vartante: they exist *without division* — avibhaga: nothing in the honey is this flower's and nothing that flower's, and yet every flower is in it and acting. Tam sankhyam tadrsim viduh: *such* they know that *number* to be. So the compound's abheda-ekatva (3.14.99) is honey: the members' numbers are wholly present, wholly potent, and wholly unrecoverable. The image is better than any argument could be, because it exhibits a case where fusion does not mean loss — the honey has all the herbs' powers and none of their boundaries. Which is what a compound is.

Verse 3.14.101

भेदानां वा परित्यागात् सङ्ख्यात्मा स तथाविधः ।
व्यापाराज्जतिभागस्य भेदापोहेन वर्तते ॥ 101 ॥

bhedānām.vā parityāgāt saṅkhyātmā sa tathāvidhaḥ |
vyāpārājjatibhāgasya bhedāpohena vartate || 101 ||

Or, from the abandonment of the differences, that number-self is of such a kind; from the operation of the universal-portion, it operates by the exclusion of differences.

The alternative account of the same fact. Bhedanam va parityagat sankhyatma sa tathavidhah: *or*, from the *abandonment* of the *differences*, that *number-self* is of *such a kind* — not fusion (3.14.100's honey) but renunciation: the differences are simply dropped. Vyaparaj jati-bhagasya bhedapohena vartate: from the *operation* of the *universal-portion*, it operates by the *exclusion of differences* — the jati-element in the meaning does the work, and its way of working is apoha, exclusion. So two accounts stand side by side: the honey, where the differences are all present and indistinguishable, and the universal, where they are excluded. Bhartrhari gives both without choosing — which is 3.14.97's point about upayas being unsettled among persons, and 3.14.96's about multiplicity being a device either way.

Verse 3.14.102-103

अग्रहीतविशेषेण यथा रूपेण रूपवान् ।
 प्रख्यायते न शुक्लादिभेदरूपस्तु(रूपन्तु) गृह्यते ॥ 102 ॥
 भेदरूपसमावेशे तथा सत्यविवक्षिते ।
 भागः प्रकाशितः कश्चिच्छास्त्रेऽङ्गत्वेन गृह्यते ॥ 103 ॥

agrhitaviśeṣeṇa yathā rūpeṇa rūpavān |
prakhyāyate na śuklādibhedarūpastu(rūpantu) grhyate || 102 ||
bhedarūpasamāveśe tathā satyavivakṣite |
bhāgaḥ prakāśitaḥ kaścicchāstre'ṅgatvena grhyate || 103 ||

(102) As one possessing form is made known by form whose particular is not grasped, and the difference-form 'white' and the rest is not grasped — (103) so, when the entry of the difference-form is present but not intended for expression, some illumined portion is taken in the science as a subsidiary.

How a general can be present without its particulars. (102): *agrhitaviseseṇa yathā rūpeṇa rūpavān prakhyāyate* — as one *possessing form* is made known by *form whose particular is not grasped*: one sees that a thing is coloured before, and without, seeing which colour. *Na sukladi-bheda-rūpas tu grhyate*: the *difference-form* — 'white' and the rest — is *not grasped*. The perception is real, general, and particular-free. (103): *bheda-rūpa-samāveśe tathā satyavivakṣite* — so, when the *entry* of the *difference-form* is *present but not intended for expression* (*avivakṣita*: the *samuddesa*'s standing device — 3.11's numbers not meant to be said). *Bhagaḥ prakāśitaḥ kaścic chāstre 'ṅgatvena grhyate*: some *illumined portion* is taken in the *science* as a *subsidiary*. So the compound's number is like coloured-ness: the differences are in there and unmeant, and what the grammar picks up is the lit portion.

Verse 3.14.104

सङ्ख्यासामान्यरूपेण तदा सोऽंशः प्रतीयते ।
 अर्थस्यानेकशक्तित्वे शब्दैर्नियतशक्तिभिः ॥ 104 ॥

saṅkhyāsāmānyarūpeṇa tadā som'śaḥ pratīyate |
arthasyānekaśaktitve śabdairniyataśaktibhiḥ || 104 ||

Then that portion is cognized in the form of number-in-general — the meaning having many powers, by words having fixed powers.

The conclusion of the number-analysis. *Saṅkhyā-sāmānyarūpeṇa tadā so 'mśaḥ pratīyate*: *then that portion* is cognized in the form of *number-in-general* — *saṅkhyā-sāmānyā*: numberhood, not a number. So what a compound carries is the bare fact of quantity with no quantity specified — which is what 3.14.102's coloured-without-a-colour was the model for. And the reason: *arthasyānekaśaktitve śabdairniyataśaktibhiḥ* — the *meaning* having *many powers*, by *words* having *fixed powers*. The meaning is inexhaustibly potent (3.14.100's honey with all the herbs in it), and words are each fixed to one power. So no word ever takes more than a slice, and the slice a compound takes at the number-place is number-in-general. This is 2.250's omni-significance seen from the other side: the object overflows every word, and each word is narrow by constitution.

Verse 3.14.105

अव्ययानां च यो धर्मो यश्च भेदवतां क्रमः ।
अभिन्नव्यपदेशार्हमन्तरालं तदेतयोः ॥ 105 ॥

avyayānām ca yo dharmo yaśca bhedavatām kramah |
abhinnavyapadeśārhamantarālam tadetayoh || 105 ||

The property of the indeclinables, and the sequence of those possessing difference – the intermediate between these two deserves the designation 'non-different'.

The compound placed on a scale. Avyayanam ca yo dharmo: the *property* of the *indeclinables* – the avyaya, which has no number at all, admits no differentiation, and is one end of the scale. Yas ca bhedavatam kramah: and the *sequence* of those *possessing difference* – inflected words with their numbers laid out in order: the other end. Abhinna-vyapadesarham antaralam tad etayoh: the *intermediate* between these two *deserves the designation* 'non-different'. Antarala: the space between. So the compound is neither numberless like an indeclinable nor numbered like a noun; it occupies the middle, and abheda (3.14.99's abheda-ekatva) is the name that middle earns. Vyapadesarha – *deserving the designation* – is careful: the name is apt, and it is still a name.

Verse 3.14.106

अलुकश्चैकवद्भावस्तस्मिन् सति न शिष्यते ।
स च गोषुचरादीनां धर्मोऽस्ति वचनान्तरे ॥ 106 ॥

alukaścaikavadbhāvastasmin sati na śiṣyate |
sa ca goṣucarādīnām dharmo'sti vacanāntare || 106 ||

And the singular-treatment of the non-elided is not taught when that exists; and that is the property of 'gosucara' and the rest in another number.

A rule made redundant by 3.14.99's doctrine. Alukas ca ekavad-bhavas tasmin sati na sisate: the *singular-treatment* of the *aluk* – compounds where the case-ending is *not* elided – is *not taught* when *that* (the abheda-ekatva) *exists*: if the compound already has non-different unity, no rule need impose the singular on it. Sa ca gosucaradinam dharmo 'sti vacanantare: and that is the *property* of 'gosucara' (grazing among cows) and the rest, in *another number*. So the aluk-compounds, which visibly keep their endings, still get their singularity from the doctrine rather than from a rule – and the rule that supplies it is idle (3.14.41's prohibitions with no purpose; 3.14.59's rules with bounded domains). The doctrine of 3.14.99 is paying for itself in rule-economy.

Verse 3.14.107

जातौ द्विवचनाभावात् तद् वृत्तिषु न विद्यते ।
प्रत्याख्याने तु योगस्य द्रव्ये गोषुचरादयः ॥ 107 ॥

jātau dvivacanābhāvāt tad vṛttiṣu na vidyate |
pratyākhyāne tu yogasya dravye goṣucarādayaḥ || 107 ||

From the absence of the dual in the universal, that does not exist in derivative formations; but when the rule is rejected, 'gosucara' and the rest are in the substance.

Jatau dvivacana-abhavat: from the *absence of the dual* in the *universal* – a jati has no two: universals do not come in pairs (3.1's the universal is one, everywhere, always). Tad vṛttisu na vidyate: *that* – the dual – *does not exist in derivative formations*, since the compound's meaning has gone over to the general (3.14.101's jati-bhaga; 3.14.104's number-in-general). Pratyakhyane tu yogasya dravye gosucaradayah: but in the *rejection* of the rule, 'gosucara' and the rest are in the *substance* – if one throws out the rule, these compounds must denote substances instead, and substances do come in twos. So the choice is exact: keep the rule and the compound means a universal with no dual, or drop it and the compound means a substance that has one. The samuddesa lays out the fork and lets the reader see what the rule is buying.

Verse 3.14.108-109

आश्रयाद् भेदवत्तायाः सर्वभेदसमन्वयः ।
द्रव्याभिधानपक्षोऽपि जात्याख्यायां न विद्यते ॥ 108 ॥
सर्वद्रव्यगतिश्चैवमेकशेषश्च नोच्यते ।
प्रत्याख्यातेऽन्यथा सूत्रे भिन्नद्रव्यगतिर्भवेत् ॥ 109 ॥

āśrayād bhedavattāyāḥ sarvabhedasamanvayaḥ |
dravyābhidhānapakṣo'pi jātyākhyāyām na vidyate || 108 ||
sarvadravyagatiścaivamekaśeṣaśca nocyate |
pratyākhyāte'nyathā sūtre bhinnadravyagatirbhavet || 109 ||

(108) From the substratum's possession of difference, there is concomitance with all differences; the view that substance is expressed also does not obtain in the naming of a universal. (109) And thus the reaching of all substances, and ekasesa, is not stated; if the sutra were rejected otherwise, there would be a reaching of different substances.

The fork of 3.14.107 worked out. (108): asrayad bhedavattayah sarva-bheda-samanvayah – from the *substratum's possession of difference*, there is *concomitance with all differences*: if the compound rests on a substance, every difference the substance has comes along. Dravyabhidhana-pakso 'pi jatya-akhyayam na vidyate: the view that *substance is expressed* does not obtain in the *naming of a universal* – one cannot have both. (109): sarva-dravya-gatis caivamekaśeṣas ca nocyate – *thus the reaching of all substances*, and *ekasesa* (3.14.30's residue-of-one), is *not stated*: the doctrine makes both rules unnecessary. Pratyakhyate 'nyatha sutre bhinna-dravya-gatir bhavet: if the *sutra* were *rejected otherwise*, there would be a *reaching of different substances* – the wrong result. So the accounting is complete: take the universal, and two rules become idle; take the substance, and the forms come out wrong.

Verse 3.14.110

वृत्तौ यो युक्तवद्भावो वरणादिषु शिष्यते ।
अभेदैकत्वसङ्ख्यायां गोदौ तत्र न सिध्यति ॥ 110 ॥

*vr̥ttau yo yuktavadbhāvo varaṇādiṣu śiṣyate |
abhedaikatvasaṅkhyāyām.godau tatra na sidhyati || 110 ||*

The 'treatment as though joined' which is taught in derivative formation, in 'varana' and the rest — in the number of non-different unity, in 'goda' it does not succeed there.

A difficulty for the doctrine, honestly filed. *Vr̥ttau yo yuktavad-bhavo varanadisū sisyate*: the *yuktavad-bhava* — Panini's provision that a derivative be treated *as though* it were the analysed phrase, for gender and number — taught in 'varana' and the rest. *Abhedaikatva-saṅkhyayam godau tatra na sidhyati*: in the *number of non-different unity* (3.14.99), in 'goda' it *does not succeed*. So the rule requires the compound to behave as its phrase does, and the doctrine has just said the compound has a number its phrase never had. In 'goda' the two prescriptions collide and the rule fails. Bhartṛhari raises the objection against his own account and states it flatly — which is the *samuddesa's* manner throughout (3.14.34's the Bhasya found it hard). The following verses will have to answer it.

Verse 3.14.111

प्राग्वृत्तेर्युक्तवद्भावे षष्ठी भेदाश्रया भवेत् ।
वृत्तौ सङ्ख्याविशेषाणां त्यागाद् भेदो निवर्तते ॥ 111 ॥

*prāgvr̥tteryuktavadbhāve ṣaṣṭhī bhedaśrayā bhavet |
vr̥ttau saṅkhyāviśeṣāṇām.tyāgād bhedo nivartate || 111 ||*

Before the derivative formation, under 'treatment as though joined', the genitive would rest on difference; in the formation, from the abandonment of the number-particulars, difference withdraws.

The answer to 3.14.110. *Prag vr̥tter yuktavad-bhave ṣaṣṭhī bhedasrayā bhavet*: *before* the derivative formation, under *yuktavad-bhava*, the *genitive* would *rest on difference* — the rule looks back to the analysed phrase, where the genitive really did relate two differentiated things. *Vr̥tau saṅkhyā-visesaṇam tyagād bhedo nivartate*: in the formation, from the *abandonment* of the *number-particulars*, *difference withdraws*. So the two prescriptions do not collide after all: they apply at different moments. *Yuktavad-bhava* reaches back to a stage where difference obtained; *abheda-ekatva* describes the stage after. The objection assumed a single time, and there are two — which is 3.14.61's *antarangatva* argument (what was formed first leaves its mark) in a semantic key.

Verse 3.14.112

विद्यमानसु सङ्ख्यासु केचित् सङ्खयान्तरं विदुः ।
अभेदाख्यमुपग्राहि वृत्तौ तच्चोपजायते ॥ 112 ॥

*vidyamānasu saṅkhyāsu kecit saṅkhyāntaram viduḥ |
abhedākhyamupagrāhi vṛttau taccopajāyate || 112 ||*

While the numbers exist, some know another number — called 'non-difference', comprehending; and that arises in the derivative formation.

The doctrine restated with its authorities. Vidyamanasu sankhyasu: *while the numbers exist* — the members' numbers are not annihilated; they are there. Kecit sankhyantaram viduh: *some know another number* — a further one, over and above them. Abhedakhyam upagrahi: called 'non-difference', *comprehending* — upagrahin: taking-in, including; the new number does not replace the old ones but contains them. Vṛttau tac ca upajāyate: *and that arises in the derivative formation*. So the honey-image of 3.14.100 is now precise: the herb-juices are still there (vidyamanasu), and the honey is a further thing that has taken them in (upagrahi). Nothing is destroyed by composition; something is added that comprehends what it was made of.

Verse 3.14.113

व्यापारं याति भेदाख्यैस्तत् स्वैरवयवैः क्वचित् ।
आत्मा भेदानपेक्षोऽस्य क्वचिदेति निमित्तात् ॥ 113 ॥

*vyāpāram yāti bhedākhyaiḥ tat svairavayavaiḥ kvacit |
ātmā bhedānapēkṣo'sya kvacideti nimittatām || 113 ||*

That goes into operation somewhere through its own members, called 'difference'; somewhere its self, independent of the differences, attains causality.

Why the compound behaves two ways. Vyaparam yati bhedakhyais tat svair avayavaiḥ kvacit: *that goes into operation somewhere through its own members, called 'difference'* — in some rules the compound acts through its parts, and the parts are live. Atma bhedanapekṣo 'sya kvacid eti nimittatam: *somewhere its self, independent of the differences, attains causality* — nimittata: the state of being the occasioning cause. So the compound has two modes: through-the-parts and as-a-whole, and which one operates depends on the rule. This is the formal statement of what 3.14.111 discovered — the same compound answers to yuktavad-bhava through its members and to the number-rules through its self — and it saves the doctrine without softening it. The whole is one (3.14.96); it is also, when a rule asks, addressable through parts it does not have.

Verse 3.14.114

दास्याः पतिरिति व्यक्तो गोदाविति च दृश्यते ।
व्यापारभेदः सङ्ख्यायास्तस्यादेवं व्यवस्थितः ॥ 114 ॥

dāsyāḥ patiriti vyakto godāviti ca drśyate |
vyāpārabhedah saṅkhyāyāstasyādevam vyavasthitah || 114 ||

'The slave-woman's husband' is manifest, and 'godau' is seen; the difference in the number's operation is therefore settled in this way.

The two modes of 3.14.113 exhibited. *Dasyah patir iti vyaktah*: 'dasyah patih' — the slave-woman's husband, the tradition's standing case of a phrase that resists compounding — is *manifest*: here the parts are live and the genitive stands. *Godav iti ca drsyate*: and 'godau' — the dual, the very form 3.14.110 said would not come out — is *seen*: it is there in usage, whatever the theory says. *Vyapara-bhedah saṅkhyayah tasmad evam vyavasthitah*: the *difference in the number's operation is therefore settled* in this way. So the doctrine is not being defended a priori: two forms are pointed at, one behaving through parts and one as a whole, and the two-mode account is read off them. *Drsyate* — is *seen* — is the argument. Usage settles it (3.14.43's loka-vyavastha).

Verse 3.14.115

द्वयादीनां च द्विपुत्रादौ बाह्यो भेदो निवर्तते ।
विभक्तिवाच्यः स्वार्थत्वान्निमित्तं त्ववतिष्ठते ॥ 115 ॥

dvayādīnām ca dviputrādau bāhyo bhedo nivartate |
vibhaktivācyaḥ svārthatvānnimittam tvavatiṣṭhate || 115 ||

And of 'dvi' and the rest, in 'dviputra' and the like, the external difference, expressible by the case-ending, withdraws, since it is the word's own meaning; but the cause remains.

Numerals inside compounds. *Dvyadinam ca dviputradau bahyo bhedo nivartate*: of 'dvi' and the rest, in 'dviputra' (two-sonned) and the like, the *external difference withdraws* — *bahya*: outer, the duality that would have been carried by an ending. *Vibhakti-vacyah svarthatvat*: *expressible by the case-ending*, since it is the word's *own meaning* — 'dvi' means two, so it does not also need an ending to say two: what the stem says, the ending need not (3.11's the numeral and the number-ending saying the same thing twice). *Nimittam tv avatisthate*: but the *cause remains* — the duality is still the occasion of the form, even with its outer expression gone. So the number is not lost; it is relocated from the ending into the stem's own sense, and it goes on causing (3.14.113's nimittata).

Verse 3.14.116

द्वित्वोपसर्जने सङ्घे द्विशब्दस्तत्र वर्तते ।
सोऽयमित्यभिसम्बन्धादुभशब्दे न तत्तथा ॥ 116 ॥

dvitvopasarjane saṅghe dviśabdastatra vartate |
so'yamityabhisambandhādubhaśabde na tattathā || 116 ||

In an aggregate where duality is subordinate, the word 'dvi' operates there, from the connection 'this is that'; in the word 'ubha' it is not so.

Dvitya-upasarjane saṅghe dvi-sabdas tatra vartate: in an *aggregate* where *duality* is *subordinate*, the word 'dvi' operates there — where twoness is the subordinate element (3.14.95's upasarjana), 'dvi' can stand. So 'yam ity abhisambandhat: from the *connection* 'this is that' — the identification that lets a numeral name a group. Ubha-sabde na tat tatha: in the word 'ubha' (both) it is *not* so. So 'ubha' will not do what 'dvi' does: it cannot be subordinated, cannot enter the identification. The difference is that 'dvi' counts and 'ubha' *totalizes* — it says not two but *the* two, both of them, and a totality has nothing above it to be subordinate to. The following verses work out what follows from this.

Verse 3.14.117

उभयस्तस्य तुल्यार्थो वृत्तौ नित्यं प्रयुज्यते ।
सूत्रेऽपि नित्यग्रहणं तदर्थमभिधीयते ॥ 117 ॥

ubhayastasya tulyārtho vṛttau nityam prayujyate |
sūtre'pi nityagrahaṇam tadartham abhidhiyate || 117 ||

'Ubhaya', equal in meaning to it, is always employed in the derivative formation; in the *sutra* too, the taking-up of 'nitya' is stated for that purpose.

Ubhayas tasya tulyārtho vṛttau nityam prayujyate: 'ubhaya' — *equal in meaning* to 'ubha' — is *always* employed in the *derivative formation*: where a compound is wanted, 'ubhaya' goes in and 'ubha' does not. Sūtre 'pi nitya-grahanam tad-artham abhidhiyate: in the *sutra* too, the taking-up of 'nitya' is stated *for that purpose*. So Panini's word 'nitya' in the relevant rule exists precisely to force this substitution — and here, unlike 3.14.40's redundant nitya, the word earns its place. The pair is instructive: the same technical device is idle in one rule and load-bearing in another, and only inspection tells which. Bhartrhari has no general verdict on the grammar's economy; he checks case by case.

Verse 3.14.118

आपि के चापरार्थत्वान्नाभेद उपजायते ।
उभे इति ततः स्वार्थे भेदवृत्तिः प्रयुज्यते ॥ 118 ॥

āpi ke cāparārthatvānnābheda upajāyate |
ubhe iti tataḥ svārthe bhedavṛttiḥ prayujyate || 118 ||

And in 'ap' and 'ka', from their serving another's purpose, non-difference does not arise; therefore 'ubhe' — the difference-usage is employed, in its own meaning.

Api ke ca aparartatvat na abheda upajayate: in 'ap' and 'ka' — the affixes — from their *serving another's purpose*, *non-difference* does not arise: these affixes exist for someone else's sake and so cannot bring about the fusion of 3.14.99. Ubhe iti tatah svarthe bheda-vrttiḥ prayujyate: *therefore 'ubhe' — the difference-usage is employed, in its own meaning*. So where the affix cannot fuse, the form keeps its difference and stands in its own sense: 'ubhe', the dual, with its twoness intact. This confirms 3.14.116 — 'ubha' resists subordination and therefore resists fusion, and its dual survives everywhere.

[Contested: Pada a is compressed and its reading is not certain. We take 'api ke ca' as naming the affixes ap (tap) and ka, whose 'serving another's purpose' (apararthatva) then explains why abheda fails. The line can also be construed with 'api' as the particle and 'ke' otherwise resolved; the verse's conclusion — that 'ubhe' keeps its difference — is unaffected.]

Verse 3.14.119

स्त्रीत्वाभिधानपक्षेऽपि गुणभावविपर्ययः ।
स्वभावादपारार्थत्वात् तत्र भेदो न हीयते ॥ 119 ॥

strītvābhidhānapakṣe'pi guṇabhāvaviparyayaḥ |
svabhāvādaparāṛthatvāt tatra bhedo na hīyate || 119 ||

Even on the view that femininity is expressed, there is a reversal of subordination; from its own nature, from its serving another's purpose, difference is not lost there.

The same result on the rival account. Stritva-abhidhana-pakse 'pi: even on the view that femininity is expressed — that the feminine affix says femininity rather than merely revealing it (3.13's vacaka/dyotaka quarrel about gender). Guna-bhava-viparyayah: there is a reversal of subordination — what was subordinate becomes principal and vice versa. Svabhadā apararthatvat tatra bhedo na hiyate: from its own nature, from its serving another's purpose, difference is not lost there. So whichever way one decides the gender-question, 'ubhe' keeps its difference — the affix serves another and cannot fuse. Bhartrhari's habit again: show that the result survives the disputed premise, so the dispute need not be settled to get on (3.14.98's vacika va dyotika vapi, left open for the same reason).

Verse 3.14.120

तस्माद् द्विवचनाट्टापश्रोभयोऽन्यत्र दृश्यते ।
प्रत्ययं तयपं हित्वा नास्त्युत्तरपदे पुनः ॥ 120 ॥

tasmād dvivacanāṭṭāpaścobhaya'o'nyatra dṛśyate |
pratyayam tayapam hitvā nāstyuttarapade punaḥ || 120 ||

Therefore, from the dual and from 'tap', 'ubhaya' is seen elsewhere; leaving aside the affix 'tayap', it does not exist again in the second member.

Tasmad dvivacanat tapas ca ubhaya'o'nyatra drsyate: *therefore, from the dual and from 'tap', 'ubhaya' is seen elsewhere* — the form turns up outside the compound-context, where the dual and the feminine affix operate normally. Pratyayam tayapam hitva na astyuttarapade punah: *leaving aside the affix 'tayap', it does not exist again in the second member*. So 'ubhaya' is derived by tayap and, once derived, cannot recur as the latter member of a compound. The restriction is exactly what 3.14.116-119 predicted: a totalizer resists every subordinate position, and the second member of a compound is a

subordinate position. The rule falls out of the semantics rather than being stipulated — which is the pattern the whole *samuddesa* has been demonstrating.

Verse 3.14.121

प्राप्तिः प्रगृह्यसंज्ञाया न स्यात् प्रत्ययलक्षणात् ।
कुमार्यगारे न ह्यस्ति समासो वचनान्तरे ॥ 121 ॥

prāptiḥ pragrhyasamjñāyā na syāt pratyayalakṣaṇāt |
kumāryagāre na hyasti samāso vacanāntare || 121 ||

The obtaining of the term 'pragrhya' would not arise from the affix-indication; for in 'kumaryagara' there is no compound in another number.

Praptiḥ pragrhya-samjñaya na syāt pratyaya-lakṣaṇāt: the obtaining of the term 'pragrhya' — the designation for a final vowel exempt from sandhi, which duals characteristically get — would not arise from the affix-indication: *pratyaya-lakṣaṇa*, the principle that a rule conditioned by an affix still applies once the affix is elided. *Kumaryagare na hyasti samāso vacanāntare*: for in 'kumaryagara' (the girl's chamber) there is no compound in another number. So the pragrhya-designation cannot be got at through an elided dual, because the compound in question is not in that number at all: there is no dual there to be exempted, elided or otherwise. This is 3.14.98's number-difference withdrawing, cashed out in a sandhi-rule — the compound's number is not the members' number, and the rules that reach for the members' number find nothing.

Verse 3.14.122

एकद्वयोर्यज्ञादीनां विभाषा लुङ् न कल्पते ।
यौष्माकस्तावकश्चेति भेदाभावान्न सिध्यति ॥ 122 ॥

ekadvayoryañādīnām vibhāṣā luṅ na kalpate |
yausmākastāvakaśceti bhedābhāvānna sidhyati || 122 ||

For one and two, the optional elision of 'yañ' and the rest is not conceivable; 'yausmaka' and 'tavaka' do not succeed, from the absence of difference.

Eka-dvayor yanadinam vibhasa lun na kalpate: for one and two, the optional elision of 'yan' and the rest is not conceivable — the patronymic affix's optional *luk* requires a plurality to operate on, and one and two do not supply it. *Yausmakas tavakas ceti bhedabhavan na sidhyati*: 'yausmaka' and 'tavaka' — the derivatives from 'yusmad' and 'tvad' — do not succeed, from the absence of difference. So two rule-failures from the same cause: where the number has fused (3.14.99's *abheda-ekatva*), the rules that need a difference to work on have nothing. *Bhartrhari* is cataloguing the doctrine's costs as carefully as its benefits (3.14.106's benefit, this verse's cost), and he does not net them out.

Verse 3.14.123

दृष्टो गार्ग्यतरे भेदस्तथा गर्गतारा इति ।
युष्मत्पिता त्वत्पितेति तथादेशौ व्यवस्थितौ ॥ 123 ॥

dr̥ṣṭo gārgyatāre bhedastathā gargatārā iti |
yusmatpitā tvatpiteti tathādeśau vyavasthitau || 123 ||

Difference is seen in 'gargyatara', and likewise in 'gargatarah'; 'yusmat-pita' and 'tvat-pita' — thus the two substitutes are settled.

The counter-evidence, admitted. Dr̥sto gargyatāre bhedah: *difference is seen in 'gargyatara' — the comparative, which requires the difference 3.14.122 said was absent. Tatha gargatara iti: and likewise in 'gargatarah'. Yusmat-pita tvat-piteti tatha adesau vyavasthitau: 'yusmat-pita' and 'tvat-pita' — thus the two substitutes are settled: the plural-based and singular-based substitutes both occur, each in its own domain. Dr̥stah is again the operative word (3.14.114's dr̥syate): the forms exist and the theory must accommodate them. So difference does survive in some derivatives, and 3.14.124 must say how — which it does, by relocating the number into the base.*

Verse 3.14.124

उपाधिभूता या संख्यया प्रकृतौ समवस्थिता ।
आदेशैः संज्ञया वापि विभक्त्याव्यज्यते विना ॥ 124 ॥

upādhibhūtā yā saṅkhyā prakṛtau samavasthitā |
ādeśaiḥ samjñayā vāpi vibhaktyāvyajyate vinā || 124 ||

That number which, being an adjunct, is settled in the base, is manifested by substitutes, or by a technical term, even without a case-ending.

The resolution of 3.14.122-123. Upadhi-bhuta ya sankhya prakrtau samavasthita: that *number* which, being an *upadhi* — an adjunct, a qualifying condition rather than a constituent — is *settled in the base*. Adesaiḥ samjñaya vapi vibhaktya vyajyate vina: is *manifested by substitutes, or by a technical term, even without a case-ending*. Vyajyate: is *manifested, revealed* — not said (3.14.98's dyotika, and the word is chosen). So the number that 3.14.98 said withdraws from the compound has not gone anywhere: it has become an adjunct of the base, where no ending expresses it and the substitutes betray it. This is why 3.14.123's forms come out: 'tvat-pita' shows its singular through its substitute, having no ending to show it with. Number in a compound is not spoken; it is given away.

Verse 3.14.125

शौर्पिके मासजाते च परिमाणं स्वभावतः ।
उपाधिभूतामाश्रित्य सङ्ख्यां भेदेन वर्तते ॥ 125 ॥

śaurpika māsajāte ca parimāṇam svabhāvataḥ |
upādhibhūtāmāśritya saṅkhyāṁ bhedena vartate || 125 ||

In 'saurpika' and in 'masa-jata', the measure, by its own nature, resting on the number which is an adjunct, operates by way of difference.

The upadhi-number of 3.14.124 at work. Saurpika masa-jate ca parimanam svabhavataḥ: in 'saurpika' (measured by a surpa) and 'masa-jata' (a month old), the *measure*, by its own nature. Upadhi-bhutam asritya sankhyam bhedena vartate: *resting on the number* which is an *adjunct*, operates by way of difference. So measure-words carry their difference through the adjunct-number in the base, not through any ending: 'masa-jata' says one month and no ending says it. Svabhavataḥ is doing work — the measure is by its own nature quantitative, so it needs no help to reach the number that is sitting in its base. This finishes the account 3.14.84-86 began, and the two now agree: measure is certified by machinery and carried by the base.

Verse 3.14.126

वयस्विनि परिच्छेदः क्रीते चापि न गम्यते ।
इष्टो भेदादृते तत्र परिमाणमनर्थकम् ॥ 126 ॥

vayasvini paricchedaḥ krīte cāpi na gamyate |
iṣṭo bhedādṛte tatra parimāṇamanarthakam || 126 ||

In 'vayasvin' and in 'krita', the delimitation is not understood; the sense intended, apart from difference — there the measure is purposeless.

The contrast case. Vayasvini paricchedaḥ krite capi na gamyate: in 'vayasvin' (aged, possessing age) and in 'krita' (bought), the *delimitation* is not understood — pariccheda: the cutting-off, the definite quantity. 'Vayasvin' says one has age, not how much; 'krita' says bought, not for how much. Isto bhedad rte tatra parimanam anarthakam: the sense *intended, apart from difference* — there the *measure* is *purposeless*. Anarthaka: without purpose. So these words carry no adjunct-number at all (3.14.124), and reaching for one gets nothing. The pair with 3.14.125 is the point: some derivatives have quantity in their base and some have only quality, and no rule can tell which — one has to know the word. Which is 3.14.43 once more: the world's settled arrangement, and the science following after.

Verse 3.14.127

भिन्नस्याभेदवचनात् प्रस्थादिभ्यः शसो विधिः ।
तद्धर्मत्वादभेदात् तु घटादिभ्यो न दृश्यते ॥ 127 ॥

*bhinnasyābhedavacanāt prasthādibhyaḥ śaso vidhiḥ |
taddharmatvābhedāt tu ghaṭādibhyo na dr̥śyate || 127 ||*

From the expression of non-difference of what is different, the rule of 'sas' after 'prastha' and the rest; but from non-difference, because that is its property, it is not seen after 'ghata' and the rest.

Bhinnasya abheda-vacanāt prasthādibhyaḥ saso vidhiḥ: from the *expression of non-difference* of what is *different*, the rule of 'sas' after 'prastha' and the rest — the distributive affix, giving 'prastha-sah', prastha by prastha: many prasthas said as one distributive sweep. Tad-dharmatvad abhedat tu ghatadibhyo na dr̥śyate: but from *non-difference*, because that is its property, it is not seen after 'ghata' and the rest. So the distributive attaches to measure-words and not to pots: a measure is intrinsically a repeatable unit — abheda is its property — and a pot is not. This is 3.14.125-126's finding again (quantity is in some bases and not others), now settling which stems take an affix. The grammar's gana is not arbitrary; it tracks which words have a unit built into them.

Verse 3.14.128

श्रूयते वचनं यत्र भावस्तत्र विशिष्यते ।
निवर्तते यद् वचनं तस्य भवो न विद्यते ॥ 128 ॥

*śrūyate vacanam.yatra bhāvastatra viśiṣyate |
nivartate yad vacanam.tasya bhovo na vidyate || 128 ||*

Where the number-ending is heard, there the state is specified; that ending which withdraws — of that, there is no being.

A methodological principle, stated with force. Sruyate vacanam yatra bhavas tatra visisyate: *where the number-ending is heard, there the state is specified* — an audible ending does specifying work. Nivartate yad vacanam tasya bhavo na vidyate: that ending which *withdraws* — of *that*, there is *no being*. Bhavo na vidyate: it has no existence at all. So Bhartrhari refuses the halfway house: an elided ending is not a quiet ending, it is *not there*. This is stronger than 3.14.87's asadhutva-nivrtty-artham (where the elided matup was allowed to exist in order to certify) and stands in tension with it — the samuddesa is exploring both, and the tension is the subject-matter (3.14.113's two modes). What is not heard does not specify.

Verse 3.14.129

कार्यं सत्ताश्रयं शास्त्रदप्रवृत्तिरदर्शनम् ।
वाक्ये दृष्टं यदत्यन्तमभावस्तस्य वृत्तिषु ॥ 129 ॥

kāryam, sattāśrayam, śāstradapravṛttiradarśanam |
vākyaḥ dr̥ṣṭam, yadatyantamabhāvastasya vṛttiṣu || 129 ||

The operation rests on existence; from the science, non-application is non-appearance. What is seen utterly in the sentence — of that there is absence in derivative formations.

The consequence of 3.14.128. Karyam satta-asrayam: the operation rests on existence — a rule cannot act on what is not there. Sastrad apravṛttir adarsanam: from the science, non-application is non-appearance — the rule's failing to apply is the thing's not showing up; there is no further fact. Vakye dr̥ṣṭam yad atyantam abhavas tasya vṛttiṣu: what is seen utterly in the sentence — of that there is absence in derivative formations. So the sentence's visible articulation is absent — not hidden, not suppressed — in the compound. This is the samuddesa's core claim (3.14.49's atyanta-bheda) stated in the vocabulary of rule-application: nothing withdrew into the compound, because nothing was there to withdraw.

Verse 3.14.130

संज्ञाविषयभेदार्थं प्रसक्तादर्शनं स्मृतम् ।
क्षूयमाणं तु वचनं विशिष्टमुपलभ्यते ॥ 130 ॥

saṃjñāviṣayabhedārtham, prasaktādarśanam, smṛtam |
kṣūyamāṇam, tu vacanam, viśiṣṭamupalabhyate || 130 ||

For the sake of differentiating the domain of the technical term, the non-appearance of what was applicable is taught; but the ending which is heard is apprehended as specified.

Samjna-visaya-bhedartham prasakta-adarsanam smrtam: for the sake of differentiating the domain of the technical term, the non-appearance of what was applicable is taught — prasakta: what would have applied; adarsana: its not showing. The grammar deliberately teaches that an applicable thing fails to appear, and the teaching's purpose is to carve the term's domain. So the elision is a demarcation-device, not a report (3.14.42's rules as nidarsana). Sruyamanam tu vacanam visistam upalabhyate: but the ending which is heard is apprehended as specified. The audible one does real work; the elided one draws a boundary. Both are the grammar's; only one is the word's.

[Contested: Pada c is transmitted in our source as 'ksuyamanam', which yields no sense here; we read 'sruyamanam' ('being heard'), which the contrast with 3.14.128's 'sruyate' and with pada d's 'upalabhyate' requires. We note the source reading rather than silently normalising it.]

Verse 3.14.131

अभावो वा लुको यत्र रूपवान् वा विधीयते ।
व्यभिचारान्निमित्तस्य तत्रासाधुः प्रसज्यते ॥ 131 ॥

abhāvo vā luko yatra rūpavān vā vidhīyate |
vyabhicārānnimittasya tatrāsādhuḥ prasajyate || 131 ||

Where absence, or elision, or a substitute possessing form is prescribed — there, from the deviation of the cause, incorrectness follows.

The cost of the whole apparatus. *Abhavo va luko yatra rupavan va vidhiyate*: where *absence*, or *luk*, or a *substitute possessing form* is *prescribed* — the grammar's three ways of handling what is not audibly there. *Vyabhicaran nimittasya tatra asadhuh prasajyate*: *there*, from the *deviation* of the *cause*, *incorrectness follows*. *Vyabhicara*: straying, failure of invariable concomitance — the occasioning cause does not hold steady across the cases. So wherever the grammar posits an absence, the conditioning breaks down somewhere and a bad form is generated. This is 3.14.76's *vyutpattir anavasthita* made concrete: the derivational machinery leaks, and it leaks precisely at the points where it posits what is not there (3.14.74's imagined parts).

Verse 3.14.132

भेदः संख्या विशेषोवाव्याख्यातो वृत्तिवाक्ययोः ।
सर्वत्रैव विशेषस्तु नावश्यं तादृशो भवेत् ॥ 132 ॥

bhedah samkhyā viśeṣovāvyākhyāto vṛttivākyayoh |
sarvatraiva viśeṣastu nāvaśyam tādrśo bhavet || 132 ||

Difference, number, or particular has been expounded for the derivative formation and the sentence; but the particular need not everywhere be of that kind.

A caution against over-generalizing what has been established. *Bhedah samkhyā viseso va vyakhyato vrtti-vakyayoh*: *difference*, *number*, or *particular* has been *expounded* for the *derivative formation* and the *sentence* — the *samuddesa's* results so far. *Sarvatra eva visesas tu na avasyam tadrso bhavet*: but the *particular* need not *everywhere* be of *that kind*. *Na avasyam*: not necessarily. So the analysis was of certain cases and does not automatically extend. *Bhartrhari* is guarding his own conclusions against the very error he charged others with (3.14.76's taking the *upayas* for true): a result reached on some forms is an *upaya* for those forms, and carrying it everywhere would make it a doctrine. The *samuddesa* polices itself by the standard it set.

Verse 3.14.133

जातेश्च भेदहेतुत्वान्न लिङ्गेन विशेष्यते ।
प्रधानं मृगदुग्धादौ गार्गीपुत्रे न स क्रमः ॥ 133 ॥

*jāteśca bhedahetutvānna liṅgena viśeṣyate |
pradhānam.mṛgadugdhādau gārgīputre na sa kramah || 133 ||*

And from the universal's being the cause of difference, the principal is not qualified by gender in 'mrga-dugdha' and the rest; in 'gargi-putra' that sequence does not hold.

Jates ca bheda-hetutvat: from the *universal's* being the *cause of difference* — the *jati* is what differentiates, so it does the qualifying. Na lingena visesyate pradhanam mrga-dugdhadau: the *principal* is not qualified by *gender* in 'mrga-dugdha' (deer's milk) and the rest — the milk is not made feminine by the doe: gender does not reach across into the principal. Gargi-putre na sa kramah: in 'gargi-putra' (Gargi's son) that *sequence* does not hold — here the feminine of the first member is doing something, and the sequence reverses. So two compounds, alike in form, differ in whether gender penetrates. This is 3.14.132's caution being exercised at once: the particular is not everywhere of the same kind, and here is a pair to prove it.

Verse 3.14.134

अभेदे लिङ्गसंख्याभ्यां योगाच्छुक्लं पटाइति ।
प्रसक्ते शास्त्रमारब्धं सिद्धये लिङ्गसंख्ययोः ॥ 134 ॥

*abhede liṅgasamkhyābhyāṃ.yogācchuklam.paṭāiti |
prasakte śāstramārabdham.siddhaye liṅgasamkhyayoh || 134 ||*

In non-difference, from connection with gender and number, 'suklam patah' being applicable — the science is undertaken for the establishing of gender and number.

Why the grammar has gender-and-number rules at all. Abhede linga-samkhyabhyam yogat: in *non-difference*, from *connection with gender and number*. Suklam pata iti prasakte: 'suklam patah' — the ungrammatical mixture, a neuter singular adjective with a masculine plural noun — being *applicable*: without a rule, that is what would come out, since abheda leaves the qualifier with no reason to agree. Sastram arabdham siddhaye linga-samkhyayoh: the *science* is *undertaken* for the *establishing of gender and number*. So agreement is not a fact of the meaning — the meaning is undivided and has no agreement in it (3.14.92's anusyuta) — and the grammar must impose it. This is a striking admission: concord is the sastra's contribution, not the world's.

Verse 3.14.135

परार्थं शेषभावं यो वृत्तिषु प्रतिपद्यते ।
गुणो विशेषणत्वेन स सूत्रे व्यपदिश्यते ॥ 135 ॥

parārtham, śeṣabhāvam, yo vṛttiṣu pratipadyate |
guṇo viśeṣaṇatvena sa sūtre vyapadiśyate || 135 ||

That quality which, for another's sake, attains the state of remainder in derivative formations — that is designated in the sutra by way of being a qualifier.

Pararthaam sesa-bhavam yo vṛttisu pratipadyate: that *quality* which, *for another's sake*, attains the *state of remainder* in *derivative formations* — sesa: what is left over, the residue after the principal has taken what it needs. Guno visesanatvena sa sūtre vyapadiśyate: that is *designated* in the *sutra* by way of being a *qualifier*. Vyapadiśyate: is *designated* — the samuddesa's careful verb for a name that is apt without being a description (3.14.105's vyapadesarha). So Panini's 'visesana' names whatever is left over serving another's purpose, and the naming is a convenience. The qualifier is not a thing in the meaning; it is the grammar's label for a residue — which is why 3.14.134's concord had to be imposed on it.

Verse 3.14.136

शब्दान्तरत्वाद् वाक्येषु विशेषा यद्यपि श्रुताः ।
वृत्तेरभिन्नरूपत्वात् तेषु वृत्तिर्न विद्यते ॥ 136 ॥

śabdāntaratvād vākyeṣu viśeṣā yadyapi śrutāḥ |
vṛtterabhinnarūpatvāt teṣu vṛttirna vidyate || 136 ||

Although particulars are heard in sentences, from their being other words — from the derivative formation's non-different form, in them there is no derivative formation.

Sabdantarativād vakyesu visesa yady api srutah: although *particulars* are *heard* in *sentences*, from their being *other words* — the phrase has audible particulars, because the phrase is a different word (3.14.49's atyanta-bheda; 3.14.64). Vṛtter abhinna-rupativāt tesu vṛttir na vidyate: from the *derivative formation's non-different form*, in *them* there is *no derivative formation*. So one cannot find the compound inside the phrase: the phrase's particulars are not the compound's members, and there is no compounding going on in a phrase at all. This closes the door 3.14.52's rival wanted open. The compound is not a phrase that has undergone anything; the two are different words, and the particulars one hears belong to one of them only.

Verse 3.14.137-138

रूपाच्च शब्दसंस्कारः सामान्यविषयो यतः ।
तस्मात् तदाश्रयं लिङ्गं वचनं च प्रसज्यते ॥ 137 ॥
सलिङ्गं च ससङ्ख्यं च ततो द्रव्याभिधायिना ।
सम्बध्यते पदं तत्र तयोर्भिन्ना श्रुतिर्भवेत् ॥ 138 ॥

rūpācca śabdasaṃskāraḥ sāmānyaviṣayo yataḥ |
tasmāt tadāśrayam liṅgam vacanam ca prasajyate || 137 ||
saliṅgam ca sasankhyam ca tato dravyābhidhāyinā |
sambadhyate padam tatra tayorbhinnā śrutirbhavet || 138 ||

(137) And since the word's formation, from its form, has the general for its domain – therefore gender and number resting on that follow. (138) Then the word, with gender and with number, is connected with what expresses the substance; there, the hearing of those two would be separate.

How gender and number get into a word at all. (137): rupac ca sabda-samskaraḥ samanya-visayo yataḥ – the word's formation, from its form, has the general for its domain: the grammar operates on shapes, and shapes are general (3.14.78's science made of notation). Tasmāt tad-asrayam liṅgam vacanam ca prasajyate: therefore gender and number resting on that follow – they attach to the general form. (138): salingam ca sasankhyam ca tato dravyabhidhayina sambadhyate padam – then the word, with gender and number already on it, is connected with what expresses the substance. Tatra tayor bhinna śrutir bhavet: there, the hearing of those two would be separate. So gender and number arrive with the form, before the substance is in view, and one would then hear them twice – which is the difficulty 3.14.139 answers.

Verse 3.14.139

भाविनो बहिरङ्गस्य वचनादाश्रयस्य ये ।
लिङ्गसङ्ख्ये गुणानां ते सूत्रेण प्रतिपादिते ॥ 139 ॥

bhāvino bahiraṅgasya vacanādāśrayasya ye |
liṅgasankhye guṇānām te sūtreṇa pratipādite || 139 ||

The gender and number of the qualities, which come from the statement of the future, external substratum – those are taught by the sutra.

The answer. Bhavino bahirangasya vacanad asrayasya ye lingasankhye gunanam: the gender and number of the qualities, which come from the statement of the substratum – and the substratum is bhavin, future (not yet in view when the form was made), and bahiranga, external (settled later: 3.7.182's antaranga/bahiranga). Te sutrena pratipadite: those are taught by the sutra. So the double hearing of 3.14.138 does not arise: the qualifier's gender and number are not its own at all – they are borrowed from a substratum that comes afterwards and from outside, and the borrowing is what the rule prescribes. This is 3.14.134's admission completed: concord is imposed, and it is imposed by making the qualifier answer to something not yet there.

Verse 3.14.140

विशेषवृत्तेरपि च रूपाभेदादलक्षितः ।
यस्माद् विशेषस्तेनात्र भेदकार्यं न कल्पते ॥ 140 ॥

viśeṣavṛtteri ca rūpābhedādalakṣitaḥ |
yasmād viśeṣastenaātra bhedakāryam na kalpate || 140 ||

And even though it operates in the particular, since the particular is unmarked, from the non-difference of form — therefore here the difference-operation is not conceivable.

Visesa-vṛtteri api ca rupabhedad alaksitaḥ yasmād visesah: even though it *operates in the particular* (3.14.37's visesa-vṛttitva), the *particular is unmarked* — alaksita: uncharacterized, bearing no sign — from the *non-difference of form*: the form does not show which particular it has got. Tena atra bheda-kāryam na kalpate: *therefore here the difference-operation is not conceivable*. So a rule that needs a difference to operate on finds none, because the difference — though present — has left no mark on the shape, and the grammar reads shapes (3.14.137's samanya-visaya). This is the deepest version of the samuddesa's recurring finding: the science's blindness to particulars is not an oversight but a consequence of its being a science of forms.

Verse 3.14.141

विशेष एव सामान्यं विशेषाद् भिद्यते यतः ।
अभेदो हि विशेषाणामाश्रितो विनिवर्तकः ॥ 141 ॥

viśeṣa eva sāmānyam viśeṣād bhidyate yataḥ |
abhedo hi viśeṣāṇāmāśrito vinivartakaḥ || 141 ||

The general is the particular itself, since it is differentiated from the particular; for the non-difference of the particulars, when resorted to, is exclusive.

One of the boldest lines in the kanda. Visesa eva samanyam: the *general is the particular itself* — eva: nothing else. Visesa bhidyate yataḥ: *since it is differentiated from the particular* — and here is the paradox stated on purpose: the general is the particular, and it is what the particular is marked off from. The general is not a further thing; it is the particular seen as excluding others. Abhedo hi visesanam asrito vinivartakah: for the *non-difference of the particulars, when resorted to, is exclusive* — vinivartaka: what turns others away. So sameness is exclusion: to take several particulars as non-different just is to turn away everything else. There is no positive general over and above the turning-away. This is very close to what the Buddhists would build apoha out of, arrived at from the other side — Bhartrhari's samanya is real, and its reality consists in excluding.

Verse 3.14.142

यद् यदाश्रीयते तत् तदन्यस्य विनिवर्तकम् ।
भेदाभेदविभागस्तु सामान्ये न निरूप्यते ॥ 142 ॥

yad yadāśrīyate tat tadanyasya vinivartakam |
bhedābhedavibhāgastu sāmānye na nirūpyate || 142 ||

Whatever is resorted to, that excludes something else; but the division into difference and non-difference is not determined in the general.

The principle generalized, and then withheld. Yad yad asriyate tat tad anyasya vinivartakam: *whatever is resorted to, that excludes something else* – every resort is an exclusion, without exception. To take up anything at all is to turn away what it is not (3.14.101's bhedapohena vartate; 2.129's the mind's fixing on one thing being its exclusion of the rest). Bhedabhedavibhāgas tu samānye na nirūpyate: *but the division into difference and non-difference is not determined in the general*. Na nirūpyate: is not ascertained, cannot be settled. So the question 'is the general the same as its particulars or different?' has no answer – not because we lack information, but because the general is constituted by exclusion and exclusion is not one of the two. Bhartṛhari states his own doctrine and then declines to metaphysicalize it: the general excludes, and asking whether it is one with what it excludes is asking the wrong thing.

Verse 3.14.143

अपोद्धारश्च सामान्यमिति तस्योरकारिणः ।
निमित्तावस्थमेवातस्तत् स्वधर्मेण गृह्यते ॥ 143 ॥

apoddhāraśca sāmānyamiti tasyorakāriṇaḥ |
nimittāvasthamevātastat svadharmaṇa grhyate || 143 ||

And the general is an extraction – so it stands only in the condition of a cause; therefore it is grasped by its own property.

The general's status settled by naming its origin. Apoddharas ca samanyam: the *general* is an *apoddhara* – an *extraction*, the work's technical term for what the analyst lifts out of an undivided whole (2.10's words extracted from sentences as suffixes from words; 3.14.75's three storeys of extraction). So the samanya is not found; it is pulled out. Nimittavastham eva atah: *therefore it stands only in the condition of a cause* – nimitta-avastha: it exists in the state of being an occasioning condition, and in no other state. Tat sva-dharmaṇa grhyate: it is *grasped by its own property*. So the general is real exactly as far as it causes, and no further – which is 3.14.142's refusal to say whether it is one with its particulars, now given its ground. An extraction that occasions has nothing left over to be same or different.

[Contested: Pada b in our source reads 'tasyorakarinaḥ', which we cannot construe and take to be corrupt. We translate the verse from padas a, c and d, whose sense is secure, and leave b unrendered rather than emend on conjecture. Something like 'tasya upakarinaḥ' ('of that which assists') would fit the syntax, but we do not press it.]

Verse 3.14.144

अनिर्धारितधर्मत्वाद् भेदा एव विकल्पिताः ।
निमित्तैर्व्यपदिश्यन्ते सामान्याख्याविशेषिताः ॥ 144 ॥

anirdhāritadharṃmatvād bhedā eva vikalpitāḥ |
nimittairvyapadiśyante sāmānyākhyāviśeṣitāḥ || 144 ||

From the non-ascertainment of their properties, the differences alone, imagined, are designated by their causes, qualified by the name of the general.

What is actually going on when one uses a general term. Anirdharita-dharṃmatvad: from the non-ascertainment of their properties — one does not have the particulars' properties settled; one never does. Bheda eva vikalpitaḥ: the differences alone, imagined — vikalpita: constructed (3.14.74's bhagair iva vikalpitaiḥ). Nimittair vyapadiśyante samanyākhyā-visesitah: are designated by their causes, qualified by the name of the general. So there are only particulars, ill-known and constructed, and the general's name is a qualification laid over them by way of their occasioning conditions. Nothing general is being referred to. This is 3.14.143's apoddhara cashed out: the extraction leaves the particulars where they were and adds a name.

Verse 3.14.145

यदा तु व्यपदिश्येते लिङ्गसंख्ये स्वभावतः ।
प्रयोगेष्वेव साधुत्वं वाक्ये प्रक्रम्यते तदा ॥ 145 ॥

yadā tu vyapadiśyete liṅgasamkhye svabhāvataḥ |
prayogeṣveva sādhutvaṃ vākyaḥ prakramyate tadā || 145 ||

But when gender and number are designated by their own nature, then correctness is commenced in the sentence, in usages alone.

Yada tu vyapadiśyete liṅga-samkhye svabhavataḥ: when gender and number are designated by their own nature — not imposed by rule (3.14.134's sastram arabdham) but belonging to the words themselves. Prayogesv eva sadhutvaṃ vakyē prakramyate tada: then correctness is commenced in the sentence, in usages alone. Prayogesv eva: in usages and nothing else. So on this alternative, concord is not the grammar's imposition: it is a fact of how words are used, and sadhutva starts from usage and stays there. The verse offers the rival to 3.14.134-139's account, and it is the more deflationary of the two — there is no mechanism, only what the sistas say (3.14.43's loka-vyavastha).

Verse 3.14.146

तत्र प्रयोगोऽनियतो गुणानामाश्रयैः सह ।
सामान्यं यत् तदत्यन्तं तत्रैव समवस्थितम् ॥ 146 ॥

tatra prayogo'niyato guṇānāmāśrayaiḥ saha |
sāmānyam.yat tadatyantam.tatraiva samavasthitam || 146 ||

There, the usage of the qualities with their substrata is unfixed; that general which is utter is settled there alone.

Tatra prayogo 'niyata gunanam asrayaih saha: *there, the usage of the qualities with their substrata is unfixed* — aniyata: not settled, varying: which quality-word goes with which substratum is not determined by anything. Samanyam yat tad atyantam tatraiva samavasthitam: that *general* which is utter is settled *there alone* — atyanta: complete, unqualified; tatra eva: in *that* — in the usage itself, and nowhere else. So on 3.14.145's view the general has no seat but the practice: the usage is unfixed, and the general is wholly resident in it. This is the most radically usage-based moment in the samuddesa, and Bhartrhari lets it stand alongside the rule-based account without adjudicating (3.14.97's upayas unsettled among persons).

Verse 3.14.147

न गोत्वं शाबलेयस्य गौरिति व्यपदिश्यते ।
शुक्लत्वं बाहुलेयस्य शुक्ल इत्यपदिश्यते ॥ 147 ॥

na gotvam.śābaleyasya gauriti vyapadiśyate |
śuklatvam.bāhuleyasya śukla ityapadiśyate || 147 ||

The cowness of Sabaleya is not designated as 'cow'; the whiteness of Bahuleya is designated as 'white'.

An asymmetry between universals and qualities, exhibited in two words. Na gotvam sabaleyasya gaur iti vyapadiśyate: the *cowness* of *Sabaleya* — the dappled ox, the tradition's stock individual — is not designated as 'cow': 'gauh' names the animal, never the cowness. Suklatvam bahuleyasya sukla ity apadiśyate: the *whiteness* of *Bahuleya* is designated as 'white' — 'sukla' does reach the quality itself. So jati-words point past the universal to the individual, and guna-words do not: the two behave oppositely, and the grammar treats them alike. This is why 3.14.133's gender did not penetrate 'mrga-dugdha' and did penetrate 'gargi-putra'; and it is 3.14.132's warning made good — the particular is not everywhere of the same kind.

Verse 3.14.148

व्यतिरेके च सत्येवं मतुपः श्रवणं भवेत् ।
लुगन्वाख्यायते तस्माद् रसादिभ्यश्च नास्ति सः ॥ 148 ॥

*vyatireke ca satyevam matupah śravaṇam bhavet |
luganvākhyāyate tasmād rasādibhyaśca nāsti saḥ || 148 ||*

And when there is thus a difference, the hearing of 'matup' would occur; therefore elision is expounded, and after 'rasa' and the rest it does not exist.

Vyatireke ca saty evam matupah sravanam bhavet: when there is thus a *difference* — between the quality and its possessor — the *hearing* of 'matup', the possessive affix, *would occur*: if 'sukla' means whiteness and the cloth *has* it, the affix should be audible. Lug anvakhyayate tasmāt: *therefore luk* is *expounded* — the grammar posits the affix and deletes it (3.14.87's matub-lopa, for the same reason). Rasadibhyas ca na asti saḥ: and after 'rasa' (taste) and the rest, *it does not exist* — no matup, elided or otherwise. So the device is applied to some quality-words and withheld from others, and the withholding needs its own explanation. 3.14.149 gives it.

Verse 3.14.149

यत्सोऽयमिति संबन्धाद्रूपाभेदेन वर्तते ।
शुक्लादिवत् ततो लोपस्तद्रसादौ न विद्यते ॥ 149 ॥

*yatso'yamiti sambandhādrūpābhedenā vartate |
śuklādivat tato lopastadrasādaū na vidyate || 149 ||*

Since, from the connection 'this is that', it operates by non-difference of form, like 'sukla' and the rest — therefore the elision does not exist in 'rasa' and the rest.

Yat so 'yam iti sambandhad rūpābhedenā vartate: since, from the *connection* 'this is that', it operates by *non-difference of form* — the identification runs directly, with no formal gap between quality and possessor. Suklādivat: like 'sukla' and the rest. Tato lopas tad rasādaū na vidyate: *therefore the elision* does *not exist* in 'rasa' and the rest. So the argument is: where the identification is immediate, no affix was ever needed, and so none can be elided (3.14.128's what withdraws has no being). 'Rasa' just identifies with its possessor; 'sukla' has to be got there by a suppressed matup. The grammar's uneven treatment tracks a real unevenness in how the words work — which is 3.14.147's asymmetry again, one level down.

Verse 3.14.150

आवेशो लिङ्गसंख्याभ्यां क्वचिन्मञ्चादिवत् स्थितः ।
सोऽयमित्यभिसंबन्धे स प्रष्टादौ न विद्यते ॥ 150 ॥

āveśo liṅgasamkhyābhyāṃ kvacinmañcādivat sthitah |
so'yamityabhisambandhe sa praṣṭhādaṃ na vidyate || 150 ||

The entry by gender and number stands somewhere, like 'the platforms' and the rest; in the connection 'this is that', it does not exist in 'prastha' and the rest.

Avesah linga-samkhyabhyam kvacin mancadivat sthitah: the entry by *gender and number* stands somewhere, like 'manca' and the rest — 'manca hasanti', *the platforms laugh*: the platforms take the gender and number of the people on them, and the metonymy is complete enough to govern agreement. Avesa: entering, taking possession. So 'this is that' can be strong enough that one thing wears another's gender. So 'yam ity abhisambandhe sa prasthādaṃ na vidyate: in the connection 'this is that', it does not exist in 'prastha' and the rest. But not always: the measure-words do not take on what they measure. So the identification comes in strengths, and the grammar has to know which strength a word commands.

Verse 3.14.151

लिङ्गं लिङ्गपरित्यागे सूत्रे प्रत्ययशासनम् ।
सोऽयमित्यभिसंबन्धात् पुंशब्दे स्त्र्यभिधायिनी ॥ 151 ॥

liṅgam liṅgaparityāge sūtre pratyayaśāsanam |
so'yamityabhisambandhāt puṃśabde stryabhidhāyinī || 151 ||

The gender, in the abandonment of gender, is in the sutra the teaching of the affix; from the connection 'this is that', in a masculine word, the one expressing the feminine.

Lingam linga-parityage sutre pratyaya-sasanam: the *gender*, in the *abandonment of gender*, is in the *sutra* the *teaching of the affix* — where a word has dropped its gender, what the rule supplies is not a gender but an affix: the grammar deals in morphology and lets the gender follow. So 'yam ity abhisambandhat puṃśabde stry-abhidhayini: from the connection 'this is that', in a *masculine word*, the one *expressing the feminine*. So a feminine affix lands on a masculine stem, carried by the identification. This is 3.14.150's avesah in a specific case, and it shows how the grammar handles what it cannot state: it prescribes a suffix and lets the semantics arrive by identification.

Verse 3.14.152

आश्रये लिङ्गसंख्याभ्यामाश्रितं व्यपदिश्यते ।
विशेषणानां चाजातेरिति शास्त्रव्यवस्थया ॥ 152 ॥

*āśraye liṅgasamkhyābhyāmāśritam, vyapadiśyate |
viśeṣaṇānām, cājāteriti śāstravyavasthaya || 152 ||*

In the substratum, what is resorted to is designated by gender and number; and by the settled arrangement of the science, 'of qualifiers, and not of a universal'.

Asraye linga-samkhyabhyam asritam vyapadisyate: in the *substratum*, what is *resorted to* is *designated* by *gender and number* — the qualifier takes its gender and number from where it rests (3.14.139's borrowed concord). Visasananam ca ajater iti sastra-vyavasthaya: and by the *settled arrangement* of the science, 'of *qualifiers, and not of a universal*' — the rule's own words, restricting the provision to qualifiers and excluding universals. So the borrowing is not universal: a jati-word does not take its substratum's gender, and the sutra says so. This is 3.14.147's asymmetry finding its way into Panini's wording — the grammar had noticed that universals and qualities behave differently, and had written the difference into a rule.

Verse 3.14.153

निमित्तानुवाधायित्वाद् ये धर्मा भेदहेतुषु ।
त आश्रयेऽपि विद्यन्त इति बुद्धिर्निवर्त्यते ॥ 153 ॥

*nimittānuvādhāyitvād ye dharmā bhedahetuṣu |
ta āśraye'pi vidyanta iti buddhirnivartyate || 153 ||*

The cognition that 'those properties which are in the difference-causes, from their conforming to the cause, exist also in the substratum' — is set aside.

An error blocked. Nimitta-anuvidhayitvad ye dharma bheda-hetusu: *those properties* which are in the *difference-causes*, from their *conforming to the cause* — anuvidhayin: following after, taking their shape from. Ta asraye 'pi vidyanta iti buddhir nivartyate: the *cognition* that they *exist also in the substratum* — is *set aside*. Nivartyate: is turned back. So one must not infer that because a qualifier's properties follow its cause, those properties are also in the thing qualified. The properties belong to the conditions, and the substratum does not acquire them by being conditioned. This guards 3.14.152's restriction from the obvious slide, and it is a small instance of the samuddesa's constant discipline: what the analysis puts somewhere for its own reasons must not be allowed to migrate into the object.

Verse 3.14.154

आख्यायते च शास्त्रेण लोकरूढा स्वभावतः ।
निमित्ततुल्या गोदादौ प्रवृत्तिर्लिङ्गसंख्ययोः ॥ 154 ॥

*ākhyāyate ca śāstreṇa lokarūḍhā svabhāvataḥ |
nimittatulyā godādau pravṛttirliṅgasamkhyayoh || 154 ||*

And the operation of gender and number in 'goda' and the rest — established in the world by its own nature, similar to the cause — is stated by the science.

The relation of science and usage, stated in one line. Akhyayate ca sastrena: is stated by the science — akhyayate: is reported. Loka-rudha svabhavatah: established in the world by its own nature — rudha: settled, grown into place, the word for what convention has made unanalysable (3.14.55's rudhi). Nimitta-tulya godadau pravrttir linga-samkhyayoh: the operation of gender and number in 'goda' and the rest, similar to the cause. So the order is: the world settles it by its own nature, the operation resembles the causes, and the science reports. The grammar is not the source; it is downstream (3.14.81's anugamyate, correctness followed out). This is 3.14.145-146's usage-account and 3.14.134's rule-account reconciled — the rules are true reports of what usage settled.

Verse 3.14.155

हरीतक्यादिषु व्यक्तिः सङ्ख्या खलतिकादिषु ।
मनुष्यलुब्धिविशेषाणामभिधेयाश्रयं द्वयम् ॥ 155 ॥

*haritakyādiṣu vyaktiḥ saṅkhyā khalatikādiṣu |
manuṣyalubdhivīśeṣāṇāmabhidheyāśrayam dvayam || 155 ||*

In 'haritaki' and the rest, the individual; in 'khalatika' and the rest, number; of the particulars of 'manusya' and of the luk, the pair rests on what is expressed.

Three cases sorted. Haritakyadisū vyaktiḥ: in 'haritaki' (the myrobalan) and the rest, the individual — the word reaches the individual fruit. Saṅkhyā khalatikadisū: in 'khalatika' and the rest, number. Manusya-lub-visesanam abhidheyasrayam dvayam: of the particulars of 'manusya' and of the luk, the pair — gender and number — rests on what is expressed. Abhidheyasraya: resting on the expressed, i.e. taking their character from the meaning rather than the form. So three word-classes and three different anchors: individual, number, and the meaning itself. The catalogue is unglamorous and it is the samuddesa's method — 3.14.132 said the particular is not everywhere the same, and this is what checking looks like.

Verse 3.14.156

जातिप्रयोगे जात्या चेत् सम्बन्धमुपगच्छति ।
विशेषणं ततो धर्मां जातेस्तत् प्रतिपद्यते ॥ 156 ॥

*jātiprayoge jātyā cet sambandhamupagacchati |
viśeṣaṇam tato dharmāñ jātestat pratipadyate || 156 ||*

If, in the use of the universal, the qualifier comes into connection with the universal — then it acquires the properties of the universal.

Jati-prayoge jatya cet sambandham upagacchati visesanam: if, in the use of the universal, the qualifier comes into connection with the universal. Tato dharman jates tat pratipadyate: then it acquires the properties of the universal. So a qualifier attached to a jati-word takes on the jati's characteristics — including, presumably, the absence of number that 3.14.107 established (jatau dvivacanabhavat). The verse is conditional throughout: if the connection is with the universal. Because it need not be — the qualifier might attach to the individual instead, and then everything changes. 3.14.157 takes the other branch.

Verse 3.14.157

लुबन्ते सन्निपतितं जातेरन्यद् विशेषणम् ।
लुबन्तस्य प्रधानत्वात् तद्धर्मैर्व्यपदिश्यते ॥ 157 ॥

*lubante sannipatitam jāteranyad viśeṣaṇam |
lubantasya pradhānatvāt taddharmairvyapadiśyate || 157 ||*

A qualifier other than the universal, having fallen upon a form ending in luk — from that form's being principal, it is designated by its properties.

The other branch. Lubante sannipatitam jater anyad visesanam: a qualifier other than the universal, having fallen upon a form ending in luk — sannipatita: alighted, come to rest on. Lubantasya pradhanatvat tad-dharmair vyapadiśyate: from that form's being principal, it is designated by its properties. So where the qualifier lands on a luk-ending word rather than on the universal, it takes that word's properties instead — because the luk-ending word is principal there. The pair 3.14.156-157 is a clean statement of the samuddesa's general finding: a qualifier has no properties of its own; it takes whichever ones the thing it rests on has (3.14.139's borrowed concord, 3.14.152's asraye). What varies is only what it lands on.

Verse 3.14.158

अबहुर्वीहिवन्द्वस्त्र्यतिशयेषु ये ।
भेदा भाष्यानुसारेण वाच्यास्ते लिङ्गसङ्ख्ययोः ॥ 158 ॥

abahurvīhidvandvastryatiśayeṣu ye |
bhedā bhāṣyānusāreṇa vāc्यāste liṅgasamṅkhyayoh || 158 ||

Those differences of gender and number which occur in the non-bahuvrihi, the dvandva, the feminine and the superlative — are to be stated in accordance with the Bhasya.

The gender-and-number stretch closed by deferral. Abahurvrihi-dvandva-stry-atisayesu ye bheda: those *differences* which are in the *non-bahuvrihi*, the *dvandva*, the *feminine* and the *superlative* — four remaining classes, each with its own gender-and-number irregularities. Bhasyanusarena vacyas te liṅga-samkhyayoh: are to be stated in accordance with the Bhasya. Bhasyanusarena: following Patanjali. So Bhartrhari declines to redo what the Bhasya has done and points the reader there (3.14.34's citing the Bhasya's admission; 2.475). The gesture is characteristic: the karikas are not a complete grammar and do not pretend to be — they are a philosophy of one, and where the grammar has already spoken well, Bhartrhari says so and moves on.

[Contested: Pada a is metrically short in our source (reading 'abahurvīhi-dvandva-stry-atisayesu ye'), and the compound's first member is transmitted as 'abahurvīhi' rather than the expected 'abahuvrihi'. We render the sense the four-item list requires. The list's membership, not the metre, carries the verse.]

Verse 3.14.159

यदि षष्ठीद्वितीयान्तान्निकृष्टात् तरबादयः ।
न्यक्कारिणी स्युरुत्कृष्टे प्रकृतेः स्यात् विलिङ्गता ॥ 159 ॥

yadi ṣaṣṭhīdvitīyāntānnikṛṣṭāt tarabādayaḥ |
nyakkārīṇī syurutkrṣṭe prakṛteḥ syāt viliṅgatā || 159 ||

If 'tarap' and the rest came after the inferior thing ending in genitive or accusative, then, in the case of the superior which does the humbling, there would be a gender-discrepancy of the base.

The comparative's derivation, and a difficulty. Yadi sasthi-dvitiyantan nikrstat tarabadayah: if 'tarap' and the rest — the comparative affixes — came after the *inferior* thing ending in *genitive* or *accusative*: i.e. if 'X-tara' were derived from the one X surpasses. Nyakkarini syur utkrste prakrteh syad vilingata: in the case of the *superior* which does the *humbling*, there would be a *gender-discrepancy* of the *base* — vilingata: the base would end up with the wrong gender, since the surpassed and the surpassing need not share one. So the derivation would make the comparative's gender depend on whoever is being outdone, which is plainly wrong. The next verses spell out how wrong.

Verse 3.14.160-161

काल्यां कालाद् द्वितीयान्तात् काले काल्यास्तरब् भवेत् ।
 न्यक्कर्तृति तथा गार्ग्ये गर्गेभ्यः प्रत्ययो भवेत् ॥ 160 ॥
 न्यक्कर्तृषु च गर्गेषु गार्ग्यात् स्यात् तच्च नेष्यते ।
 कुमार्याः स्वार्थिके डीप् स्यात् प्रकृत्यर्थो हि नाधिकः ॥ 161 ॥

kālyām, kālād dvitīyāntāt kāle kālyāstarab bhavet |
nyakkartari tathā gārgye gargebhyah pratyayo bhavet || 160 ||
nyakkartṛṣu ca gargeṣu gārgyāt syāt tacca neṣyate |
kumāryāḥ svārthike nīp syāt prakṛtyartha hi nādhikah || 161 ||

(160) In 'kali', 'tarap' would come from 'kala' ending in the accusative; in 'kala', from 'kali'. Likewise, when Gargya does the humbling, the affix would come from the Gargas. (161) And when the Gargas do the humbling, it would come from Gargya — and that is not desired. For 'kumari', in the svarthika, 'nip' would apply; for the base-meaning is not in excess.

The absurdity of 3.14.159 spelled out on four forms. (160): *kalyam kalad dvitiyantat kale kalyas tarab bhavet* — in the feminine 'kali', 'tarap' would come from masculine 'kala'; and in 'kala', from feminine 'kali': each would take the other's gender, and the derivation would deliver 'kalitara' where 'kalatara' is wanted. *Nyakkartari tathā gārgye gargebhyah pratyayo bhavet*: likewise where *Gargya* humbles, the affix would come from the *Gargas* — the plural. (161): *nyakkartṛsu ca gargesu gargyat syat tac ca nesyate* — and conversely; *and that is not desired*. *Kumaryah svarthike nip syat prakṛtyartha hi nādhikah*: for 'kumari', in the svarthika, 'nip' would apply, for the *base-meaning is not in excess* — the affix adds nothing, so nothing licenses the change. Four forms, four wrong results.

Verse 3.14.162

षष्ठ्यन्तादधिके तस्माद् गुणे स्वाश्रयवर्तिनि ।
 उत्कृष्टसमवेतायां क्रियायां वा विधीयते ॥ 162 ॥

ṣaṭhyantādhike tasmād guṇe svāśrayavartini |
utkrṣṭasamavetāyām, kriyāyām, vā vidhīyate || 162 ||

Therefore it is prescribed after a genitive-ending, when the quality residing in its own substratum is in excess — or in an action inhering in the superior.

The correct derivation. *Sasthyantad adhike tasmad guṇe svasraya-vartini*: *therefore* after a *genitive-ending*, when the *quality* residing in its *own substratum* is *in excess* — the comparative is built on the *quality's* excess, and the quality stays in its own seat: *svasraya-vartin*. *Utkrsta-samavetayam kriyayam va vidhiyate*: *or in an action inhering in the superior*. So 'tarap' attaches where the excess is — in the quality, or in the action — and not to whoever is surpassed. The gender-discrepancy of 3.14.159-161 never arises, because the base was never the inferior party. The whole objection came from putting the affix in the wrong place, and the repair is to locate the excess correctly.

Verse 3.14.163

उपात्तं च प्रकृत्यर्थो द्रव्यमेवाश्रयस्तयोः ।
सोऽयमित्यभिसंबन्धादभेदेन प्रतीयते ॥ 163 ॥

upāttam ca prakṛtyartho dravyamevāśrayastayoh |
so'yamityabhisamṇbandhādabhedena pratīyate || 163 ||

And what is taken up — the base-meaning — the substance alone is the substratum of those two; from the connection 'this is that', it is cognized by non-difference.

Upattam ca prakṛtyartho dravyam eva asrayas tayoh: what is *taken up*, the *base-meaning* — the *substance alone* is the *substratum* of those *two* (gender and number). Dravyam eva: the substance and nothing else; qualities and universals do not hold gender or number in their own right. So 'yam ity abhisambandhad abhedena pratiyate: from the connection 'this is that', it is *cognized by non-difference*. So the substance is where gender and number live, and everything else that seems to have them has borrowed them by identification (3.14.150's *avesa*). This is the resolution of the whole gender-and-number stretch: there is one bearer, and the rest is 'this is that'.

Verse 3.14.164

रूपाभेदाच्च तद् द्रव्यमाकाङ्क्षावत् प्रतीयते ।
विशेषैर्भिन्नरूपैस्तदाश्रयैरिव युज्यते ॥ 164 ॥

rūpābhedācca tad dravyamākāṅkṣāvat pratīyate |
viśeṣairbhinnarūpaistadāśrayairiva yujyate || 164 ||

And from non-difference of form, that substance is cognized as having expectancy; it is joined with particulars of different forms, as though with substrata.

Rupabhedac ca tad dravyam akanksavat pratiyate: from *non-difference of form*, that *substance* is cognized as *having expectancy* — *akanksavat*: with a gap in it, reaching (2.4's *sakanksa*). Because its form shows no differences, the substance presents itself as incomplete and wanting qualification. Visesair bhinna-rupais tad asrayair iva yujyate: it is *joined with particulars of different forms, as though with substrata*. Iva: as though. So the substance takes on particulars as if they were its supports — when in fact it is the support and they are the borrowers (3.14.163). The relation inverts in the cognition, and iva marks the inversion. This is 3.14.9-11's two open generals drawing away each other's doubt, now stated for substance and quality.

Verse 3.14.165

भिन्नरूपेषु यल्लिङ्गं विशेषेषु व्यवस्थितम् ।
संख्या च ताभ्यां द्रव्यात्मा सोऽभिन्नो व्यपदिश्यते ॥ 165 ॥

*bhinnarūpeṣu yallīṅgam.viśeṣeṣu vyavasthitam |
saṁkhyā ca tābhyāṁ.dravyātmā so'bhinno vyapadiśyate || 165 ||*

That gender which is settled in the particulars of different forms, and number — by those two the substance-self, undivided, is designated.

Bhinna-rupesu yal lingam visesesu vyavasthitam samkhyā ca: the *gender settled* in the *particulars of different forms, and number* — the two live in the particulars. Tabhyam dravyatma so 'bhinno vyapadiśyate: by those two the *substance-self, undivided, is designated*. Abhinnah: undivided (3.14.99's abheda-ekatva; 3.14.93's tad-atmany avibhakte). So the traffic runs both ways: the substance lends its gender and number to the particulars (3.14.163), and the particulars are what designate the substance by means of them. And the substance so designated is undivided — it does not acquire the particulars' divisions by being pointed at through them. Vyapadiśyate again: designated, not described (3.14.135).

Verse 3.14.166

आश्रयः समवायी च निमित्तं लिङ्गसंख्ययोः ।
कर्तृस्थभावकः शेतितो भाष्य उदाहृतः ॥ 166 ॥

*āśrayaḥ samavāyī ca nimittam.liṅgasamkhyayoh |
kartṛsthābhāvakaḥ śetirato bhāṣya udāhṛtaḥ || 166 ||*

The substratum, and what inheres, are the cause of gender and number; therefore 'si', whose state resides in the agent, is cited in the Bhasya.

Asrayah samavayi ca nimittam linga-samkhyayoh: the *substratum, and what inheres, are the cause of gender and number* — two causes, not one: where the thing rests, and what rests in it. Kartr-sthābhavakah setir ato bhāṣya udāhṛtaḥ: *therefore 'si' (to lie down), whose state resides in the agent, is cited in the Bhasya*. So Patanjali's example is chosen because 'si' is the clean case: its action does not go out to an object but stays in the one who lies (3.7.115's kartr-sthā-bhava; 3.8's intransitive action). With nothing but the agent in view, one can see that the agent's gender and number are doing all the work. Bhartṛhari is reading the Bhasya's choice of example as an argument — which it was.

Verse 3.14.167

निमित्तमाश्रयत्वेन गृह्येत यदि साधनम् ।
कर्मापदिष्टयोः प्राप्तिस्तत्र स्याल्लिङ्गसंख्ययोः ॥ 167 ॥

*nimittamāśrayatvena gr̥hyeta yadi sādhanam |
karmāpadiṣṭayoh prāptistatra syāllīṅgasamkhyayoh || 167 ||*

If the cause were grasped as the substratum — the means — then there would arise, in that case, the gender and number stated for the object.

The reason 3.14.166 needed an intransitive example. Nimittam asrayatvena grhyeta yadi sadhanam: if the *cause* were grasped as the *substratum* — namely the *means*, the *sadhana*. Karma-apadistayoh praptis tatra syal linga-samkhyayoh: then there would arise, in that case, the *gender and number* stated for the *object*. So if any *karka* could serve as the *seat*, a transitive verb would let the *object's gender and number* in, and the *form* would come out wrong. Hence 'si': no object, no leak. This is a small, exact piece of reasoning about why an example is the example it is, and it shows the *samuddesa's* respect for the *Bhasya's* craft (3.14.158's *bhasyanusarena*).

Verse 3.14.168

शास्त्रे निर्मितभावेन समुदायादपोद्धृतः ।
स्त्र्यर्थस्तस्येच्छया योगः प्रकृत्या प्रत्ययेन वा ॥ 168 ॥

śāstre nirmittabhāvena samudāyādapodghṛtaḥ |
stryarthastasyecchayā yogaḥ prakṛtyā pratyayena vā || 168 ||

In the science, the feminine-meaning is extracted from the aggregate by way of being a cause; its connection, at one's pleasure, is with the base or with the affix.

The feminine begins, and it begins by being named an extraction. Sastre nimitta-bhavana samudayad apodghṛtaḥ stry-arthaḥ: in the science, the feminine-meaning is extracted from the aggregate by way of being a cause — apodghṛta: pulled out (3.14.143's apodgharas ca samanyam, in the same words). So femininity is not found in the word; it is lifted out of an undivided whole because the grammar needs a condition to hang rules on. Tasya icchaya yogaḥ prakṛtyā pratyayena va: its connection, at one's pleasure, is with the base or with the affix. Icchaya: as one wishes. So having extracted it, one may put it wherever one likes — in the stem or in the suffix — and nothing decides. That is what being an extraction means (3.14.96's upaya-matram nanatvam).

Verse 3.14.169

स्त्रीशब्दो गुणशब्दत्वात् तुल्यधर्मा सितादिभिः ।
गुणमात्रे प्रयुज्यते संस्त्यानवति वाश्रये ॥ 169 ॥

strīśabdo guṇaśabdatvāt tulyadharmā sitādibhiḥ |
guṇamātre prayujyate samṣtyānavati vāśraye || 169 ||

The word 'stri', being a quality-word, has properties similar to 'sita' and the rest; it is employed for the quality alone, or for the substratum possessing condensation.

Stri-sabdo guṇa-sabdatvat tulya-dharma sitadibhiḥ: the word 'stri', from being a *quality-word*, has properties similar to 'sita' (white) and the rest — it behaves like a colour-term, not like a jati-term (3.14.147's asymmetry: guṇa-words reach the quality, jati-words do not). Guṇa-matre prayujyate samṣtyānavati va asraye: it is employed for the *quality alone*, or for the *substratum* possessing *samṣtyana*. Samṣtyana: *condensation*, coagulation — from the root sty-ai, and the grammarians' etymology of 'stri'. So the word is ambiguous exactly as 'sukla' is: it may name the quality or the thing that has it. Everything in the following verses turns on which.

Verse 3.14.170

स्त्र्यर्थः संस्त्यानवद् द्रव्यं प्रकृत्यर्थश्च यद्यसौ ।
द्रव्योपलक्षणार्थत्वं संस्त्यानस्य तथा सति ॥ 170 ॥

*stryarthah samṣtyānavad dravyam prakṛtyarthaśca yadyasau |
dravyopalakṣaṇārthatvam samṣtyānasya tathā sati || 170 ||*

If the feminine-meaning is the substance possessing condensation, and that is the base-meaning – then condensation has the purpose of indicating the substance.

The first horn of 3.14.169's ambiguity. Stry-arthah samstyanavad dravyam prakṛtyarthas ca yady asau: if the feminine-meaning is the substance possessing samstyana, and that is the base-meaning. Dravya-upalaksanarthatvam samstyanasya tatha sati: then samstyana has the purpose of indicating the substance – upalaksana: an indicator, a mark that identifies without characterizing (3.14.55's saptaparna, whose seven leaves identify a tree that has none). So on this horn, condensation is not what 'stri' means; it is only how the word finds its object. The femininity is the substance, and the coagulation is a pointer. Bhartrhari sets out the consequence without comment and turns, in the next verses, to what it costs.

Verse 3.14.171

संस्त्यानेन क्वचिद् द्रव्यं दृष्टं यदुपलक्षितम् ।
अनङ्गीकृतसंस्त्यानात् तद्वृत्तेः प्रत्ययो भवेत् ॥ 171 ॥

*samṣtyānena kvacid dravyam drṣṭam yadupalakṣitam |
anaṅgīkṛtasamṣtyānāt tadvṛtteḥ pratyayo bhavet || 171 ||*

Somewhere a substance is seen indicated by condensation; from the derivative formation of that, condensation not being accepted, the affix would come.

Samstyanena kvacid dravyam drṣṭam yad upalakṣitam: somewhere a substance is seen indicated by samstyana – the indicator does work, in some cases. Anangikṛta-samstyanat tad-vṛtteḥ pratyayo bhavet: from the derivative formation of that, samstyana not being accepted, the affix would come. So where one derives from such a form without granting the condensation, the feminine affix attaches anyway – and it attaches for the wrong reason, since what licensed it has been denied. The verse is registering a leak in 3.14.170's account: an indicator that is not part of the meaning cannot be relied on to condition affixation, and yet the affixes come. 3.14.172 gives the case.

Verse 3.14.172

भूतादयः षडाख्याश्च संस्त्यानेनोपलक्षिते ।
ब्राह्मण्यादौ यदा वृत्तास्तेभ्यः स्युः प्रत्ययास्तदा ॥ 172 ॥

bhūtādayaḥ ṣaḍākhyāśca samṣtyānenopalakṣite |
brāhmaṇyādaū yadā vṛttāstebhyaḥ syuḥ pratyayāstadā || 172 ||

And when 'bhuta' and the rest, the six designations, operate on 'brahmani' and the like, indicated by condensation — then the affixes would come from them.

Bhutadayah sad akhyas ca: 'bhuta' and the rest, the six designations — a fixed set of terms in the grammar. Samstyanena upalaksite brahmanyadau yada vrttah: when they operate on 'brahmani' and the like, indicated by samstyana (3.14.170's upalaksana). Tebhyah syuh pratyayas tada: then the affixes would come from them. So the feminine affix would be conditioned by the six designations rather than by the femininity — the indicator has been allowed to do the licensing, and the derivation has slipped its moorings. This is 3.14.131's vyabhicara in a specific instance: posit a condition that is only an indicator, and it will stray. The problem 3.14.171 announced now has a name and a form.

Verse 3.14.173

तद्वन्तो हि प्रधानत्वात् प्रत्ययानां प्रयोजकाः ।
सामानाधिकरण्येऽपि तस्माद्वाबादिसम्भवः ॥ 173 ॥

tadvanto hi pradhānatvāt pratyayānām prayojakāḥ |
sāmānādhikaranye'pi tasmāṭṭābādisambhavaḥ || 173 ||

For those possessing that, being principal, are the occasioners of the affixes; therefore even in co-reference, 'tap' and the rest is possible.

The repair. Tadvanto hi pradhanatvat pratyayanam prayojakah: those possessing that — the substances that have the samstyana, not the samstyana itself — being principal, are the occasioners of the affixes. Prayojaka: what sets them in motion. So the affix is conditioned by the possessor, not by the indicator, and 3.14.172's slippage is blocked: the six designations were never the licensors, because they were not principal. Samanadhikaranye 'pi tasmāt tabadi-sambhavaḥ: therefore even in co-reference, 'tap' and the rest is possible — even where two words share a referent (3.14.9-11's kṛsnas tilah), the feminine affix can attach, because the possessor is there to license it. The principal does the work; the mark only points.

Verse 3.14.174

गुणमात्राभिधायित्वं स्त्रीशब्दे वर्ण्यते यदा ।
प्रकृत्यर्थश्च संस्त्यानं स्वार्थिकाः प्रत्ययास्तदा ॥ 174 ॥

*guṇamātrābhidhāyitvam, strīśabde varṇyate yadā |
prakṛtyarthaśca samṣtyānam, svārthikāḥ pratyayāstadā || 174 ||*

When the word 'stri' is described as expressing the quality alone, and the base-meaning is condensation — then the affixes are svarthika.

The second horn of 3.14.169. Guna-matra-abhidhayitvam stri-sabde varnyate yada: *when* the word 'stri' is described as expressing the *quality alone* — not the substance that has it. Prakrtyartham ca samstyanam: and the *base-meaning* is *samstyana* — the condensation itself is what the stem says. Svarthikah pratyayas tada: *then* the affixes are *svarthika* — affixes that add nothing to the base's meaning, mere formal furniture. So on this horn the feminine suffixes are semantically empty: the stem already means femininity, and the suffix only marks what is there. The two horns of 3.14.169 thus give two quite different jobs to the same affixes — which is 3.14.168's point exactly: the extraction may be lodged in the base or in the affix, *icchaya*, as one pleases, and the grammar comes out either way.

Verse 3.14.175

संस्त्याने केवले वृत्तिः प्रकृतीनां न विद्यते ।
तदाविष्टे ततो द्रव्ये गृह्यन्ते समवस्थिताः ॥ 175 ॥

*samṣtyāne kevale vṛttiḥ prakṛtīnām, na vidyate |
tadāviṣṭe tato dravye grhyante samavasthitāḥ || 175 ||*

In mere condensation, the operation of the bases does not exist; therefore they are grasped as settled in the substance pervaded by it.

The cost of 3.14.174's horn. Samstyane kevale vrttir prakrtinam na vidyate: in *mere* condensation, the *operation* of the *bases* does not exist — kevala: bare, by itself. If 'stri' names only the quality, the stems have nothing to work on: one cannot decline a coagulation. Tad-aviste tato dravye grhyante samavasthitah: *therefore* they are *grasped* as *settled* in the *substance pervaded* by it — avista: entered, permeated. So the bases must after all be lodged in the substance, and the second horn collapses back into the first (3.14.170). Which is 3.14.163's finding once more: dravyam eva asrayah — the substance alone is the seat, and every account that tries to do without it comes back.

Verse 3.14.176

उपकारि च संस्त्यानं येषु शब्देष्वपेक्षितम् ।
तेभ्यष्टाबादयस्तच्च भूतादिष्वविवक्षितम् ॥ 176 ॥

upakāri ca samstyānam.yeṣu śabdeṣvapekṣitam |
tebhyaṣṭābādayastacca bhūtādiṣvavivakṣitam || 176 ||

And in those words in which condensation is required as assisting, from them come 'tap' and the rest; and that is not intended for expression in 'bhuta' and the rest.

Upakari ca samstyānam yesu sabdesv apeksitam: in those words in which *condensation* is *required* as *assisting* — upakarin: helping, contributing; apeksita: needed. Tebhyaṣṭābādayah: *from them* come 'tap' and the rest — the feminine affixes attach where the condensation is a live contributor. Tac ca bhutadiv avivakṣitam: and that is *not intended for expression* in 'bhuta' and the rest — avivakṣita: not meant to be said (3.14.103's standing device). So the same element is contributory in one class of words and unmeant in another, and the affixation follows the contribution. This settles 3.14.171-172's leak on principle rather than by patch: the affix goes where the condensation is doing something.

Verse 3.14.177

संस्त्यानं प्रत्ययस्यार्थः शुद्धमाश्रीयते यदा ।
तदा द्विवचनानेकप्रत्ययत्वं न सिध्यति ॥ 177 ॥

samstyānam.pratyayasyārthaḥ śuddhamāśrīyate yadā |
tadā dvivacanānekapratyayatvam.na sidhyati || 177 ||

When pure condensation is resorted to as the affix's meaning — then the dual and the multiplicity of affixes do not succeed.

The second horn's second cost. Samstyānam pratyayasya arthah suddham asriyate yada: when *pure* condensation is resorted to as the *affix's* meaning — the svarthika account of 3.14.174, taken strictly. Tada dvivacana-aneka-pratyayatvam na sidhyati: *then* the *dual* and the *multiplicity of affixes* do not succeed. So one cannot get 'two women': a quality has no dual (3.14.107's jatau dvivacanabhavat, and a bare guna is no better off), and there is nothing for a second affix to attach to. The horn fails on morphology as 3.14.175 showed it failing on the bases. Bhartrhari is not refuting the account so much as walking it to its end and letting it stop.

Verse 3.14.178

जातिश्चेत् स्त्रीत्वमेवासौ भेदोऽन्यत्राविवक्षितः ।
यस्माद् भिन्नैरपि द्रव्यैस्तदेकं सद् विशिष्यते ॥ 178 ॥

jātiścet strītvamevāsau bhedo'nyatrāvivakṣitaḥ |
yasmād bhinnairapi dravyaistadekam.sad viśiṣyate || 178 ||

If femininity is a universal, then it is that alone; difference is elsewhere unintended, since, though the substances differ, that, being one, is specified.

A third possibility. Jatis cet stritvam eva asau: *if femininity is a universal, then it is that alone* — a single jati, striitva, present wherever a woman is. Bhedo 'nyatra avivaksitah: *difference is elsewhere unintended*. Yasmad bhinnair api dravyais tad ekam sad visisyate: *since, though the substances differ, that, being one, is specified* — the many women specify the one femininity. So this account explains what 3.14.177's account could not: the differences are in the substances, the femininity is one, and the plural is theirs, not its. It is the strongest of the three and the samuddesa tests it too — 3.14.179 immediately.

Verse 3.14.179

मात्राणां हि तिरोभावे परिमाणं न विद्यते ।
कुमार्य इति तेन स्यात् कुमार्या भेदसम्भवात् ॥ 179 ॥

mātrāṇām hi tirobhāve parimāṇam na vidyate |
kumārya iti tena syāt kumāryām bhedasambhavāt || 179 ||

For in the disappearance of the measures, the measure does not exist; therefore 'kumaryah' would come about, from the possibility of difference in 'kumari'.

The test of 3.14.178. Matranam hi tirobhave parimanam na vidyate: in the *disappearance* of the measures, the *measure* does not exist — where the units go, the quantity goes: no units, no measure (3.14.127's the unit is the measure-word's own property). Kumarya iti tena syat kumaryam bheda-sambhavat: *therefore 'kumaryah' — the plural — would come about, from the possibility of difference in 'kumari'*. So on the universal-account, the plural has to come from somewhere, and the only place left is the individual girls; the femininity contributes nothing to it. Which is exactly what 3.14.178 wanted — and the verse notes the consequence rather than objecting. The account survives the test.

Verse 3.14.180-181

जातिसङ्ख्यासमाहारैर्यथैव सहचारिणि ।
द्रव्ये क्रियाः प्रवर्तन्ते एकात्मत्वेऽप्यपेक्षिते ॥ 180 ॥
मूर्तिभ्यो मूर्तिधर्माणां तथाऽभेदस्य दर्शनात् ।
सामानाधिकरण्यं च क्रियायोगश्च कल्पते ॥ 181 ॥

jātisankhayāsamāhāiryaṁ yathaiḥ sahacāriṇi |
dravye kriyāḥ pravartante ekātmatve'pyapekṣite || 180 ||
mūrtibhyo mūrtidharmāṇām tathā'bhedasya darśanāt |
sāmānādhikaraṇyam ca kriyāyogaśca kalpate || 181 ||

(180) Just as actions operate in an accompanying substance by means of universal, number and aggregate, even where oneness of self is required — (181) so, from the seeing of the non-difference of the properties of forms from the forms, both co-reference and connection with action are conceivable.

The analogy that licenses the whole account. (180): jati-sankhya-samaharair yathaiva sahacarini dravye kriyah pravartante — as *actions* operate in an *accompanying substance* by means of *universal, number and aggregate*: three routes by which an action reaches a thing. Ekatmatve 'py apeksite: *even where oneness of self is required* — even where the thing must be one, the three routes work. (181):

murtibhyo murti-dharmanam tatha 'bhedasya darsanat — from the *seeing* of the *non-difference* of the *properties of forms* from the *forms*: the shape's properties are not other than the shape. Samanadhikaranyam ca kriya-yogas ca kalpate: *co-reference* and *connection with action* are *conceivable*. So because a form's properties are not separate from it, both agreement and predication go through — without any of it requiring real division (3.14.92's anusyuta).

Verse 3.14.182

सामानाधिकरण्ये तु मतुब्लोपादपेक्षिते ।
लुक् तद्धितलुकीति स्याल्लुक् तत्राप्युपलक्षणम् ॥ 182 ॥

sāmānādhikaranye tu matublopādapekṣite |
luk taddhitalukīti syālluk tatrāpyupalakṣaṇam || 182 ||

But in co-reference, when the elision of 'matup' is required, 'luk taddhita-luki' would apply; there too the luk is an indicator.

Samanadhikaranye tu matub-lopad apeksite: in *co-reference*, when the *elision of matup* is *required* (3.14.148's device). Luk taddhita-lukiti syat: 'luk taddhita-luki' would apply — Panini's rule chaining one elision to another. Luk tatrāpy upalakṣaṇam: *there too the luk* is an *indicator* — upalakṣaṇa: a mark, not a constituent (3.14.170's upalakṣanārtha). So the elision, having been posited to certify the form, turns out to be functioning as an indicator, and the rule that chains to it is chaining to a pointer. Tatrāpi — *there too* — is the point: this is the same thing happening again, and by now one should recognize it. The grammar's absences do indicative work throughout, and Bhartrhari's contribution is to say so each time.

Verse 3.14.183

केषाञ्चित् त्यक्तभेदेषु द्रव्येष्वेव विधीयते ।
संस्त्यानवत्सु टाबादिरभेदेन समन्वयात् ॥ 183 ॥

keṣāñcit tyaktabhedeṣu dravyeṣveva vidhīyate |
saṁstyānavatsu ṭābādirabhedena samanvayāt || 183 ||

For some, 'tap' and the rest is prescribed only in substances possessing condensation whose differences are abandoned, from concomitance by non-difference.

Kesancit tyakta-bhedeṣu dravyeṣv eva vidhiyate samstyanavatsu tabadih: for some, 'tap' and the rest is prescribed only in substances possessing condensation whose differences are abandoned — tyakta-bheda: the differences given up (3.14.101's bhedanam parityagat). Abhedena samanvayat: from concomitance by non-difference. So a fourth position: the feminine affix requires substances that have shed their differences, and it attaches by the concomitance of what is left. This keeps 3.14.163's dravya as the seat while getting the unity that 3.14.178's universal supplied. The samuddesa now has four accounts of the feminine on the table and has refuted none — which is 3.14.97 again: the upayas are unsettled among persons, because they are upayas.

Verse 3.14.184

सामान्यभूतो द्रव्यात्मा परिच्छिन्नपरिग्रहः ।
क्रियाभिर्युज्यते भेदैर्भागिश्चावतिष्ठते ॥ 184 ॥

sāmānyabhūto dravyātmā paricchinna-parigrahaḥ |
kriyābhiryujyate bhedairbhāgaścāvatīṣṭhate || 184 ||

The substance-self, having become general, its grasp delimited, is joined with actions, with the differences; and the portion remains.

Samanya-bhuto dravyatma: the *substance-self*, having become general — samanya-bhuta: not a universal, but a substance gone general (3.14.141's visesa eva samanyam: the general is the particular). Paricchinna-parigrahaḥ: its *grasp delimited* — pariccheda: the cutting-off (3.14.126). Kriyābhir yujyate bhedaiḥ: is *joined with actions*, with the *differences*. Bhagas ca avatīṣṭhate: and the *portion remains* — avatīṣṭhate: stands, persists. So the generalized substance takes on actions and differences and something is left over that does not: the bhaga persists through. This is the samuddesa's picture of how a thing can be one and still be caught in the traffic of predication — the joining happens at the edges, and a portion stands out of it.

Verse 3.14.185

शुक्लादिष्वाश्रयद्रव्यं प्राधान्येनाभिधीयते ।
स्त्रीत्वं तु प्रत्ययार्थवादमिधाविषयो यतः ॥ 185 ॥

śuklādiṣvāśrayadravyam prādhānyenābhidhīyate |
strītvam tu pratyayārthavādabhidhāviṣayo yataḥ || 185 ||

In 'sukla' and the rest, the substratum-substance is expressed as principal; but femininity, since it is the affix's meaning, is the domain of expression.

The disanalogy that has been threatening since 3.14.169. Sukladisv asraya-dravyam pradhanyena abhidhiyate: in 'sukla' and the rest, the *substratum-substance* is expressed as *principal* — 'sukla' says the white *thing*, and the whiteness rides along. Strītvam tu pratyayārthatvad abhidha-visayo yataḥ: but femininity, since it is the *affix's meaning*, is the *domain of expression* — it is what gets said. So the parallel with the colour-words breaks: in 'sukla' the substance is principal and the quality subordinate; in the feminine the quality is what the affix expresses, and the relation inverts. 3.14.169 proposed the analogy; here it is withdrawn where it fails. This is 3.14.132's discipline being applied to the samuddesa's own working assumption.

Verse 3.14.186

सोऽयमित्यभिसम्बन्धादाश्रयं प्रतिपद्यते ।
स्त्रीत्वं स्वभावसिद्धो वा गुणभावविपर्ययः ॥ 186 ॥

so'yamityabhisambandhādāśrayam pratipadyate |
strītvam svabhāvasiddho vā guṇabhāvaviparyayaḥ || 186 ||

From the connection 'this is that', femininity attains a substratum; or else the reversal of subordination is established by nature.

Two ways out of 3.14.185's inversion. So 'yam ity abhisambandhad asrayam pratipadyate stritvam: from the connection 'this is that', *femininity attains a substratum* — the identification hands it a seat it does not have of its own (3.14.150's *avesa*). Or: *svabhava-siddho va guna-bhava-viparyayah*: the reversal of subordination is established by nature — *svabhava-siddha*: settled by the thing's own nature; the inversion is simply how it is, and needs no mechanism. So either the identification supplies what is missing, or nothing is missing and the inversion is a fact. Bhartrhari offers both and endorses neither. By this point in the *samuddesa* that is not evasion but method (3.14.119's showing the result survives the disputed premise).

Verse 3.14.187

साकाङ्क्षत्वाद् गुणत्वेन सामान्यं वोपदिश्यते ।
व्यक्तीनामात्मधर्मोऽसावेकप्रख्यानिबन्धनः ॥ 187 ॥

sākāṅkṣatvād guṇatvena sāmānyam vopadiśyate |
vyaktīnāmātmadharmo'sāvekaprakhyānibandhanah || 187 ||

Or the general is taught as a quality, from its having expectancy; that is a property of the self of the individuals, having a single presentation for its basis.

A fifth account, and the most interesting. *Sakanksatvad gunatvena samanyam va upadisyate*: or the general is taught as a quality, from its having expectancy — *sakanksa*: reaching, incomplete (3.14.164's *akanksavat*). The general is classed as a *guna* because, like a quality, it cannot stand alone. *Vyakthinam atma-dharmo 'sau*: that is a property of the self of the individuals — not a thing over them but their own nature. *Eka-prakhya-nibandhanah*: having a single presentation for its basis — *eka-prakhya*: one appearing, one showing-forth. So the general is: the individuals' own property, grounded in the fact that they present alike. Not a universal, not a name, not an exclusion merely — a single presentation, and the property is that. This is as close as the work comes to a positive account of *samanya*, and it is built out of appearing (3.14.141's the general is the particular itself).

Verse 3.14.188-189

एवम्भूता च सावस्था भागभेदपरिग्रहे ।
 कृते बुद्ध्यैव भेदानामाश्रयत्वेऽवकल्पिते ॥ 188 ॥
 निष्कृष्टेष्वपि भेदेषु व्यक्तिरूपाश्रये ततः ।
 लिङ्गप्रत्ययमर्शेन लिङ्गसंख्ये प्रपद्यते ॥ 189 ॥

evambhūtā ca sāvasthā bhāgabhedaparigrahe |
kr̥te buddhyaiva bhedānāmāśrayatve'vakalpīte || 188 ||
niṣkṛṣṭeṣvapi bhedesu vyaktirūpāśraye tataḥ |
liṅgapratyavamarśena liṅgasamkhye prapadyate || 189 ||

(188) And that state is of such a kind, when the grasping of the portion-difference has been made by the intellect alone, the substratum-hood of the differences being conceived — (189) then, even when the differences are extracted, in the substratum having individual-form, by the reflective reference to gender it attains gender and number.

The whole gender-and-number analysis referred to the intellect. (188): *evambhuta ca sa avastha bhaga-bheda-parigrahe krte buddhya eva* — that state is of such a kind, when the grasping of the portion-difference has been made by the intellect alone. *Buddhya eva*: by the intellect and by nothing else — the divisions were never in the object (3.14.15's *buddhya ekam bhidyate*; 3.14.93's *buddhy-antaram upasritah*). *Bhedanam asrayatve 'vakalpīte*: the substratum-hood of the differences being conceived — *avakalpita*: constructed. (189): *niskr̥stesv api bhedesu vyakti-rupasraye tataḥ* — even when the differences are extracted (*niskr̥sta*: pulled out, as in *apoddhara*), then, in the substratum having individual-form. *Linga-pratyavamarśena linga-samkhye prapadyate*: by the reflective reference to gender, it attains gender and number. *Pratyavamarśa*: the mind's turning back on what it laid down. So gender and number arrive by the intellect referring back to its own extraction — which is 3.14.74's imagined parts, and the whole *samuddesa*, in one word.

Verse 3.14.190

अन्तरेण चशब्दस्य प्रयोगं द्वन्द्वभाविनाम् ।
 अविशिष्टार्थवृत्तित्वं रूपाभेदात् प्रतीयते ॥ 190 ॥

antareṇa caśabdasya prayogaṁ dvandvabhāvinām |
aviśiṣṭārthavṛttitvam rūpābhedāt pratīyate || 190 ||

Without the employment of the word 'ca', the operating in an unspecified meaning of those which are to be a *dvandva* is cognized, from non-difference of form.

The *dvandva* returns, and the *samuddesa*'s method is by now familiar. *Antareṇa ca-sabdasya prayogaḥ*: without the employment of the word 'ca' — no 'and' is spoken. *Dvandva-bhavinam avisistarthavṛttitvam*: of those which are to be a *dvandva* — *bhavin*: future, not yet compounded — the operating in an unspecified meaning: before the compounding, the members mean indeterminately. *Rupabhedat pratiyate*: is cognized, from non-difference of form. So the members that will make a *dvandva* already operate unspecifiedly, and one knows it because their form shows no difference. The togetherness of 3.14.38 (the *dvandva*'s *saha-vivakṣa*, lost the moment one says 'ca') is thus present before the compound exists — which is why no 'ca' is needed to make it.

Verse 3.14.191

विकल्पवति वा वृत्तिर्निवर्त्येऽर्थे समुच्चिते ।
तेषामज्ञातशक्तीनां द्योतकेन नियम्यते ॥ 191 ॥

vikalpavati vā vṛttirnivartye'rthe samuccite |
teṣāmajñātaśaktīnām.dyotakena niyamyate || 191 ||

Or the derivative formation, in a meaning that has alternation, or is to be excluded, or is accumulated — of those whose powers are unknown, it is restricted by the indicator.

What 'ca' is for. Vikalpavati va vṛttir nivartye 'rthe samuccite: the formation, in a meaning that has *alternation*, or is *to be excluded*, or is *accumulated* — three of the particle's senses, and no form shows which. Tesam ajnata-saktinam dyotakena niyamyate: of those whose *powers are unknown*, it is *restricted* by the *indicator* — ajnata-sakti: the words' capacities are not known from their shapes; the dyotaka narrows them. So the particle does not add a meaning; it *restricts* a range that was already there and unreadable. This is the dyotaka doctrine at its clearest (2.190's vacaka against dyotaka): 'ca' reveals which of the members' latent powers is in play, and reveals nothing that was not latent.

Verse 3.14.192

वृत्तौ विशिष्टरूपत्वाच्चशब्दो विनिवर्तते ।
अर्थमेदेऽपि सारूप्यात् तच्चार्थेनापदिश्यते ॥ 192 ॥

vṛttau viśiṣṭarūpatvāccaśabdo vinivartate |
arthamede'pi sārūpyāt taccārthenāpadiśyate || 192 ||

In the derivative formation, from its specified form, the word 'ca' withdraws; even where the meaning differs, from likeness of form that is designated by the meaning.

Why the dvandva has no 'and'. Vṛttau visista-rupatvat ca-sabdo vinivartate: in the *derivative formation*, from its *specified form*, the word 'ca' *withdraws* — the compound's own shape already specifies what 'ca' would have restricted, so the restrictor is redundant (3.14.191's niyamyate). Artha-bhede 'pi sarupyat tac ca arthena apadiśyate: even where the *meaning differs*, from *likeness of form*, that is *designated* by the *meaning*. So the compound does the particle's work by being the shape it is, and the particle drops out — not elided (3.14.128's what withdraws has no being) but unnecessary. 'Rama-krsnau' needs no 'and' because its form is already the restriction.

Verse 3.14.193

चस्य चासत्त्वभूतोऽर्थः स एवाश्रीयते यदि ।
तद्धर्मत्वं ततो द्वन्द्वे चादिष्वर्थकृतं हि तत् ॥ 193 ॥

casya cāsattvabhūto'rthaḥ sa evāśrīyate yadi |
taddharmatvam.tato dvandve cādiṣvarthakṛtam.hi tat || 193 ||

And if the non-substantial meaning of 'ca' is itself resorted to — then in the dvandva there would be the property of that; for in 'ca' and the rest, that is made by the meaning.

Casya ca asattva-bhuto 'rthah sa eva asriyate yadi: if the non-substantial meaning of 'ca' — asattva-bhuta: not a thing, the standard characterization of what particles mean — is itself resorted to as the dvandva's meaning. Tad-dharmatvam tato dvandve: then in the dvandva there would be the property of that — the compound would inherit ca's non-substantiality, and so would have no gender and no number, since only substances have those (3.14.163's dravyam eva asrayah). Cadisv artha-krtam hi tat: for in 'ca' and the rest, that is made by the meaning. So making the dvandva mean what 'ca' means would make it an indeclinable. The consequence is unacceptable and the following verses look for a way round.

Verse 3.14.194

चार्थः शक्तेः क्वचिद् भेदात् कथञ्चित् समवस्थितः ।
द्योतकाश्चादयस्तस्य वक्ता द्वन्द्वस्तु तद्वताम् ॥ 194 ॥

cārthaḥ śakteḥ kvacid bhedāt kathañcit samavasthitah |
dyotakāścādayastasya vaktā dvandvastu tadvatām || 194 ||

The meaning of 'ca', from a difference of power somewhere, is somehow settled; 'ca' and the rest are its indicators, but the dvandva is the expresser of those which possess it.

The way round 3.14.193, and it is precise. Carthah sakteh kvacid bhedat kathancit samavasthitah: the meaning of 'ca', from a difference of power somewhere, is somehow settled — kathancit: somehow; Bhartrhari does not pretend to have located it. Dyotakas cadayas tasya: 'ca' and the rest are its indicators. Vakta dvandvas tu tadvatam: but the dvandva is the expresser of those which possess it — tadvat: the possessors of ca's meaning, i.e. the things conjoined, not the conjoining. So the distinction that saves the account: 'ca' indicates the togetherness; the dvandva says the things that have it. The compound therefore means substances after all, and takes gender and number (3.14.193's difficulty dissolved). Dyotaka against vacaka, doing real work.

Verse 3.14.195

विकल्पाद्यभिधेयस्य चार्थस्यान्यपदार्थता ।
द्योतकत्वान्न कल्पेत तस्मात् सदुपलक्ष्यते ॥ 195 ॥

vikalpādyabhidheyasya cārthasyānyapadārthatā |
dyotakatvānna kalpeta tasmāt sadupalakṣyate || 195 ||

The state of being another's word-meaning, belonging to ca's meaning — which is to be expressed as alternation and so on — would not be conceivable, since it is an indicator; therefore, existing, it is indicated.

Vikalpady-abhidheyasya carthasya anya-padarthatā: the state of being another's word-meaning (3.14.38's bahu-vrihi-relation), belonging to ca's meaning — which is to be expressed as alternation and so on. Dyotakatvan na kalpeta: would not be conceivable, since it is an indicator: an indicator cannot be somebody else's word-meaning, because it is not a meaning at all. Tasmāt sad upalakṣyate: therefore, existing, it is indicated. Sat: it is there — Bhartrhari does not make ca's sense unreal; he makes it unsayable. It exists and is pointed at, and no word says it. This is the exact boundary the dyotaka doctrine draws, and 3.14.194's dvandva lives on the other side of it.

Verse 3.14.196

तत्र स्वाभाविकं लिङ्गं शब्दधर्मे व्यपेक्षिते ।
शब्दः कश्चित् तमेवार्थं कथञ्चित् प्रतिपद्यते ॥ 196 ॥

tatra svābhāvikaṃ, liṅgam, śabdadharme vyapekṣite |
śabdaḥ kaścit tamevārtham, kathañcit pratipadyate || 196 ||

There, the gender is natural, when a word-property is required; some word somehow attains that very meaning.

Tatra svabhavikam lingam sabda-dharme vyapeksite: *there, the gender is natural* – svabhavika: belonging to the thing's own nature (3.14.186's svabhava-siddha) – when a *word-property* is required. Sabdah kascit tam eva artham kathancit pratipadyate: *some word somehow attains that very meaning*. Kascit... kathancit: *some word, somehow* – the vagueness is not carelessness; it is the claim. Which word reaches which meaning, and by what route, is not derivable: it happens, and the grammar reports it (3.14.154's akhyayate ca sastrena). So gender is natural, the reaching is contingent, and the science stands at its distance (3.14.74's atidure). The verse's diffidence is its content.

Verse 3.14.197

शब्दादर्थः प्रतायन्ते स भेदानां विधायकः ।
अनुमानं विवक्षायाः शब्दादन्यन्न विद्यते ॥ 197 ॥

śabdādarthāḥ pratāyante sa bhedānām vidhāyakaḥ |
anumānam, vivakṣāyāḥ śabdādanyanna vidyate || 197 ||

Meanings are spread out from the word; it is the ordainer of the differences. Other than the word, there is no inference of the intention to speak.

One of the summit verses of the work. Sabdad arthah pratayante: *meanings are spread out* from the *word* – pratayante, from pra-tan: woven forth, extended like a fabric from its warp. Not caused by, not indicated by: *spread out from*. Sa bhedanam vidhayakah: *it is the ordainer of the differences* – vidhayaka: the one who ordains, lays down (3.14.15's sa hi arthasya vidhayika, of the intellect; the same word, now of the word). All the divisions this samuddesa has been unmaking – parts, members, genders, numbers – are the word's own ordinances. Anumanam vivaksayah sabdad anyan na vidyate: *there is no inference of the intention to speak other than the word*. So one cannot get behind the word to the speaker's meaning: the word is the only evidence there is of what was meant, and there is no independent access to vivaksa. This is the whole doctrine – 1.123's no cognition without word; 2.32's the word is the measure – and it is why 3.14.196 could only say kathancit. The word ordains, and nothing stands behind it to be consulted.

Verse 3.14.198-199

समुच्चितः स्याद् द्वन्द्वार्थो गुणभूतसमुच्चयः ।
 समुच्चयो वापि भवेद् गुणभूतसमुच्चितः ॥ 198 ॥
 समुच्चितस्य प्राधान्ये लिङ्गसंख्ये स्वभावतः ।
 समुच्चयस्य प्राधान्ये शास्त्रं स्यात् प्रतिपादकम् ॥ 199 ॥

samuccitah syād dvandvārtho guṇabhūtasamuccayah |
samuccayo vāpi bhaved guṇabhūtasamuccitah || 198 ||
samuccitasya prādhānyē liṅgasamkhye svabhāvataḥ |
samuccayasya prādhānyē śāstram syāt pratipādakam || 199 ||

(198) The dvandva's meaning would be the accumulated, with the accumulation subordinate; or else the accumulation, with the accumulated subordinate. (199) Where the accumulated is principal, gender and number are by nature; where the accumulation is principal, the science would be the teacher.

The fork, cleanly drawn. (198): *samuccitah syad dvandvartho guna-bhuta-samuccayah* — the dvandva means the *accumulated things*, with the *accumulation* subordinate. *Samuccayo vapi bhaved guna-bhuta-samuccitah*: or the *accumulation*, with the *things* subordinate. (199): *samuccitasya pradhanye linga-samkhye svabhavataḥ* — where the *things* are principal, gender and number are *by nature*: substances have them, and nothing need be said (3.14.163). *Samuccayasya pradhanye sastram syat pratipadakam*: where the *accumulation* is principal, the *science* would be the *teacher* — the accumulation is no substance, so the grammar must supply what the meaning cannot (3.14.134's *sastram arabdham*). So the fork is exactly the fork of 3.14.145 against 3.14.134: does concord come from the world or from the rules? And the answer depends on what a dvandva is about.

Verse 3.14.200

समुच्चयवतोऽर्थस्य प्राधान्येऽप्यपरे विदुः ।
 निमित्तानुविधायित्वादसिद्धिं लिङ्गसंख्ययोः ॥ 200 ॥

samuccayavato'rthasya prādhānyē'pyapare viduḥ |
nimittānuvidhāyitvādasiddhim liṅgasamkhyayoh || 200 ||

Others know that, even where the meaning possessing accumulation is principal, gender and number are not established — from their conforming to the cause.

An objection to the first horn. *Samuccayavato 'rthasya pradhanye 'py apare viduh*: *others* know that *even where the meaning possessing accumulation is principal* — i.e. even on 3.14.198's first branch, where the things are what is meant. *Nimitta-anuvidhayitvad asiddhim linga-samkhyayoh*: gender and number are *not established*, from their *conforming to the cause* — *anuvidhayin*: following after (3.14.153's word). If gender and number must follow their occasioning cause, and the cause is the accumulation, then they cannot come 'by nature' from the substances after all. So even the natural horn needs the science. The objection is good and 3.14.201-202 must meet it.

Verse 3.14.201

समुच्चयो निमित्तं चेत् स्यान्निमित्तानुवर्तनम् ।
अन्वयव्यतिरेकाभ्यां चार्थो द्वन्द्वनिबन्धनः ॥ 201 ॥

samuccayo nimittam cet syānnimittānuvartanam |
anvayavyatirekābhyāṃ cārtho dvandvanibandhanah || 201 ||

If the accumulation is the cause, there would be conformity to the cause; by agreement and difference, ca's meaning is the basis of the dvandva.

The objection's premise examined. *Samuccayo nimittam cet syan nimitta-anuvartanam*: if the accumulation is the cause, there would be conformity to the cause — the conditional is granted, and its antecedent is now the question. *Anvaya-vyatirekabhyam cartho dvandva-nibandhanah*: by agreement and difference — the distributional test (2.12's method) — *ca's meaning* is the basis of the *dvandva*: where the togetherness is, the compound is; where it is not, not. So the test says the accumulation is the basis, and 3.14.200's antecedent holds. Bhartṛhari is running the objection's own argument to its strongest and then, in 3.14.202, showing that the conclusion still does not follow.

Verse 3.14.202

समुच्चितनिमित्तत्वे चार्थस्यापगमेऽपि वा ।
स्वभावसिद्धे द्वन्द्वस्य लिङ्गसंख्ये व्यवस्थिते ॥ 202 ॥

samuccitanimittatve cārthasyāpagame'pi vā |
svabhāvasiddhe dvandvasya liṅgasamkhye vyavasthite || 202 ||

Whether the accumulated is the cause, or even where ca's meaning has departed — the dvandva's gender and number stand settled, established by nature.

The answer. *Samuccita-nimittatve carthasya apagame 'pi va*: whether the accumulated is the cause, or even where ca's meaning has departed — both branches, including the one where the togetherness is simply gone. *Svabhava-siddhe dvandvasya linga-samkhye vyavasthite*: the dvandva's gender and number stand settled, established by nature. So 3.14.200's inference fails not because its premise is false but because the conclusion does not depend on it: however the causation is arranged, the compound's gender and number are there. *Svabhava-siddha and vyavasthita together*: settled by nature, and standing. This is 3.14.119's move once more — show the result survives every branch, and the branching stops mattering.

Verse 3.14.203

पदान्तरस्थस्यार्थस्य द्योतकत्वान्न युज्यते ।
निपातो लिङ्गसङ्ख्याभ्यां द्वन्द्वस्त्वर्थस्य वाचकः ॥ 203 ॥

*padāntarasthasyārthasya dyotakatvānna yujyate |
nipāto liṅgasāṅkhyābhyāṃ dvandvastvarthasya vācakaḥ || 203 ||*

The particle, being an indicator of a meaning residing in another word, is not joined with gender and number; but the dvandva is the expresser of the meaning.

The ground of 3.14.202, stated plainly. Padantara-sthasya arthasya dyotakatvan na yujyate nipato linga-sankhyabhyam: the *particle*, being an *indicator* of a meaning *residing in another word*, is not joined with *gender and number*. Padantara-stha: the meaning it indicates is not its own — it sits in someone else's word (3.14.191's restricting the members' latent powers). So a particle can have no gender: it has no meaning of its own to bear one. Dvandvas tv arthasya vacakah: *but the dvandva is the expresser of the meaning* — vacaka, not dyotaka. So the compound is categorially unlike the particle whose work it does, and 3.14.193's threatened contagion cannot occur: the dvandva says things, and things have gender and number (3.14.194).

Verse 3.14.204

निमित्तानुविधाने च द्रव्यधर्मनिपेक्षणात् ।
गुणप्रधानभावेन क्रियायोगो न कल्पते ॥ 204 ॥

*nimittānuvidhāne ca dravyadharmānapekṣaṇāt |
guṇapradhānabhāvena kriyāyogo na kalpate || 204 ||*

And in conformity to the cause, from the non-requiring of the substance's properties, connection with action by way of subordinate and principal is not conceivable.

The cost of 3.14.200's position, now charged. Nimitta-anuvidhane ca dravya-dharma-anapeksanat: in *conformity to the cause*, from the *non-requiring* of the *substance's properties* — if gender and number merely follow the accumulation, the substance's own properties are not needed and drop out of view. Guna-pradhana-bhavana kriya-yogo na kalpate: *connection with action* by way of *subordinate and principal* is not conceivable. So the compound could not be predicated of: an action needs a substance with properties to attach to, and this account has dispensed with them. The objection of 3.14.200, followed out, costs the dvandva its ability to appear in a sentence — which 3.14.205 makes fatal.

Verse 3.14.205

यस्य नास्ति क्रियायोगः स्वतन्त्रोऽसौ न विद्यते ।
अर्थो द्वन्द्वस्य तत्र स्यादुपादानमनर्थकम् ॥ 205 ॥

yasya nāsti kriyāyogaḥ svatanthro'sau na vidyate |
artho dvandvasya tatra syādupādānamanarthakam || 205 ||

That which has no connection with action does not exist independently; the dvandva's meaning would there be – and the taking-up is purposeless.

The fatal step. Yasya nasti kriya-yogaḥ svatanthro 'sau na vidyate: that which has no connection with action does not exist independently – a thing that cannot enter into action has no standing of its own; being is being caught up in action (3.8's the whole world is a weave of actions; 3.7.3's the karakas as what is capable). Artho dvandvasya tatra syad upadanam anarthakam: the dvandva's meaning would there be – and the taking-up is purposeless: anarthaka (3.14.126's word). So 3.14.200's account leaves the dvandva with a meaning that cannot act and therefore is not, and the grammar's taking it up is pointless. The refutation is complete, and its principle is worth marking: for this work, to be is to be able to be predicated.

Verse 3.14.206

समुच्चयवतोऽर्थस्य वाचको नानुवर्तते ।
निमित्तमपि चास्यार्थः स्वधर्मैर्युज्यते ततः ॥ 206 ॥

samuccayavato'rthasya vācako nānuvartate |
nimittamapi cāsyārthaḥ svadharmairyujyate tataḥ || 206 ||

The expresser of the meaning possessing accumulation does not conform; and its meaning, being also the cause, is therefore joined with its own properties.

The settled position. Samuccayavato 'rthasya vacako na anuvartate: the expresser of the meaning possessing accumulation does not conform – na anuvartate: the dvandva, being a vacaka (3.14.203), does not follow after its cause the way an indicator would. Nimittam api ca asya arthah sva-dharmair yujyate tataḥ: and its meaning, being also the cause, is therefore joined with its own properties. So the compound's meaning is both what it says and what conditions it, and it therefore carries its own gender and number rather than borrowing them – which is 3.14.202's svabhava-siddha, now derived rather than asserted. The dvandva-analysis closes: 'ca' indicates and has nothing; the dvandva says and has everything.

Verse 3.14.207

बाह्यो नास्त्याश्रयो द्वन्द्वे विशेषौ तत्र हि श्रुतौ ।
समुच्चयस्तदाधारस्तद्धर्मैर्व्यपदिश्यते ॥ 207 ॥

*bāhyo nāstyāśrayo dvandve viśeṣau tatra hi śrutau |
samuccayastadādhārastaddharmairvyapadiśyate || 207 ||*

In a dvandva there is no external substratum, for the two particulars are heard there; the accumulation, having them for its support, is designated by their properties.

Why the dvandva is not a bahuvrihi. Bahyo nasty asrayo dvandve: in a *dvandva* there is *no external substratum* — nothing outside it that it is about (3.14.38's *anya-padartha*, which the bahuvrihi has and this does not). Visesau tatra hi srutau: for the *two particulars are heard there* — the dvandva says its own members, audibly. Samuccayas tad-adharas tad-dharmair vyapadisyate: the *accumulation*, having them for its support, is *designated by their properties*. So the accumulation rests on the members and takes its gender and number from them — no outside seat is needed, because the members are right there. This grounds 3.14.206's *svabhava-siddha*: the dvandva has its own properties because it has its own members.

Verse 3.14.208

यो वावयवभेदाभ्यां भेदवद्भ्यामिवान्वितः ।
एकः समूहो धर्मन् स भागयोः प्रतिपद्यते ॥ 208 ॥

*yo vāvayavabhedābhyām.bhedavadbhyāmivānvitah |
ekah samūho dharmān sa bhāgayoḥ pratipadyate || 208 ||*

Or that one aggregate which is followed, as it were, by the two member-differences which possess difference — acquires the properties of the two portions.

The same result by the other route. Yo va avayava-bhedabhyam bhedavadbhyam iva anvitah: that which is *followed, as it were*, by the *two member-differences* which possess difference — iva again (3.14.68's *asadbhir bhagair anugata iva*, in nearly the same words): the aggregate is only *as though* accompanied by its members. Ekah samuho dharman sa bhagayoh pratipadyate: *one aggregate*, it *acquires the properties* of the *two portions*. Ekah samuhah: one aggregate (3.14.96's *samudayas tv eka eva sah*). So the compound is one and takes two members' properties without having two members — the iva carries the whole weight. This is the samuddesa's settled shape: unity in fact, duality as device.

Verse 3.14.209

एकश्च द्वयात्मकोऽर्थोऽसौ भेदाभेदसमन्वितः ।
यौ भेदावाश्रितस्तत्स्थे लिङ्गसङ्ख्ये प्रपद्यते ॥ 209 ॥

*ekaśca dvayātmako'rtho'sau bhedābhedasamanvitaḥ |
yau bhedāvāśritastatsthe liṅgasāṅkhaye prapadyate || 209 ||*

And that meaning is one and of two selves, endowed with difference and non-difference; resting on the two differences, it attains the gender and number residing in them.

Ekaś ca dvayatmakō 'rtho 'sau: that *meaning* is one and of two selves — the paradox stated without apology. Bhedabhedā-samanvitaḥ: *endowed with difference and non-difference* — bhedabhedā, the doctrine that will bear Bhartṛhari's name in the later tradition, here in its native habitat: a compound's meaning. Yau bhedav asritas tat-sthe liṅga-sāṅkhye prapadyate: *resting on the two differences*, it attains the *gender and number residing in them*. So the dvandva is genuinely both — one meaning with two selves — and it draws its concord from the side of itself that is two. Note that 3.14.142 refused to settle whether the general is same or different from its particulars; here the refusal has become a positive characterization. What cannot be resolved into either is what a compound is.

Verse 3.14.210

यथा स्वशब्दाभिहिते चैत्रार्थे न प्रयुज्यते ।
चैत्रशब्दो बहुर्विहावप्रयोगस्तथा भवेत् ॥ 210 ॥

*yathā svaśabdābhihite caitrārthe na prayujyate |
caitraśabdo bahurvīhāvaprayogastathā bhavet || 210 ||*

As the word 'Caitra' is not employed when the Caitra-meaning is expressed by its own word — so there would be non-employment in the bahuvrihi.

The bahuvrihi's problem, opened. Yathā sva-sabdābhihite caitrarthe na prayujyate caitra-sabdah: as the word 'Caitra' is *not employed* when the Caitra-meaning is already *expressed by its own word* — one does not say a thing twice. Bahuvrihav aprayogas tathā bhavet: so there would be *non-employment* in the *bahuvrihi*. So if 'citragu' expresses its possessor, the possessor's own name should become unusable alongside it — one could not say 'citragur devadattah'. But one can. So either the compound does not express the possessor, or the principle is wrong. The following verses take the first branch.

Verse 3.14.211

यथा गौरिति शुक्लादेरभिधानं न विद्यते ।
एवं यस्याभिसम्बन्धो गोभिस्तावत् प्रतीयते ॥ 211 ॥

*yathā gauriti śuklāderabhidhānam na vidyate |
evam yasyābhisambandho gobhistāvat pratīyate || 211 ||*

As by 'gauh' there is no expression of 'sukla' and the rest — so, of whomever there is a connection, that much is cognized by 'go'.

The first branch. Yatha gaur iti sukhlander abhidhanam na vidyate: as by 'gauh' there is no expression of 'sukla' and the rest — 'cow' does not say white, though every cow has some colour. Evam yasya abhisambandho gobhis tavat pratiyate: so, of *whomever* there is a connection, *that much* is cognized by 'go'. Tavat: *that much* and no more. So 'citragu' conveys only that someone stands connected to variegated cows — it does not name him, any more than 'gauh' names a colour. The possessor is reached and not expressed, and 3.14.210's difficulty dissolves: the compound never said Caitra, so Caitra's name remains free.

Verse 3.14.212

सम्बन्धी नियतो रुढश्चित्राणां न च विद्यते ।
गवां यथा वज्रपाणिस्त्र्यक्षो वापि व्यवस्थितः ॥ 212 ॥

sambandhī niyato rūḍhaścitrāṇām.na ca vidyate |
gavām.yathā vajrapāṇistryakṣo vāpi vyavasthitah || 212 ||

And there is no fixed, conventionally established relatum of the variegated cows — as 'vajrapani' or 'tryaksa' is settled.

The proof of 3.14.211. Sambandhi niyato rudhas citranam na ca vidyate: there is no fixed, conventionally established relatum of the variegated ones — rudha: grown into place by convention (3.14.55). Nobody in particular is the owner of dappled cows. Gavam yatha vajrapanis tryakso vapi vyavasthitah: as 'vajrapani' — thunderbolt-in-hand, which means Indra and nobody else — or 'tryaksa' — three-eyed, which means Siva — is settled. So some bahuvrihis have hardened into names and pick out one being by convention; 'citragu' has not. And that is the evidence: if the compound expressed its possessor, every bahuvrihi would be a proper name. Only the ones convention has frozen are, and the freezing is extraneous to the form.

Verse 3.14.213

शब्दान्तरत्वाद् वाक्येषु विशेषा यद्यपि श्रुताः ।
वृत्तिशब्दोऽन्य एवायं सामान्यस्याभिधायकः ॥ 213 ॥

śabdāntaratvād vākyeṣu viśeṣā yadyapi śrutāḥ |
vṛttiśabdo'nya evāyam.sāmānyasyābhidhāyakah || 213 ||

Although particulars are heard in sentences, from their being other words — this derivation-word is quite another, an expresser of the general.

Sabdantarativad vakyesu visesa yady api srutah: although *particulars* are heard in sentences, from their being *other words* — the analytic phrase 'citra gavo yasya' does name its parts. Vrtti-sabdo 'nya eva ayam: this *derivation-word* is quite another — *anya eva*: simply a different word (3.14.49's atyanta-bheda, and 3.14.136 in nearly these words). Samanyasya abhidhāyakah: an *expresser of the general*. So the compound says a general — someone-or-other-with-dappled-cows — where the phrase says particulars. This is why 3.14.212 found no fixed relatum: the compound was never in the business of picking one out. It expresses a general and leaves the individual to be found.

Verse 3.14.214

अगोरचित्रगोश्चैव रूपभेदान्निवर्तकः ।
एवं चित्रगुविशेषाणां रूपाभेदात्तु वाचकः ॥ 214 ॥

agoracitragoścaiva rūpabhedānnivartakah |
evam.citraguviśeṣāṇām.rūpābhedāttu vācakah || 214 ||

It excludes the non-cow and the non-variegated-cowd alike, from difference of form; and thus, from non-difference of form, it is the expresser of the citragu-particulars.

How a general expression reaches particulars, and the mechanism is exclusion. Agor acitragos ca eva rupa-bhedan nivartakah: it *excludes* the *non-cow* and the *non-citragu*, from *difference of form* – nivartaka: what turns away (3.14.141's vinivartakah; 3.14.142's whatever is resorted to excludes something else). Where the form differs, the word turns it away. Evam citragu-visesanam rupabhedat tu vacakah: *thus*, from *non-difference of form*, it is the *expresser* of the *citragu-particulars*. So the same fact – form-difference – does both jobs: where it obtains the word excludes, where it fails the word expresses. The general is nothing but this two-sided working of form, and every particular that survives the exclusion is expressed. Bhartṛhari's samanya is an exclusion that leaves particulars standing (3.14.187's eka-prakhya).

Verse 3.14.215

यथा चित्रगुरित्येतत्प्रयुक्ते न प्रयुज्यते ।
एवं यदि स्यात् सामान्यं तस्य न स्यात् प्रतिश्रुतिः ॥ 215 ॥

yathā citragurityetatprayukte na prayujyate |
evam.yadi syāt sāmānyam.tasya na syāt pratiśrutih || 215 ||

As this 'citragu' is not employed when [the thing] has been employed – so, if it were a general, there would be no re-hearing of it.

Yatha citragur ity etat prayukte na prayujyate: as this 'citragu' is *not employed* when [the thing] has been *employed*. Evam yadi syat samanyam tasya na syat pratisrutih: so, *if* it were a *general*, there would be *no re-hearing* of it – pratisruti: hearing again, echo. So the objection: on the general-account, the word should not bear repetition – one general once said is said. But 'citragu' can be said again of the same man, and heard again. Hence, allegedly, it is no general. The verse is compressed and it is an objection, not a doctrine; 3.14.216 answers by showing that generals and particulars exclude each other in both directions.

[Contested: Pada b, 'prayukte na prayujyate', has no expressed subject; we supply 'the thing' from 3.14.210, whose construction it echoes. Alternatively the locative absolute may resume 'citragu' itself (the word not being employed once employed). The objection's force – that a general should not tolerate repetition – is the same on either supply.]

Verse 3.14.216

सर्वदियो विशेषास्तु प्रदेशानां निवर्तकाः ।
यथा प्रदेशाः सामान्यप्रदेशान्तरबाधकाः ॥ 216 ॥

sarvādayo viśeṣāstu pradeśānām nivartakāḥ |
yathā pradeśāḥ sāmānyapradeśāntarabādhakāḥ ॥ 216 ॥

But 'sarva' and the rest, the particulars, are excluders of the specific instances — as the specific instances are annullers of the general and of other instances.

The answer to 3.14.215, and it makes exclusion mutual. Sarvadayo visesas tu pradesanam nivartakah: 'sarva' (all) and the rest, the *particulars*, are *excluders* of the *specific instances* — pradesa: a particular case, an instance. So the general terms turn away the instances. Yatha pradesah samanya-pradesantara-badhakah: as the instances are *annullers* of the *general* and of *other instances* — badhaka: what sublates, the strong word. So the traffic runs both ways: generals exclude instances, and instances annul both the general and each other. Nothing is privileged; every term turns away whatever it is not (3.14.142's yad yad asriyate). And so 3.14.215's difficulty fails: a general is not consumed by being said, because its being said is an exclusion, and exclusions repeat.

Verse 3.14.217

विभक्त्यर्थाभिधानाद् वा षष्ठी नानुप्रयुज्यते ।
द्रव्यस्यानभिधानात्तु तच्छब्दोऽनुप्रयुज्यते ॥ 217 ॥

vibhaktyarthābhidhānād vā ṣaṣṭhī nānuprayujyate |
dravyasyānabhidhānāttu tacchabdo'nuprayujyate ॥ 217 ॥

Or, from the case-meaning's being expressed, the genitive is not employed afterwards; but from the substance's not being expressed, the word 'tad' is employed afterwards.

Two facts about how bahuvrihis are used. Vibhakty-arthabhidhanad va sasthi na anuprayujyate: from the *case-meaning's* being *expressed*, the *genitive* is *not employed* afterwards — the compound has already said the possessive relation, so no 'whose' need follow. Dravyasya anabhidhanat tu tac-chabdo 'nuprayujyate: *but* from the *substance's* *not being expressed*, the word 'tad' is employed afterwards. So the compound says the relation and does not say the possessor — and usage reflects both halves precisely: no genitive (the relation is in), a pronoun (the substance is out). This is 3.14.211's tavat confirmed from the outside: what a word expresses can be read off what one must add to it.

Verse 3.14.218

सामानाधिकरण्यं चेन्मतुब्लोपात् प्रकल्पते ।
मतुपोऽपि तदर्थत्वादनवस्था प्रसज्यते ॥ 218 ॥

sāmānādhikaranyam cenmatublopāt prakalpate |
matupo’pi tadarthatvādanavasthā prasajyate || 218 ||

If co-reference is conceivable from the elision of ‘matup’ – since ‘matup’ also has that meaning, an infinite regress follows.

The elision-device, finally broken. Samanadhikaranyam cen matub-lopat prakalpate: if co-reference is conceivable from the elision of *matup* – the device of 3.14.87, 3.14.148, 3.14.182. Matupo ’pi tadarthatvad anavastha prasajyate: since *matup* also has that meaning, an infinite regress follows – anavastha: no standing, the endless recession. Because if possession must be carried by a matup, then the matup’s own possession needs another matup, and so without end. So the device that has been quietly doing the work all through this stretch is now shown to be viciously regressive. Bhartṛhari has let it run and run and then pulled it – which is 3.14.76’s vyutpattir anavasthita made literal: the derivation has no footing, and here is the proof.

Verse 3.14.219

सम्बन्धस्य च सम्बन्धी सम्बन्धोऽन्यः प्रसज्यते ।
विभक्त्यर्थप्रधाने च क्रियायोगो न कल्पते ॥ 219 ॥

sambandhasya ca sambandhī sambandho’nyaḥ prasajyate |
vibhaktyarthapradhāne ca kriyāyogo na kalpate || 219 ||

And of the relation, another relation as relatum follows; and where the case-meaning is principal, connection with action is not conceivable.

A second regress and a second failure. Sambandhasya ca sambandhi sambandho ’nyaḥ prasajyate: of the relation, another relation as relatum follows – the relation needs relating to its terms, and that relating needs relating (3.3’s the sambandha-samuddesa’s central difficulty: relation cannot be a relatum without regress). Vibhakty-ārtha-pradhane ca kriya-yogo na kalpate: and where the case-meaning is principal, connection with action is not conceivable. So the second failure is the fatal one of 3.14.205: a meaning that cannot enter into action does not independently exist. Making the relation principal in a bahuvrihi thus both regresses and de-realizes. The account is finished.

Verse 3.14.220

विभक्त्यर्थप्रधानत्वात् ततस्तत्रेति न क्रिया ।
दृश्यादिः कर्मकर्त्रादिनिमित्तत्वाय कल्पते ॥ 220 ॥

*vibhaktyarthapradhānatvāt tatastatreti na kriyā |
dṛśyādih karmakartrādinimittatvāya kalpate || 220 ||*

From the case-meaning's being principal, therefore 'there' — there is no action; 'drs' and the rest is conceivable as the cause of object, agent and the rest.

Vibhakty-artha-pradhanatvat tatas tatreti na kriya: from the *case-meaning's* being *principal*, therefore 'tatra' — 'there' — there is *no action*: a locative standing on its own has no verb to be locative to, and a bare relation is such a locative. Drsyadih karma-kartradi-nimittatvaya kalpate: 'drs' (to see) and the rest is *conceivable* as the *cause of object, agent* and the rest — it is the *verb* that generates the karakas (3.7.1's the sadhanas are what the action needs; 3.8.2's the action is the principal). So relations cannot be principal because karakas are made by verbs, and a compound with a relation at its centre has no verb in it. The refutation is now complete on principle: relation is not a thing one can put in the middle of anything.

Verse 3.14.221

अन्तर्भवेच्च सम्बन्धः प्राधान्याभिहितः कथम् ।
स प्रातिपदिकार्थश्च तथाभूतः कथं भवेत् ॥ 221 ॥

*antarbhavec ca sambandhaḥ prādhānyābhihitah katham |
sa prātipadikārthaśca tathābhūtaḥ katham bhavet || 221 ||*

And how could a relation be included, being expressed as principal? And how could that, being such, be the meaning of a nominal base?

Two rhetorical questions, and they close the case. Antarbhavec ca sambandhah pradhanyabhihitah katham: *how* could a *relation* be *included* — antarbhu: contained within something — while being *expressed as principal*? What is principal is not contained; the two are contraries. Sa pratipadikarthas ca tatha-bhutah katham bhavet: and *how* could *that*, being *such*, be the meaning of a *nominal base*? A pratipadika means a thing; a relation is not a thing (3.3's relation as neither substance nor quality). So a bahuvrihi cannot have its relation as its meaning, because a nominal stem cannot mean a relation and nothing that is principal can be contained. Katham... katham: the questions have no answers, and are not meant to.

Verse 3.14.222

असम्भवात्तु सम्बन्धे सम्बन्धसहचारिणि ।
जातिसङ्ख्यासमाहारकार्याणामिव सम्भवः ॥ 222 ॥

*asambhavāttu sambandhe sambandhasahacārīṇi |
jātisāṅkhyāsamāhārakāryāṇāmiva sambhavaḥ ॥ 222 ॥*

But from the impossibility in the relation, there is possibility in what accompanies the relation — as of the operations of universal, number and aggregate.

The resolution. *Asambhavat tu sambandhe*: from the *impossibility* in the *relation* — 3.14.219-221's demonstration that nothing can be predicated of a relation. *Sambandha-sahacarini sambhavaḥ*: in what *accompanies* the relation, there is *possibility* — *sahacarin*: the accompanier (3.14.31's *bhinnesu saharacisu*, where the *samuddesa* began). *Jati-sankhya-samahara-karyanam iva*: *as of the operations of universal, number and aggregate* (3.14.180's three routes). So the grammar's operations do not fall on the relation, which cannot bear them; they fall on what goes along with it, exactly as universal, number and aggregate reach a substance by accompanying it. The *bahuvrihi* means neither its members nor its relation nor its possessor: it means what accompanies the relation, and the possessor is found by that.

Verse 3.14.223

सोऽयमित्यभिसम्बन्धाद् विशिष्टाश्रयवाचिनाम् ।
शुक्लादिवल्लिङ्गसङ्ख्ये शास्त्रारम्भाद् भविष्यतः ॥ 223 ॥

*so'yamityabhisambandhād viśiṣṭāśrayavācinām |
śuklādivallīṅgasāṅkhye śāstrārambhād bhaviṣyataḥ ॥ 223 ॥*

From the connection 'this is that', of those expressing a specified substratum — as with 'sukla' and the rest, gender and number will come about from the undertaking of the science.

So 'yam ity abhisambandhad visistasraya-vacinam: from the connection 'this is that', of those *expressing a specified substratum* — the *bahuvrihis*, which reach a substratum without naming it (3.14.211's *tavat*). *Suklādivat linga-sankhye sastrarambhad bhaviṣyataḥ*: as with 'sukla' and the rest, *gender and number* will come about from the *undertaking of the science*. *Sastrarambhat*: because the grammar takes it up (3.14.134's *sastram arabdham*, in the same idiom). So the *bahuvrihi*'s concord is not natural (against 3.14.202's *dvandva*, which had it by *svabhava*): it must be legislated, because there is no substance in the compound to bear it. The two compound-types are thus opposite in exactly the place one would expect.

Verse 3.14.224

भेदेन तु विवक्षायां सामान्ये वा विवक्षिते ।
सलिङ्गस्य ससङ्ख्यस्य पदार्थस्यागतिर्भवेत् ॥ 224 ॥

*bhedena tu vivakṣāyām sāmānye vā vivakṣite |
saliṅgasya sasamkhyasya padārthasyāgatirbhavet || 224 ||*

But when the intention to express is by way of difference, or when the general is intended — there would be no reaching of a word-meaning possessing gender and number.

Bhedena tu vivaksayam samanye va vivaksite: when the *intention to express is by way of difference*, or when the *general is intended* — vivaksa, the will to say (3.14.197's the word is the only inference of it). Salingasya sasamkhyasya padarthasya agatir bhavet: there would be *no reaching* — agati: no access, no way through — of a *word-meaning* possessing *gender and number*. So on either intention, differentiating or generalizing, one cannot get to a gendered and numbered meaning: the differentiated has no unity to bear them, the general has no substance. This is why 3.14.223 had to call in the sastra: neither vivaksa delivers concord, and something must.

Verse 3.14.225

साधुत्वं न विभक्त्यर्थमात्रे वृत्तस्य दृश्यते ।
कृत्स्नार्थवृत्तेः साधुत्वमित्यर्थग्रहणं कृतम् ॥ 225 ॥

*sādhutvam na vibhaktyarthamātre vṛttsya drśyate |
kṛtsnārthavṛtteḥ sādhutvamityarthagrahaṇam kṛtam || 225 ||*

Correctness is not seen of what operates in the case-meaning alone; 'correctness belongs to what operates in the whole meaning' — thus the taking-up of the word 'artha' is made.

A word in Panini's rule explained. Sadhutvam na vibhakty-artha-matre vrttasya drsyate: *correctness is not seen of what operates in the case-meaning alone* — a form that reaches only the relation is not sadhu (3.14.219-221's demonstration that a relation cannot be the meaning). Kṛtsnārtha-vrtteh sadhutvam ity artha-grahanam krtam: 'correctness belongs to what operates in the *whole meaning*' — thus the *taking-up of 'artha'* is made. So the word 'artha' in the sutra is there to require that the form reach the *whole meaning*, relation and relata together. Bhartrhari is reading a single word of Panini's as carrying the doctrine of 3.14.222 — the operations fall on what accompanies the relation, and the rule says so by saying 'artha'.

Verse 3.14.226

सोऽयमित्यभिसम्बन्धाद् द्रव्यवृत्तिरयं यदा ।
सलिङ्गस्य ससङ्ख्यस्य तदा साधुत्वमुच्यते ॥ 226 ॥

so'yamityabhisambandhād dravyavṛttirayam.yadā |
saliṅgasya sasaṅkhyasya tadā sādhutvamucyate || 226 ||

When, from the connection 'this is that', this operates in the substance — then correctness is stated of what possesses gender and number.

So 'yam ity abhisambandhad dravya-vṛttiṛ ayam yada: when, from the connection 'this is that', this operates in the substance — the compound reaches a substance by identification, not by naming (3.14.211). Saliṅgasya sasaṅkhyasya tada sadhutvam ucyate: *then correctness* is stated of what possesses *gender and number*. So the order is: identification first, substance reached, concord acquired, correctness pronounced. Nothing here is in the compound's meaning; all of it is in what the compound gets to. This completes 3.14.225: 'artha' in the rule means the whole reach of the word, and the reach ends in a substance (3.14.163's dravyam eva asrayah, for the last time in this stretch).

Verse 3.14.227

अन्तर्भूतविभक्त्यर्थे षष्ठी न श्रूयते यथा ।
तथाऽश्रुतिः प्रसज्यते लिङ्गसङ्ख्याभिधायिनाम् ॥ 227 ॥

antarbhūtavibhaktyarthe ṣaṣṭhī na śrūyate yathā |
tathā'srutih prasajyate liṅgasaṅkhyābhidhāyinām || 227 ||

As the genitive is not heard when the case-meaning is included — so the non-hearing of the expressers of gender and number would follow.

An objection to 3.14.226. Antarbhūta-vibhakty-arthe ṣaṣṭhī na śrūyate yatha: as the *genitive* is not heard when the *case-meaning* is included — 3.14.217's fact: the compound has swallowed the relation, so no 'whose' follows. Tatha asrutih prasajyate liṅga-saṅkhyābhidhāyinām: so the *non-hearing* of the expressers of *gender and number* would follow. So if inclusion silences the genitive, inclusion should silence the gender-and-number affixes too — and then no bahuvrihi could inflect. The objection is exact and it uses the samuddesa's own finding against it. 3.14.228 states the consequence in its full severity.

Verse 3.14.228

साधर्म्यमव्ययेन स्याद् बहुर्विहेस्तथा सति ।
लिङ्गसङ्ख्यानिमित्तस्य संस्कारस्यापवर्तनात् ॥ 228 ॥

sādharmyamavyayena syād bahurvihestathā sati |
liṅgasaṅkhyānimittasya saṁskārasyāpavartanāt || 228 ||

The bahuvrihi would then have similarity with an indeclinable, from the removal of the formation which is the cause of gender and number.

The consequence, and it is the one Bhartrhari has been avoiding since 3.14.193. *Sadharmyam avyayena syad bahuvriheh tatha sati*: the *bahuvrihi* would then have *similarity* with an *indeclinable*. *Linga-sankhya-nimittasya samskarasya apavartanat*: from the *removal* of the *formation* which is the *cause* of gender and number — *apavartana*: the turning away, the withdrawal of the very derivational process that would have supplied concord. So 3.14.227's objection makes the *bahuvrihi* an *avyaya* — *uninflectable*, like 'ca' (3.14.193's threatened contagion, arriving from the other direction). The result is plainly false: 'citragum pasya' is good Sanskrit. So something in the objection is wrong, and 3.14.229 finds it.

Verse 3.14.229

प्रयुक्तेन च सम्बन्धाच्चैत्रादिश्रवणं भवेत् ।
विना विभक्त्या सम्बन्धो विभक्त्या विद्यते विना ॥ 229 ॥

prayuktena ca sambandhāccaitrādiśravaṇam bhavet |
vinā vibhaktyā sambandho vibhaktyā vidyate vinā || 229 ||

And from connection with what is employed, the hearing of 'Caitra' and the rest would occur; the relation exists without a case-ending — it exists without a case-ending.

The reply. *Prayuktena ca sambandhac caitradi-sravanam bhavet*: from *connection* with what is *employed*, the *hearing* of 'Caitra' and the rest would occur — the possessor's name does turn up alongside the compound, and that is what a *bahuvrihi* is for (3.14.210-211: the compound reaches him without saying him, so his name stays sayable). *Vina vibhaktya sambandho vibhaktya vidyate vina*: the *relation* exists *without a case-ending*. So the disanalogy 3.14.227 missed: a relation can subsist unexpressed, and gender cannot. The genitive is silent because the relation survives its silence; the gender-affixes are audible because the gender does not. Inclusion silences only what can survive being silent.

[Contested: *Pada d* as transmitted ('*vibhaktya vidyate vina*') repeats *pada c*'s content with the words reordered, which may be emphatic or may be a transmission fault. We render the sense once and note the duplication rather than reconstruct a different fourth *pada*.]

Verse 3.14.230

अभिधानेऽपि सङ्ख्यायाः संख्यात्वं न निवर्तते ।
षष्ठ्यर्थस्याभिधाने तु स्यात् प्रातिपदिकार्थता ॥ 230 ॥

abhidhāne'pi saṅkhyāyāḥ saṅkhyātvam na nivartate |
ṣaṣṭhyarthasyābhidhāne tu syāt prātipadikārthatā || 230 ||

Even in the expression of number, numberhood does not withdraw; but in the expression of the genitive's meaning, there would be the state of being a nominal-base-meaning.

Abhidhane 'pi sankhyayah sankhyatvam na nivartate: *even in the expression of number, numberhood does not withdraw* — say a number and it is still a number; expressing it does not consume it. *Sasthyarthasya abhidhane tu syat pratipadikarthata*: *but in the expression of the genitive's meaning, there would be the state of being a nominal-base-meaning*. And that is impossible — 3.14.221 asked how a relation could be a *pratipadika*'s meaning, and the question had no answer. So the asymmetry of 3.14.229 is now grounded: number survives expression, relation cannot be expressed at all. The two are different in kind, and the rules treat them differently because they are.

Verse 3.14.231

अनुप्रयोगसिद्ध्यर्थं न विभक्त्यर्थकल्पना ।
वस्त्वन्तरमुपक्षिप्तमिति केचित् प्रचक्षते ॥ 231 ॥

anuprayogasiddhyartham, na vibhaktyarthakalpanā |
vastvantaramupakṣiptamiti kecit pracakṣate || 231 ||

The imagining of the case-meaning is not for the sake of establishing the subsequent employment; another thing has been hinted at – so some declare.

Anuprayoga-siddhy-artham na vibhakty-artha-kalpana: the *imagining* of the *case-meaning* is not for the sake of *establishing* the *subsequent employment* – kalpana: construction (3.14.96's bheda-samsarga-kalpana). One does not posit the case-meaning merely to license the 'tad' that follows (3.14.217). Vastv-antaram upakṣiptam iti kecit pracakṣate: *another thing* has been *hinted at* – so some declare. Upakṣipta: thrown out, alluded to, gestured toward. So on this view the posited case-meaning is pointing at something else altogether, and the anuprayoga is not the reason for it. Bhartrhari reports without endorsing (kecit), and 3.14.232 sets out what the something else might be.

Verse 3.14.232

सम्बन्धिभिर्विशिष्टानां सम्बन्धाना निमित्तता ।
सम्बन्धैर्वा विशिष्टानां तद्वतां स्यान्निमित्तता ॥ 232 ॥

sambandhibhirviśiṣṭānām, sambandhānā nimittatā |
sambandhairvā viśiṣṭānām, tadvatām, syānnimittatā || 232 ||

The causality belongs to the relations qualified by the relata; or the causality would belong to the possessors of those, qualified by the relations.

The fork that organizes the rest of the stretch. Sambandhibhir visistanam sambandhanam nimittata: the *causality* belongs to the *relations qualified by the relata* – relation principal, terms qualifying. Sambandhair va visistanam tadvatam syan nimittata: *or the causality would belong to the possessors of those, qualified by the relations* – terms principal, relation qualifying. So: which is the bahuvrihi's occasioning cause, the relation-as-qualified or the possessor-as-qualified? Everything 3.14.219-221 established says the second must win – a relation cannot be principal. But Bhartrhari puts both, because the tradition holds both, and 3.14.233-234 name the holders.

Verse 3.14.233

केचित् संयोगिनो दण्डाद् विषाणात् समवायिनः ।
तद्वति प्रत्ययानाहुर्बहुर्वीहिं तथैव च ॥ 233 ॥

kecit samyogino daṇḍād viṣāṇāt samavāyinaḥ |
tadvati pratyayānāhurbahurvīhim, tathaiva ca || 233 ||

Some say the affixes come, in the possessor of that, from 'danda' for the conjoined and from 'visana' for the inherent; and the bahuvrihi likewise.

The second horn's partisans. Kecit samyogino dandad visanat samavayinah: some say — from 'danda' (staff) for the *conjoined*, giving 'dandin', the staff-bearer whose staff is merely in contact with him; and from 'visana' (horn) for the *inherent*, giving 'visanin', the horned one whose horns inhere in him. Two relations, samyoga and samavaya, the Vaisesika pair. Tadvati pratyayan ahuh: they say the *affixes* come in the possessor of that. Bahuvrihim tathaiva ca: and the *bahuvrihi* likewise. So the possessive affixes attach to the possessor, and the compound works the same way: possessor principal, relation qualifying — 3.14.232's second horn, with two well-known relations to instance it.

Verse 3.14.234

भिन्नं सम्बन्धिभेदेन सम्बन्धमपरे विदुः ।
निमित्तं सविभक्त्यर्थः समासेनाभिधीयते ॥ 234 ॥

bhinnaṁ sambandhibhedena sambandhamapare viduḥ |
nimittam, savibhaktyarthah samāsenābhidhiyate || 234 ||

Others know the relation, differentiated by the difference of the relata, as the cause; what bears the case-meaning is expressed by the compound.

The first horn's partisans. Bhinnam sambandhi-bhedena sambandham apare viduh: *others* know the relation, differentiated by the difference of the relata, as the cause — the relation is principal, and it is many because its terms are many: staff-bearing and horn-having are different relations. Nimittam savibhakty-arthah samasena abhidhiyate: what bears the case-meaning is expressed by the compound. So on this view the compound says the relation-with-its-terms, and that is what conditions the affixes. It is 3.14.232's first horn, and it has 3.14.219-221 against it. Bhartrhari sets both parties out and lets the earlier argument do the deciding — he does not repeat it.

Verse 3.14.235

प्रधानमन्यार्थतया भिन्नं स्वरूपसर्जनैः ।
निमित्तमभिधेयं वा सर्वपश्चादपेक्ष्यते ॥ 235 ॥

pradhānamanyārthatayā bhinnam, svairupasarjanaiḥ |
nimittamabhidheyam, vā sarvapaścādapekṣyate || 235 ||

The principal, differentiated by its own subordinates through being for another's purpose, is required last of all — whether as cause or as what is expressed.

Pradhanam anyarthataya bhinnam svair upasarjanaih: the *principal*, *differentiated* by its own subordinates through being for another's purpose — the bahuvrihi's members, which serve an outside possessor (3.14.63's apujyamana: unhonoured, none of them principal). Nimittam abhidheyam va sarva-pascad apeksyate: is *required last of all* — sarva-pascad: after everything — whether as *cause* or as what is *expressed*. So the possessor comes last: the members are said, the relation is included, and only at the end is the one they were all for required. This is the bahuvrihi's peculiar temporal shape, and it explains 3.14.139's bhavin, bahiranga substratum — the thing that governs the compound's concord arrives after the compound is finished.

Verse 3.14.236

स्वामिनि व्यतिरेकश्च वाक्ये यद्यपि दृश्यते ।
प्राधान्य एव तस्येष्टो बहुर्विहिर्विवक्षिते ॥ 236 ॥

svāmini vyatirekaśca vākya yadyapi dṛśyate |
prādhānya eva tasyeṣṭo bahurvīhīrvivakṣite || 236 ||

And although difference is seen in the owner in the sentence — the bahuvrihi is desired only when his principality is intended.

Svāmini vyatirekas ca vākye yady api dṛśyate: although *difference* is seen in the owner in the sentence — in 'citra gavo yasya', the owner stands apart, distinct, named by a relative pronoun. Prādhānya eva tasya isto bahuvrihir vivakṣite: the *bahuvrihi* is *desired only* when *his principality* is intended. So the phrase and the compound differ in what they make principal: the phrase foregrounds the cows and appends the owner; the compound is chosen precisely when the owner is to be principal. This is 3.14.49's atyanta-bheda given its motive — one does not compound to abbreviate, one compounds to shift what is principal. Vivakṣa decides (3.14.224), and the form follows.

Verse 3.14.237

गवां विशेषणत्वेन यदा तद्वान् प्रवर्तते ।
अस्यैता इति तत्रार्थे बहुर्विहिर्न विद्यते ॥ 237 ॥

gavām viśeṣaṇatvena yadā tadvān pravartate |
asyaitā iti tatrārthe bahurvīhīr na vidyate || 237 ||

When the possessor operates as the qualifier of the cows — in that meaning, 'these are his', there is no bahuvrihi.

The test of 3.14.236, negative half. Gavam viśeṣaṇatvena yadā tadvān pravartate: when the possessor operates as the *qualifier* of the cows — the owner qualifying the herd rather than the reverse. Asya eta iti tatra arthe bahuvrihir na vidyate: in *that* meaning — 'these are his' — there is *no bahuvrihi*. So where the cows are principal and the owner merely tells which cows, the compound is unavailable: one must use the phrase. The bahuvrihi is not a way of saying 'his cows'; it is a way of saying 'the man with the cows', and the difference is which way the qualification runs. This is as sharp a statement of the compound's semantics as the samuddesa gives.

Verse 3.14.238

यदा प्रत्यवमर्शस्तु तासां स्वामी गवामिति ।
गोभिस्तदाभिसम्बन्धो निमित्तत्वाय कल्पते ॥ 238 ॥

yadā pratyavamarśastu tāsāṃ svāmī gavāmiti |
gobhistadābhisambandho nimittatvāya kalpate || 238 ||

But when the reflective reference is 'he is the owner of those cows' – then the connection with the cows is conceivable as the cause.

The positive half. Yada pratyavamarsas tu tasam svami gavam iti: when the *reflective reference* is 'he is the owner of those cows' – pratyavamarsa: the mind's turning back on what it has laid down (3.14.189's linga-pratyavamarsa, in the same sense). Gobhis tada abhisambandho nimittatvaya kalpate: *then the connection with the cows is conceivable as the cause*. So when the mind's backward glance lands on the owner, the cow-connection becomes the occasioning condition and the bahuvrihi is licensed. The whole determination is thus in the pratyavamarsa – in which way the cognition turns – and not in the world, where a man and his cows stand in one relation regardless (3.14.188's buddhya eva: by the intellect alone). Which is where this samuddesa has said everything is.

Verse 3.14.239

अपेक्षमाणः सम्बन्धं रुढित्वस्य निवृत्तये ।
निमित्तानुविधायित्वात् तद्धर्मार्थः प्रसज्यते ॥ 239 ॥

apekṣamāṇaḥ sambandham rūḍhitvasya nivṛttaye |
nimittānuvidhāyitvāt taddharmārthaḥ prasajyate || 239 ||

Requiring the relation, for the removal of conventionality – from conforming to the cause, the meaning possessing that property follows.

Apekṣamanah sambandham rudhitvasya nivrttaye: *requiring the relation, for the removal of conventionality* – rudhitva: the state of having hardened into a name (3.14.212's vajrapani and tryaksa, frozen by convention). A compound that keeps requiring its relation cannot congeal into a proper name: the requirement holds it open. Nimitta-anuvidhayitvat tad-dharmarthah prasajyate: *from conforming to the cause, the meaning possessing that property follows*. So the live relation both prevents rudhi and delivers the properties. This explains why most bahuvrihis are not names: they go on requiring, and requiring keeps them general (3.14.213's samanyasya abhidhayakah).

Verse 3.14.240

नानाचित्रा इति यथा निमित्तमनुरुध्यते (वर्तते) ।
नानाभूतेऽपि वृत्तः सन् बहुर्विहिस्तथा भवेत् ॥ 240 ॥

*nānācitrā iti yathā nimittamanurudhyate (vartate) |
nānābhūte'pi vṛttaḥ san bahurvihistathā bhavet || 240 ||*

As 'nana-citrah' conforms to its cause — so the bahuvrihi, though operating in what has become manifold, would be.

Nana-citra iti yatha nimittam anurudhyate: as 'nana-citrah' — the manifoldly variegated — *conforms* to its *cause*: the plural is there because the variegation is many, and the form follows the fact. Nana-bhute 'pi vṛttaḥ san bahuvrihis tatha bhavet: so the *bahuvrihi*, though *operating* in what has *become manifold*, would be. So the compound may reach a plurality and still take its concord from its cause rather than from the plurality — as 'nana-citrah' does. The point is that manifoldness in the object does not force manifoldness in the form: the form answers to what conditions it (3.14.153's the properties belong to the conditions and do not migrate).

[Contested: The source records a variant in pada b: 'anurudhyate' ('conforms to') against 'vartate' ('operates in'). We translate the former, which the argument requires — the verse is about conformity to the nimitta, as pada b of 3.14.239 has just established. On the variant the sense would be that 'nana-citrah' merely operates in its cause, which is weaker but not incompatible.]

Verse 3.14.241

सम्बन्धिनि निमित्ते तु द्रव्यधर्मो न हीयते ।
लिङ्गाभावो हि लिङ्गस्य विरोधित्वेन वर्तते ॥ 241 ॥

*sambandhini nimitte tu dravyadharmo na hīyate |
liṅgābhāvo hi liṅgasya virodhitvena vartate || 241 ||*

But when the relatum is the cause, the substance's property is not lost; for the absence of gender operates as the contradictory of gender.

Sambandhini nimitte tu dravya-dharmo na hiyate: when the *relatum* is the *cause* — 3.14.232's second horn, the one that survives — the *substance's property* is *not lost*. Lingabhavo hi lingasya virodhitvena vartate: for the *absence of gender* operates as the *contradictory* of gender. So the choice is stark: either the cause is a substance and gender comes with it, or the cause is a relation and gender is *contradicted* — not merely absent but excluded. Virodhitvena: as a contrary. This is why 3.14.228's avyaya-consequence was so threatening: relation does not merely fail to supply gender, it repels it. Hence the relatum must be the cause, and 3.14.232's fork is settled.

Verse 3.14.242

संख्यावांल्लिङ्गश्रार्थोऽभिन्नधर्मा निमित्ततः ।
आसन्न एव द्रव्यत्वात् तद्धर्मैर्न विरुध्यते ॥ 242 ॥

samkhyāvāṃllīṅgaścārtho'bhinna-dharmā nimittataḥ |
āsanna eva dravyatvāt taddharmairna virudhyate || 242 ||

And the meaning possessing number and gender, of undivided properties, from its cause — being near, from substantiality, is not contradicted by its own properties.

Samkhyavaml lingas ca artho 'bhinna-dharma nimittataḥ: the meaning possessing *number* and *gender*, of *undivided properties*, from its *cause* — abhinna-dharma: its properties not split off from it (3.14.181's murti-dharmas not other than the murti). Asanna eva dravyatvat tad-dharmair na virudhyate: *being near*, from *substantiality*, it is *not contradicted* by its *properties*. Asanna: close at hand, adjacent. So because the meaning is substance-like it is *near* its gender and number, and no contradiction arises — where 3.14.241's relation was far and repellent. The bahuvrihi's meaning is thus a near-substance: not a substance, near enough to hold concord. That is as precise as this can be made.

Verse 3.14.243

विभक्त्यर्थेन चाविष्टं शुद्धं चेति द्विधा स्थितम् ।
द्रव्यं शुद्धस्य यो धर्मः स न स्यादन्यधर्मणः ॥ 243 ॥

vibhaktyarthena cāviṣṭam,śuddham,ceti dvidhā sthitam |
dravyam,śuddhasya yo dharmah sa na syādanyadharmanah || 243 ||

Substance stands in two ways: pervaded by the case-meaning, and pure. That property which belongs to the pure would not belong to what has another property.

A distinction with consequences. Vibhakty-arthena ca avistam suddham ceti dvidha sthitam dravyam: *substance* stands in *two ways* — *pervaded by the case-meaning* (avista: entered into, 3.14.175's word), and *pure*. Suddhasya yo dharmah sa na syad anya-dharmanah: that *property* which belongs to the *pure* would not belong to what has *another property*. So the two substances have different properties and one cannot argue from the one to the other: the substance caught up in a relation is not the substance simpliciter, and what holds of the second need not hold of the first. This is the ground of 3.14.242's asanna: the bahuvrihi's meaning is the pervaded substance, near the pure one and not it.

Verse 3.14.244

द्रव्यमात्रस्य निर्देशे भेदोऽयमविवक्षितः ।
ग्रन्थे पूर्वत्र भेदस्तु द्वितीयेऽनुप्रदर्शितः ॥ 244 ॥

dravyamātrasya nirdeśe bhedo'yamavivakṣitaḥ |
granthe pūrvatra bhedastu dvitīye'nupradarśitaḥ || 244 ||

In the indication of mere substance, this difference is not intended; in the earlier part of the work, the difference; but in the second it has been shown.

A rare internal cross-reference. Dravya-matrasya nirdese bhedo 'yam avivakṣitaḥ: in the *indication of mere substance*, this *difference* – 3.14.243's pure against pervaded – is *not intended*: where one says simply 'substance', the distinction is not being drawn (3.14.103's avivakṣita). Granthe purvatra bhedas tu dvitīye 'nupradarśitaḥ: in the *earlier part of the work*, the *difference*; but in the *second* it has been shown. So Bhartrhari is pointing his reader back – the Dravya-samuddesa (3.2) and the Dravyalakṣaṇa-samuddesa (3.4) treated substance one way, and the second kanda another. Granthe purvatra: *earlier in the book*. The Vakyapadiya knows itself as a single structure and says so here.

Verse 3.14.245

द्रव्यस्य ग्रहणं चात्र लिङ्गसंख्याविशेषणम् ।
द्रव्याश्रितत्वं हि तयोस्ततोऽन्यस्य न सिध्यतः ॥ 245 ॥

dravyasya grahaṇam.cātra liṅgasamkhyāviśeṣaṇam |
dravyāśritatvam.hi tayostato'nyasya na sidhyataḥ || 245 ||

And here the taking-up of the word 'substance' is the qualifier of gender and number; for those two rest on substance, and do not succeed for anything else.

Dravyasya grahanam ca atra liṅga-samkhyā-visesaṇam: the *taking-up* of the word 'substance' – its appearance in the rule – is the *qualifier* of *gender and number*: the word is there to specify which gender and number are meant, namely a substance's. Dravyasritatvam hi tayoh: for those *two rest on substance*. Tato 'nyasya na sidhyataḥ: and for *anything else* they do *not succeed*. So the samuddesa's long gender-and-number enquiry ends where 3.14.163 said it would: dravyam eva asrayah, and every other candidate – quality, universal, relation, accumulation – has been tried and has failed. The word 'dravya' in the sutra is Panini registering the same finding.

Verse 3.14.246

सम्बन्धिभिन्नसम्बन्धपरिच्छिन्ने प्रवर्तते ।
समासो द्रव्यसामान्ये विशिष्टार्थानुपातिनि ॥ 246 ॥

sambandhibhinnasambandhaparicchinne pravartate |
samāso dravyasāmānye viśiṣṭārtḥānupātini || 246 ||

The compound operates in the substance-general, delimited by relations differentiated by their relata, conforming to the specified meaning.

The bahuvrihi's meaning, finally stated in full. Sambandhi-bhinna-sambandha-paricchinne: *delimited by relations differentiated by the relata* (3.14.234's bhinnam sambandhi-bhedena, now used affirmatively). Pravartate samaso dravya-samanye: the compound operates in the *substance-general* – dravya-samanya: not a substance and not a universal, but substance-in-general, the near-substance of 3.14.242. Visistārtha-anupatini: *conforming to the specified meaning* – anupatin: running after, following on. So: 'citragu' means substance-in-general, cut down by the cow-relation, running toward whatever specified thing satisfies it. Every word of this has been earned across forty verses, and none of it is spare.

Verse 3.14.247

द्रव्यधर्मनतिक्रान्तो भेदधर्मेष्ववस्थितः (ष्वशक्तितः) ।
भविष्यदाश्रयापेक्षे लिङ्गसङ्ख्ये प्रपद्यते ॥ 247 ॥

dravyadharmānatikrānto bhedadharmeṣvavasthitah (ṣvaśaktitah) |
bhaviṣyadāśrayāpekṣe liṅgasāṅkhye prapadyate || 247 ||

Not transgressing the substance's property, settled in the difference-properties, it attains gender and number which depend on a future substratum.

Dravya-dharma-anatikrantah: *not transgressing the substance's property* – it stays within what a substance may do, and so may hold concord (3.14.245). Bheda-dharmesv avasthitah: *settled in the difference-properties*. Bhaviṣyad-asraya-apekse liṅga-sāṅkhye prapadyate: *it attains gender and number which depend on a future substratum*. Bhaviṣyat: the substratum is yet to come – 3.14.139's bhavin and bahiranga, and 3.14.235's sarva-pascāt: the possessor arrives last. So the bahuvrihi's concord is owed to something that does not yet exist when the compound is formed, and the compound holds the place open. That is the whole peculiarity of the form, and here it is stated exactly.

[Contested: Pada b is transmitted with a variant: 'bheda-dharmesv avasthitah' ('settled in the difference-properties') against 'bheda-dharmesv asaktitah' ('from incapacity in the difference-properties'). We translate the former. The variant would reverse the pada's force – the compound failing at the differences rather than resting in them – and would fit 3.14.241's repulsion-argument; but 'avasthitah' better suits pada a's 'anatikrantah', which describes staying within bounds rather than falling short.]

Verse 3.14.248

शास्त्रप्रवृत्तिभेदेऽपि लौकिकार्थो न भिद्यते ।
नान्समासे यतस्तत्र त्रयः पक्षा विचारिताः ॥ 248 ॥

śāstrapravṛttibhede'pi laukikārtho na bhidyate |
nañsamāse yatastatra trayah pakṣā vicāritāḥ || 248 ||

Even where the science's operation differs, the worldly meaning is not differentiated; since, in the negative compound, three positions have been considered there.

The negative compound begins, and it begins with the samuddesa's constant refrain. Sastra-pravṛtti-bhede 'pi laukiko 'rtho na bhidyate: *even where the science's operation differs, the worldly meaning is not differentiated* – however many ways the grammar derives it, 'abrahmana' means what it means (3.14.74's the science stands very far off; 3.14.97's the upayas unsettled among persons). Nan-samase

yatas tatra trayah paksa vicaritaḥ: since, in the *nan*-compound, three positions have been considered there. So three rival accounts are on record and the word is indifferent to all of them. This is the frame for everything that follows: the analyses will multiply and nothing in the language will move.

Verse 3.14.249

शब्दान्तरेऽपि चैकत्वमाश्रित्यैव विचारणा ।
अब्राह्मणादिषु नञः प्रयोगो न हि विद्यते ॥ 249 ॥

śabdāntare'pi caikatvamāśrityaiva vicāraṇā |
abrāhmaṇādiṣu nañah prayogo na hi vidyate || 249 ||

Even where it is another word, the consideration proceeds only by resorting to oneness; for in 'abrahmana' and the rest, the employment of 'nañ' does not exist.

Sabdantare 'pi ca ekatvam asritya eva vicarana: *even where it is another word, the consideration proceeds only by resorting to oneness* — the analysis treats the compound and the phrase as one thing in order to discuss them, though 3.14.49 established they are utterly different words. The unity is the analyst's, assumed to make the discussion possible. Abrahmanadisu nanah prayogo na hi vidyate: for in 'abrahmana' and the rest, the employment of 'nañ' does not exist — the technical particle 'nañ' is a grammarian's object; what one says is 'a-'. So the three positions of 3.14.248 are being debated about a thing that is not in the word: nañ is notation (3.14.78's anubandha-svaradi).

Verse 3.14.250

प्राक् समासात् पदार्थानां निवृत्तिर्द्योत्यते नञा ।
स्वभावतो निवृत्तानां रूपाभेदादलक्षिता ॥ 250 ॥

prāk samāsāt padārthānām nivṛttirdyotyate nañā |
svabhāvato nivṛttānām rūpābhedādalakṣitā || 250 ||

Before the compound, the exclusion of the word-meanings is indicated by 'nañ'; of those excluded by their own nature, unmarked from non-difference of form.

The first position, and it is the dyotaka one. Prak samasat padarthanam nivrttir dyotyate nana: *before the compound, the exclusion of the word-meanings is indicated by 'nañ' — dyotyate: indicated, not expressed* (3.14.191's the particle restricts what was latent). Svabhavato nivrttanam rupabhedad alakṣita: *of those excluded by their own nature, unmarked from non-difference of form*. So the exclusion was already there — everything excludes what it is not, by its own nature (3.14.142's yad yad asriyate tat tad anyasya vinivartakam) — and it went unmarked because the form did not show it (3.14.140's alaksitah). 'Nañ' does not negate; it marks an exclusion that every word was already performing. This is a beautiful position and it follows from everything the samuddesa has said about generals.

Verse 3.14.251

ब्राह्मणादिस्थया वाक्येष्वख्ययातपदवाच्यया ।
क्रियया यस्य सम्बन्धो वृत्तिस्तस्य न विद्यते ॥ 251 ॥

*brāhmaṇādisthayā vākyeṣvākhyātapadavācyayā |
kriyayā yasya sambandho vṛttistasya na vidyate || 251 ||*

That which has connection with the action residing in 'brahmana' and the rest, expressed by the verb-word in sentences — of that there is no derivative formation.

Brahmanadi-sthaya vakyesv akhyata-pada-vacyaya kriyaya yasya sambandhah: that which has connection with the action residing in 'brahmana' and the rest, expressed by the verb-word in sentences — the being-a-brahmin that the phrase 'na brahmanah' denies by its verb. Vrttis tasya na vidyate: of that there is no derivative formation. So the sentence's negation attaches to an action said by a verb, and no compound can do that: compounds have no verbs (3.14.220's vibhakty-artha-pradhanatvat... na kriya). Hence 'abrahmana' is not the compressed 'na brahmano bhavati' — it cannot be, because what the phrase negates is not available to be compounded.

Verse 3.14.252

पाचकादिपदस्था चेन्नत्रा सम्बन्ध्यते क्रिया ।
तत्र सत्तानुपादानात् त्रिपक्षी नोपपद्यते ॥ 252 ॥

*pācakādipadasthā cennañā sambandhyate kriyā |
tatra sattānupādānāt tripakṣī nopapadyate || 252 ||*

If the action residing in 'pacaka' and the rest is connected with 'nañ' — there, from the non-taking-up of existence, the three-fold position is not established.

Pacakadi-pada-stha cen nana sambandhyate kriya: if the action residing in 'pacaka' (cook) and the rest is connected with 'nañ' — 'apacaka', the non-cook: here the base does contain an action, cooking, so perhaps the negation reaches it. Tatra satta-anupadanat tri-paksi na upapadyate: there, from the non-taking-up of existence, the three-fold position is not established. So the three accounts of 3.14.248 all assumed that nañ negates an existence, and 'apacaka' negates a cooking without touching any existence — the cook still is. So the trio does not apply here, and its generality is broken. Bhartrhari is dismantling the framework of the debate rather than joining it.

Verse 3.14.253

सत्तयैवाभिसम्बन्धो यदि सर्वत्र कल्प्यते ।
असन्निति समासेऽस्मिन् सत्तान्या परिकल्प्यताम् ॥ 253 ॥

*sattayaivābhisambandho yadi sarvatra kalpyate |
asanniti samāse'smin sattānyā parikalpyatām || 253 ||*

If connection with existence alone is imagined everywhere — then in this compound 'asat', let another existence be imagined.

The reductio, and it is very fine. *Sattaya eva abhisambandho yadi sarvatra kalpyate*: if connection with existence alone is imagined everywhere — *kalpyate*: imagined, constructed (3.14.231's *kalpana*). *Asann iti samase 'smin satta anya parikalpyatam*: then in this compound 'asat' — the non-existent — let another existence be imagined. *Parikalpyatam*: let it be imagined — the imperative is sardonic. So if every *nañ*-compound negates an existence, then 'asat' negates one too, and one must find an existence for it to negate, and then another to be negated in that, and so on. The account destroys itself on its own crucial word. The argument is three lines long and it is complete.

Verse 3.14.254

क्त्वान्ते च तुमुनन्ते च नञ्समासे न दृश्यते ।
विशेषणविशेष्यत्वं नञा (नञः) सत्ताभिधायिनां ॥ 254 ॥

*ktvānte ca tumunante ca nañsamāse na drśyate |
viśeṣaṇaviśeṣyatvam.nañā (nañah) sattābhidhāyinām.|| 254 ||*

In the *ktva*-ending and in the *tumun*-ending, in the negative compound, the qualifier-qualified relation of 'nañ' with those expressing existence is not seen.

Two more counter-cases. *Ktvante ca tumun-ante ca nan-samase na drsyate*: in the *ktva*-ending (the gerund: 'akrtva', not having done) and the *tumun*-ending (the infinitive), in the *nan*-compound, it is not seen. *Visesana-visesyatvam nanah satta-abhidhayinam*: the *qualifier-qualified* relation of 'nañ' with those expressing existence. So in 'akrtva' the *nañ* stands in no qualifier-qualified relation to anything existence-expressing — there is no existence in a gerund to qualify. *Na drsyate*: it is not seen (3.14.114's *drsyate*: the argument is observation). So the framework fails again, on forms everyone uses. Between 3.14.252 and this verse the existence-account has been refuted from four directions, and the *samuddesa* has not yet said what it thinks *nañ* does.

Verse 3.14.255

क्रियायाः साधनाधारसामान्ये नञ् व्यवस्थितः ।
ततो विशिष्टैराधारैर्युज्यते ब्राह्मणादिभिः ॥ 255 ॥

*kriyāyāḥ sādhanādhārasāmānye nañ vyavasthitah |
tato viśiṣṭairādhairyujyate brāhmaṇādibhiḥ || 255 ||*

'Nañ' is settled in the general of the substratum which is the action's means; then it is joined with specified substrata — 'brahmana' and the rest.

The samuddesa's own account of the negative, at last. Kriyayah sadhana-adhara-samanye nan vyavasthitah: 'nañ' is settled in the *general* of the *substratum* which is the *action's means* — not in an existence (3.14.252-254's refuted framework), but in the general of a *seat*. Tato visistair adharair yujyate brahmanadibhih: *then it is joined with specified substrata* — 'brahmana' and the rest. So the order is: nañ occupies a general first, and is *afterwards* fitted to a specific base. It does not negate the brahmin; it settles in a general seat and then that seat turns out to be brahmin-shaped. This is why 'abrahmana' means a ksatriya and not simply anything-not-a-brahmin: the general was a seat, and seats are furnished.

Verse 3.14.256

वृत्तौ यथा गताद्यर्थमुपादाय निरादयः ।
युज्यन्ते साधनाधारैर्नञ्समासेऽपि स क्रमः ॥ 256 ॥

*vṛttau yathā gatādyarthamupādāya nirādayaḥ |
yujyante sādhanādhārairnañsamāse'pi sa kramah || 256 ||*

As, in the derivative formation, 'nir' and the rest, having taken up the meaning 'gone' and so on, are joined with the substrata which are means — in the negative compound too, that is the sequence.

The precedent for 3.14.255. Vṛttau yatha gatady-artham upadaya niradayah: as in the *derivative formation*, 'nir' and the rest, having *taken up* the meaning '*gone*' and so on — 3.14.39's preverbs, whose transcending-sense exists only in composition. Yujyante sadhana-adharaih: *are joined with the substrata which are means*. Nan-samase 'pi sa kramah: in the *nan-compound* too, *that is the sequence*. So nañ works exactly as 'nir' does: it acquires a sense in the composing and is then fitted to a base. Neither is a negation or a preposition operating on something already there. Sa kramah — *that sequence*: the ordering is the whole of the explanation.

Verse 3.14.257

तत्रासति नञो वृत्तेर्ब्रह्मणक्षत्रियादिभिः ।
विशेषणविशेष्यत्वं कल्प्यते कुब्जखञ्जवत् ॥ 257 ॥

tatrāsatī naño vṛtterbrāhmaṇakṣatriyādibhiḥ |
viśeṣaṇaviśeṣyatvam, kalpyate kubjakhañjavat || 257 ||

There, in 'asat', from the derivation of 'nañ', the qualifier-qualified relation with 'brahmana', 'ksatriya' and the rest is imagined — as with 'hunchbacked' and 'lame'.

Tatra asati nano vrtteh: *there*, in 'asat', from the derivation of 'nañ'. Brahmana-ksatriyadibhir visesana-visesyatvam kalpyate: the *qualifier-qualified* relation with 'brahmana', 'ksatriya' and the rest is *imagined* — kalpyate: constructed, not found. Kubja-khanjavat: as with 'kubja' (hunchbacked) and 'khanja' (lame) — two attributes of one man, neither qualifying the other, held together only by co-reference (3.14.9-11's kṛsnas tilah). So the relation between the negation and the base is like that between a hunchback's two defects: they meet in a subject and not in each other. The negative compound has no internal qualification, only a shared seat.

[Contested: Pada b's syntax is strained: 'asati' and 'vrtteh' do not construe smoothly together. We read 'asati' as locative of 'asat' (picking up 3.14.253's example) with 'vrtteh' ablative. Read instead as a locative absolute — 'the derivation of nañ not existing' — the verse would say that the qualifier-qualified relation is imagined precisely where nañ has no derivation, which also suits 'kalpyate'. The comparison to kubja-khanja stands on either construal.]

Verse 3.14.258

कामचारे च सत्येवमसतः स्यात् प्रधानता ।
गुणत्वमितरेषां च तेषां वा स्यात् प्रधानत्वं ॥ 258 ॥

kāmacāre ca satyevamasataḥ syāt pradhānatā |
guṇatvamitareṣāṃ, ca teṣāṃ, vā syāt pradhānat || 258 ||

And where there is thus free play, 'asat' would be principal and the others subordinate; or they would be principal.

The cost of 3.14.257's imagined relation. Kama-care ca saty evam: where there is thus *free play* — kama-cara: doing as one likes, the state of a question nothing settles (3.14.168's icchaya: at one's pleasure). Asatah syat pradhanata guṇatvam itaresam ca: 'asat' would be *principal* and the others *subordinate*. Tesam va syat pradhanata: or they would be principal. So if the relation is merely imagined, nothing decides which side is principal, and both assignments are available. This is exactly what one should expect of a construct (3.14.96's upaya-matram nanatvam), and it is a defect only if one thought the construct was a description.

Verse 3.14.259

प्राधान्येनाश्रिताः पूर्वं श्रुतेः सामान्यवृत्तयः ।
विशेष एव प्राकान्ता ब्राह्मणक्षत्रियादयः ॥ 259 ॥

*prādhānyenāśritāḥ pūrvam śruteḥ sāmānyavṛttayaḥ |
viśeṣa eva prākāntā brāhmaṇakṣatriyādayaḥ || 259 ||*

'Brahmana', 'ksatriya' and the rest — resorted to as principal at first, operating in the general because of what is heard — are commenced upon precisely in the particular.

Pradhanyena asritah purvam: resorted to as *principal at first* — the base-word comes first and comes as principal. Sruteh samanya-vrttayah: *operating in the general* because of *what is heard* — the audible word 'brahmana' means the general, brahmin-hood at large. Visesa eva prakranta brahmana-ksatriyadayah: they are *commenced upon precisely in the particular* — prakranta: begun, set out from. So the movement is general-to-particular within a single word: 'brahmana' sounds the general and the discourse begins from a particular. This is 3.14.37's visesa-vrttitva (in composition the member means the particular) shown as a movement rather than a state, and it is what 3.14.255's 'then' was describing.

Verse 3.14.260

यथा गौरादिभिस्तेषामवच्छेदो विधीयते ।
असताप्यनभिव्यक्तं तादात्म्यं व्यज्यते तथा ॥ 260 ॥

*yathā gaurādibhisteṣāmavacchedo vidhīyate |
asatāpyanabhivyaktam tādātmyam vyajyate tathā || 260 ||*

As their delimitation is effected by 'gaura' and the rest — so, by 'asat' too, an unmanifested identity is manifested.

The positive characterization of what a negative does. Yatha gauradibhis tesam avacchedo vidhiyate: as their *delimitation* is effected by 'gaura' (fair) and the rest — an ordinary adjective cuts a class down. Asata api anabhivyaktam tadatmyam vyajyate tatha: so, by 'asat' too, an *unmanifested identity* is *manifested*. Tadatmya: identity, being-that-self; anabhivyakta: unmanifested; vyajyate: is made manifest. So the negative does what the adjective does — it delimits — and what it delimits into view is an *identity* that was there unmanifested. 'Abrahmana' does not remove a brahmin; it manifests a ksatriya-identity that was in the field unshown. This is 3.14.250's position perfected: exclusion is how things get shown, and nañ shows by excluding.

Verse 3.14.261

यथा सत्ताभिधानाय सन्नर्थः परिकल्प्यते ।
तथा सत्ताभिधानाय निरुपाख्यो विकल्प्यते ॥ 261 ॥

yathā sattābhidhānāya sannarthah parikalpyate |
tathā sattābhidhānāya nirupākhyo vikalpyate || 261 ||

As the existent meaning is imagined for the expression of existence — so the indefinable is constructed for the expression of non-existence.

The parity argument. Yatha satta-abhidhanaya sann arthah parikalpyate: as the *existent meaning* is *imagined* for the *expression of existence* — even to say 'it is', one constructs an existent for the saying to be about. Tatha satta-abhidhanaya nirupakhyo vikalpyate: so the *indefinable* — nirupakhya: that of which no account can be given, the technical term for the utterly unreal — is *constructed* for the expression of non-existence. So both existence and non-existence require a posit, and the posit for non-existence is a thing defined as having no definition. Neither side is innocent. This is 3.14.253's reductio turned into a general observation: reference to being and to non-being are equally constructions (3.14.197's the word ordains the differences).

[Contested: Pada c reads 'satta-abhidhanaya' in our source, duplicating pada a. The parallel ('yatha... tatha') plainly requires 'asatta-abhidhanaya' — for the expression of non-existence — which is what we translate; otherwise the verse says the same thing twice and the nirupakhya has no work. We note the transmitted reading rather than pass over the emendation.]

Verse 3.14.262

क्षत्रियादौ पदं कृत्वा बुद्धिः सत्तान्तराश्रया ।
जात्या भिन्नां ततः सत्तां प्रसक्तामपकर्षति ॥ 262 ॥

kṣatriyādaṁ padam kṛtvā buddhiḥ sattāntarāśrayā |
jātyā bhinnām tataḥ sattām prasaktāmapakarṣati || 262 ||

The intellect, having made a footing in 'ksatriya' and the rest, resting on another existence, then draws away the applicable existence differentiated by the universal.

The negative described as a mental movement — and this is the samuddesa's real answer. Ksatriyadaṁ padam kṛtvā buddhiḥ: the *intellect*, having *made a footing* — padam kṛtvā: having taken a step, planted itself — in 'ksatriya' and the rest. Satta-antarāśraya: *resting on another existence*. Jātya bhinnām tataḥ sattām prasaktāmapakarṣati: *then draws away the applicable existence differentiated by the universal*. Apakarṣati: pulls off, drags away (3.14.11's apakarṣati, of the two generals drawing away each other's doubt). So: the mind plants itself on a ksatriya, stands on that existence, and from there *pulls away* the brahmin-existence that was pressing. The negation is a shift of footing followed by a withdrawal — done by the buddhi, in two moves, and there is no negative fact anywhere in it.

Verse 3.14.263

अभाव इति भावस्य प्रतिषेधे विवक्षिते ।
सोपाख्यत्वमनाश्रित्य प्रतिषेधो न कल्पते ॥ 263 ॥

abhāva iti bhāvasya pratiṣedhe vivakṣite |
sopākhyatvamanāśritya pratiṣedho na kalpate || 263 ||

When the negation of being is intended as 'non-being' — without resorting to definability, negation is not conceivable.

Abhava iti bhavasya pratisedhe vivakṣite: when the *negation of being* is intended as 'non-being' — the hardest case, where what is denied is being itself. Sopakhyatvam anasritya pratisedho na kalpate: *without resorting to definability* — sopakhya: that of which an account *can* be given, the opposite of 3.14.261's nirupakhya — *negation is not conceivable*. So even to deny being, one must have something definable to plant one's foot on (3.14.262's padam kṛtvā). A negation of the utterly indefinable is not a negation, because there is nowhere to stand. This is why 3.14.261's posit was unavoidable: the mind's withdrawal requires a footing, and a footing must be describable.

Verse 3.14.264

अनेकधर्मवचनैः शब्दैः सङ्घाभिधायिभिः ।
एकदेशेषु वर्तन्ते तुल्यरूपाः स्वभावतः ॥ 264 ॥

anekadharmavacanaiḥ śabdaiḥ saṅghābhidhāyibhiḥ |
ekadeśeṣu vartante tulyarūpāḥ svabhāvataḥ || 264 ||

By words expressing many properties, expressing an aggregate — they operate in the parts, similar in form by their own nature.

Aneka-dharma-vacanaiḥ sabdaiḥ sangha-abhidhāyibhiḥ: by words *expressing many properties, expressing an aggregate* — words like 'brahmana', which name a bundle: birth, study, conduct, and the rest. Ekadesesu vartante tulya-rupāḥ svabhāvataḥ: they *operate in the parts, similar in form* by their own nature. So an aggregate-word applies to its parts as readily as to the whole, and the form does not distinguish the two applications: they are tulya-rupa, alike in shape, by nature. This is the premise of the paradox that 3.14.265 is about to spring, and it is not a trick — it is a fact about every word that names a bundle.

Verse 3.14.265

यथैकदेशकरणात् कृत इत्यभिधीयते ।
अकृतश्चेति सङ्घातः स एवाब्राह्मणे क्रमः ॥ 265 ॥

yathaikadeśakaraṇāt kṛta ityabhidhīyate |
akṛtaśceti saṅghātaḥ sa evābrāhmaṇe kramah || 265 ||

As, from the doing of one part, an aggregate is spoken of as 'done' and also as 'not done' — that same sequence is in 'abrahmana'.

The paradox, and it is superb. Yatha ekadesa-karanat kṛta ity abhidhiyate akrtas ceti sanghatah: as, from the *doing of one part*, an *aggregate* is spoken of as 'done' and as 'not done' — a half-built house is built and unbuilt, and both are true, because 3.14.264's words apply to parts and wholes alike. Sa eva abrahmane kramah: *that same sequence* is in 'abrahmana'. So a man with some of the brahmin-properties and not others is a brahmana and an abrahmana at once. This is not a puzzle to be dissolved; it is what aggregate-words do, and 3.14.266 draws the consequence without flinching.

Verse 3.14.266

ब्राह्मणोऽब्राह्मणस्तस्मादुपन्यासात् प्रसज्यते ।
अकृते वा कृतासङ्गादविशिष्टं कृताकृतात् ॥ 266 ॥

brāhmaṇo'brāhmaṇastasmādupanyāsāt prasajyate |
akṛte vā kṛtāsaṅgādaviśiṣṭam kṛtākṛtāt || 266 ||

From that presentation, a brahmana would be a non-brahmana; or, in the undone, from the attachment of the done, it is not different from the done-and-undone.

The consequence. Brahmano 'brahmanas tasmad upanyasat prasajyate: from *that presentation*, a *brahmana* would be a *non-brahmana* — the contradiction, stated as such. Akṛte va kṛtasangad avīśiṣṭam kṛtakṛtāt: or, in the *undone*, from the *attachment* of the *done*, it is *not different* from the *done-and-undone*. So either the brahmin is a non-brahmin, or the undone thing is indistinguishable from the half-done. Both are unacceptable, and both follow from 3.14.264's premise, which is true. So something must be added — and 3.14.267 adds it: the grammar's own decision.

Verse 3.14.267

अमुख्यसम्भवे तत्र मुख्यस्य विनिवृत्तये ।
शास्त्रान्वाख्यानसमये नञ् प्रयुक्तो विशेषकः ॥ 267 ॥

amukhyasambhave tatra mukhyasya vinivṛttaye |
śāstrānvākhyānasamaye nañ prayukto viśeṣakaḥ || 267 ||

There, when a non-primary is possible, 'nañ' — employed at the time of the science's exposition — is a differentiator, for the exclusion of the primary.

The resolution, and it is frankly conventionalist. Amukhya-sambhave tatra mukhyasya vinivṛttaye: *there*, when a *non-primary* is possible, for the *exclusion of the primary* — where a word might be taken in its full or its partial sense, the full sense must be got out of the way. Sastra-anvakhyana-samaye nan prayukto viśeṣakah: 'nañ', *employed at the time of the science's exposition*, is a *differentiator*. Anvakhyana-samaye: at the moment of the grammarian's exposition (3.14.71's anvakhyana-bhedah). So nañ is the grammar's device for forcing the non-primary reading, deployed when the science is expounding. It resolves 3.14.266's contradiction by decision, not by discovery — which is what a science that stands atidure (3.14.74) has to do.

Verse 3.14.268

पदार्थानुपघातेन दृश्यते च विशेषणम् ।
अथ जातिमतोऽर्थस्य कश्चिद् धर्मो निवर्तितः ॥ 268 ॥

padārthānupaghātena dṛśyate ca viśeṣaṇam |
atha jātīmatō'rthasya kaścīd dharmo nivartitaḥ || 268 ||

And a qualifier is seen not to damage the word-meaning. Now, some property of the meaning possessing a universal has been excluded.

Two steps toward a new difficulty. Padārtha-anupaghataena dṛśyate ca viśeṣaṇam: a *qualifier* is seen *without damaging* the word-meaning — anupaghata: no injury: adding 'blue' to 'lotus' does not destroy lotus-hood, and qualifiers generally leave their bases intact (3.14.260's delimitation, which cuts down without cutting up). Atha jātīmatō'rthasya kaścīd dharmo nivartitaḥ: *now, some property of the meaning possessing a universal has been excluded*. So nañ, if it is a qualifier (3.14.257), must likewise leave the base intact while excluding one of its properties. And that raises the question of 3.14.269: which property, and does it matter?

Verse 3.14.269

अवश्यं ब्राह्मणे कश्चित् क्वचिद् धर्मो न विद्यते ।
विशेषावचनात् तत्र नञः श्रुतिरनर्थिका ॥ 269 ॥

avaśyam brāhmaṇe kaścīd kvacid dharmo na vidyate |
viśeṣāvacanāt tatra nañāḥ śrutīranarthikā || 269 ||

Necessarily, some property somewhere does not exist in a brahmana; there, from the non-statement of the particular, the hearing of 'nañ' is purposeless.

The difficulty, and it is sharp. Avasyam brahmane kascit kvacid dharmo na vidyate: *necessarily* — avasyam — *some property somewhere does not exist* in a *brahmana*: no one has every property; every brahmin lacks something. Visesa-avacanāt tatra nañāḥ śrutir anarthika: *there, from the non-statement of the particular, the hearing of 'nañ' is purposeless* — anarthika (3.14.126, 3.14.205's word). So if nañ merely excludes some property or other, it says nothing: every brahmin already fails some property, and 'abrahmana' would be true of all of them. Unless nañ says *which* property — and it does not. The account of 3.14.268 collapses into vacuity.

Verse 3.14.270

अविशिष्टस्य पर्यायो नञ्विशिष्टः प्रसज्यते ।
अन्वाख्यानाद्धि साधुत्वमेवम्भूते प्रतीयते ॥ 270 ॥

aviśiṣṭasya paryāyo nañviśiṣṭaḥ prasajyate |
anvākhyānāddhi sādhutvamevambhūte pratiyate || 270 ||

The nañ-qualified would become a synonym of the unqualified; for correctness in such a case is cognized from the exposition.

The consequence of 3.14.269. Avisistasya paryayo nan-visistah prasajyate: the *nañ-qualified* would become a synonym of the *unqualified* — 'abrahmana' and 'brahmana' would mean the same, since every brahmin lacks something. Paryaya: a synonym — the reductio's final form, and it is worse than 3.14.266's contradiction. Anvakhyana dhi sadhutvam evambhute pratiyate: for *correctness in such a case* is cognized from the *exposition* — anvakhyana: the grammarian's exposition (3.14.267's samaya). So what saves the word from synonymy is not anything in it: it is the science's exposition, which decides how it is to be taken. The negative compound is legible because the grammarians settled how to read it — and Bhartrhari, having demonstrated that nothing else could settle it, says so.

Verse 3.14.271

पदार्थानुपघातेन यद्यप्यत्र विशेषणम् ।
उपचारसतोऽर्थस्य सावस्था द्योत्यते नाना ॥ 271 ॥

padārthānupaghātena yadyapyatra viśeṣaṇam |
upacārasato'rthasya sāvasthā dyotyate nañā || 271 ||

Although here the qualifier does not damage the word-meaning — that state of the meaning which exists by figurative transfer is indicated by 'nañ'.

The answer to 3.14.268-270. Padārtha-anupaghatena yady apy atra viśeṣaṇam: *although* here the *qualifier* does *not damage* the *word-meaning* (3.14.268's principle, conceded). Upacara-sato 'rthasya sa avastha dyotyate nana: that *state of the meaning* which exists by *figurative transfer* is indicated by 'nañ'. Upacara-sat: existing by upacara — by transferred usage, the mode of being that belongs to what is only figuratively so (3.3.82's beings raised up by construction). Dyotyate: *indicated*, not expressed (3.14.250's dyotyate nana). So nañ points at the base's *figurative* condition — 'abrahmana' shows brahmin-hood being held in a transferred way — and 3.14.269's vacuity is avoided: nañ does not exclude some property or other, it marks a mode of holding.

Verse 3.14.272

विशेष्येषु यथाभूतः पदार्थः समवस्थितः ।
तथाभूते तथाभावो गम्यते भेदहेतुभिः ॥ 272 ॥

viśeṣyeṣu yathābhūtaḥ padārthaḥ samavasthitaḥ |
tathābhūte tathābhāvo gamyate bhedahetubhiḥ || 272 ||

As the word-meaning stands settled in the qualified things — in such a one, the being-such is understood through the difference-causes.

Viśeṣyeṣu yathābhūtaḥ padārthaḥ samavasthitaḥ: as the *word-meaning* stands *settled* in the *qualified things* — however it happens to sit in its instances. Tathābhūte tathābhāvo gamyate bheda-hetubhiḥ: in *such a one*, the *being-such* is *understood* through the *difference-causes*. So the mode in which the meaning sits — fully, partially, figuratively — is read off the differentiating conditions, and nothing else reveals it. This grounds 3.14.271: nañ can indicate a figurative holding because the mode of holding is what the bheda-hetus disclose anyway. The negative is one such cause among others, doing what they all do.

Verse 3.14.273

निवृत्तेऽवयवस्तस्मिन् पदार्थे वर्तते कथम् ।
नानिमित्ता हि शब्दस्य प्रवृत्तिरुपपद्यते ॥ 273 ॥

nivṛtte'vayavastasmin padārthe vartate katham |
nānimittā hi śabdasya pravṛttirupapadyate || 273 ||

When that word-meaning is excluded, how does the member operate? For a word's operation without a cause is not possible.

The objection that will not go away. Nivṛtte 'vayavas tasmin padārthe vartate katham: when that word-meaning is excluded, how does the member operate? If 'abrahmana' has excluded brahminhood, what is the 'brahmana' in it doing? Na animitta hi śabdasya pravṛttir upapadyate: for a word's operation without a cause is not possible. Animitta: causeless. So the base cannot just sit there: a word operates only when something occasions it, and its occasion has just been denied. This is the sharpest form of the negative compound's puzzle, and 3.14.274-275 test the obvious answers.

Verse 3.14.274

आराच्छब्दवदेकस्य विरुद्धेऽर्थे स्वभावतः ।
शब्दस्य वृत्तिर्यद्यस्ति नञः श्रुतिरनर्थिका ॥ 274 ॥

ārācchabдавadekasya viruddhe'rthe svabhāvataḥ |
śabdasya vṛttiryadyasti nañāḥ śrutiranarthikā || 274 ||

If, like the word 'arat', a single word by its own nature operates in a contradictory meaning — then the hearing of 'nañ' is purposeless.

The first answer, and its cost. Arac-chabдавad ekasya viruddhe'rthe svabhāvataḥ śabdasya vṛttir yady asti: if, like the word 'arat' — which means both *near* and *far*, Sanskrit's most famous auto-antonym — a single word by its own nature operates in a contradictory meaning. Nañāḥ śrutir anarthika: then the hearing of 'nañ' is purposeless. So one might say that 'brahmana' natively means both brahmin and non-brahmin, as 'arat' means both near and far — and then the base needs no cause from outside (3.14.273 answered). But then nañ is doing nothing, since the base already had the sense. The answer buys the base's operation at the price of the negative.

Verse 3.14.275

अथ स्वभावो वचनादन्वाख्येयत्वमर्हति ।
तद्वाच्यमप्रसिद्धत्वान्नार्थो विनिवर्त्यते ॥ 275 ॥

*atha svabhāvo vacanādanvākhyeyatvamarhati |
tadvācyamaprasiddhatvānnāñārtho vinivartyate ॥ 275 ॥*

Now, the nature deserves to be expounded from the statement; that is to be expressed, from its not being well-known; the meaning is excluded by 'nañ'.

The second answer. *Atha svabhavo vacanad anvakhyeyatvam arhati: now, the nature deserves to be expounded from the statement — anvakhyeya: to be expounded (3.14.74's anvakhyeyas tatha). The word's dual nature is not self-evident and must be taught. Tad vacyam aprasiddhatvat: that is to be expressed, from its not being well-known — aprasiddha: not established in usage, unlike 'arat', whose double sense everyone knows. Nana artho vinivartyate: the meaning is excluded by 'nañ'. So: 'brahmana' does not natively mean non-brahmin (which is why 3.14.274's parallel fails), and nañ is what excludes — it has work precisely because the base's contrary sense is not established. The negative earns its keep from the base's not being 'arat'.*

Verse 3.14.276

यद्यप्युभयवृत्तित्वं प्रधानं तु प्रतीयते ।
प्रस्थानं गम्यते शुद्धे तदर्थेऽपि न तिष्ठतौ ॥ 276 ॥

*yadyapyubhayavṛttitvam, pradhānam, tu pratiyate |
prasthānam, gamyate śuddhe tadarthe'pi na tiṣṭhatau ॥ 276 ॥*

Although there is operation in both, the principal is cognized; setting-out is understood in the pure root, and even in that meaning, not in 'tisthati'.

A parallel from the preverbs. *Yady apy ubhaya-vṛttitvam pradhanam tu pratiyate: although there is operation in both, the principal is cognized — where a form could go two ways, one of them is what is understood. Prasthanam gamyate suddhe tad-arthe 'pi na tisthatau: setting-out is understood in the pure root, and even in that meaning, not in 'tisthati'. So 'pra-stha' means setting out, and the sense belongs to the compounded root — while 'tisthati', the same root uncompounded, means standing still and never means departure. The preverb's sense is not in the root and does not stay in it (3.14.39's niradinam krantady-arthesv asambhavah; 3.14.256's sa kramah). Nañ is the same: what it contributes is not recoverable from the base, and does not survive decomposition.*

Verse 3.14.277

किमर्थमतथाभूते सति मुख्यार्थसम्भवे ।
भेदे ब्राह्मणशब्दस्य वृत्तिरभ्युपगम्यते ॥ 277 ॥

*kimarthamatathābhūte sati mukhyārthasambhave |
bhede brāhmaṇaśabdasya vṛttirabhyupagamyate || 277 ||*

For what purpose, when the primary meaning is possible in what is not such, is the operation of the word 'brahmana' accepted in difference?

Kim artham atathabhute sati mukhyārtha-sambhave: *for what purpose*, when the *primary meaning* is possible in what is not such — the ksatriya is not a brahmin, and yet the word's primary sense somehow reaches him. Bhede brahmana-sabdasya vṛttir abhyupagamyate: *is the operation of the word 'brahmana' accepted in difference?* So the question is put bluntly: why let the word run into the very thing it is not? Kim artham: to what end? The samuddesa has been circling this and here demands the point of the whole construction. 3.14.278 answers: because that is how one is told anything.

Verse 3.14.278

अयं पदार्थ एतस्मिन् क्षत्रियादौ न विद्यते ।
इति तद्वचनः शब्दः प्रत्ययाय प्रयुज्यते ॥ 278 ॥

*ayam padārtha etasmin kṣatriyādaṁ na vidyate |
iti tadvacanaḥ śabdaḥ pratyayāya prayujyate || 278 ||*

'This word-meaning does not exist in this ksatriya and the like' — thus the word expressing that is employed, for the sake of cognition.

The answer, and it is the practical one. Ayam padārtha etasmin kṣatriyadaṁ na vidyate: *'this word-meaning does not exist in this ksatriya'* and the like — the content of what one wants conveyed. Iti tad-vacanah sabdah pratyayaya prayujyate: *thus the word expressing that is employed, for the sake of cognition* — pratyayaya: so that one may know. So 'brahmana' runs into the ksatriya (3.14.277's question) because that is the only way to say that brahmin-hood is not there: one must bring the brahmin-hood into view to remove it (3.14.262's padam kṛtvā, planting the foot in order to pull away; 3.14.263's sopakhyatvam, needing something definable to deny). The word goes where it does not belong because negation has no other route.

Verse 3.14.279

बुद्धेर्विषयतां प्राप्ते शब्दादर्थे प्रतीयते ।
प्रवृत्तिर्वा निवृत्तिर्वा श्रुत्या ह्यर्थोऽनुषज्यते ॥ 279 ॥

*buddherviṣayatām, prāpte śabdādarthe pratīyate |
pravṛttirvā nivṛttirvā śrutyā hyartho'nuṣajyate || 279 ||*

When the meaning, from the word, has attained the state of being the intellect's object — either operation or exclusion is cognized; for the meaning is attached by the hearing.

The general principle behind 3.14.278. *Buddher visayatam prapte sabdad arthe pratiyate*: when the meaning, from the word, has attained the state of being the intellect's object — the word first makes the meaning an object of thought; that is what a word does (3.14.197's sabdad arthah pratayante). *Pravrttir va nivrttir va*: either operation or exclusion is cognized — only then, and equally either way. *Srutya hy artho 'nusajyate*: for the meaning is attached by the hearing — anusajyate: is annexed, comes along with. So affirmation and denial are alike downstream of the word's presenting: one cannot deny what one has not first been given, and the giving is the hearing. This is the whole doctrine of negation in one line, and it is the doctrine of 1.123 (no cognition without word) applied to absence.

Verse 3.14.280

असम्यगुपदेशाद् वा निमित्तात् संशयस्य वा ।
शब्दप्रवृत्तिर्न त्वस्ति लोष्टादिषु विपर्ययम् ॥ 280 ॥

*asamyagupadeśād vā nimittāt samśayasya vā |
śabdapravṛttirna tvasti loṣṭādiṣu viparyayam || 280 ||*

Or from incorrect teaching, or from a cause of doubt — a word does operate; but there is no reversal in the case of 'clod' and the rest.

The limit of 3.14.279's principle. *Asamyag-upadesad va nimittat samsayasya va sabda-pravrttih*: from incorrect teaching, or from a cause of doubt, a word does operate — words are applied wrongly, out of bad instruction or genuine uncertainty, and the misapplication is real. *Na tv asti lostadisv viparyayam*: but there is no reversal in 'losta' (a clod of earth) and the rest. So the errors have a range: one may call a ksatriya a brahmin by ignorance or doubt, and nobody calls a clod one. The word's straying is bounded by something — the resemblance that made the doubt possible. This is 3.14.214's rupabheda: where the form differs enough, the word turns it away, and no mistake can reach it.

Verse 3.14.281

अनेकस्मादस इति प्राधान्ये सति सिध्यति ।
सापेक्षत्वं प्रधानानामेवं युक्तं त्वतल्लिधौ ॥ 281 ॥

anekasmādasa iti prādhānyē sati sidhyati |
sāpekṣatvam.pradhānānāmevam.yuktam.tvatalvidhau || 281 ||

From the many, 'as' — it succeeds where there is principality; the dependence of principals is thus proper in the 'atal'-rule.

A rule-technical case, and its reading is not easy. *Anekasmad asa iti pradhanye sati sidhyati*: from the many, 'as' — it succeeds where there is *principality*: the form comes out when the relevant element is principal, and not otherwise. *Sapeksatvam pradhananam evam yuktam tv atal-vidhau*: the dependence of principals is thus proper in the 'atal'-rule. *Sapeksatva*: mutual dependence — and the point is that even principals may depend, which the atal-rule requires. So the *samuddesa* notes that principality does not entail independence: a principal can still be *sapeksa* (3.14.47's *relatum*-words, whose expectancy is their meaning). The *nañ*-compound will need this, since its base is principal and dependent at once.

[Contested: *Padas a-b* are highly compressed and we render them with reserve. 'Anekasmad asa iti' appears to cite a rule-fragment; without the rule's identification the construction of 'asa' (whether the root 'as', a form of it, or a *pratyaya*) cannot be fixed. The verse's usable content — that principals may nonetheless be *sapeksa*, and that the atal-rule requires this — rests on *padas c-d*, which are clear.]

Verse 3.14.282

एकस्य च प्रधानत्वात् तद्विशेषणसन्निधौ ।
प्रधानधर्मप्यावृत्तिरतो न वचनान्तरम् ॥ 282 ॥

ekasya ca pradhānatvāt tadviśeṣaṇasannidhau |
pradhānadharmāpyāvṛttirato na vacanāntaram || 282 ||

And from one's being principal, in the presence of its qualifier — the recurrence even of the principal's property; therefore there is no other statement.

Ekasya ca pradhanatvat tad-visesana-sannidhau: from one's being *principal*, in the presence of its *qualifier* — *sannidhi*: proximity, the qualifier standing by. *Pradhana-dharmapy avrtti*: the recurrence even of the principal's property — *avrtti*: coming round again, repetition. *Ato na vacanantaram*: therefore there is no other statement — no further rule is needed. So when a principal has its qualifier alongside, the principal's own property recurs, and the grammar need not say so separately. This is rule-economy of the kind 3.14.106 found (a rule made idle by a doctrine), and it prepares the number-analysis of 3.14.283-286: the principal's property recurring is exactly what will happen to number in 'advi'.

Verse 3.14.283

प्रधानमत्र भेद्यत्वादेकार्थो विकृतो नञा ।
हित्वा स्वधर्मन् वर्तन्ते द्रव्यादयोऽप्येकतां गताः ॥ 283 ॥

pradhānamatra bhedyatvādekārtho vikṛto nañā |
hitvā svadharmān vartante dvyādayo'pyekatām.gatāḥ || 283 ||

Here the principal, from being what is differentiated, is the one-meaning modified by 'nañ'; and 'dvi' and the rest too, having gone to oneness, operate having abandoned their own properties.

Pradhanam atra bhedyatvad ekartha vikṛto nana: *here the principal, from being what is differentiated — bhedya: the thing to be cut into, not the cutter — is the one-meaning modified by 'nañ'.* Ekārtha: 3.14.44's ekarthibhava, becoming-one-meaning; vikṛta: altered. So the negative compound is one meaning that nañ has modified, not two meanings in relation. Hitva sva-dharman vartante dvyadayo 'py ekatam gataḥ: and 'dvi' and the rest too, having gone to oneness, operate having abandoned their own properties. So the numerals in a nañ-compound drop their numbers — 'advi' has no two in it — because they have gone into the one-meaning (3.14.101's bhedanam parityagat; 3.14.115's the numeral's outer difference withdrawing).

Verse 3.14.284

ब्राह्मणत्वं यथापन्ना नञ्युक्ताः क्षत्रियादयः ।
द्वित्वादिषु तथैकत्वं नञ्योगादुपचर्यते ॥ 284 ॥

brāhmaṇatvam.yathāpannā nañyuktāḥ kṣatriyādayaḥ |
dvitvādiṣu tathāikatvam.naṇyogādūpacaryate || 284 ||

As 'ksatriya' and the rest, joined with 'nañ', have attained brahmana-hood — so in 'dvitva' and the rest, oneness is figuratively applied, from the connection with 'nañ'.

The parallel that organizes the numeral-case. Brahmanatvam yatha apanna nan-yuktah ksatriya-dayah: as 'ksatriya' and the rest, *joined with 'nañ', have attained brahmana-hood — the striking formulation: in 'abrahmana' the ksatriya has acquired brahmin-hood, figuratively, in order to have it denied (3.14.271's upacara-sat; 3.14.278's the word must reach him to remove it).* Dvitvadisū tathā ekatvam nan-yogad upacaryate: so in 'dvitva' and the rest, *oneness is figuratively applied from the connection with 'nañ' — upacaryate: is transferred.* So the negated numeral acquires a figurative oneness exactly as the negated ksatriya acquires a figurative brahmin-hood. Nañ confers before it removes, both times.

Verse 3.14.285

एकत्वयोगमासज्य स धर्मः प्रतिषिध्यते ।
द्व्यादिभ्यस्तेषु तच्छब्दो वर्तते ब्राह्मणादिवत् ॥ 285 ॥

*ekatvayogamāsajya sa dharmah pratiṣidhyate |
dvyādibhyasteṣu tacchabdo vartate brāhmaṇādivat || 285 ||*

Having attached the connection with oneness, that property is negated; from 'dvi' and the rest, in those the word 'tad' operates, as with 'brahmana' and the rest.

Ekatva-yogam asajya sa dharmah pratisidhyate: having *attached* the connection with oneness, that property is *negated* — asajya: having fastened it on. So the sequence is explicit: attach, then deny. The oneness is put there in order to be taken away, which is what 3.14.284's upacara amounted to. Dvyadibhyas tesu tac-chabdo vartate brahmanadivat: from 'dvi' and the rest, in those the word 'tad' operates, as with 'brahmana' and the rest — the pronoun follows, as it did at 3.14.217, because the substance is not expressed. So the numeral-negation behaves in every respect like the caste-negation, down to the pronoun. The parallel is complete.

Verse 3.14.286

आविष्टसङ्ख्यो वाक्येऽसौ यथा द्वयादौ प्रयुज्यते ।
वृत्तौ तस्य प्रधानत्वात् सा सङ्ख्या न निवर्तते ॥ 286 ॥

*āviṣṭasaṅkhyo vākye'sau yathā dvayādau prayujyate |
vṛttau tasya pradhānatvāt sā saṅkhyā na nivartate || 286 ||*

As, in a sentence, that which is pervaded by number is employed in 'dvi' and the rest — in the derivative formation, from its being principal, that number does not withdraw.

The stretch's conclusion, and it inverts 3.14.283. Avista-sankhyo vakye 'sau yatha dvayadau prayujyate: as, *in a sentence*, that *pervaded by number* — avista: entered into (3.14.243's word) — is employed in 'dvi' and the rest. Vṛttau tasya pradhanatvat sa sankhya na nivartate: in the *derivative formation*, from *its being principal*, that *number does not withdraw*. So where the numeral is *principal*, its number survives the composition — against 3.14.283, where the numerals abandoned their properties on going into the one-meaning. The two verses are not in conflict: they describe the numeral subordinate and the numeral principal, and 3.14.282 has already established that the principal's property recurs. What a compound does to its members depends on which of them is principal — which is where this samuddesa began (3.14.95's upasarjana).

Verse 3.14.287

प्रतिषेध्यो यथाभूतस्तथाभूतोऽनुषज्यते ।
वचनान्तरयोगे हि न सोऽर्थः प्रतिषिध्यते ॥ 287 ॥

pratiṣedhyo yathābhūtastathābhūto'nuṣajyate |
vacanāntarayoge hi na so'rthah pratiṣidhyate || 287 ||

The thing to be negated is annexed exactly as it is; for in connection with another number, that meaning is not negated.

Pratisedhyo yathabhutas tathabhuto 'nusajyate: the *thing to be negated* is *annexed exactly as it is* — yathabhutas tathabhutah: however it is, so it comes along (3.14.279's srutya hy artho 'nusajyate, the same verb). One cannot deny a thing under a description it does not have. Vacanantara-yoge hi na so 'rthah pratisidhyate: for in connection with *another number*, that *meaning* is *not negated* — change the number and the denial misses. So negation is exact: it strikes the thing as presented and nothing else, which is why 3.14.286's number mattered. Deny 'two' and you have not denied 'twos'.

Verse 3.14.288

अशुक्ल इति कृष्णादिर्यथार्थः सम्प्रतीयते ।
सङ्ख्यान्तरं तथानेक इत्यत्राप्यभिधीयते ॥ 288 ॥

aśukla iti kṛṣṇādiryathārthah sampratīyate |
saṅkhyāntaram tathāneka ityatrāpyabhidhīyate || 288 ||

As by 'non-white' the meaning 'black' and the like is cognized — so in 'not-one' too, another number is expressed.

The paryudasa principle, in two examples. Asukla iti kṛṣṇadir yatha arthah sampratīyate: as by 'asukla' (non-white) the meaning 'black' and the like is *cognized* — one does not hear 'not white' and think of virtue or Tuesday: one thinks of another colour. The negation lands inside the genus. Saṅkhyāntaram tatha aneka ity atrapi abhidhiyate: so in 'aneka' (not-one) too, *another number* is *expressed*. So 'aneka' means some other number, not the absence of number. This is paryudasa — the negation that selects a sibling rather than annihilating — and Bhartṛhari establishes it by pointing at what one actually understands (3.14.260's asata api tadatmyam vyajyate: the negative manifests an identity).

Verse 3.14.289

क्रियाप्रसङ्गात् सर्वेषु कर्मस्वङ्गीकृतेषु च ।
एकस्मिन् प्रतिषिद्धेऽपि प्राप्तमन्यत् प्रतीयते ॥ 289 ॥

*kriyāprasaṅgāt sarveṣu karmasvaṅgīkṛteṣu ca |
ekasmin pratiṣiddhe'pi prāptamanyat pratiyate || 289 ||*

And from the action's applicability, all the objects being accepted — even when one is negated, another, being applicable, is cognized.

Why paryudasa works. Kriya-prasaṅgat sarveṣu karmasv angikṛtesu ca: from the action's applicability, all the objects being accepted — the verb has already brought the whole field of its possible objects into view (3.14.291 will spell this out). Ekasmin pratisiddhe 'pi praptam anyat pratiyate: *even when one is negated, another, being applicable, is cognized*. So the reason 'asukla' delivers black is that the colour-field was already open when white was denied: deny one member of an open field and the field's remainder presents itself. Paryudasa is not a special kind of negation; it is ordinary negation performed inside a field that the verb had already spread out.

Verse 3.14.290

क्रिया श्रुतिश्च प्रक्रान्ते प्रसज्यप्रतिषेधेन ।
पर्युदासे तु नियतं सङ्ख्येयान्तरमुच्यते ॥ 290 ॥

*kriyā śrutiśca prakrānte prasajyapratishedhena |
paryudāse tu niyatam, saṅkhyeyāntaramucyate || 290 ||*

The action and what is heard are within what has been commenced, by prasajya-negation; but in paryudasa, a determinate other countable is stated.

The two negations distinguished, and this is the tradition's most consequential distinction. Kriya srutis ca prakrante prasajya-pratishedhena: the action and what is heard are within what has been commenced, by prasajya-negation — prasajya-pratishedha: the negation that denies the predication itself ('he does not cook'), and it stays inside what was begun: the verb is what is denied. Paryudase tu niyatam saṅkhyeyantaram ucyate: *but in paryudasa, a determinate other countable is stated* — niyatam: fixed. So prasajya denies the act; paryudasa asserts a sibling. The first says no, the second says another. And Bhartrhari's contribution here is 3.14.289's ground: paryudasa can name a sibling only because the action had already laid out the family.

Verse 3.14.291

धात्वर्थः कर्मविषयो व्यपदिष्टः स्वसाधनैः ।
अर्थात् सर्वाणि कर्माणि प्रागाक्षिप्यावतिष्ठते ॥ 291 ॥

dhātvarthaḥ karmaviṣayo vyapadiṣṭaḥ svasādhanaḥ |
arthāt sarvāṇi karmāṇi prāgākṣipyāvatiṣṭhate || 291 ||

The root-meaning, having objects for its domain, designated by its own means — by implication, having first implied all objects, stands.

The ground of 3.14.289, stated in full. Dhatv-arthah karma-visayo vyapadistah sva-sadhanaih: the root-meaning, having objects for its domain, designated by its own means — the verb comes with its karakas (3.7.1's the action requires its sadhanas). Arthat sarvani karmani prag aksipya avatisthate: by implication, having first implied all objects, it stands. Aksipya: having drawn in, implicated; prak: beforehand. So the verb, before any object is specified, has already implicated all its possible objects and stands over them. That standing field is what a paryudasa-negation carves. This is a fine piece of semantics: the verb's transitivity is a prior claim on a whole domain, and particular objects are selections from it.

Verse 3.14.292-293

निर्जतिसाधनाधारे यत्राख्याते प्रयुज्यते ।
अनेक इति पश्चाच्च तिष्ठतीत्यनुषज्यते ॥ 292 ॥
साध्यत्वात् तत्र सिद्धेन क्रिया द्रव्येण लक्ष्यते ।
प्रागेवाङ्गीकृतं द्रव्यमतः पूर्वेण भिद्यते ॥ 293 ॥

nirjñātasāadhanādhāre yatrākhyāte prayujyate |
aneka iti paścācca tiṣṭhātītyanuṣajyate || 292 ||
sādhyaṭvāt tatra siddhena kriyā dravyeṇa lakṣyate |
prāgevāṅgīkṛtaṁ dravyamataḥ pūrveṇa bhidyate || 293 ||

(292) Where 'aneka' is employed in a verb whose means and substratum are known, and afterwards 'tisthati' is annexed — (293) there, since the action is to be accomplished, it is indicated by an accomplished substance; the substance was accepted already beforehand, and therefore differs from the earlier one.

(292): nirjnata-sadhana-adhare yatra akhyate prayujyate aneka iti — where 'aneka' is employed in a verb whose means and substratum are known. Pascac ca tisthatity anusajyate: and afterwards 'tisthati' is annexed — 'aneka tisthanti', not-one stand. (293): sadhyatvat tatra siddhena kriya dravyena laksyate — since the action is to be accomplished (sadhya: not yet done), it is indicated by an accomplished substance (siddha: already there). The standing contrast of this work (3.8's sadhya-kriya against the siddha karakas; 3.1's the accomplished indicating the accomplishable). Prag eva angikrtam dravyam atah purvena bhidyate: the substance was accepted already beforehand, and therefore differs from the earlier one. So the substance that indicates the action is not the one the verb had implicated at 3.14.291: it was accepted earlier and is a different thing. The negation's 'other' is thus genuinely other.

Verse 3.14.294

सङ्ख्यैव प्रतिषेधेन सङ्ख्यान्तरमपेक्षते ।
वाक्येऽपि तेन नैकत्वमात्रमेव निवर्त्यते ॥ 294 ॥

*saṅkhyāiva pratīśedhena saṅkhyāntaramapekṣate |
vākya'e'pi tena naikatvamātrameva nivartyate || 294 ||*

Number itself, by the negation, requires another number; therefore even in a sentence, not merely oneness is excluded.

Sankhya eva pratīśedhena saṅkhyāntaram apeksate: *number itself, by the negation, requires another number* — apeksate: needs, reaches for. The negation of a number is not satisfied by absence; it demands a substitute from the same family (3.14.288's asukla giving black). Vakye 'pi tena na ekatva-matram eva nivartyate: *therefore even in a sentence, not merely oneness is excluded*. So 'na ekah' does not simply remove the one and leave a blank: it puts another number there. And the point of 'vakye 'pi' — *even in a sentence* — is that this is not a compound-effect: paryudasa is how negation works in the language at large, and the compound only makes it visible.

Verse 3.14.295

स्नेहान्तरादवच्छेदा यस्तथासत्तेः प्रतीयते ।
तैलेन भोजने प्राप्ते न त्वन्यदुपसेचनम् ॥ 295 ॥

*snehāntarādavacchedā yastathāsatteḥ pratiyate |
tailena bhojane prāpte na tvanyadupasecanam || 295 ||*

That which is cognized from the delimitation by another oil, from such proximity — when eating with oil is applicable, there is no other seasoning.

Paryudasa's reach measured, and it is short. Sneha-antarad avacchedad yas tatha asatteḥ pratiyate: what is cognized from the *delimitation* by *another oil*, from such *proximity* — asatti: nearness, the adjacency that decides which sibling the negation lands on. Tailena bhojane prapte na tv anyad upasecanam: when *eating with oil is applicable*, there is *no other seasoning* — deny the sesame oil and one gets a different oil, not ghee, not salt. So the negation does not roam its genus freely; it takes the nearest neighbour, and asatti fixes which. This is the exact converse of 3.14.280's lostadisu viparyayam (the word cannot stray as far as a clod): both verses bound the drift, one for error and one for negation, and both bound it by nearness.

Verse 3.14.296

एकार्थे वर्तमानाभ्यामसता ब्राह्मणेन च ।
यदा जात्यन्तरं बाह्यं क्षत्रियाद्यपदिश्यते ॥ 296 ॥

*ekārthe vartamānābhyāmasatā brāhmaṇena ca |
yadā jātyantaram.bāhyam.kṣatriyādyapadiśyate || 296 ||*

When, by 'asat' and 'brahmana', both operating in one meaning, an external other class — ksatriya and the rest — is designated.

Ekarthe vartamanabhyam asata brahmanena ca: by 'asat' and 'brahmana', both operating in one meaning — ekarthe: in one meaning, the co-reference of 3.14.257's kubja-khanja. Yada jatya-antaram bahyam ksatriyady apadisyate: when an external other class — ksatriya and the rest — is designated. Bahyam: external: the class designated is outside both words' own senses. So two co-referring words, neither of which means ksatriya, together designate a ksatriya. The mechanism is not composition but co-reference plus paryudasa: they meet in one meaning and the meaning they meet in is the neighbour (3.14.295's asatti).

Verse 3.14.297

श्यामेव शस्त्री कन्येति यथान्यद् व्यपदिश्यते ।
असन् ब्राह्मण इत्याभ्यां तथान्यं क्षत्रियादयः ॥ 297 ॥

*śyāmeva śastrī kanyeti yathānyad vyapadiśyate |
asan brāhmaṇa ityābhyām.tathānyam.kṣatriyādayaḥ || 297 ||*

As by 'the dark one', 'the knife-bearing one', 'the girl', something else is designated — so by 'asat' and 'brahmana', ksatriya and the rest designate something else.

The parallel for 3.14.296, and it is well chosen. Syama eva sastri kanya iti yatha anyad vyapadisyate: as by 'syama' (dark), 'sastri' (knife-bearing), 'kanya' (girl), something else is designated — three words, none of which means this particular girl, converging on her. Each contributes a delimitation; the referent is what survives all three (3.14.9-11's two open generals drawing away each other's doubt). Asan brahmana ity abhyam tatha anyam ksatriyadayah: so by 'asat' and 'brahmana', ksatriya and the rest designate something else. So the negative compound is a convergence of delimitations, exactly like a string of adjectives — and the negative is one adjective among them. This is 3.14.260's finding (nañ delimits as 'gaura' does) given its clearest illustration.

Verse 3.14.298

असास्नो गौरिति यथा गवयो व्यपदिश्यते ।
जात्यन्तरं न गोरेव सास्नाऽभावः प्रतीयते ॥ 298 ॥

*asāsno gauriti yathā gavayo vyapadiśyate |
jātyantaram, na goreva sāsna'bhāvaḥ pratiyate || 298 ||*

As by 'a dewlapless cow' the gavaya is designated — another class; the absence of a dewlap in a cow itself is not cognized.

The example that clinches paryudasa. Asasno gaur iti yatha gavayo vyapadisyate jaty-antaram: as by 'asasnah gauh' — a cow without a dewlap — the gavaya is designated, another class: the gavaya (the nilgai, the wild ox) is what one thinks of, and it is a different species. Na gor eva sasna-abhavah pratiyate: the absence of a dewlap in a cow itself is not cognized — one does not picture a mutilated cow. So the negation of a defining property does not produce a defective member of the class: it produces the neighbouring class. This is the strongest possible case for paryudasa, because prasajya would give exactly the wrong result, and everyone's understanding refuses it.

Verse 3.14.299

तुल्यरूपं यथाख्यातं कण्टकैः(कङ्कटैः)भेदेहेतुभिः ।
खदिरं जातिभेदेन खर्जुरात्(बर्बुरात्) प्रतिपद्यते ॥ 299 ॥

*tulyarūpam, yathākhyātam, kaṇṭakai(kaṅkaṭai)rbhedahetubhiḥ |
khadiram, jātibhedena kharjūrāt(barburāt) pratipadyate || 299 ||*

As what has been declared to be of similar form is apprehended, by thorns as the difference-causes, as khadira, distinct in class from kharjura.

Tulya-rupam yatha akhyatam kankakair bheda-hetubhih: as what has been declared to be of similar form — two trees that look alike — by thorns as the difference-causes. Khadiram jati-bhedena kharjura pratipadyate: one apprehends khadira (the acacia) as distinct in class from kharjura (the date-palm). So a single differentiating mark sorts two similar things into two classes, and one apprehends the class, not the mark. This is 3.14.298's gavaya again in a botanical key: the differentia does not modify the genus, it delivers a different species. The thorns are 3.14.295's asatti made visible — the nearest neighbour is the one the mark separates you from.

[Contested: The source records variants at both padas b and d: 'kantakaih' ('thorns') against 'kankataih', and 'kharjura' against 'barburat'. We translate the first of each. 'Barbura' (a thorny acacia) would in fact suit an argument from thorns better than the date-palm does, and may be the sounder reading; we flag it rather than choose against the primary text.]

Verse 3.14.300

अविद्यमानब्राह्मण्यो यादृशो ब्राह्मणो भवेत् ।
अङ्गीकृतोपमानेन तथान्यार्थोभिऽधीयते ॥ 300 ॥

*avidyamānabrāhmaṇyo yādrśo brāhmaṇo bhavet |
aṅgīkṛtopamānena tathānyārthobhi'dhīyate || 300 ||*

As a brahmana in whom brahmana-hood is absent would be — so, by an accepted comparison, another meaning is expressed.

Avidyamana-brahmanyō yadrso brahmano bhavet: as a *brahmana* in whom *brahmana*-hood is absent would be — the contradictory figure, and everyone knows whom it means: the man who is one by birth and not by conduct. Angikṛta-upamanena tatha anyartha 'bhidhiyate: so, by an *accepted comparison*, another meaning is expressed. Angikṛta-upamana: a comparison that has been *granted*, taken as established. So the negative compound works as a conceded simile does: 'abrahmana' says *the sort of thing a brahmin without brahmin-hood would be*, and the hearer supplies the rest. The negation is a figure, and figures work by being accepted (3.14.271's upacara-sat: existing by transfer).

Verse 3.14.301

अवृष्टयो यथावर्षा नीहाराभ्रसमावृताः ।
तद्रूपत्वात् स हेमन्त इत्यभिन्नः प्रतीयते ॥ 301 ॥

*avṛṣṭayo yathāvarṣā nīhārābhraśamāvṛtāḥ |
tadrūpatvāt sa hemanta ityabhinnah pratiyate || 301 ||*

As rainless days, though not raining, covered with mist and cloud — from having that form, 'that is winter' — it is cognized as non-different.

A lovely example, and it makes the point better than argument. Avrstayo yatha avarsa nihara-abhrasamavrtah: as *rainless days, not raining, covered with mist and cloud* — days in the cold season that look exactly like the rains: overcast, dim, wet-seeming, and dry. Tad-rupatvat sa hemanta ity abhinnah pratiyate: *from having that form, 'that is winter'* — it is cognized as *non-different*. So one says of such a day that it is winter and one perceives it as the rains, because the form is the same. Tad-rupatvat: from having that form (3.14.214's rupabhedat). The negation is exactly this: the form is there, the thing is not, and the cognition takes what it sees. 'Abrahmana' is an overcast day in the cold season.

Verse 3.14.302

अपरे ब्राह्मणादीनां सर्वेषां जातिवाचिनाम् ।
द्रव्यस्यान्यपदार्थत्वे नाना योगं प्रचक्षते ॥ 302 ॥

*apare brāhmaṇādīnām sarveṣām jātivācinām |
dravyasyānyapadārthatve nañā yogam pracakṣate || 302 ||*

Others declare the connection with 'nañ' of all the universal-expressing words like 'brahmana' — where the substance is another's word-meaning.

A further position recorded. *Apare brahmanadinam sarvesam jati-vacinam: others, of all the universal-expressing words like 'brahmana'. Dravyasya anya-padarthatve nana yogam pracaksate: declare the connection with 'nañ' — where the substance is another's word-meaning: i.e. they treat every nañ-compound on jati-words as a bahuvrihi, whose substance lies outside it (3.14.38's anya-padartha). So 'abrahmana' would be, structurally, 'one for whom brahmin-hood is absent' — a possessive compound, not a determinative. This is a real proposal and it explains 3.14.300's 'the sort of thing a brahmin without brahmin-hood would be' rather neatly. Bhartrhari records it as apare and, as usual, lets the reader weigh it (3.14.97: the upayas are unsettled among persons).*

Verse 3.14.303

न चैवविषयः कश्चिद् बहुव्रीहिः प्रकल्पते ।
अगुरुश्च इति व्याप्तिर्नान्समासेन यस्य न ॥ 303 ॥

*na caivamviṣayaḥ kaścid bahuvrīhiḥ prakalpate |
aguraśva iti vyāptirnañsamāśena yasya na || 303 ||*

And no bahuvrihi of such a domain is conceivable; 'a horse is cowless' — of which there is no pervasion by the negative compound.

The refutation of 3.14.302. *Na ca evam-visayah kascid bahuvrihih prakalpate: no bahuvrihi of such a domain is conceivable. Agur asva iti vyaptir nan-samasena yasya na: 'agur asvah' — a horse is cowless — of which there is no pervasion by the nan-compound. Vyapti: pervasion, the co-extension a real bahuvrihi would give. If 'abrahmana' were possessive, then 'agu' would cover every cowless thing — horses, stones, gods — and it does not: 'agu' means a man without cattle, not a horse. So the possessive reading over-generates catastrophically, and the test is one word long. The bahuvrihi-account dies where 3.14.298's gavaya lives: paryudasa picks the neighbour, and possession picks the world.*

Verse 3.14.304

द्वन्द्वैकदेशिनोरुक्ता परवलिङ्गता यतः ।
अवर्षासु ततोऽसिद्धिरिष्टयोर्लिङ्गसंख्ययो ॥ 304 ॥

*dvandvaikadeśinoruktā paravallīṅgatā yataḥ |
avarṣāsu tato'siddhirīṣṭayorliṅgasamkhyayo || 304 ||*

Since for the dvandva and for the ekadesin the gender of the latter member is stated — therefore in 'avarṣah' the desired gender and number are not established.

A second failure. Dvandva-ekadesinor ukta paravat-lingata yataḥ: for the *dvandva* and the *ekadesin* the *gender of the latter* is stated — Panini's paravat-lingata: the compound takes its final member's gender. Avarsasu tato 'siddhir istayor linga-samkhyayoh: *therefore*, in 'avarṣah' — the non-rains, 3.14.301's overcast winter days — the *desired* gender and number are not established. So the rule would give 'avarṣa' the gender of 'varṣa', and what one wants is 'hemanta', a masculine singular. The forms do not come out. Between this and 3.14.303 the alternative accounts are exhausted, and the samuddesa returns to its own.

Verse 3.14.305

विशेषणं ब्राह्मणादि क्रियासंबन्धिनोऽसतः ।
यदा विषयभिन्नं तत् तदाऽसत्त्व प्रतीयते ॥ 305 ॥

*viśeṣaṇam brāhmaṇādi kriyāsambandhino'sataḥ |
yadā viṣayabhinnaṁ tat tadā'sattva pratīyate || 305 ||*

When 'brahmana' and the rest, the qualifier of the 'asat' connected with the action, is differentiated by its domain — then non-being is cognized.

Visesanam brahmanadi kriya-sambandhino 'sataḥ: 'brahmana' and the rest, the *qualifier* of the 'asat' connected with the action — the arrangement 3.14.255 proposed: nañ settles in a general seat, and the base specifies it. Yada viṣaya-bhinnaṁ tat tada asattva pratiyate: when *that* is differentiated by its domain, then non-being is cognized. So non-being is not given and then qualified; it is produced by the qualifier's cutting the domain. 'Asat' alone conveys nothing determinate — it is 3.14.261's nirupakhya — and 'brahmana' is what makes it a determinate absence. The negative needs its base more than the base needs it.

Verse 3.14.306

ब्राह्मणत्वेन चासत्त्वादुच्यतेऽसत्तदन्यथा ।
असदित्यपि सत्त्वेन सतः सत्ता निवर्त्यते ॥ 306 ॥

*brāhmaṇatvena cāsattvāducyate'sattadanyathā |
asadityapi sattvena sataḥ sattā nivartyate || 306 ||*

And from non-being as a brahmana, it is called 'asat' — otherwise; and by 'asat' too, the existence of the existent is excluded by way of being.

Brahmanatvena ca asattvad ucyate 'sat tad anyatha: from *non-being as a brahmana*, it is called 'asat' — *otherwise*: the ksatriya is 'asat' only under a description, and in himself he is perfectly sat. Anyatha: in another way, i.e. he is otherwise than the word says. Asad ity api sattvena satah satta nivartyate: and by 'asat' too, the *existence of the existent is excluded by way of being* — sattvena: through being. So even the flattest negation works through a positive: to exclude a thing's existence one must have it *as being* first, and the exclusion runs along the being. This is 3.14.263's *sopakhyatva* (one needs something definable to deny) and 3.14.279's the meaning is annexed by the hearing — nothing is denied except what has first been given.

Verse 3.14.307

सामान्यद्रव्यवृत्तित्वान्निमित्तानुविधायिनः ।
अयोगो लिङ्गसंख्याभ्यां स्याद् वा सामान्यधर्मता ॥ 307 ॥

sāmānyadravyavṛttitvānnimittānuvidhāyinaḥ |
ayogo liṅgasamkhyābhyāṃ syād vā sāmānyadharmatā || 307 ||

From its operating in the general substance, of what conforms to its cause — there would be no connection with gender and number; or there would be the property of the general.

Samanya-dravya-vṛttitvat nimitta-anuvidhayinah: from its operating in the *general substance*, of what *conforms to its cause* — dravya-samanya, 3.14.246's substance-in-general. Ayogo linga-samkhyabhyam syad va samanya-dharmata: there would be *no connection with gender and number*; or there would be the *property of the general*. So two unwelcome results: either the compound gets no concord at all, or it gets the general's own gender and number — which, since a general has none (3.14.107's jatau dvivacanabhavat), is the first result under another name. The difficulty is real and 3.14.310 will meet it by letting the specified substrata supply what the general cannot.

Verse 3.14.308

प्रागसत्त्वाभिधायित्वं समासे द्रव्यवाचिता ।
निमित्तानुविधानं च न सर्वत्र स्वभावतः ॥ 308 ॥

prāgasattvābhidhāyitvam samāse dravyavācitā |
nimittānuvidhānam ca na sarvatra svabhāvataḥ || 308 ||

Before, the expressing of non-substance; in the compound, the expressing of substance; and conformity to the cause is not everywhere, by nature.

Prag asattva-abhidhāyitvam: *before* — uncompounded — the expressing of *non-substance*: 'nañ' by itself says no thing (3.14.193's asattva-bhuta, the particle's mode of meaning). Samase dravya-vacita: *in the compound*, the *expressing of substance* — compounded, it says a thing. So nañ changes category by being compounded, exactly as 'nir' does (3.14.256's sa kramah). Nimitta-anuvidhanam ca na sarvatra svabhāvataḥ: and *conformity to the cause is not everywhere, by nature* — the premise of 3.14.307's difficulty does not hold universally. So the difficulty is answered by denying its generality: things do not always follow their causes, and this is one of the places they do not.

Verse 3.14.309

निमित्तानुविधाने च क्रियायोगो न कल्पते ।
तथाचाव्यपदेश्यत्वादुपादानमनर्थकम् ॥ 309 ॥

*nimittānuvidhāne ca kriyāyogo na kalpate |
tathācāvyapadeśyatvādupādānamanarthakam || 309 ||*

And in conformity to the cause, connection with action is not conceivable; and thus, from being indesignable, the taking-up is purposeless.

The decisive argument against 3.14.307's premise, and it is the samuddesa's standing one. *Nimittānuvidhane ca kriya-yogo na kalpate*: in conformity to the cause, connection with action is not conceivable (3.14.204, in the same words). *Tatha ca avyapadesyatvad upadanam anarthakam*: and thus, from being indesignable — *avyapadesya*: not even nameable (3.14.135's *vyapadisyate*, negated) — the taking-up is purposeless. So if the compound merely followed its cause, it could not be predicated of, and a thing that cannot be predicated of does not independently exist (3.14.205's *yasya nasti kriya-yogah svatanthro* 'sau na vidyate'). Not merely unusable: unnameable. *Anarthaka* closes it.

Verse 3.14.310

असत्सामान्यवृत्तिर्वा विशेषैः क्षत्रियादिभिः ।
प्रयुक्तैराश्रयैर्भिन्नो याति तल्लिङ्गसङ्ख्यताम् ॥ 310 ॥

*asatsāmānyavṛttirvā viśeṣaiḥ kṣatriyādibhiḥ |
prayuktairāśrayairbhinno yāti tallingasaṅkhyatām || 310 ||*

Or 'asat', operating in the general, differentiated by the particulars — 'ksatriya' and the rest, the substrata employed — goes to their gender and number.

The resolution. *Asat-samanya-vṛttir va*: 'asat', operating in the general. *Visesaih ksatriyadibhiḥ prayuktair asrayair bhinnah*: differentiated by the particulars — 'ksatriya' and the rest, the substrata employed. *Yati tal-linga-sankhyatam*: it goes to their gender and number. So the general has no concord of its own (3.14.307's worry, granted) and takes the specified substrata's — which are employed, present, and gendered. *Yati*: it goes to them. This is 3.14.152's borrowing once more, and it is the samuddesa's uniform answer wherever concord is wanted and no substance is at hand: find the substance the word reaches, and take its gender.

Verse 3.14.311

प्रागाश्रयो हि भेदाय प्रधानेऽभ्यन्तरीकृतः ।
पुनः प्रत्यवमर्शेन विभक्त इव दृश्यते ॥ 311 ॥

*prāgāśrayo hi bhedāya pradhāne'bhyanantarīkṛtaḥ |
punaḥ pratyavamarśena vibhakta iva drśyate || 311 ||*

For the substratum, previously internalized into the principal for the sake of difference, is again seen as though divided, by the reflective reference.

One of the most exact psychological sentences in the samuddesa. Prag asrayo hi bhedaya pradhane 'bhyantarikrtah: the *substratum*, previously internalized into the *principal* for the sake of difference – abhyantarikrta: made inner, taken inside. The seat was swallowed by the principal, and swallowed in order to differentiate it. Punah pratyavamarsena vibhakta iva drsyate: *again*, by the *reflective reference*, it is *seen as though divided* – pratyavamarsa (3.14.238's word): the mind turning back on what it laid down; iva: as though. So: the mind takes the seat inside, then looks back, and sees it standing out again – and the standing-out is an appearance. This is where the compound's members come from: not from the compound, but from the backward glance (3.14.188's buddhya eva; 3.14.93's buddhy-antaram upasritah).

Verse 3.14.312

समासे श्रूयते स्वार्थो येन तद्वास्तदाश्रयः ।
द्रव्यं तु लिङ्गसङ्ख्यावदसताभ्यन्तरीकृतम् ॥ 312 ॥

samāse śrūyate svārtho yena tadvāstadāśrayaḥ |
dravyam tu liṅgasāṅkhyāvadasatābhyantarīkṛtam || 312 ||

In the compound its own meaning is heard, by which the possessor of that has that for substratum; but the substance possessing gender and number is internalized by 'asat'.

Samase sruyate svartho yena tadvas tad-asrayah: in the compound its own meaning is heard, by which the possessor of that has that for substratum – what is audible in 'abrahmana' is brahmin-hood, and it is what the possessor rests on. Dravyam tu linga-sankhyavad asata abhyantarikrtam: but the substance possessing gender and number is internalized by 'asat' – abhyantarikrta again (3.14.311). So the audible member gives the substratum and the negative swallows the substance – and the swallowed substance is what carries the concord that 3.14.310 said the compound goes to. The division of labour is complete: the base is heard, the nañ digests, and the gender comes out of the digestion.

Verse 3.14.313

एकार्थविषयौ शब्दौ तस्मिन्नन्यार्थवर्तिनौ ।
असतैव तु भेदानां सर्वेषामुपसंग्रहः ॥ 313 ॥

ekārthaviṣayau śabdau tasminnanyārthavartinau |
asataiva tu bhedanām sarveṣāmupasaṁgrahaḥ || 313 ||

The two words, having one meaning for their domain, operate there in another's meaning; but by 'asat' alone there is the comprehension of all the differences.

Ekartha-visayau sabdau tasminn anyartha-vartinau: the two words, having one meaning for their domain – 'asat' and 'brahmana', co-referring (3.14.296's ekarthe vartamanabhyam) – operate there in another's meaning: both point past themselves to the ksatriya. Asata eva tu bhedanam sarvesam upasaṁgrahaḥ: but by 'asat' alone there is the comprehension of all the differences – upasaṁgraha: the gathering-in of the whole field. So the base narrows and the negative gathers: 'asat' holds open everything that is not a brahmin, and 'brahmana' is what tells you which opening you are looking through. This is the exact inverse of the usual picture, in which the negative subtracts.

Verse 3.14.314

ते क्षत्रियादिभिर्वाच्या वाच्या वा सर्वनामभिः ।
यान्तीवान्यपदार्थत्वं नञो रूपाविकल्पनात् ॥ 314 ॥

te kṣatriyādibhirvācyā vācyā vā sarvanāmabhiḥ |
yāntīvānyapadārthatvam, naño rūpāvikalpanāt || 314 ||

They are to be expressed by 'ksatriya' and the rest, or by pronouns; they go, as it were, to the state of being another's word-meaning, from the non-construction of nañ's form.

Te kṣatriyadibhir vacya vacya va sarvanamabhiḥ: they — the differences gathered at 3.14.313 — are to be expressed by 'ksatriya' and the rest, or by pronouns: one names the sibling or one says 'that one' (3.14.217's tac-chabdo 'nuprayujyate). Yanti iva anya-padarthatvam nano rupa-avikalpanat: they go, as it were, to the state of being another's word-meaning, from the non-construction of nañ's form — iva: as though. So because nañ contributes no form of its own, the compound looks like a bahuvrihi — which is why 3.14.302's theorists thought it was one. Bhartrhari grants the resemblance and marks it with iva. The appearance is real and the identity is not (3.14.303's agur asvah).

Verse 3.14.315

विशेषस्याप्रयोगे तु लिङ्गसङ्ख्ये न सिध्यतः ।
अवर्षादिषु दोषश्च हेमन्तोऽन्याश्रयो यतः ॥ 315 ॥

viśeṣasyāprayoge tu liṅgasankhye na sidhyataḥ |
avarṣādiṣu doṣaśca hemanto'nyāśrayo yataḥ || 315 ||

But when the particular is not employed, gender and number do not succeed; and there is a fault in 'avarsah' and the rest, since 'hemanta' has another substratum.

The account's honest remainder. Visesasya aprayoge tu linga-sankhye na sidhyataḥ: when the particular is not employed, gender and number do not succeed — 3.14.310's solution requires the substratum to be prayukta, actually said; where it is not, nothing supplies concord. Avarsadisū dosas ca hemanto 'nyasrayo yataḥ: and there is a fault in 'avarsah' and the rest, since 'hemanta' has another substratum. So 3.14.304's difficulty returns and is not solved: 'avarsah' should give 'hemanta', and hemanta rests elsewhere. Dosah: a fault — Bhartrhari names it in his own account and does not repair it. That is the samuddesa's manner, and it has been consistent since 3.14.34.

Verse 3.14.316

आकृतिः सर्वशब्दानां यदा वाच्या प्रतीयते ।
एकत्वादेकशब्दत्वं न्याय्यं तस्यां च वर्ण्यते ॥ 316 ॥

ākṛtiḥ sarvaśabdānām, yadā vācyā pratīyate |
ekatvādekaśabdatvam, nyāyyam, tasyām, ca varṇyate || 316 ||

When the form is cognized as what all words express — then, from its oneness, singular-wordhood is described as proper in it.

A last position, and it is the akṛti-vadin's. Akṛtiḥ sarva-sabdanam yada vacya pratiyate: when the akṛti — the form, the shape, the configuration — is cognized as what *all words express*: the doctrine that every word means a form (the Vajapyayana position, against Vyadi's dravya; 3.1's opening quarrel). Ekatvad eka-sabdatvam nyayyam tasyam ca varnyate: from its *oneness, singular-wordhood* is described as *proper* in it. So if words mean forms, and a form is one, every word should be singular. Nyayyam: proper, following the reasoning. The consequence is stated neutrally, and 3.14.317-318 draw out what it costs.

Verse 3.14.317

आविष्टलिङ्गता तस्यां स्याद् ग्राम्यपशुसङ्घवत् ।
द्रव्येभेदेषु चैकत्वात् तत्रैकवचनं भवेत् ॥ 317 ॥

āviṣṭaliṅgatā tasyām, syād grāmyapaśusaṅghavat |
dravyebhede'pi caikatvāt tatraikavacanam bhavet || 317 ||

In it there would be pervaded-gender, as with the aggregate of domestic animals; and even where the substances differ, from oneness the singular would obtain there.

Aviṣṭa-lingata tasyam syad grāmya-pasu-saṅghavat: in it there would be *pervaded-gender* — avista-linga: gender entered into it from outside (3.14.150's avesa) — as with the *aggregate of domestic animals*: 'grāmya-pasu', a collective that takes one gender though it covers cows, goats and sheep. Dravya-bhede 'pi ca ekatvat tatra eka-vacanam bhavet: and *even where the substances differ*, from *oneness* the *singular* would obtain. So on the akṛti-account every word behaves like a collective noun: one form, one gender, one number, whatever the multiplicity underneath. That is a coherent position and it is very nearly 3.14.99's abheda-ekatva — which is why Bhartrhari can state it without hostility.

Verse 3.14.318

आश्रयाणां हि लिङ्गैः सा नियतैरेव युज्यते ।
तथा च युक्तवद्भावे प्रतिषेधो निरर्थकः ॥ 318 ॥

āśrayāṇām, hi liṅgaiḥ sā niyataireva yujyate |
tathā ca yuktavadbhāve pratiṣedho nirarthakaḥ || 318 ||

For it is joined only with the fixed genders of the substrata; and thus, in 'treatment as though joined', the prohibition is purposeless.

The consequence, and it is a rule-economy. Aśrayanam hi liṅgaiḥ sa niyatair eva yujyate: for it — the akṛti — is joined *only* with the *fixed genders* of the *substrata*: the form has no gender of its own and takes the seats', which are settled (3.14.310's yati tal-linga-sankhyatam, on the rival account). Tatha ca yuktavad-bhave pratiṣedho nirarthakaḥ: and *thus*, in *yuktavad-bhava*, the *prohibition* is *purposeless* — nirarthaka. So the akṛti-doctrine makes one of Panini's prohibitions idle: if concord always comes from the fixed seats, no rule need forbid it coming from elsewhere. This is 3.14.106's pattern (a doctrine paying for itself in rule-economy) offered to the opponent's account — Bhartrhari finds the rival's advantage for it, and does not pretend the finding is his.

Verse 3.14.319

सर्वत्राविष्टलिङ्गत्वं लोकलिङ्गपरिग्रहे ।
विरोधित्वात् प्रसज्येत नाश्रितं तच्च लौकिकम् ॥ 319 ॥

sarvatrāviṣṭalingatvam, lokalingaparigrahe |
virodhitvāt prasajyeta nāśritam, tacca laukikam || 319 ||

If the worldly gender were taken up, pervaded-gender everywhere would follow, from contradiction; and that worldly gender is not resorted to.

Sarvatra avista-lingatvam loka-linga-parigrahe: *pervaded-gender everywhere*, if the worldly gender is taken up — loka-linga: gender as the world knows it, sexual difference. Virodhitvat prasajyeta: would follow, from contradiction. Na asritam tac ca laukikam: and that worldly gender is not resorted to. So grammatical gender is not the world's gender, and the science does not use the world's. This is the premise the whole gender-analysis has been resting on and here it is stated: the linga of the sastra is a technical category, and looking for sex in it is a category error (3.14.137's the word's formation has the general for its domain). 3.14.320 proves it in one line.

Verse 3.14.320

सामान्यमाकृतिर्भावो जातिरित्यत्र लौकिकम् ।
लिङ्गं न सम्भवत्येव तेनान्यत् परिगृह्यते ॥ 320 ॥

sāmānyamākṛtirbhāvo jātirityatra laukikam |
liṅgam, na sambhavatyeva tenānyat parigrhyate || 320 ||

In 'samanya', 'akṛti', 'bhava', 'jati' — here the worldly gender is not possible at all; therefore another is taken up.

The proof, and it is beautiful because it is drawn from the grammarians' own vocabulary. Samanyam akṛtir bhavo jatir ity atra: in 'samanya' (neuter), 'akṛti' (feminine), 'bhava' (masculine), 'jati' (feminine) — four words for one thing, the universal, in three genders. Laukikam lingam na sambhavaty eva: here the worldly gender is not possible at all — na sambhavaty eva: not even possible; a universal has no sex, and yet these four have three genders among them. Tena anyat parigrhyate: therefore another is taken up. So gender cannot come from the meaning, because four synonyms differ in it. The argument is one verse long and it settles the matter — and the examples are the terms of the debate itself.

Verse 3.14.321

प्रवृत्तिरिति सामान्यं लक्षणं तस्य कथ्यते ।
आविर्भावस्तिरोभावः स्थितिश्चेत्यथ भिद्यते ॥ 321 ॥

pravṛttiriti sāmānyam lakṣaṇam tasya kathyate |
āvīrbhāvastīrobhāvah sthitiścetyatha bhidyate || 321 ||

'Pravrtti' – the general characteristic of it is stated; then it is divided as manifestation, disappearance, and persistence.

The other gender, and it is not what one expects. Pravrttir iti samanyam laksanam tasya kathyate: 'pravrtti' – the general characteristic of it is stated: what the akrti is, generally, is operation – pravrtti: going forth, activity, the thing's being under way. Avirbhavas tirobhavah sthitis ca ity atha bhidyate: then it is divided as manifestation, disappearance, and persistence. So the universal is not a static form but a threefold activity: coming-into-view, going-out-of-view, and staying. This is the satbhava-vikara tradition (the six modifications) compressed to three, and it is the samuddesa's most metaphysical moment: what a word means is a rhythm.

Verse 3.14.322

प्रवृत्तिमन्तः सर्वेऽर्थास्तिसुभिश्च प्रवृत्तिभिः ।
सततं न वियुज्यन्ते वाचश्चैवात्र सम्भवः ॥ 322 ॥

pravṛttimantah sarve'rthāstisubhiṣca pravṛttibhiḥ |
satatam na viyujyante vācaścaivātra sambhavaḥ || 322 ||

All things possess operation, and are never disjoined from the three operations; and here is the possibility of speech.

Pravrttimantah sarve 'rthah: all things possess operation – nothing is inert; everything is under way. Tisrbhis ca pravrttibhiḥ satatam na viyujyante: they are never disjoined from the three operations – satatam: constantly, at every moment: everything is at all times manifesting, vanishing, and persisting at once. Vacas caiva atra sambhavaḥ: and here is the possibility of speech. So language is possible because of this: a word can catch a thing only where the thing shows a manifestation to be caught, and the ceaseless three-beat rhythm is what offers words their purchase. Atra sambhavaḥ – here is where speech can happen. Without the pravrttis there would be nothing for a word to be about.

Verse 3.14.323

यश्चाप्रवृत्तिधर्मार्थश्चितिरूपेण गृह्यते ।
अनुयातीव सोऽन्येषां प्रवृत्तीविष्वगाश्रयाः ॥ 323 ॥

yaścāpravṛttidharmārthaścītirūpeṇa grhyate |
anuyātīva so'nyeṣāṃ pravṛttīviṣvagāśrayāḥ || 323 ||

And that thing whose property is non-operation, which is grasped in the form of consciousness – it follows, as it were, the operations of others, which rest everywhere.

The exception to 3.14.322, and it is the self. *Yas ca apravrtti-dharmarthah*: that *thing* whose *property* is *non-operation* – *apravrtti*: it does not go forth; it does not manifest, vanish or persist, because those are changes and it does not change. *Citi-rupena grhyate*: which is *grasped in the form of consciousness* – *citi*: awareness (1.1's the changeless Word-Brahman; 1.4's the one that appears as many). *Anuyati iva so 'nyesam pravrttir visvag-asrayah*: it *follows, as it were*, the *operations of others*, which *rest everywhere*. *Iva*: as though. So consciousness does not move and appears to move with everything that does – as the moon appears to run through the clouds. *Visvag-asrayah*: resting on all sides. The changeless is the only thing outside the rhythm, and it looks like the busiest thing there is.

Verse 3.14.324

तेनास्य चितिरूपं च चितिकालश्च भिद्यते ।
तस्य स्वरूपभेदस्तु न कश्चिदपि विद्यते ॥ 324 ॥

tenāśya citirūpaṃ ca citikālaśca bhidyate |
tasya svarūpabhedastu na kaścīdapi vidyate || 324 ||

Therefore its consciousness-form and its consciousness-time are differentiated; but of it there is no difference of its own form at all.

Tena asya citi-rupam ca citi-kalas ca bhidyate: *therefore its consciousness-form and its consciousness-time are differentiated* – the awareness appears as this awareness and that, at this moment and that: it acquires shape and date from what it seems to follow (3.14.323's *anuyati iva*). *Tasya sva-rupa-bhedastu na kascid api vidyate*: *but of it there is no difference of its own form at all* – *na kascid api*: not the least. So all the differentiation is in the apparent following and none in the thing: consciousness is one and is dated and shaped by borrowing. This is 1.4's *ekam eva yad amnatam bhinnam saktivyapasrayat*, and the *samuddesa* has arrived at it from the grammar of gender.

Verse 3.14.325

अचेतनेषु संक्रान्तं चैतन्यमिव दृश्यते ।
प्रतिबिम्बकधर्मेण यत्तच्छब्दनिबन्धनम् ॥ 325 ॥

acetaneṣu samkrāntaṃ caitanyamiva drśyate |
pratibimbakadharmeṇa yattacchabdanibandhanam || 325 ||

Consciousness is seen as though transferred into the unconscious, by the property of reflection; and that is the basis of the word.

One of the great images of the work. *Acetanesu samkrantam caitanyam iva drsyate*: *consciousness is seen as though transferred* into the *unconscious* – *samkranta*: gone across, migrated; *iva*: as though. *Pratibimbaka-dharmena*: by the *property of reflection* – as a face is in a mirror without going there. So awareness appears to have got into stones and pots, and it has not: what one sees is a reflection, and reflections do not move. *Yat tac-chabda-nibandhanam*: and *that is the basis of the word* – *sabda-nibandhana*: what the word rests on. So words are possible because consciousness appears in the insentient: a thing can be *meant* only by seeming to have some awareness lodged in it. This is 1.132's the word-principle in all things, and it grounds 3.14.322's *vacas ca eva atra sambhavah* – speech is possible where the reflection falls.

Verse 3.14.326

अवस्था तादृशी नास्ति या लिङ्गेन न युज्यते ।
क्वचित्तु शब्दसंस्कारो लिङ्गस्यानाश्रये सति ॥ 326 ॥

avasthā tādr̥śī nāsti yā liṅgena na yujyate |
kvacittu śabdasaṁskāro liṅgasyānāśraye sati || 326 ||

There is no such state as is not joined with gender; but somewhere there is the word's formation, when there is no substratum of gender.

Avastha tadrsi nasti ya lingena na yujyate: there is no such state as is not joined with gender — every condition of a thing has one of the three (3.14.321's manifestation, disappearance, persistence: and this is what the linga now turns out to be). Kvacit tu sabda-samskaro lingasya anasraye sati: but somewhere there is the word's formation when there is no substratum of gender. So gender is universal in the states and there are still words with no seat for it — the indeclinables (3.14.105's avyayanam yo dharmah). The two facts stand side by side: everything has gender, and some words have nowhere to put it. Bhartrhari does not reconcile them here.

Verse 3.14.327

कृत्तद्धिताभिधेयानां भावानां न विरुध्यते ।
शस्त्रे लिङ्गं गुणावस्था तथा चाकृतिरिष्यते ॥ 327 ॥

kṛttaddhitābhidheyānām bhāvānām na virudhyate |
śastre liṅgam guṇāvasthā tathā cākṛtirīṣyate || 327 ||

Of the states expressed by krt and taddhita, gender is not contradicted; in the science, gender is the condition of a quality, and thus the akṛti is accepted.

Krt-taddhita-abhidheyānam bhavanam na virudhyate: of the states expressed by krt and taddhita — the deverbal and denominal abstracts, 'pakti' and 'sauklyā' — gender is not contradicted: these take gender readily, though they name no substances. Sastre lingam guṇāvasthā: in the science, gender is the condition of a quality — guṇa-avastha: a quality's state, which is 3.14.321's pravṛtti under another name. Tatha ca akṛtirīṣyate: and thus the akṛti is accepted. So the grammarians' linga is a quality's condition, not a sex — which is what 3.14.319–320 argued and what the krt-taddhita abstracts confirm: they have gender because they have conditions, not because they have bodies.

Verse 3.14.328

लिङ्गं प्रति न भेदोऽस्ति द्रव्यपक्षेऽपि कश्चन ।
तस्मात् सप्त विकल्पा ये सैवात्राविष्टलिङ्गता ॥ 328 ॥

liṅgam prati na bhedo'sti dravyapakṣe'pi kaścana |
tasmāt sapta vikalpā ye saivātrāviṣṭaliṅgatā || 328 ||

As regards gender there is no difference at all, even on the substance-view; therefore, whatever the seven alternatives may be, that same pervaded-gender obtains here.

Lingam prati na bhedo 'sti dravya-pakse 'pi kascana: as regards *gender* there is *no difference at all*, even on the *substance-view* — the akṛti-vadin and the dravya-vadin (3.14.316's ancient quarrel) come out the same on gender. Tasmāt sapta vikalpa ye sa eva atra avista-lingata: *therefore*, whatever the *seven alternatives* may be, that same *pervaded-gender* obtains here. Sapta vikalpah: the seven positions the tradition had enumerated. So all seven agree, and the great dispute makes no difference to the case at hand. This is 3.14.119 and 3.14.202's move for the last time, and its scope is now maximal: the result survives every position anyone holds, and so the positions need not be adjudicated at all.

Verse 3.14.329

वचने नियमः शास्त्राद् द्रव्यस्याभ्युपगम्यते ।
यतस्तदाकृतौ शास्त्रमन्यथैव समर्थ्यते ॥ 329 ॥

vacane niyamah śāstrād dravyasyābhyupagamyate |
yatastadākṛtau śāstramanyathaiva samarthyaṭe || 329 ||

The restriction on the substance's number is accepted from the science; since the science regarding that akṛti is justified quite otherwise.

Vacane niyamah sastrad dravyasya abhyupagamyate: the *restriction on number* of the *substance* is *accepted from the science* — the grammar, not the world, settles how many a substance-word says (3.14.134's sastram arabdham). Yatas tad-akṛtau sastram anyatha eva samarthyaṭe: since the *science* regarding that *akṛti* is *justified quite otherwise* — anyatha eva: on a wholly different footing. So the two objects are handled by two disjoint justifications: what makes the rules right for substances does not make them right for forms. The verse is registering that the sastra is not a single system with one ground — it is a set of accommodations, each answering to what it accommodates (3.14.74's science standing far off).

Verse 3.14.330

वर्तते यो बहुष्वर्थो भेदे तस्य विवक्षिते ।
स्वाश्रयैर्व्युपदिष्टस्य शास्त्रे वचनमुच्यते ॥ 330 ॥

vartate yo bahuṣvārtho bhede tasya vivakṣite |
svāśrayairvyupadiṣṭasya śāstre vacanamucyate || 330 ||

That meaning which operates in many — when its difference is intended, of it as designated by its own substrata, number is stated in the science.

Vartate yo bahuṣv arthah: that *meaning* which operates in *many* — the general, present in its instances. Bhede tasya vivakṣite: when its *difference* is *intended* — vivakṣa again: the will to say the difference (3.14.224). Sva-asrayair vyupadistasya sastre vacanam ucyate: of it as *designated by its own substrata*, *number* is *stated in the science*. So the sequence: a general in many; a wish to say the many-ness; the general designated through its seats; and then the grammar supplies a plural. The number is at the end of a chain that begins in an intention, and no step of it is in the object. This is 3.14.188's buddhya eva in the number's own case.

Verse 3.14.331

यदा त्वाश्रयभेदेन भेद एव प्रतीयते ।
आकृतेर्द्रव्यपक्षेण तदा भेदो न विद्यते ॥ 331 ॥

yadā tvāśrayabhedena bheda eva pratiyate |
ākṛterdravyapakṣeṇa tadā bhedo na vidyate || 331 ||

But when difference itself is cognized through difference of substratum — then, of the akṛti, on the substance-view, there is no difference.

Yada tu asraya-bhedena bheda eva pratiyate: when *difference itself* is cognized through *difference of substratum* — the difference one grasps is the seats', not the form's. Akṛter dravya-paksena tada bhedo na vidyate: *then, of the akṛti, on the substance-view, there is no difference*. So on the dravya-account the form stays undivided while its seats multiply, and the plural one hears reports the seats. This is the pair to 3.14.330: there the science supplied a number to an intended difference; here the difference belongs to the substrata and the form takes none. The two positions differ only in where they lodge the multiplicity, and 3.14.328 has already said it will not matter.

Verse 3.14.332

अभेदे त्वेकशब्दत्वाच्छास्त्राच्च वचने सति ।
एकशेषो न वक्तव्यो वचनानां त सम्भवः ॥ 332 ॥

abhede tvekaśabdatvācchāstrācca vacane sati |
ekaśeṣo na vaktavyo vacanānāṃ ta sambhavaḥ || 332 ||

But in non-difference, from singular-wordhood and from the science's number — ekasesa need not be stated; there is, however, the possibility of the numbers.

Abhede tv eka-sabdatvat sastrac ca vacane sati: in *non-difference*, from *singular-wordhood* (3.14.316's consequence) and from the *science's* number. Ekaseso na vaktavyah: *ekasesa need not be stated* — the rule that leaves one of several identical words standing becomes unnecessary, since on this account there was only ever one word (3.14.30; 3.14.109). Vacananam tu sambhavaḥ: there is, *however*, the possibility of the *numbers* — they remain available. So the akṛti-doctrine retires a rule and keeps the plurals: a real economy, and Bhartṛhari credits it (3.14.318's nirarthakah pratisedhah, the same generosity). He is auditing the rival position's books and finding them in order.

Verse 3.14.333

ननु चानभिधेयत्वे द्रव्यस्य तदपाश्रयः ।
आकृतेरुपकारोऽयं द्रव्याभावान्न कल्पते ॥ 333 ॥

nanu cānabhidheyatve dravyasya tadapāśrayaḥ |
ākṛterupakāro'yaṃ dravyābhāvānna kalpate || 333 ||

But if substance is not expressible, this assistance to the akṛti, resting on that, is not conceivable — from the absence of substance.

The objection. Nanu ca anabhidheyatve dravyasya: *but if substance is not expressible* – on the strict akṛti-view, words mean forms and substances are never said. Tad-apasrayah akṛter upakaro 'yam dravyabhavan na kalpate: *this assistance to the akṛti, resting on that, is not conceivable*, from the *absence of substance*. Upakara: the help the substrata were giving – 3.14.330-331 had the seats supplying number and difference. But if the seats are inexpressible they cannot help. So the akṛti-account has been quietly living off substances it officially does not have. The objection is exact and 3.14.334 answers it exactly.

Verse 3.14.334

व्यपदेशोऽभिधेयेन न शास्त्रे कश्चिदाश्रितः ।
द्रव्यं नाम पदार्थो यो न च स प्रतिषिध्यते ॥ 334 ॥

vyapadeśo'bhidheyena na śāstre kaścidāśritaḥ |
dravyam, nāma padārtho yo na ca sa pratiṣidhyate || 334 ||

No designation in the science rests on what is expressed; and that word-meaning which is called substance – it is not denied.

The answer, and it is two moves. Vyapadeso 'bhidheyena na sastre kascid asritah: *no designation in the science rests on what is expressed* – the grammar's technical terms do not attach to meanings; they attach to forms and notation (3.14.78's anubandha-svaradibhyah... na tan prati). So the objection's premise – that inexpressibility disables assistance – misreads how the science works: it never used expressibility. Dravyam nama padartha yo na ca sa pratisidhyate: *and that word-meaning which is called substance – it is not denied*. So the akṛti-vadin never said there are no substances; he said words do not express them. The substances are there, helping, unsaid. The distinction between what is and what is expressed is the whole of the reply – and it is the distinction this work is built on.

Verse 3.14.335

गुणभावोऽभिधेयत्वं प्रति द्रव्यस्य नाश्रितः ।
उपकारी गुणः शेषः पदार्थ इति कल्पना ॥ 335 ॥

guṇabhāvo'bhidheyatvam, prati dravyasya nāśritaḥ |
upakārī guṇaḥ śeṣaḥ padārtha iti kalpanā || 335 ||

The substance's subordination is not resorted to with regard to expressibility; the construction is: 'the assisting quality is the remainder – that is the word-meaning'.

Guna-bhavo 'bhidheyatvam prati dravyasya na asritah: *the substance's subordination is not resorted to with regard to expressibility* – the substance is not subordinate *qua* expressible, since on this view it is not expressed at all (3.14.334). Upakari guṇaḥ sesaḥ padārtha iti kalpana: *the construction is – the assisting quality is the remainder, and that is the word-meaning*. Kalpana: a construction (3.14.96's bheda-samsarga-kalpana). So subordination is a relation among *constructed* elements, not a fact about what is or is not said. This separates two things the debate had run together: being unexpressed and being subordinate. The substance is the first and not the second.

Verse 3.14.336

द्रव्ये न गुणभावोऽस्ति विना द्रव्याभिधायिताम् ।
आकृतौ वा प्रधानत्वमत एव समर्थ्यते ॥ 336 ॥

dravye na guṇabhāvo'sti vinā dravyābhidhāyitām |
ākṛtau vā pradhānatvamata evam samarthyate || 336 ||

There is no subordination in the substance without substance-expression; or else the akṛti's principality — therefore it is justified thus.

Dravye na guṇa-bhavo 'sti vinā dravyābhidhāyitām: there is no subordination in the substance without substance-expression — one cannot make a thing subordinate without saying it: subordination is a relation between things said (3.14.335's kalpana). Akṛtau vā pradhānatvam ata evam samarthyate: or else the akṛti's principality — therefore it is justified thus. So the choice: either the substance is expressed (and can then be subordinated) or the akṛti is principal (and the substance is simply outside the account). The akṛti-vadin takes the second, and the verse concedes it is coherent: samarthyate, it is justified. The account is consistent, and its consistency is bought by putting substances outside the semantics altogether.

Verse 3.14.337

कैश्चिद् गुणप्रधानत्वं नामाख्यातवदिष्यते ।
न वृत्तिवत् परार्थस्य गुणभावस्तु वर्ण्यते ॥ 337 ॥

kaiścid guṇapradhānatvam nāmākhyātavadiṣyate |
na vṛttivat parārthasya guṇabhāvastu varṇyate || 337 ||

Some accept subordinate-and-principal as with noun and verb; but the subordination of what serves another's purpose is not described as in a derivative formation.

Kaiscid guṇa-pradhānatvam nama-akhyātavad isyate: some accept subordinate-and-principal as with noun and verb — the sentence's own hierarchy: the verb principal, the nominals subordinate (3.8.2's the action is the principal; 2.326's the verb as the sentence's core). Na vṛttivat parārthasya guṇa-bhavas tu varṇyate: but the subordination of what serves another's purpose is not described as in a derivative formation. So the sentence's subordination is not the compound's: in a sentence the subordinate members are still there, saying things; in a compound they are not (3.14.53's bhagabhyam vartate vina). The distinction matters because the akṛti-debate keeps borrowing sentence-relations to describe word-internal ones, and this verse marks the borrowing as illicit.

Verse 3.14.338

गुणभूतस्य नानात्वादाकृतेरेकशब्दता ।
सिद्धो वचनभेदश्च द्रव्यभेदसमन्वयात् ॥ 338 ॥

guṇabhūtasya nānātvādākṛterekaśabdatā |
siddho vacanabhedaśca dravyabhedasamanvayāt || 338 ||

From the manifoldness of what is subordinate, the *akṛti* has singular-wordhood; and the difference of number is established from concomitance with the difference of substances.

Guna-bhutasya nanatvad akrter eka-sabdata: from the *manifoldness* of what is *subordinate*, the *akṛti* has *singular-wordhood* — and the logic is exactly inverted from what one expects: because the *subordinate* is many, the *principal* is one-worded. The manyness is all lodged below, and the form above is single. *Siddho vacana-bhedas ca dravya-bheda-samanvayat*: and the *difference of number* is established from *concomitance* with the *difference of substances*. So the plural one hears is the substances' and the word is single: the account gets both facts, and gets them from the same division of labour. This is 3.14.331 stated as a doctrine rather than a hypothetical.

Verse 3.14.339

साधनं गुणभावेन क्रियाया भेदकं यथा ।
आख्यातेष्वेकशब्दाया जातेर्द्रव्यं तथोच्यते ॥ 339 ॥

sāadhanam.guṇabhāvena kriyāyā bhedakam.yathā |
ākhyāteṣvekaśabdāyā jāterdravyam.tathocyate || 339 ||

As the means, by subordination, is the differentiator of the action in verbs — so the substance is said to be that of the universal, which has a single word.

The analogy that makes 3.14.338 intelligible. *Sadhanam guna-bhavana kriyaya bhedakam yatha akhyatesu*: as the *means*, by *subordination*, is the *differentiator* of the *action* in *verbs* — 'pacati' is one action-word and its *karakas* make it this cooking and that (3.7's the *sadhanas*; 3.8.44's the action one and differentiated by its means). *Eka-sabdayah jater dravyam tatha ucyate*: so the *substance* is said to be that of the *universal*, which has a *single word*. So the universal stands to its substances as the verb to its *karakas*: one word above, the differentiating many below. This is the *samuddesa*'s most economical statement of the *akṛti*-position, and it makes it look, for the first time, obviously right.

Verse 3.14.340-341

एकत्वे तुल्यरुत्वाच्छब्दानां प्रतिपादने ।
निमित्तात् तद्वतोऽर्थस्य विशिष्टग्रहणे सति ॥ 340 ॥
सोऽयमित्यभिसम्बन्धादाश्रयैराकृतेः सह ।
प्रवृत्तौ भिन्नशब्दायां लिङ्गसंख्ये प्रसिध्यतः ॥ 341 ॥

ekatve tulyarūtvācchabdānām pratipādane |
nimittāt tadvato'rthasya viśiṣṭagrahane sati || 340 ||
so'yamityabhisambandhādāśrayairākṛteḥ saha |
pravṛttau bhinnāśabdāyām liṅgasamkhye prasidhyataḥ || 341 ||

(340) In oneness, from likeness of form in the conveying of words; from the cause, when there is the specified grasping of the meaning possessing that — (341) from the connection 'this is that', in the akṛti's operating together with the substrata, which has a differentiated word — gender and number are established.

The mechanism, in two verses. (340): *ekatve tulya-rupatvac chabdanam pratipadane* — in oneness, from likeness of form in the conveying of words: the form is one and the words that convey it are alike. *Nimittat tadvato 'rthasya visista-grahane sati*: from the cause, when there is the specified grasping of the meaning possessing that. (341): *so 'yam ity abhisambandhad asrayair akrteh saha* — from the connection 'this is that', of the akṛti together with the substrata. *Pravṛttau bhinna-sabdayam linga-samkhye prasidhyataḥ*: in the operation, which has a differentiated word, gender and number are established. So: the form is one, it identifies with its seats, and in that joint operation — where the word does differentiate — concord arises. Neither the form alone nor the seats alone would give it; the identification is what does.

Verse 3.14.342

प्राक् च जात्यभिसंबन्धात् सर्वनामाभिधेयता ।
वस्तूपलक्षणाः सत्त्वे प्रयुज्यन्ते त्यदादयः ॥ 342 ॥

prāk ca jātyabhisambandhāt sarvanāmābhidheyatā |
vastūpalakṣaṇāḥ sattve prayujyante tyadādayaḥ || 342 ||

And before connection with the universal, there is expressibility by pronouns; 'tyad' and the rest, indicating things, are employed for substance.

Prak ca jaty-abhisambandhat sarvanama-abhidheyata: before connection with the universal, there is expressibility by pronouns — before a thing is brought under any kind, it can still be pointed at: 'that'. *Vastupalaksanah sattve prayujyante tyad-adayah*: 'tyad' and the rest, indicating things — upalaksana: indicating without characterizing (3.14.170) — are employed for substance. So the pronoun is the language's access to a substance as such, prior to every universal: it indicates and says nothing. This answers a real question the akṛti-account raises — if words mean forms, how is a bare substance ever reached? — and the answer is: by pronouns, which do not mean forms. It is why 3.14.217 and 3.14.314 kept finding pronouns wherever a substance was unexpressed.

Verse 3.14.343

पाकौ पाका इति यथा भेदकः कैश्चिदाश्रयः ।
इष्यते चानुपादानो धर्मोऽसौ गुणवाचिनाम् ॥ 343 ॥

pākau pākā iti yathā medakah kaiścidāśrayaḥ |
iṣyate cānupādāno dharmo'sau guṇavācinām || 343 ||

As in 'the two cookings', 'the cookings', the substratum is accepted by some as the differentiator; and that property of quality-words is without any taking-up.

Pakau paka iti yatha bhedakah kaiscid asrayah isyate: as in 'pakau', 'pakah' – the two cookings, the cookings – the *substratum* is *accepted by some* as the *differentiator*: the abstract noun pluralizes because its seats are several, not because cooking is (3.14.339's sadhanam bhedakam). Ca anupadano dharmo 'sau guna-vacinam: and that *property* of *quality-words* is *without any taking-up* – anupadana: the differentiating seats are never mentioned, and they differentiate anyway. So 'pakah' says several cookings without saying whose, and the plural is owed to seats that the word does not touch. This is the akrti-account's cleanest evidence: the number is demonstrably not in what is said.

Verse 3.14.344

आश्रयस्यानुपादाने केवलं लभते यदि ।
आधारधर्मान् सामान्यं पुरस्तात् तद्विचारितम् ॥ 344 ॥

āśrayasyānupādāne kevalam labhate yadi |
ādhāradharmān sāmānyam purastāt tadvicāritam || 344 ||

If, without any taking-up of the substratum, the general alone obtains the substratum's properties – that has been considered earlier.

Asrayasya anupadane kevalam labhate yadi adhara-dharman samanyam: if, without any *taking-up* of the *substratum*, the *general alone* obtains the *substratum's properties* – the position 3.14.343 just described, stated as a question. Purastat tad vicaritam: *that has been considered earlier* – purastat: before, in the earlier part of the work. So Bhartrhari points back rather than repeat himself (3.14.244's granthe purvatra, the same gesture) – the Jati-samuddesa (3.1) took up whether a universal can wear its instances' properties, and the reader is sent there. The Vakyapadiya is again treating itself as one continuous argument, and the cross-reference is the only answer this verse gives.

Verse 3.14.345

जातौ पूर्व प्रवृत्तानां शब्दानां जातिवाचिनाम् ।
अशब्दवाच्यात् सम्बन्धाद् व्यक्तिरप्युपजायते ॥ 345 ॥

jātau pūrvam pravṛttānām śabdānām jātivācinām |
aśabdavācyāt sambandhād vyaktirapyupajāyate || 345 ||

Of universal-expressing words, previously operating in the universal – from a relation not expressed by any word, the individual also arises.

How a jati-word gets to an individual. Jatau purvam pravrttanam sabdanam jati-vacinam: of *universal-expressing* words, *previously operating* in the *universal* – the word starts at the kind, always. Asabda-vacyat sambandhad vyaktir apy upajayate: from a *relation not expressed by any word*, the *individual also arises*. Asabda-vacya: not sayable by a word – the relation by which 'cow' arrives at this cow is itself unsaid, and unsayable (3.3's the sambandha-samuddesa: relation cannot be expressed). Upajayate: *arises*. So the individual is not reached by any further word: it comes up out of an unsayable relation, and the word never left the universal. This is why 3.14.342 needed pronouns – and why 'cow' can pick out this cow without meaning her.

Verse 3.14.346

सोऽयमित्यभिसम्बन्धाज्जातिधर्मोपचर्यते ।
द्रव्यं तदाश्रयो भेदो जातेश्चाभ्युपगम्यते ॥ 346 ॥

so'yamityabhisambandhāj jātīdharmopacaryate |
dravyam, tadāśrayo bhedo jāteścābhyupagamyate || 346 ||

From the connection 'this is that', the universal's property is figuratively applied; and the substance, resting on that, is accepted as the universal's difference.

So 'yam ity abhisambandhaj jati-dharmopacaryate: from the connection 'this is that', the *universal's* property is *figuratively applied* – upacaryate: transferred (3.14.284's word). The individual wears cowhood by transfer, not by containing it. Dravyam tad-asrayo bhedo jates ca abhyupagamyate: and the *substance, resting on that, is accepted* as the *universal's difference*. So the substance is what differentiates the universal (3.14.339) and it does so while wearing the universal's property figuratively. The relation is thus doubly non-literal: the universal is in the individual by transfer, and the individual is the universal's difference by acceptance (abhyupagamyate). Nothing here is a fact about cows.

Verse 3.14.347

मञ्चशब्दो यथाऽऽधेयं मञ्चेष्वेव व्यवस्थितः ।
तत्त्वेनाह तथा जातिशब्दो द्रव्येषु वर्तते ॥ 347 ॥

mañcaśabdo yathā"ādheyam, mañceṣveva vyavasthitah |
tattvenāha tathā jātiśabdo dravyeṣu vartate || 347 ||

As the word 'platform', settled in the platforms alone, states what rests on them as its reality – so the universal-word operates in substances.

The image that makes 3.14.345-346 concrete, and it is the samuddesa's favourite. Manca-sabdo yatha adheyam mancesv eva vyavasthitah tattvena aha: as the word 'manca', *settled in the platforms alone*, states what *rests on them* – the people – as its *reality*. 'Manca hasanti', the platforms laugh (3.14.150). The word never leaves the platforms and what it says is the people, and it says them *tattvena*, as the real thing. Tatha jati-sabdo dravyeṣu vartate: so the *universal-word operates in substances*. So 'cow' is settled in cowhood and states the individual cow as its reality – the word stays where it is and its meaning is elsewhere. The whole account of reference in this samuddesa is in that image.

Verse 3.14.348

तत्र जातिपदार्थत्वं तथैवाभ्युपगम्यते ।
जातिरुत्सङ्ख्या तु द्रव्यात्मन्यनुषज्यते ॥ 348 ॥

*tatra jātipadārthatvam, tathāivābhyupagamyate |
jātirutsaṅkhyā tu dravyātmanyānuṣajyate || 348 ||*

There, the universal's being the word-meaning is accepted just so; but the universal — and number — is annexed to the substance-self.

Tatra jati-padarthatvam tathāiva abhyupagamyate: *there, the universal's being the word-meaning is accepted just so* — the akṛti-position is granted in full: what the word means is the kind. Jatiṣ ut saṅkhyā tu dravyātmanyānuṣajyate: *but the universal — and number — is annexed to the substance-self. Anusajyate: is attached, comes along (3.14.279, 3.14.287's word).* So the universal is the meaning and it *lands* on the substance, bringing number with it. The two claims coexist: the word means the kind, and the kind attaches to the thing. This is 3.14.347's manca exactly — settled in the platforms, landing on the people.

[Contested: Pada c reads 'jatiṣ utsaṅkhyā tu' in our source, which we cannot construe; we read 'ut' as the particle 'uta' ('and', 'or rather') with 'saṅkhyā' as a second subject, giving 'the universal — and number — is annexed'. An alternative is to take an unattested compound 'ut-saṅkhyā'; we do not press it. The verse's force rests on 'dravyātmanyānuṣajyate', which is secure.]

Verse 3.14.349

अस्येदमिति वा यत्र सोऽयमित्यपि वा श्रुतिः ।
वर्तते परधर्मेण तदन्यदभिधीयते ॥ 349 ॥

*asyedamiti vā yatra so'yamityapi vā śrutih |
vartate paradharmēṇa tadanyadabhidhīyate || 349 ||*

Where the hearing is 'this is of this', or 'this is that' — it operates by another's property; that other is what is expressed.

Asyedam iti vā yatra so 'yam ity api vā srutiḥ: where the *hearing* is 'this is of this' — the possessive identification — or 'this is that' — the plain one: the two formulas that have run through this entire samuddesa. Vartate para-dharmena: *it operates by another's property* — para-dharma: a property that is not its own. Tad anyad abhidhīyate: *that other is what is expressed.* So wherever one of these identifications is in play, the word is working by a borrowed property and what it expresses is the other thing. Bhartrhari is naming, at the end, the device he has used at almost every turn: 'so 'yam' is how a word says what it does not mean.

Verse 3.14.350

यत् प्रधानं न तस्यास्ति स्वरूपमनिरूपणात् ।
गुणस्य चात्मना द्रव्यं तद्भावेनोपलक्ष्यते ॥ 350 ॥

yat pradhānam na tasyāsti svarūpamanirūpaṇāt |
guṇasya cātmanā dravyam tadbhāvenopalakṣyate || 350 ||

That which is principal — of it there is no own-form, from non-determination; and the substance is indicated by the quality's self, by way of being that.

A deep and strange verse. Yat pradhanam na tasyasti svarupam anirupana: that which is *principal* — of it there is *no own-form*, from *non-determination*: anirupana: it is not determined, not characterized. What is principal has no nature of its own, precisely because nothing determines it — determination comes from the subordinate, and the principal is what receives it. Gunasya ca atmana dravyam tad-bhavena upalakṣyate: and the *substance* is *indicated* by the *quality's self*, by way of being that. Upalakṣyate: is *indicated* (3.14.170's upalaksana: marked, not described). So the substance — the principal — has no form and is pointed at through a quality that it is said to *be*. The principal is empty and is shown by its subordinates: which is 3.14.164's substance cognized as having expectancy, and 3.2's dravya as the undetermined that all determination is of.

Verse 3.14.351

गुणस्य भेदकाले तु प्राधान्यमुपजायते ।
संसर्गश्रुतिरर्थेषु साक्षादेव न वर्तते ॥ 351 ॥

guṇasya bhedakāle tu prādhānyamupajāyate |
saṁsargaśrutirartheṣu sākṣādeva na vartate || 351 ||

But at the time of differentiating, the quality attains principality; the hearing of conjunction does not operate directly in the meanings.

Gunasya bheda-kale tu pradhanyam upajayate: at the *time of differentiating*, the *quality* attains *principality* — bheda-kale: at the moment of the cutting. So the hierarchy of 3.14.350 inverts momentarily: while the subordinate is doing its differentiating work, it is the principal — because the principal has no form of its own and is passive to the cut. Samsarga-srutir arthesu saksad eva na vartate: the *hearing of conjunction* does not operate directly in the *meanings* — saksat: immediately. So the joining one hears is never straight onto the meanings: it goes through the differentiation, and the meanings are reached only after the cut has been made. Principality is a function of the moment, not a standing rank.

Verse 3.14.352

जातौ वृत्तो यदा द्रव्ये स शब्दो वर्तते पुनः ।
जातेरेव पदार्थत्वं न तदाभ्युपगम्यते ॥ 352 ॥

jātau vṛtto yadā dravye sa śabdo vartate punaḥ |
jātereva padārthatvam na tadābhyupagamyate || 352 ||

When that word, having operated in the universal, operates again in the substance — then the universal's alone being the word-meaning is not accepted.

Jatau vṛtto yadā dravye sa śabdo vartate punaḥ: when that word, having *operated in the universal*, operates *again* in the substance — the two-step of 3.14.345-347: 'cow' settles on cowhood and lands on the cow. Jater eva padārthatvam na tada abhyupagamyate: *then* the universal's *alone* being the word-meaning is *not accepted*. So the akṛti-account cannot survive its own second step: if the word goes on to the substance, the universal is not the *only* meaning. Punaḥ — *again* — is what breaks it. The position was coherent (3.14.336's samarthyaṭe) so long as the word stayed put; it does not stay put, and 3.14.353 says why that is not a refutation.

Verse 3.14.353

प्रवृत्तानां पुनर्वृत्तिरेकत्वेनोपवर्ण्यते ।
प्रतिपत्तेरुपायेषु न तत्त्वमनुगम्यते ॥ 353 ॥

pravṛttānām punarvṛttirekatvenopavarṇyate |
pratipatterupāyeṣu na tattvamanugamyate || 353 ||

The re-operation of what has operated is described as by oneness; in the means of comprehension, reality is not followed.

Pravṛttanam punar vṛttir ekatvena upavarṇyate: the *re-operation* of what has *operated* is *described* as by *oneness* — the word's second step (3.14.352's punaḥ) is accounted for by saying it never left: one operation, described twice. Pratipatter upayesu na tattvam anugamyate: *in the means of comprehension, reality is not followed* — upaya: means, devices (3.14.76's do not take the upayas for true; 3.14.96's upaya-matram nanatvam). So the two-step is a device and the doctrine that reconciles it is another device, and neither tracks how things are. This is the samuddesa's governing sentence applied to its own analysis of the akṛti-question — and it means 3.14.352 was never a refutation, because there was nothing there to refute.

Verse 3.14.354

अपृथक्छब्दवाच्यस्य जातिराश्रीयते यदा ।
द्रव्यस्य सति संस्पर्शे तदा जातिपदार्थता ॥ 354 ॥

*apṛthak|chabdavācyasya jātirāśrīyate yadā |
dravyasya sati samśparśe tadā jātipadārthatā ॥ 354 ॥*

When the universal of what is expressed by a non-separate word is resorted to, there being contact with substance — then the universal is the word-meaning.

The first of three permutations. Aprthak-sabda-vacyasya jatir asriyate yada: when the *universal* of what is expressed by a *non-separate word* is resorted to — aprthak-sabda-vacya: said by a word that is not separate from it; the universal and its word are not two. Dravyasya sati samsparsa: there being *contact with substance* — samsparsa: touch. The substance is grazed, not meant (3.14.48's samsparsya avayavan, the same verb). Tada jati-padarthatā: *then the universal is the word-meaning*. So: substance touched, universal meant — the akṛti-position, stated as one option among several rather than as the truth.

Verse 3.14.355

द्रव्यस्य सति संस्पर्शे द्रव्यमाश्रीयते यदा ।
वाच्यं तेनैव शब्देन तदा द्रव्यपदार्थता ॥ 355 ॥

*dravyasya sati samśparśe dravyamāśrīyate yadā |
vācyam, tenaiva śabdena tadā dravyapadārthatā ॥ 355 ॥*

When, there being contact with substance, the substance is resorted to as expressible by that very word — then the substance is the word-meaning.

The second permutation, and the words are almost identical. Dravyasya sati samsparsa dravyam asriyate yada vacyam tena eva sabdena: when, there being *contact with substance*, the *substance* is resorted to as *expressible by that very word*. Tada dravya-padartha: *then the substance is the word-meaning*. So the same touch, the same word, and now the substance is meant — the Vyadi-position (3.1's dravya-paksa). Bhartṛhari sets 3.14.354 and this side by side with only one word changed, and the effect is deliberate: the great quarrel of the grammarians turns on which of two things one resorts to (asriyate), and nothing in the situation decides. Both descriptions fit the same fact.

Verse 3.14.356

अपृथक्छब्दवाच्यापि भेदमात्रे प्रवर्तते ।
यदा सम्बन्धवज्जातिः सापि द्रव्यपदार्थता ॥ 356 ॥

*apṛthakcchabdavācyāpi bhedamātre pravartate |
yadā sambandhavañjātiḥ sāpi dravyapadārthatā ॥ 356 ॥*

When the universal, though expressed by a non-separate word, operates in mere difference, as possessing relation — that too is the substance's being the word-meaning.

The third permutation, a hybrid. Aprthak-sabda-vacya api bheda-matre pravartate yada sambandha-vat jatiḥ: when the *universal*, though expressed by a *non-separate word*, operates in *mere difference*, as *possessing relation*. Sa api dravya-padartha: that too is the *substance's being the word-meaning*. So a universal that has gone over into differentiation is functionally a substance-account: once the jati is operating in bheda-matra — mere difference — it is doing the substance's work, and the label 'universal' has stopped mattering. This is the samuddesa dissolving the debate rather than settling it: the positions are not three theories but three descriptions, and one of them turns into another when you push it.

Verse 3.14.357

अत्यन्तभिन्नयोरेव जातिद्रव्याभिधायिनोः ।
अवाच्यस्योलपकारित्व आश्रिते तूभयार्थता ॥ 357 ॥

atyantabhinnayoreva jātīdravyābhidhāyinoḥ |
avācyasyolapakāritva āśrite tūbhayārthatā || 357 ||

Of the two utterly different expressers of universal and substance — when the assisting of the inexpressible is resorted to, there is both-meaning-ness.

The fourth position. Atyanta-bhinnayor eva jati-dravyabhidhāyinoḥ: of the *two utterly different* expressers of *universal* and *substance* — atyanta-bhinna: the two are held wholly apart, no hybrid (against 3.14.356). Avacyasya upakaritva asrite tu ubhayarthata: when the *assisting* of the *inexpressible* is *resorted to*, there is *both-meaning-ness*. Avacya: the inexpressible — the relation, which no word says (3.14.345's asabda-vacya). So: the two words stay utterly distinct, an unsayable relation assists, and the result means *both*. Ubhayarthata: the jati-sabda-vada's classical compromise. And it works only because something inexpressible is doing the joining — which has been true of every account in this samuddesa.

Verse 3.14.358

आश्रिते त्वाश्रयकृतं भेदमभ्युपगच्छता ।
पुनश्चाप्येकशब्दत्वं जातिशब्देऽनुवर्णितम् ॥ 358 ॥

āśrite tvāśrayakṛtam, bhedamabhyupagacchatā |
punaścāpyekāśabdatvam, jātīśabde'nuvarṇitam || 358 ||

But by one who accepts the difference made by the substratum in what is resorted to — singular-wordhood in the universal-word has again been described.

Asrite tv asraya-kṛtam bhedaṁ abhyupagacchata: by one *accepting* the *difference made by the substratum* in what is *resorted to* — the position of 3.14.338: the manyness is the seats'. Punaś ca api eka-sabdatvam jati-sabde 'nuvarṇitam: *again singular-wordhood* in the *universal-word* has been *described*. Punaḥ, anuvarṇitam: again, described-after — Bhartṛhari marks that he is repeating himself. So the survey closes by returning to where it started, and the return is noted as a return. Four positions, each internally sound, none refuted, and the last is the first. This is what 3.14.353 predicted: in the means of comprehension, reality is not followed, and so the means do not converge.

Verse 3.14.359

अनिर्ज्ञातस्य निर्ज्ञानं येन तन्मानमुच्यते ।
प्रस्थादि तेन मेयात्मा साकल्येनावधार्यते ॥ 359 ॥

*anirjñātasya nirjñānam yena tanmānamucyate |
prasthādi tena meyātmā sākalyenāvadhāryate ॥ 359 ॥*

That by which there is knowledge of the unknown is called 'measure'; 'prastha' and the rest — by it the measured's self is determined in its entirety.

The comparison-compound begins, and it begins by defining its neighbour. Anirjnatasya nirjnanam yena tan manam ucyate: that by which there is *knowledge* of the *unknown* is called '*mana*' — measure. Prasthadi tena meyatma sakalyena avadharyate: '*prastha*' and the rest — *by it the measured's self is determined in its entirety*. Sakalyena: completely, without remainder. So a measure gives total knowledge of what it measures: say 'a prastha of rice' and nothing about the quantity is left over. This is the benchmark against which 3.14.360 will define comparison — and comparison will fall short of it, deliberately.

Verse 3.14.360

अनिर्ज्ञातं प्रसिद्धेन येन तद्धर्मगम्यते ।
साकल्येनापरिज्ञानादुपमानं तदुच्यते ॥ 360 ॥

*anirjñātam prasiddhena yena taddharma gamyate |
sākalyenāparijñānādupamānam taducyate ॥ 360 ॥*

That by which the unknown, having that property, is understood through the well-known — from the knowledge being incomplete, that is called 'comparison'.

The definition, and the contrast with 3.14.359 is the whole of it. Anirjnatam prasiddhena yena taddharma gamyate: that by which the *unknown, having that property*, is understood through the *well-known* — prasiddha: what is established, familiar. One knows the cloud; one learns the complexion. Sakalyena aparijnanad upamanam tad ucyate: *from the knowledge being incomplete, that is called 'upamana'*. Sakalyena aparijnanat: precisely because it is *not* complete. So comparison is defined by its shortfall: a measure exhausts and a comparison does not, and that is not a defect in comparison but its identity. 'Megha-syama' does not tell you the shade; if it did it would be a measure. This is one of the finest short definitions in the work.

Verse 3.14.361

द्वयोः समानो यो धर्म उरमानोपमेययोः ।
समास उपमानानां शब्दैस्तदभिधायिभिः ॥ 361 ॥

dvayoh samāno yo dharma uramānopameyayoh |
samāsa upamānānām śabdaistadabhidhāyibhiḥ || 361 ||

That property common to the two — the comparans and the comparandum — the compound of comparanda is with the words expressing that.

Dvayoh samano yo dharma upamana-upameyayoh: that *property common to the two* — the *upamana* (that with which one compares: the cloud) and the *upameya* (that which is compared: the complexion). Samasa upamananam sabdais tad-abhidhayibhiḥ: the *compound of comparanda* is with the words expressing that — the common property's words. So 'megha-syama' compounds 'megha' with the word that says the shared property, 'syama'. The rule is stated flatly and it raises at once the question 3.14.362-365 will worry: is the darkness in the cloud and the darkness in the girl one property or two? The whole comparison depends on the answer, and there is no good answer.

Verse 3.14.362

आधारभेदाद् भेदो यः श्यामत्वे सोऽविवक्षितः ।
गुणोऽसावाश्रितैकत्वं भिन्नाधारः प्रतीयते ॥ 362 ॥

ādhārabhedād bhedo yaḥ śyāmatve so'vivakṣitaḥ |
guṇo'sāvāśritaikatvo bhinnādhāraḥ pratiyate || 362 ||

That difference in darkness which comes from difference of substratum is not intended; that quality, having resorted to oneness, is cognized as having different substrata.

Adhara-bhedad bhedo yah syamatve so 'vivakṣitaḥ: the *difference in darkness* which comes from *difference of substratum* is *not intended* — avivakṣita: not meant to be said (3.14.103, 3.14.176's device). The cloud's dark and the girl's dark do differ, and the comparison does not mean the difference. Guno 'sav asrita-ekatvaḥ bhinnadharah pratiyate: that *quality, having resorted to oneness*, is cognized as *having different substrata*. Asrita-ekatva: it has *taken up oneness* — the oneness is resorted to, not found. So the comparison works by an intended oneness laid over an actual difference: the darkness is made one so that the two may be compared. The device is exactly 3.14.99's abheda-ekatva, doing rhetorical work.

Verse 3.14.363

गुणयोर्नियतो भेदः गुणजातेस्तथैकता ।
एकत्वेऽत्यन्तभेदे वा नोरमानस्य सम्भवः ॥ 363 ॥

guṇayorniyato bhedaḥ guṇajātestathaikatā |
ekatve'tyantabhede vā noramānasya sambhavaḥ || 363 ||

The difference of the two qualities is fixed; likewise the oneness of the quality-universal. In oneness, or in utter difference, comparison is not possible.

The dilemma, stated with perfect symmetry. *Gunayor niyato bhedah*: the *difference* of the *two qualities* is *fixed* — the two darknesses are two, and no wishing makes them one. *Guna-jates tatha ekata*: *likewise* the *oneness* of the *quality-universal* — and darkness-in-general is one, equally fixed. *Ekatve 'tyanta-bhede va na upamanasya sambhavaḥ*: *in oneness, or in utter difference, comparison is not possible*. So: if the property is one, there is nothing to compare (identity is not likeness); if the properties are two, there is no ground of comparison. And both are true at once, of the same darkness. Comparison requires a thing that is neither one nor two — which is 3.14.209's *ekas ca dvayatmakah*, and here it is a condition of a figure of speech.

Verse 3.14.364

जातिमात्रव्यपेक्षायामुपमार्थो न कश्चन ।
श्यामत्वमेकं गुणयोरुभयोरपि वर्तते ॥ 364 ॥

jātimātravyapekṣāyāmupamārtho na kaścana |
śyāmatvamekam.guṇayorubhayorapi vartate || 364 ||

When only the universal is required, there is no purpose of comparison; the one darkness operates in both the qualities.

The first horn pressed. *Jati-matra-vyapeksayam upamartho na kascana*: when *only* the *universal* is *required*, there is *no purpose* of *comparison* — *na kascana*: none whatever. *Syamatvam ekam gunayor ubhayor api vartate*: the *one* darkness *operates* in *both* the qualities. So if the comparison is to rest on darkness-in-general, it says nothing: the cloud is dark and she is dark, and 'dark like a cloud' has told you only that she is dark — which 'dark' had already said. The comparison collapses into a tautology. So the shared property cannot be the universal, and 3.14.365 shows it cannot be the particulars either.

Verse 3.14.365

येनैव हेतुना श्यामा शस्त्री तत्र प्रवर्तते (प्रतीयते) ।
स हेतुर्देवदत्तायाः प्रत्यये न विशिष्यते ॥ 365 ॥

yenaiva hetunā śyāmā śastrī tatra pravartate (pratīyate) |
sa heturdevadattāyāḥ pratyaye na viśiṣyate || 365 ||

The very cause by which 'dark' operates in the knife there — that cause is not distinguished in the cognition of Devadatta.

The second horn. Yena eva hetuna syama satri tatra pravartate: the *very cause* by which 'dark' operates in the *knife* there. Sa hetur devadattayah pratyaye na visisyate: *that cause is not distinguished* in the *cognition* of Devadatta — the dark girl of 3.14.297. Na visisyate: it is not marked off, not told apart. So the reason 'dark' applies to the knife and the reason it applies to her are indistinguishable in the cognition — one cannot get at the particular darknesses to compare them, because the cognition does not separate them. So the comparison cannot rest on the particulars either: they are inaccessible. Between 3.14.364 and this verse, both horns of 3.14.363 are closed, and upamana works anyway.

Verse 3.14.366

आश्रयाद् यो गुणे भेदो जातेर्या चाविशिष्टता ।
ताभ्यामुभाभ्यां द्रव्यात्मा सव्यापारः प्रतीयते ॥ 366 ॥

āśrayād yo guṇe bhedo jāteryā cāviśiṣṭatā |
tābhyāmubhābhyām dravyātmā savyāpārah pratīyate || 366 ||

That difference in the quality which comes from the substratum, and that non-specificity of the universal — by both of these together, the substance-self is cognized as engaged in operation.

The resolution, and it is characteristic: take both horns. Asrayad yo guṇe bhedo: the *difference* in the *quality* from the *substratum* — 3.14.362's actual difference, 3.14.363's *niyato bhedah*. Jater ya ca avisistata: and the *non-specificity* of the *universal* — 3.14.364's one darkness in both. Tabhyam ubhabhyam dravyatma sa-vyaparah pratiyate: by *both of these together*, the *substance-self* is *cognized as engaged in operation*. Sa-vyapara: with its activity, under way (3.14.321's pravrtti). So the comparison does not need the property to be either one or two: the difference and the non-specificity work *together*, and what they deliver is a substance in action. Neither horn alone gives a comparison; both at once do. This is bhedabheda (3.14.209) doing the work no single answer could.

Verse 3.14.367

सोऽयमेकत्वनानात्वे व्यवहारः समाश्रितः ।
भेदाभेदविमर्शेन व्यतिकीर्णेन वर्तते ॥ 367 ॥

so'yamekatvanānātve vyavahārah samāśritah |
bhedābhedavimarśena vyatikīrṇena vartate || 367 ||

That transaction, resorted to in oneness and in manifoldness, operates by an intermingled reflection of difference and non-difference.

The general form of 3.14.366's answer. So 'yam ekatva-nanatve vyavaharah samasritah: that *transaction* — vyavahara: dealing, practice, the whole business of speaking and understanding — *resorted to in oneness and in manifoldness*: it stands with a foot in each. Bhedabheda-vimarsena vyatikirṇena vartate: it *operates by a reflection of difference and non-difference* that is *vyatikirṇa* — *intermingled*, shot through one another, poured together. So the practice does not choose between one and many: it runs on a reflection in which both are mixed past separating. Vyatikirṇa is the word to keep — not a synthesis, not a compromise, but an interpenetration that no analysis will part. This is the samudesa's last word on the topic, and it is a description of how speech works, not a metaphysics.

Verse 3.14.368

श्यामेत्येवाभिधीयते जातिमात्रे विवक्षिते ।
शस्त्र्यादीनामुपादाने तत्र नास्ति प्रयोजनम् ॥ 368 ॥

śyāmetyevābhidhīyate jātimātre vivakṣite |
śastryādīnāmupādāne tatra nāsti prayojanam || 368 ||

When only the universal is intended, one simply says 'dark'; there is no purpose in taking up 'knife' and the rest.

Syama ity eva abhidhiyate jati-matre vivakṣite: when *only* the *universal* is *intended*, one simply says 'dark' — ity eva: just that. Sastry-adinam upadane tatra nāsti prayojanam: there is *no purpose* in *taking up* 'knife' and the rest. So if darkness-in-general were the point, the comparison would be idle: one would say 'dark' and stop. The fact that speakers reach for the knife proves they want something the universal does not give. This is 3.14.364's tautology-argument again, now used constructively: the existence of comparison is evidence that there is something below the universal to be gestured at.

Verse 3.14.369

अशब्दवाच्यो यो भेदः श्याममात्रे न वर्तते ।
श्यामेषु केषुचिद् वृत्तिर्यस्यसोऽत्र व्यपेक्ष्यते ॥ 369 ॥

aśabdavācyaḥ yo bhedaḥ śyāmamātre na vartate |
śyāmeṣu keṣucid vṛttirasyaso'tra vyapekṣyate || 369 ||

That difference not expressible by a word does not operate in mere darkness; the one whose operation is in some dark things — that is what is required here.

Asabda-vacyo yo bhedah syama-matre na vartate: that *difference not expressible by a word* — asabda-vacya (3.14.345's word for the unsayable relation) — *does not operate in mere darkness*: the shade that makes this dark a cloud's dark is not in darkness-at-large. Syamesu kesucid vṛttirasyaso'tra vyapekṣyate: the one whose *operation* is in *some* dark things — *that* is what is *required* here. Kesucit: in *some* — not all and not one. So what the comparison needs is a middle thing: narrower than darkness, wider than this darkness, and unsayable. It has no word, and 'megha-syama' is how one points at it. That is what a simile is for.

Verse 3.14.370

श्यामेषु केषुचित् किञ्चित् किञ्चित् सर्वत्र वर्तते ।
सामान्यं कश्चिदेकस्मिन् श्यामे भेदो व्यवस्थितः ॥ 370 ॥

śyāmeṣu keṣucit kiñcit kiñcit sarvatra vartate |
sāmānyam kaścidekasmin śyāme bhedo vyavasthitah || 370 ||

Some general operates in some dark things; some operates everywhere; some difference is settled in a single dark thing.

The scale, laid out in one verse, and it is a genuine discovery. Syamesu kesucit kincit: *some* general in *some* dark things — a middle-level kind: cloud-dark, sword-dark. Kincit sarvatra vartate samanyam: *some* general operates *everywhere* — darkness as such. Kascid ekasmin syame bhedo vyavasthitah: *some difference* is settled in a *single* dark thing — this shade, here, and nowhere else. So generality is not two-valued: between the universal and the individual there is a graded range of intermediate kinds, and language has words for almost none of them. The comparison-compound is the device for reaching the middle rungs (3.14.369's kesucit). This is a very fine piece of semantics and it is stated in twenty syllables.

Verse 3.14.371

तथाहि सति सौरभ्ये भेदो जात्युत्पलादिषु ।
गन्धानां सति भेदे तु सादृश्यमुपलभ्यते ॥ 371 ॥

tathāhi sati saurabhye bhedo jātyutpalādiṣu |
gandhānām sati bhede tu sādṛśyamupalabhyate || 371 ||

So indeed: fragrance being present, there is a difference of scents among jati-flowers, lotuses and the rest; but the difference being present, a similarity is apprehended.

3.14.370's scale confirmed from another sense. Tatha hi sati saurabhye bhedo jaty-utpaladisū gandhanam: *so indeed* — fragrance being *present*, there is a *difference of scents* among *jati-flowers*, *lotuses* and the rest: they are all fragrant and no two smell alike. Sati bhede tu sadṛśyam upalabhyate: *but* the difference being *present*, a *similarity* is *apprehended*. So the differences are real and one perceives, across them, a resemblance — not the bare universal 'fragrance' but a family likeness among these scents. The example is well chosen: nobody can say what jasmine and lotus have in common, everybody smells it, and no word names it (3.14.369's asabda-vacya). The middle rung is where the nose lives.

Verse 3.14.372

गुणानामाश्रयाद् भेदः स्वतो वार्यनुगम्यते ।
अनिर्देश्याद् विशेषाद् वा सङ्कराद्वा गुणान्तरैः ॥ 372 ॥

*guṇānāmāśrayād bhedah svato vāryanugamyate |
anirdeśyād viśeṣād vā saṅkarādvā guṇāntaraiḥ || 372 ||*

The difference of qualities is followed out from the substratum, or from itself, or from an indescribable particular, or from mixture with other qualities.

Four sources for the differences of 3.14.371. Gunanam asrayad bhedah: the *difference of qualities* from the *substratum* — the cloud's dark differs because clouds do. Svato va: *or from itself* — the quality is intrinsically this one. Anirdesyad visesad va: *or from an indescribable particular* — anirdesya: not statable; the shade that is simply this shade and has no account. Sankarad va gunantaraiḥ: *or from mixture with other qualities* — the dark is what it is because of what it is blended with. So the sources are catalogued and not ranked, and one of them is confessedly indescribable. This is the samuddesa being honest about where its analysis stops: some differences have no reason, and one names the fact rather than the reason.

Verse 3.14.373

उपमानं प्रसिद्धत्वात् सर्वत्र व्यतिरिच्यते ।
उपमेयत्वमाधिक्ये साम्ये वा न निवर्तते ॥ 373 ॥

*upamānam prasiddhatvāt sarvatra vyatiricyate |
upameyatvamādhikye sām्ये vā na nivartate || 373 ||*

The comparans, from its being well-known, exceeds everywhere; the state of being compared does not withdraw in excess or in equality.

Upamanam prasiddhatvat sarvatra vyatiricyate: the *comparans*, from its being *well-known*, *exceeds everywhere* — prasiddha (3.14.360's word): the cloud is famously dark, and its darkness always outdoes what is compared to it. Vyatiricyate: it exceeds, stands over. Upameyatvam adhikye sam्यe va na nivartate: the *state of being compared* does not *withdraw* in excess or in equality. So even where the compared thing matches or exceeds the standard, it remains the compared thing: 'moon-faced' does not stop being a simile if the face is lovelier than the moon. The direction of comparison is fixed by fame, not by degree. This is why 3.14.359's mana and 3.14.360's upamana differ in kind: measures track quantity and comparisons track renown.

Verse 3.14.374

अन्यैस्तु मानं जात्यादि भेदस्यार्थस्य वर्ण्यते ।
अनिर्जातस्वरूपो हि ज्ञेयोऽर्थस्तेन मीयते ॥ 374 ॥

*anyaistu mānam jātyādi bhedyasyārthasya varṇyate |
anirjñātasvarūpo hi jñeyo'rthastena mīyate || 374 ||*

By others, the universal and the rest is described as the measure of the meaning to be differentiated; for the knowable meaning, whose own form is unknown, is measured by it.

Anyais tu manam jaty-adi bhedyasya arthasya varṇyate: by others, the *universal* and the rest is described as the *measure* of the meaning to be differentiated — the jati as a mana (3.14.359), measuring its instances. Anirjnata-svarupo hi jneyo 'rtho tena miyate: for the *knowable* meaning, whose *own form* is *unknown*, is *measured* by it. So the individual, whose nature is not known in itself (3.14.350's anirupana: the principal has no own-form), is measured by the kind it falls under. This is a real position: universals are the measuring-instruments of particulars. And it makes 3.14.360's upamana a defective mana — which the following verses will resist.

Verse 3.14.375-376

मितस्तु स्वेन मानेन प्रसिद्धो यो गुणाश्रयः ।
ऐश्रयान्तरमानाय स्वधर्मेण प्रवर्तते ॥ 375 ॥
रूपान्तरेण संस्पर्शो रूपान्तरवतां सताम् ।
भिन्नेन यस्य भेदानामुपमानं तदुच्यते ॥ 376 ॥

*mitastu svena mānena prasiddho yo guṇāśrayaḥ |
aiśrayāntaramānāya svadharmēṇa pravartate || 375 ||
rūpāntareṇa saṁsparśo rūpāntaravatām satām |
bhinnena yasya bhedyānāmupamānam taducyate || 376 ||*

(375) But the quality-substratum which, measured by its own measure, is well-known — operates by its own property for the measuring of another substratum. (376) The contact, by a different form, of things possessing different forms, of things to be differentiated — that is called comparison.

(375): mitas tu svena manena prasiddho yo gunasrayah — the *quality-substratum* which, *measured by its own measure*, is *well-known*: the cloud has been measured already, by whatever measures clouds, and is famous. Asrayantara-manaya sva-dharmena pravartate: it *operates by its own property* for the *measuring of another substratum*. So the comparans is a thing that has finished being known and is now lent out as an instrument. (376): rupantarena samsparsa rupantaravatam satam bhinnena yasya bhedyanam — the *contact*, by a *different form*, of *things possessing different forms*, of *things to be differentiated*. Upamanam tad ucyate: *that is called comparison*. So: two things of different forms, touched by way of a form that is other than both — that is a simile. Samsparsa (3.14.354's touch) is the word: comparison grazes, and 3.14.359's mana grips.

Verse 3.14.377

धर्मः समानः श्यामादिरुपमानोपमेययोः ।
आश्रीयमाणप्राधान्यो धर्मेणान्येन भिद्यते ॥ 377 ॥

dharmah samānah śyāmādirupamānopameyayoh |
āsriyamāṇapṛādhānyo dharmenānyena bhidyate || 377 ||

The common property 'dark' and the rest, of the comparans and the comparandum, whose principality is resorted to, is differentiated by another property.

Dharmah samanah syamadir upamana-upameyayoh: the *common property* — 'dark' and the rest — of *comparans and comparandum*. Asriyamana-pradhanyah: whose *principality* is resorted to — asriyamana: being taken up; the property's principality is conferred by the taking, not owned (3.14.351's the quality attains principality at the moment of differentiating). Dharmena anyena bhidyate: is *differentiated by another property*. So the common property is made principal and then cut by a further property — the middle rung of 3.14.370, reached by a second cut. Two operations, and the simile is their product: elevate the shared quality, then differentiate it. Neither alone gives a comparison.

Verse 3.14.378

शस्त्रीकुमार्योः सदृशः श्याम इत्येवमाश्रिते ।
व्यपदेश्यमनेनेति निमित्तं गुणयोः स्थितम् ॥ 378 ॥

śāstrīkumāryoh sadṛśah śyāma ityevamāśrite |
vyapadeśyamaneneti nimittam guṇayoh sthitam || 378 ||

When it is resorted to thus — 'the dark of the knife and of the girl is similar' — the cause 'it is to be designated by this' stands in the two qualities.

Sastri-kumaryoh sadrsah syama ity evam asrite: when it is resorted to thus — 'the dark of the knife and of the girl is similar': the comparison spelled out as a statement of resemblance. Vyapadesyam anena iti nimittam guṇayoh sthitam: the cause — 'it is to be designated by this' — stands in the two qualities. So what the two darknesses share is not a property but a *designability*: each is such that the other may name it. The nimitta is a fitness-to-be-designated, lodged in the qualities themselves. This is exact and it sidesteps 3.14.363's dilemma: the shared thing need not be one property or two, because it is not a property — it is a licence to name.

Verse 3.14.379

यदा निमित्तैस्तद्वन्तो गच्छन्तीव तदात्मताम् ।
भेदाश्रयं तदाख्यानमुपमानोपमेययोः ॥ 379 ॥

yadā nimittaiṣṭadvanto gacchantīva tadātmatām |
bhedāśrayam tadākhyānamupamānopameyayoh || 379 ||

When the possessors of those, through the causes, go as it were to identity with them — that statement of comparans and comparandum rests on difference.

Yada nimittais tadvanto gacchanti iva tad-atmatam: when the possessors of those — the knife and the girl — through the *causes*, go as it were to identity with them: iva again. The girl becomes, as it were, the knife's darkness. Bhedasrayam tad akhyanam upamana-upameyayoh: *that statement of comparans and comparandum rests on difference*. So the identity is figurative and the statement is grounded in difference: the two must stay apart for the going-toward to mean anything (3.14.363's ekatve na upamanasya sambhavah). The iva is not decoration — it is what keeps the simile from collapsing into an identification. Which is what 3.14.380 is about.

Verse 3.14.380

तत्त्वासङ्गविवक्षायां येषु भेदो निवर्तते ।
लुप्तोपमानि तान्याहुस्तद्धर्मेण समाश्रयात् ॥ 380 ॥

tattvāsaṅgavivakṣāyām.yeṣu bhedo nivartate |
luptopamāni tānyāhustaddharmeṇa samāśrayāt || 380 ||

Those in which the difference withdraws, when identity-attachment is intended to be expressed — those they call 'elliptical comparisons', from the resort by way of that property.

The figure named. Tattva-asanga-vivaksayam yesu bhedo nivartate: those in which the *difference withdraws*, when *identity-attachment* is intended to be expressed — tattva-asanga: clinging to the very thing, the wish to say she is that darkness and not merely like it. Lupta-upamani tany ahuh: those they call 'lupta-upama' — the *elided comparison*: 'sastri-syama', knife-dark, with the 'iva' gone. Tad-dharmena samasrayat: from the resort by way of *that property*. So dropping the 'iva' is not abbreviation: it answers to a different intention. Where 3.14.379's iva held the two apart, here the speaker wants them together and the marker of difference goes. The compound is chosen because it says the identity the phrase could not (3.14.236's the bahuvrihi is desired when his principality is intended).

Verse 3.14.381

शस्त्र्यां प्रसिद्धं श्यामत्वं मानं सा तेन मीयते ।
अन्याश्यामातु तद्रूपा (त्वतद्रूपा) तेनात्यन्तं न मीयते ॥ 381 ॥

śastryām.prasiddham śyāmatvām.mānam.sā tena mīyate |
anyāśyāmātu tadrūpā (tvatadrūpā) tenātyantam.na mīyate || 381 ||

The darkness well-known in the knife is the measure; she is measured by it. But another dark thing, having that form, is not measured by it completely.

Sastryam prasiddham syamatvam manam sa tena miyate: the *darkness well-known* in the *knife* is the *measure*; *she* is *measured* by it — 3.14.374's proposal applied: the famous dark measures the unfamous. Anya syama tu tad-rupa tena atyantam na miyate: but *another* dark thing, *having that form*, is not measured by it *completely* — atyantam: utterly, without remainder (3.14.359's sakalyena). So even where the measuring works, it does not exhaust: another dark thing of the same form is left partly unmeasured. And that remainder is precisely 3.14.360's definition of comparison — the shortfall is not a failure of the measure but the nature of the thing.

[Contested: Pada c is transmitted with a variant: 'tad-rupa' ('having that form') against 'atad-rupa' ('not having that form'). We translate the former, on which the verse says that even a like-formed thing

escapes complete measurement – which is the stronger point and matches 3.14.360's definition. On the variant the claim is the weaker one that unlike things are not measured at all.]

Verse 3.14.382

शस्त्रीं स्वेन गुणेनातो मिमानामाश्रयमान्तरम् ।
असमाप्तगुणं सिद्धेरुपमानं प्रचक्षते ॥ 382 ॥

śastrīm.svena guṇenāto mimānāmāśrayamāntaram |
asamāptaguṇam.siddherupamānam.pracakṣate || 382 ||

Therefore they call the comparans that other substratum which measures the knife by its own quality – whose quality is incomplete as regards establishment.

The definition closed. Sastrim svena gunena atah mimanam asrayam antaram: that other substratum which measures the knife by its own quality. Asamapta-gunam siddheh upamanam pracaksate: they call the comparans that whose quality is incomplete as regards establishment – asamapta-guna: its quality not finished, not brought to completion. So the comparans is defined by its incompleteness: it measures, and its measuring never finishes (3.14.381's atyantam na miyate). A mana completes and an upamana does not, and the samuddesa has now said this three times in different words (3.14.360, 3.14.381, here) because it is the whole distinction. A simile is a measure that has agreed not to finish.

Verse 3.14.383

उपमेये स्थितो धर्मः श्रुतोऽन्यत्रानुमीयते ।
श्रुतोऽथवोपमानस्थ उपमेयेऽनुमीयते ॥ 383 ॥

upameye sthito dharmah śruto'nyatrānumīyate |
śruto'thavopamānastha upameye'numīyate || 383 ||

The property residing in the comparandum, being heard, is inferred elsewhere; or, heard as residing in the comparans, it is inferred in the comparandum.

Upameye sthito dharmah sruto 'nyatra anumiyate: the property residing in the comparandum, being heard, is inferred elsewhere. Sruto 'thava upamana-stha upameye 'numiyate: or, heard as residing in the comparans, it is inferred in the comparandum. So the simile runs in either direction: what is said of one term is inferred of the other, and which term gets the saying is a matter of arrangement. Anumiyate: inferred – and the word matters. A comparison does not state the shared property twice; it states it once and leaves the other occurrence to be worked out. That is the mechanism of 3.14.360's incompleteness.

Verse 3.14.384

अधीयते ब्राह्मणवत् क्षत्रिया दृश्यते ।
उपमेयस्य भिन्नत्वाद् वचनं क्षत्रियाश्रयम् ॥ 384 ॥

adhīyate brāhmaṇavat kṣatriyā drśyate |
upameyasya bhinnatvād vacanam kṣatriyāśrayam || 384 ||

'The ksatriyas study like brahmins' is seen; from the comparandum's difference, the number rests on the ksatriyas.

Adhiyate brahmanavat ksatriya drsyate: 'the ksatriyas study like brahmins' is seen — 'brahmanavat', with the comparison-suffix. Upameyasya bhinnatvad vacanam ksatriyasrayam: from the *comparandum's difference*, the number rests on the ksatriyas. So the verb's plural answers to the ksatriyas and not to the brahmins, though the brahmins are what is named: the compared thing carries the concord, and the standard is inert. This confirms 3.14.379's bhedasrayam: the comparison rests on difference, and the difference shows up in the grammar. The standard lends its fame (3.14.373's prasid-dhatvat) and nothing else.

[Contested: Pada a is metrically short in our source ('adhiyate brahmanavat ksatriya drsyate'), a syllable or more having apparently dropped. The construction and the point — that the verb agrees with the ksatriyas — are unaffected.]

Verse 3.14.385

साधारणं ब्रुवन् धर्मं क्वचिदेव व्यवस्थितम् ।
सामान्यवचनः शब्द इति सूत्रेऽपदिश्यते ॥ 385 ॥

sādhāraṇam bruvan dharmam kvacideva vyavasthitam |
sāmānyavacanah śabda iti sūtre'padiśyate || 385 ||

Stating a common property that is settled only somewhere — 'a word expressing the general' is what the sutra says.

Sadharanam bruvan dharmam kvacid eva vyavasthitam: *stating a common property settled only somewhere* — kvacid eva: in some places only, 3.14.370's middle rung, the general that is neither everywhere nor in one. Samanya-vacanah sabda iti sutre 'padiśyate: 'a word expressing the general' is stated in the sutra. So Panini's phrase 'samanya-vacana' names exactly the thing 3.14.369-370 had to construct: a word whose general is a middle one. The grammar had the category and Bhartrhari has supplied its semantics. This is the pattern of the whole samuddesa — the rules were right and unexplained, and the explanation is the work.

Verse 3.14.386

नाभेदेन न भेदेन गुणो द्विष्ठोऽभिधीयते ।
भिन्नयोर्धर्मयोरेकः श्रूयतेऽन्यः प्रतीयते ॥ 386 ॥

*nābhedena na bhedena guṇo dviṣṭho'bhidhīyate |
bhinnayordharmayorekaḥ śrūyate'nyaḥ pratīyate || 386 ||*

A quality residing in two is expressed neither by non-difference nor by difference; of the two different properties, one is heard, the other is cognized.

The resolution of 3.14.363's dilemma, and it is exact. Na abhedena na bhedena guṇo dvistho 'bhidhiyate: a quality residing in two is expressed neither by non-difference nor by difference — both horns declined, in one line. Bhinnayor dharmayor ekah sruyate 'nyah pratiyate: of the two different properties, one is heard, the other is cognized. So the properties are two — that much is conceded to the difference-horn — and the comparison does not express both: it says one and lets the other be understood (3.14.383's anumiyate). The oneness is never asserted, so the identity-horn is never taken. The simile's whole trick is that it says half and the hearer supplies half, and the halves are different properties.

Verse 3.14.387

नात्यन्ताय मिमीते यत् सामान्ये समवस्थितम् ।
सादृश्यादुपमेयार्थः समीपे परिकल्प्यते ॥ 387 ॥

*nātyantāya mimīte yat sāmānye samavasthitam |
sādrśyādupameyārthaḥ samīpe parikalpyate || 387 ||*

That which, settled in the general, does not measure completely — from similarity, the comparandum's meaning is imagined in proximity.

Na atyantaya mimite yat samanye samavasthitam: that which, settled in the general, does not measure completely — 3.14.381's atyantam na miyate, now as a definition. Sadrśyad upameyarthah samipe parikalpyate: from similarity, the comparandum's meaning is imagined in proximity — samipe: near by; parikalpyate: constructed (3.14.75's word). So the comparison does not place the compared thing at the standard but near it, and the placing is a construction. Samipa is the whole of what a simile achieves: not identity, not measure, but nearness — and the nearness is imagined.

Verse 3.14.388

मानं प्रति समीपं वा सादृश्येन प्रतीयते ।
परिच्छेदाद्धि सादृश्यमिह मानोपमानयोः ॥ 388 ॥

*mānam prati samīpam vā sādrśyena pratīyate |
paricchedāddhi sādrśyamiha mānopamānayoh || 388 ||*

Or the proximity to the measure is cognized by similarity; for from delimitation there is here a similarity of measure and comparison.

Manam prati samipam va sadrsyena pratiyate: the *proximity* to the *measure* is cognized by *similarity* – one knows how near one has come to a full measure by how like it the case is. Paricchedad dhi sadrsyam iha mana-upamanayoh: for from *delimitation* there is *here* a *similarity* of *measure and comparison* – pariccheda: the cutting-off (3.14.126's word). So measure and comparison are themselves alike, because both delimit – and the samuddesa's whole distinction between them (3.14.359-360's sakalyena and its absence) is a difference of degree within one operation. The verse quietly softens its own dichotomy: a mana is an upamana that finished.

Verse 3.14.389

एकजातिव्यपेक्षायां तदेवेत्यवसीयते ।
भेदस्यैव व्यपेक्षायामन्यदेवेति गम्यते ॥ 389 ॥

ekajātivyapekṣāyām.tadevetyavasīyate |
bhedasyaiva vyapekṣāyāmanyadeveti gamyate || 389 ||

When one universal is required, 'it is that very thing' is determined; when only the difference is required, 'it is something else' is understood.

Eka-jāti-vyapeksayam tad eveti avasiyate: when *one universal* is *required*, 'it is *that very thing*' is *determined*. Bhedasya eva vyapeksayam anyad eveti gamyate: when *only the difference* is required, 'it is *something else*' is understood. So identity and otherness are not found but *required*: which one obtains depends on what the cognition is reaching for (vyapeksa: the reaching). The same two things are the same thing and different things according to what one wants of them. This is 3.14.367's vyatikirna – the intermingled reflection – stated as a rule of thumb: identity and difference are two ways of needing.

Verse 3.14.390

कर्मत्वं करणत्वं च भेदेनैवाश्रितं यतः ।
अत्यन्तैकत्वविषयान्न स्यात् तेनात्र संशयः ॥ 390 ॥

karmatvam.karaṇatvam.ca bhedenaivāśritam.yataḥ |
atyantaikatvaviṣayānna syāt tenātra saṁśayaḥ || 390 ||

Since object-hood and instrument-hood are resorted to only by way of difference – from the domain of utter oneness there would be no doubt here.

Karmatvam karanatvam ca bhedena eva asritam yataḥ: since *object-hood* and *instrument-hood* are *resorted to only by way of difference* – the karakas require distinct terms: one does not cut a thing with itself (3.7's the sadhanas as distinguished capacities). Atyanta-ekatva-visayan na syat tena atra samsayah: from the *domain of utter oneness*, there would be *no doubt* here. So where oneness is complete, no karaka-question can even arise: doubt about what is object and what is instrument presupposes two. The verse is a small proof that 3.14.389's 'requiring the difference' is not optional in some places – the karakas need it constitutively.

Verse 3.14.391

भेदेन तुल्यरूपत्वाच्छालींस्तानिति दृश्यते ।
जात्यभेदात् स एवायमिति भिन्नोऽभिधीयते ॥ 391 ॥

bhedena tulyarūpatvācchālīmstāniti drśyate |
jātyabhedāt sa evāyamiti bhinno'bhidhiyate || 391 ||

From likeness of form by way of difference, 'those rice-grains' is seen; from non-difference of universal, 'this is that very one' – the different is expressed.

Bhedena tulya-rupatvac chalims tani iti drsyate: from *likeness of form* by way of *difference*, 'those rice-grains' is *seen* – the plural: many grains, alike, distinct. Jaty-abhedat sa eva ayam iti bhinno 'bhidhiyate: from *non-difference of universal*, 'this is that very one' – the *different* is expressed. So of the same grains one says 'those, plural, alike' and 'this is the very same' – and the second says a *different* thing while asserting identity. Bhinno 'bhidhiyate: what is expressed is the different one, under the form of identity. This is 3.14.389 exhibited: the grains oblige either requirement, and the language has both idioms ready.

Verse 3.14.392

कथं ह्यवयवोऽन्यस्य स्यादन्य इत् चोच्यते ।
अत्यन्तभेदे नानात्वं यत्र तत्त्वं न विद्यते ॥ 392 ॥

katham hyavayavo'nyasya syādanya it cocyate |
atyantabhede nānātvam.yatra tattvam.na vidyate || 392 ||

For how could a member of another be, and yet be called 'other'? In utter difference there is manifoldness, where identity does not exist.

Katham hy avayavo 'nyasya syad anya iti ca ucyate: *how* could a *member of another* be, and yet be called 'other'? – a part belongs to its whole and is other than it, and both cannot be flatly true. Atyanta-bhede nanatvam yatra tattvam na vidyate: in *utter difference* there is *manifoldness*, where *identity* does not exist. So if the parts were utterly other, there would be many and no whole at all – which is not what one finds. The question is left standing as a question (katham hi), and its point is that partaking will not reduce to identity or to difference. This is 3.14.367's vyatikirna again, met in mereology.

Verse 3.14.393

अभेदस्य विवक्षायामेकत्वं सङ्घसङ्घिनोः ।
सङ्घिनोर्न त्वभेदोऽस्ति तथान्यत्वमुदाहृतम् ॥ 393 ॥

abhedasya vivakṣāyāmekatvam saṅghasaṅghinoh |
saṅghinorna tvabhedo'sti tathānyatvamudāhṛtam || 393 ||

When non-difference is intended, there is oneness of the aggregate and the aggregated; but there is no non-difference of the aggregated ones among themselves — thus otherness has been illustrated.

The answer to 3.14.392. *Abhedasya vivaksayam ekatvam sangha-sanghinoh*: when *non-difference* is intended, there is *oneness* of the *aggregate* and the *aggregated* — the forest and its trees are one, when one means them so. *Sanghinor na tv abhedo 'sti*: but there is *no non-difference* of the *aggregated ones among themselves* — the trees are not one another. *Tatha anyatvam udahrtam*: *thus otherness* has been *illustrated*. So the part is one with the whole and other than its fellows, and 3.14.392's paradox dissolves once one asks *other than what*. The whole absorbs, the siblings repel, and vivaksa selects which relation is in view (3.14.389).

Verse 3.14.394

तत्राभिन्नव्यपेक्षायामुपमार्थो न विद्यते ।
यो हि गोरिति विज्ञाने हेतुः सोऽस्ति गवान्तरे ॥ 394 ॥

tatrābhinnavyapekṣāyāmupamārtho na vidyate |
yo hi goriti vijñāne hetuḥ so'sti gavāntare || 394 ||

There, when the non-different is required, there is no purpose of comparison; for the cause which is in the cognition 'cow' exists in another cow too.

Tatra abhinna-vyapeksayam upamartho na vidyate: when the *non-different* is *required*, there is *no purpose* of *comparison* — 3.14.363's first horn, and 3.14.364's tautology. *Yo hi gor iti vijnane hetuh so 'sti gavantare*: for the *cause* which is in the cognition 'cow' exists in *another* cow too. So one does not compare a cow to a cow: whatever makes this one a cow makes that one a cow, and there is nothing to say. Comparison needs the terms to differ, and where the universal is what is required, they do not. The verse re-establishes 3.14.379's *bhedasrayam* from the other side.

Verse 3.14.395

व्यावृत्तानां विशेषाणां व्यापारे तु विवक्षिते ।
न कश्चिदुपकारोऽस्ति बुद्धेर्बुद्ध्यन्तरं प्रति ॥ 395 ॥

vyāvṛttānām viśeṣāṇām vyāpāre tu vivakṣite |
na kaścidadupakāro'sti buddherbuddhyantaram prati || 395 ||

But when the operation of the excluded particulars is intended — there is no assistance at all of one cognition toward another.

The other horn, and it is worse. Vyavrttanam visesanam vyapare tu vivaksite: when the operation of the excluded particulars is intended — vyavrtta: turned away, mutually excluding (3.14.141's vini-vartaka). Na kascid upakaro 'sti buddher buddhy-antaram prati: there is no assistance at all of one cognition toward another. Upakara: help (3.14.333's word). So where the particulars exclude one another, the cognition of one contributes nothing to the cognition of the other, and again no comparison is possible. Between 3.14.394 and this verse both horns are closed for the second time — and comparison happens. So neither pure identity nor pure difference is ever what is required: 3.14.367's vyatikirna is.

Verse 3.14.396

किञ्चिद् यत्रास्ति सामान्यं यदि भेदाश्च केचन ।
गोत्वं गोष्वस्ति सामान्यं भेदाश्च शबलादयः ॥ 396 ॥

kiñcid yatrāsti sāmānyam yadi bhedāśca kecana |
gotvam goṣvasti sāmānyam bhedāśca śabalādayaḥ || 396 ||

If somewhere there is some general and there are some differences — cowness is the general in cows, and the differences are 'dappled' and the rest.

Kincid yatra asti samanyam yadi bhedas ca kecana: if somewhere there is some general and some differences — the condition comparison needs, per 3.14.394-395: neither general alone nor differences alone. Gotvam gosv asti samanyam bhedas ca sabaladayah: cowness is the general in cows, and the differences are 'sabala' (dappled) and the rest. So the cow-case has both: one cowness, many coats. And that is the structure a comparison requires — a shared kind carrying real differences. The verse is a specification, not an example: it says what must be present for a simile to have work to do.

Verse 3.14.397

सामान्यं श्यामताद्येव तद्धि साधारणं द्वयोः ।
तदेव सिद्ध्यसिद्धिभ्यां भेद इत्यपदिष्टे ॥ 397 ॥

sāmānyam śyāmatādyeva taddhi sādharāṇam dvayoh |
tadeva siddhyasiddhibhyāṁ bheda ityapadiṣṭe || 397 ||

The general is just darkness and the rest; for that is common to the two. That very thing, by establishment and non-establishment, is designated as the difference.

Samanyam syamatady eva tad dhi sadharanam dvayoh: the general is just darkness and the rest; for that is common to the two — the shared property, and nothing more elevated. Tad eva siddhy-asiddhibhyam bheda ity apadisyate: that very thing, by establishment and non-establishment, is designated as the difference. Siddhi and asiddhi: being made out and not being made out — the darkness is established in the knife (prasiddha: 3.14.373) and not established in the girl. So the same darkness is the general and the difference, according to whether it is made out or not. That is a remarkable claim: the difference between the two darks is not a further property but the difference between being famous and being obscure.

Verse 3.14.398

श्यामत्वमेव सामान्यमन्येषामुभयोः स्थितम् ।
सम्पूर्णत्वात् तदन्यस्माद् विशेष इति गम्यते ॥ 398 ॥

*śyāmatvameva sāmānyamanyeṣāmubhayoh sthitam |
sampūrṇatvāt tadanyasmād viśeṣa iti gamyate || 398 ||*

For others, darkness itself is the general, standing in both; from its completeness, it is understood as the particular as distinct from that other.

Syamatvam eva samanyam anyesam ubhayoh sthitam: for others, darkness itself is the general, standing in both. Sampurnatvat tad anyasmat visesa iti gamyate: from its completeness, it is understood as the particular, as distinct from that other — sampurna: full, complete: the darkness that is fully realized in the knife is thereby a particular, marked off from the darkness that is not. So the same doctrine as 3.14.397 in another vocabulary: the general becomes a particular by being complete. Not by acquiring a differentia — by being fully there. This is as unusual an account of the general-particular relation as the tradition offers, and the comparison-compound is where Bhartrhari found it.

Verse 3.14.399

आकृतौ वापि सामान्ये क्वचिदेव व्यवस्थिताः ।
श्यामादयोऽवसीयन्ते विशेषास्त इहाश्रिताः ॥ 399 ॥

*ākṛtau vāpi sāmānye kvacideva vyavasthitāḥ |
śyāmādayo'vasīyante viśeṣāsta ihāśritāḥ || 399 ||*

Or, settled only somewhere in the form, in the general — 'dark' and the rest are determined; those particulars are what are resorted to here.

Akṛtau vapi samanye kvacid eva vyavasthitah: settled only somewhere in the akṛti, in the general — kvacid eva again (3.14.370, 3.14.385): the middle rung. Syamadayo 'vasiyante visesas ta iha asritah: 'dark' and the rest are determined; those particulars are what are resorted to here. So on this account 'dark' is already a particular relative to the form it sits in — and the comparison resorts to it, not to darkness at large. The vocabulary shifts (akṛti for jati) and the finding is 3.14.370's: what a simile reaches for lives between the universal and the individual, and the language has only compounds to reach it with.

Verse 3.14.400

जातेरभेदे भेदे वा सादृश्यं तत् प्रचक्षते ।
कश्चित् तदाचिदार्थात्मा तथाभूतोऽपदिश्यते ॥ 400 ॥

*jāterabhede bhede vā sādṛśyam tat pracakṣate |
kaścit tadācidarthātmā tathābhūto'padiśyate || 400 ||*

In the non-difference or the difference of the universal, they declare that similarity; some meaning-self, being such, is designated.

Jater abhede bhede va sadrsyam tat pracaksate: in the *non-difference* or the *difference* of the *universal*, they *declare* that *similarity* — abhede bhede va: either way, and the va is doing real work: the theorists differ and the similarity is claimed on both accounts. Kascit... arthatma tathabhuto 'padisyate: *some meaning-self*, being *such*, is *designated*. So resemblance is asserted from both sides of the great division, and what is designated is a meaning-self of some sort — kascit: *some*, *indeterminate*. Bhartrhari is registering that sadrsya survives every account of the universal because it is not built out of universals at all.

[Contested: Pada c is transmitted as 'kascit tadacid arthatma', in which 'tadacid' will not construe. We translate from the remainder ('kascid arthatma tathabhuto 'padisyate'), whose sense is clear, and leave the corrupt element unrendered rather than emend on conjecture.]

Verse 3.14.401

यत्रार्थे प्रत्ययाभेदो न कदाचिद् विकल्पते ।
अविद्यमानभेदत्वात् स एक इति गम्यते ॥ 401 ॥

yatrārthe pratyayābhedo na kadācid vikalpate |
avidyamānabhedatvāt sa eka iti gamyate || 401 ||

That meaning in which the non-difference of cognition never varies — from the non-existence of difference, it is understood as one.

Yatra arthe pratyaya-abhedo na kadacid vikalpate: that *meaning* in which the *non-difference* of *cognition* never varies — na kadacid: at no time; vikalpate: wavers, admits an alternative. Avidyamānabhedatvāt sa eka iti gamyate: from the *non-existence* of *difference*, it is *understood* as *one*. So oneness is a fact about cognition's steadiness, not about the object: what one never cognizes as two, one calls one. The criterion is epistemic through and through (3.14.188's buddhya eva), and it is the honest form of what identity comes to in this work: the absence of a wavering.

Verse 3.14.402

योऽर्थ आश्रितनानात्वः स एवेत्यपदिश्यते ।
व्यापारं जातिभागस्य तत्रापि प्रतिजानते ॥ 402 ॥

yo'rtha āśritanānātvah sa evetyapadiśyate |
vyāpāram jātibhāgasya tatrāpi pratijānate || 402 ||

That meaning which has resorted to manifoldness is designated as 'that very one'; there too they assert the operation of the universal-portion.

Yo 'rtha asrita-nanatvah sa evety apadisyate: that *meaning* which has *resorted* to *manifoldness* is *designated* as '*that very one*' — the thing has taken up manyness and is still called the same (3.14.391's sa eva ayam of the rice-grains). Vyaparam jati-bhagasya tatrapi pratijanate: *there too* they *assert* the *operation* of the *universal-portion*. So even where manyness has been resorted to, a jati-portion is at work holding the 'same' together. Bhaga: portion — not a universal but a *part* of the meaning that does universal-work. The samuddesa's characteristic move: not two entities but one meaning with sides.

Verse 3.14.403

जातिभागाश्रया प्रख्या तत्राभिन्ना प्रवर्तते ।
व्यक्तिभागाश्रया बुद्धिस्तत्र भेदेन जायते ॥ 403 ॥

jātibhāgāśrayā prakhyā tatrābhinnā pravartate |
vyaktibhāgāśrayā buddhistatra bhedena jāyate || 403 ||

The presentation resting on the universal-portion operates there as undivided; the cognition resting on the individual-portion arises there by difference.

The two portions of 3.14.402, each with its own cognition. Jati-bhagasraya prakhya tatra abhinna pravartate: the *presentation* resting on the *universal-portion* operates there as *undivided* – prakhya: the showing-forth (3.14.187's eka-prakhya-nibandhanah, of the general). Vyakti-bhagasraya buddhis tatra bhedena jayate: the *cognition* resting on the *individual-portion* arises there *by difference*. So one object, two portions, two cognitions – one showing it whole and one bringing it up divided. Both are of the same thing at the same time, which is why 3.14.367's reflection is vyatikirna, intermingled: the two cognitions are not stages, they are simultaneous and they overlap.

Verse 3.14.404-405

अन्यत्र वर्तमानं सद् भेदाभेदसमन्वितम् ।
निमित्तं पुनरन्यत्र नानात्वेनेव गृह्यते ॥ 404 ॥
आधारेषु पदन्यासं कृत्वोपैति तदाश्रयम् ।
स सादृश्यस्य विषय इत्यन्यैरपदिश्यते ॥ 405 ॥

anyatra vartamānam sad bhedābhedasamanvitam |
nimittam punaranyatra nānātveneveva grhyate || 404 ||
ādhāreṣu padanyāsam kṛtvopaiti tadāśrayam |
sa sādṛśyasya viṣaya ityanyairapadiśyate || 405 ||

(404) The cause, existing in one place, endowed with difference and non-difference, is again grasped elsewhere as though by manifoldness. (405) Having planted a foot in the substrata, it approaches what rests on them; that, others declare, is the domain of similarity.

(404): anyatra vartamanam sad bhedabhedasamanvitam – the *cause*, existing in *one place*, endowed with *difference and non-difference* (3.14.209's bhedabhedasamanvitam). Nimittam punar anyatra nanatvena iva grhyate: is *again* grasped elsewhere as though by manifoldness – iva. (405): adharesu pada-nyasam kṛtvā upaiti tad-aśrayam – having *planted a foot* in the *substrata*, it *approaches* what rests on them. Pada-nyasam kṛtvā: *having taken a step* – the same image as 3.14.262's padam kṛtvā, where the intellect planted itself on a ksatriya in order to pull the brahmin away. Sa sadṛśyasya viṣaya ity anyair apadiśyate: *that, others declare*, is the *domain of similarity*. So resemblance lives where the cause, having stepped onto the seats, reaches past them. Similarity is a movement, not a property – and this samuddesa has said the same of negation.

Verse 3.14.406

परापेक्षे यथा भावे कारणाख्या प्रवर्तते ।
तथान्याधिगमापेक्षमुपमानं प्रचक्षते ॥ 406 ॥

*parāpekṣe yathā bhāve kāraṇākhyā pravartate |
tathānyādhigamāpekṣamupamānam.pracakṣate || 406 ||*

As the designation 'cause' operates in a state that depends on another — so, they declare, comparison depends on the knowing of another.

Para-apekse yatha bhave karanakhyā pravartate: as the designation 'cause' operates in a state that depends on another — nothing is a cause in itself; it is a cause of something, and the title is relational through and through (3.3's relation; 3.7's the karakas as capacities conferred by the action). Tatha anyā-adhigama-apeksam upamānam pracakṣate: so they declare *comparison* to depend on the knowing of another — anyā-adhigama: the getting-to-know of the other. So upamāna is a relational title like 'cause': nothing is a comparans in itself, only for a knowing that needs it. This is why 3.14.373's fame decided direction — a standard is a standard for someone.

Verse 3.14.407

गुरुशिष्यपितापुत्रक्रियाकालादयो यथा ।
व्यवहारास्तथौपम्यमप्यपेक्षानिबन्धनम् ॥ 407 ॥

*guruśiṣyapitāputrakriyākālādayo yathā |
vyavahārāstathaupamyamapyapekṣānibandhanam || 407 ||*

As the transactions 'teacher and pupil', 'father and son', 'action and time' and the rest — so comparison too is founded on dependence.

The list that makes 3.14.406 plain, and it is well chosen. Guru-sisya-pita-putra-kriya-kalādayo yatha vyavaharah: as the transactions — teacher-pupil, father-son, action-time and the rest: correlatives, each of which is nothing without its mate (3.14.47's sambandhi-sabdah sapekso nityam sarvah prayujyate: a relatum-word is *wholly* dependent). Tatha aupamyam apy apekṣa-nibandhanam: so *comparison* too is founded on dependence — apekṣa-nibandhana: its ground is the reaching. So a comparans is to its comparandum as a father to a son: not a thing with a property but a term in a reaching. And the last pair — kriya-kala, action and time — quietly recalls the Kala-samuddesa, where time was shown to be nothing but this kind of dependence.

Verse 3.14.408

श्यामत्वमुपमाने चेद् वृत्तं वृत्तौ प्रयुज्यते ।
उपमेयं समासेन बाह्यं तत्राभिधीयते ॥ 408 ॥

*śyāmatvamupamāne ced vṛttam vṛttau prayujyate |
upameyam samāsenā bāhyam tatrābhidhīyate || 408 ||*

If the darkness which operated in the comparans is employed in the derivative formation — then the comparandum, being external, is expressed by the compound.

The rule-technical consequences begin. Syamatvam upamane ced vṛttam vṛttau prayujyate: if the darkness which operated in the comparans is employed in the derivative formation — the shared property enters the compound from the standard's side. Upameyam samasena bahyam tatra abhidhiyate: then the comparandum, being external, is expressed by the compound. Bahya: outside (3.14.207's bahyo nasty asrayo dvandve). So 'sastri-syama' would have its meaning outside itself — which makes it structurally a bahuvrihi (3.14.38's anya-padartha), with all that follows for accent and gender. The following verses test whether that is tolerable.

Verse 3.14.409

टाबन्त एव चैत्रादौ श्यामाशब्दस्तथा भवेत् ।
सूत्रे च प्रथमाभावान्न श्यामाद्युपसर्जनम् ॥ 409 ॥

*tābanta eva caitrādaū śyāmāśabdastathā bhavet |
sūtre ca prathamābhāvānna śyāmādyupasarjanam || 409 ||*

The word 'syama', ending in 'tap', would thus occur in 'Caitra' and the like; and from the absence of the nominative in the sutra, 'syama' and the rest is not the subordinate.

Tab-anta eva caitradau syama-sabdas tatha bhavet: the word 'syama', ending in 'tap' — the feminine — would thus occur in 'Caitra' and the like: a masculine name would take a feminine-marked member, which is wrong. Sūtre ca prathama-abhavan na syamady-upasarjanam: and from the absence of the nominative in the sutra, 'syama' and the rest is not the subordinate — Panini's definition makes upasarjana what stands in the nominative in the rule, and 'syama' does not. So 3.14.408's reading fails twice: it produces a bad form and it misidentifies the subordinate. The tests are purely formal and they are decisive.

Verse 3.14.410

अथवैकविभक्तित्वाद् गुणत्वाद् वोपसर्जनम् ।
नैव तित्तिरिकल्माष्यामिष्टः स्त्रीप्रत्ययो भवेत् ॥ 410 ॥

*athavaikavibhaktitvād guṇatvād vopasarjanam |
naiva tittirikalmāṣyāmiṣṭaḥ strīpratyayo bhavet || 410 ||*

Or, from having a single case-ending, or from being a quality, it is the subordinate; the desired feminine affix would not occur in 'tittiri-kalmasi'.

Athava eka-vibhaktitvad gunatvad va upasarjanam: or, from having a *single case-ending*, or from *being a quality*, it is the subordinate — two alternative criteria that would make 'syama' subordinate after all, against 3.14.409. Na eva tittiri-kalmasyam istah stri-pratyayo bhavet: the *desired feminine affix* would not occur in 'tittiri-kalmasi' — partridge-speckled, of a cow. So the alternative criteria buy the subordination and lose the feminine. Every route through the rules costs something, and Bhartrhari is walking each one to where it breaks rather than declaring a winner. This is 3.14.267's finding in advance: the science settles such things by decision.

Verse 3.14.411

सति शिष्टबलीयस्त्वाद् बाह्ये ङीषि च सत्यपि ।
उपमानस्वरो न स्यात् तस्मात् स्त्र्यन्तः समस्यते ॥ 411 ॥

sati śiṣṭabaliyastvād bāhye ṅīṣi ca satyapi |
upamānasvaro na syāt tasmāt stryantaḥ samasyate || 411 ||

From the greater strength of what is taught while the other is present, and even where the external 'nis' is there — the comparans-accent would not occur; therefore the feminine-ending is compounded.

Sati sista-baliyastvat: from the *greater strength* of what is taught while the other is present — the sati-sista maxim (3.14.62, where it settled another accent-conflict). Bāhye nisi ca saty api: even where the external 'nis' — the feminine affix — is *there*. Upamana-svaro na syat: the *comparans-accent* would not occur. Tasmāt stry-antah samasyate: *therefore the feminine-ending is compounded*. So the accent-facts force the conclusion: since the comparans-accent does not appear, the feminine must have been inside the compound when it formed. The argument runs from phonology back to structure — exactly as at 3.14.62, and it is the samuddesa's most reliable instrument.

Verse 3.14.412

गुणे न चोपमानस्थे सापेक्षत्वं प्रकल्पते ।
प्राधान्यस्य (प्रधानस्य) तथा न स्याद् व्याघ्रादौ लिङ्गदर्शनम् ॥ 412 ॥

guṇe na copamānasthe sāpekṣatvam prakalpate |
prādhānyasya (pradhānasya) tathā na syād vyāghrātau liṅgadarśanam || 412 ||

And dependence is not conceivable in a quality residing in the comparans; thus the seeing of gender in 'tiger' and the rest would not belong to the principal.

Gune na ca upamana-sthe sapekṣatvam prakalpate: *dependence is not conceivable* in a *quality residing in the comparans* — the standard's quality is complete in itself and reaches for nothing (3.14.373's it exceeds everywhere). Pradhanyasya tatha na syad vyaghradau linga-darsanam: thus the *seeing of gender* in 'vyaghra' (tiger) and the rest would not belong to the *principal*. So in 'purusa-vyaghra', man-tiger, the gender one sees would not be the principal's — which is wrong. The difficulty comes from denying dependence to the comparans's quality, and it shows the denial is too strong.

[Contested: Pada c is transmitted with a variant: 'pradhanyasya' ('of the principality') against 'pradhanyasya' ('of the principal'). We translate the latter's sense, which the argument about where the gender is seen requires. The variant is unlikely to be more than a scribal alternation.]

Verse 3.14.413

तस्मात् सति गुणत्वेऽपि प्राधान्यं विग्रहान्तरे ।
नैवञ्जतीयकं शास्त्रे सम्भवत्युपसर्जनम् ॥ 413 ॥

*tasmāt sati guṇatve'pi prādhānyam vighrahāntare |
naivañjatiyakam śāstre sambhavatyupasarjanam || 413 ||*

Therefore, even though it is a quality, there is principality in another analysis; a subordinate of this kind is not possible in the science.

Tasmāt sati guṇatve 'pi pradhanyam vighrahantare: therefore, even though it is a quality, there is principality in another analysis — vighraha-antara: a different resolution of the compound. So the same element is quality and principal, depending on which analysis one runs (3.14.351's the quality attains principality at the moment of differentiating). Na evañjatiyakam sastre sambhavaty upasarjanam: a subordinate of this kind is not possible in the science. So the grammar has no category for what this element is — a principal quality — and the analyses multiply because none of them fits. This is the honest end of the comparison-compound's rule-technical treatment: the thing is real and the science has no box for it (3.14.74's attitude).

Verse 3.14.414

उपमेयात्मनि श्यामे वर्तमेनोऽभिधीयते ।
उपमानेष्वनिर्दिष्टः सामर्थ्यात् सम्प्रतीयते ॥ 414 ॥

*upameyātmani śyāme vartameno'bhidhīyate |
upamāneṣvanirdiṣṭaḥ sāmartyāt sampratīyate || 414 ||*

Existing in the comparandum's self, 'dark' is expressed; not stated in the comparanda, it is understood from capacity.

Upameyatmani syame vartamano 'bhidhiyate: existing in the comparandum's self, 'dark' is expressed — the property is said of the compared thing, which is where it was doubtful (3.14.397's asiddhi). Upamanesv anirdistah samartyat sampratiyate: not stated in the comparanda, it is understood from capacity — samartya: the words' own power to convey without saying (3.14.36's samartya-matra; 2.13's what capacity carries). So the simile states the property of the obscure term and leaves it to be understood of the famous one — which is 3.14.386's exact division of labour (one is heard, the other is cognized), now assigned: the heard one belongs to the comparandum. The compound says what needed saying and trusts capacity with the rest.

Verse 3.14.415

द्रव्यमात्रेऽपि निर्दिष्टे चन्द्रवक्त्रेऽनुगम्यते ।
विशिष्ट एव चन्द्रस्थो गुणो नोपप्लवादयः ॥ 415 ॥

dravyamātre'pi nirdiṣṭe candravaktre'nugamyate |
viśiṣṭa eva candrastho guṇo nopaplavādayaḥ || 415 ||

Even when only the substance is indicated, in 'moon-face' a specific quality residing in the moon is what follows – not eclipses and the rest.

A lovely observation, and it is decisive. Dravya-matre 'pi nirdiste candra-vaktre: even when *only the substance is indicated* – 'candra' names the moon, a thing, and no property is said. Anugamyate visista eva candra-stho guṇaḥ: a *specific quality* residing in the moon is what *follows* – visista eva: a *particular* one: the beauty, the coolness, the fullness. Na upaplavadayah: *not eclipses* and the rest. So 'moon-faced' does not mean her face is periodically swallowed, or spotted, or waning – though all of that is as much the moon's as its beauty is. The substance is named and one specific quality comes along and the rest, though equally present, does not. This is why the comparison-compound cannot be analysed: nothing in it selects, and the selection happens anyway.

Verse 3.14.416

भेदभावनयैतच्च समासेऽप्युपवर्ण्यते ।
विशिष्टगुणभिन्नेऽर्थे पदमन्यत् प्रयुज्यते ॥ 416 ॥

bhedabhāvanayaitacca samāse'pyupavarṇyate |
viśiṣṭaguṇabhinne'rthe padamanyat prayujyate || 416 ||

And this is described, in the compound too, by the cultivation of difference; another word is employed in a meaning differentiated by the specific quality.

Bheda-bhavanaya etac ca samase 'py upavarṇyate: this is *described*, in the *compound* too, by the *cultivation of difference* – bhava-na: the bringing-into-being by attention, the mind's dwelling on something until it stands out (the term is the yogins', and Bhartrhari uses it for what an analysis does). Visista-guṇa-bhinne 'rthe padam anyat prayujyate: *another word is employed* in a meaning *differentiated by the specific quality*. So the selection of 3.14.415 is described by *cultivating* a difference that the compound does not contain – the analyst dwells on the beauty until it separates from the eclipses. This is the exact status of every analysis in the samuddesa: a bhavana, not a finding (3.14.353's in the means of comprehension, reality is not followed).

Verse 3.14.417

यदि भिन्नाधिकरणो वचनादनुगम्यते ।
मृगीव चपलेत्यत्र पुंवद्भावो न सिध्यति ॥ 417 ॥

yadi bhinnādhikaraṇo vacanādanugamyate |
mṛgīva capaletyatra pumvadbhāvo na sidhyati || 417 ||

If a different locus is followed from the statement – then in 'fickle as a doe' the treatment-as-masculine does not succeed.

Yadi bhinnadhikarano vacanad anugamyate: if a different locus is followed from the statement – if the comparans and comparandum are taken to sit in different substrata. Mrgi iva capala ity atra pumvad-bhavo na sidhyati: then in 'mrgi iva capala' – fickle as a doe – the pumvad-bhava does not succeed: Panini's provision that a feminine first member in a compound be treated as masculine. So the difference-of-locus reading blocks the rule and the form comes out wrong. The comparison's terms must share a locus for the grammar to work – which is what 3.14.379's identity-as-it-were was, seen from the rules.

Verse 3.14.418

अस्त्रीपूर्वपदत्वात् तु पुंवद्भावो भविष्यति ।
तथैव मृगदुग्धादो न चेत् स्त्र्यर्थो विवक्ष्यते ॥ 418 ॥

astripūrvapadatvāt tu pumvadbhāvo bhaviṣyati |
tathaiva mṛgadugdhādo na cet stryartho vivakṣyate || 418 ||

But from the first member's not being feminine, the treatment-as-masculine will occur; likewise in 'deer-milk' and the rest, if the feminine meaning is not intended.

Astri-purva-padatvat tu pumvad-bhavo bhaviṣyati: from the first member's not being feminine, the pumvad-bhava will occur – the rule applies where the member is not feminine to begin with, so nothing needs converting. Tathaiva mrga-dugdhadau na cet stryartho vivakṣyate: likewise in 'mrga-dugdha' and the rest, if the feminine meaning is not intended – 3.14.133's deer-milk, where the doe's gender did not penetrate. So the rule is saved by noting that the member was never feminine in the relevant sense: vivaksa decides (na cet... vivakṣyate), and where femininity is not meant, there is no femininity to treat as masculine. The repair is semantic and the rule is formal, which is the samuddesa's usual arrangement.

Verse 3.14.419

शस्त्रीव शस्त्री श्यामेति देवदत्तैव कथ्यते ।
तस्यामेवोभयं तस्मादुच्यते शास्त्रविग्रहे ॥ 419 ॥

*śastrīva śastrī śyāmeti devadattaiva kathyate |
tasyāmevobhayam, tasmāducyate śāstravigrahe ॥ 419 ॥*

'Dark like a knife' — Devadatta alone is spoken of; therefore both are stated of her alone, in the science's analysis.

Sastri iva sastri syama iti devadatta eva kathyate: 'dark like a knife' — Devadatta alone is spoken of: whatever the analysis produces, the sentence is about the girl and about nobody else. Tasyam eva ubhayam tasmad ucyate sastra-vigrahe: therefore both are stated of her alone, in the science's analysis — sastra-vigraha: the grammar's resolution of the compound. So the vigraha must put both the darkness and the knife-likeness in her, because that is where the utterance put them. The analysis is disciplined by what the sentence is about — which is the only discipline an analysis has (3.14.71's anvakhyānaya, and 3.14.353).

Verse 3.14.420

पुंवद्भावस्य सिद्ध्यर्थं पक्षे स्त्रीप्रत्ययस्य च ।
बह्वपेक्ष्यमतस्तस्यामुभयप्रतिपादनम् ॥ 420 ॥

*pumvadbhāvasya siddhyartham, pakṣe strīpratyayasya ca |
bahvapekṣyamatastasyāmubhayapratipādanam ॥ 420 ॥*

For the establishing of the treatment-as-masculine, and, on the alternative, of the feminine affix — much has to be taken into account; therefore both are conveyed of her.

Pumvad-bhavasya siddhy-artham pakṣe strī-pratyayasya ca: for the establishing of the pumvad-bhava, and, on the alternative, of the feminine affix — the two rules of 3.14.417-418, pulling opposite ways. Bahv apeksyam atah: much has to be taken into account — bahu apeksyam: a great deal must be considered. Tasyam ubhaya-pratipadanam: therefore both are conveyed of her. So the grammar's two provisions are reconciled by locating both in the girl (3.14.419), and Bhartrhari concedes the reconciliation is laborious. Bahv apeksyam is a rare admission of the machinery's cost, and it stands where the machinery is at its worst.

Verse 3.14.421

प्राप्तिः प्रगृह्यसंज्ञाया न स्यात् प्रत्ययलक्षणात् ।
कुमार्यगारे न ह्यस्ति समासो वचनान्तरे ॥ 121 ॥

*prāptiḥ pragṛhyasamjñāyā na syāt pratyayalakṣaṇāt |
kumāryagāre na hyasti samāso vacanāntare ॥ 121 ॥*

The obtaining of the term 'pragṛhya' would not arise from the affix-indication; for in 'kumaryagara' there is no compound in another number.

This verse is identical to 3.14.121, and in our source it carries the number 121 rather than 421 — the repetition is the transmission's, not the reader's. Its argument belongs with 3.14.121's context (number-difference withdrawing in a compound, so that pratyaya-laksana cannot reach an elided dual), and it has no evident work to do here among the comparison-compounds. We print it where the source prints it and note the doubling rather than silently delete: a duplicated karika is evidence about the text's history, and suppressing it would destroy that evidence.

[Contested: The source repeats this verse verbatim from 3.14.121 and mis-numbers it '121'. Whether the doubling is scribal (an eye-skip that copied a leaf's worth of material twice) or reflects a genuine variant recension, we cannot determine from a single witness. Readers with access to the critical editions should check whether the verse is attested here at all.]

Verse 3.14.422

अथ श्यामेव शस्त्रीवं श्यामेत्येवं प्रयुज्यते ।
शस्त्री यथेयं श्यामेति तावदेव प्रतीयते ॥ 422 ॥

atha śyāmeva śastrīvaṁ śyāmetyevaṁ prayujyate |
śastrī yathēyaṁ śyāmeti tāvadeva pratiyate || 422 ||

Now, 'dark as a knife' is thus employed; 'this is dark, as a knife is' — only that much is cognized.

Atha syama iva satri syama ity evam prayujyate: 'dark as a knife' is thus employed. Satri yatha iyam syama iti tavat eva pratiyate: 'this is dark, as a knife is' — only that much is cognized. Tavat eva: just that and no more (3.14.211's tavat, of the bahuvrihi's reach). So the whole content of the simile is: she is dark, in the way a knife is. No shade is specified, no property is shared in the strong sense, nothing is measured (3.14.360's aparijnana). The verse states the simile's meaning in its own words and the statement is disappointingly small — which is the point. That smallness is what the last sixty verses have been accounting for.

Verse 3.14.423

उपलक्षणमात्रार्था गुणस्यास्य यदि श्रुतिः ।
पृथग् द्वयोः श्रुतोऽप्येष नेष्टस्यार्थस्य वाचकः ॥ 423 ॥

upalakṣaṇamātrārthā guṇasyāsyā yadi śrutiḥ |
prthag dvayoh śruto'pyeṣa neṣṭasyārthasya vācakah || 423 ||

If the hearing of this quality has mere indication for its purpose — then, heard separately of the two, it is not the expresser of the desired meaning.

Upalakṣana-matrārtha guṇasya asya yadi srutiḥ: if the hearing of this quality has mere indication for its purpose — upalakṣana: a pointer, not a description (3.14.170, 3.14.182). Prthag dvayoh sruto 'py esa na istasya arthasya vacakah: heard separately of the two, it is not the expresser of the desired meaning. So if 'dark' merely indicates, then saying it of the knife and of the girl separately gives two indications and no comparison: the desired meaning — the likeness — is not expressed by either. The indicator-reading cannot get the simile's content. So the quality must be doing more than pointing, and 3.14.424 says what.

Verse 3.14.424

उपमेयं तु यद् वाच्यं तस्य चेत् प्रतिपादने ।
सव्यापारा गुणास्तत्र सर्वस्योक्तिः सकृच्छ्रुतौ ॥ 424 ॥

upameyam tu yad vācyam tasya cet pratipādane |
savyāpārā guṇāstatra sarvasyoktiḥ sakṛcchrutau || 424 ||

But if, in conveying the comparandum which is to be expressed, the qualities are engaged in operation there — then in a single hearing there is the statement of all.

Upameyam tu yad vacyam tasya cet pratipadane sa-vyapara gunas tatra: if, in conveying the comparandum which is to be expressed, the qualities are engaged in operation there — sa-vyapara: with their activity, at work (3.14.366's word). Sarvasya uktiḥ sakrc-chrutau: then in a single hearing there is the statement of all. Sakrt: once. So one saying does the whole work — the darkness, the likeness, the girl — because the qualities are active rather than merely indicative. This answers 3.14.423: the quality is not a pointer, it is an operation, and an operation said once reaches everything it operates on. Sakrc-chrutau is the whole reply.

Verse 3.14.425

प्रकाराधारभेदेन विशेषे समवस्थितः ।
शब्दान्तराभिसम्बन्धे सामान्यवचनः कथम् ॥ 425 ॥

prakārādhārabhedena viśeṣe samavasthitah |
śabdāntarābhisambandhe sāmānyavacanah katham || 425 ||

Settled in the particular through difference of mode and of substratum — in connection with another word, how is it 'expressing the general'?

Prakara-adhara-bhedena visese samavasthitah: settled in the particular through difference of mode and of substratum — prakara: the manner in which it is dark; adhara: what it is dark in. Both differ, so the quality is a particular. Sabdantara-abhisambandhe samanya-vacanah katham: in connection with another word, how is it 'expressing the general' — Panini's samanya-vacana (3.14.385)? So the objection: the rule calls this word a general-expresser and everything just said makes it a particular. Katham: how? The question is left open here and 3.14.426-427 answer it by listing the ways the tradition has tried.

Verse 3.14.426-427

सादृश्यमात्रं सामान्यं द्विष्टं कैश्चित् प्रतीयते ।
 गुणो भेदेऽप्यभेदेन द्विवृत्तिर्वा विवक्षितः ॥ 426 ॥
 व्यापारो जातिभागस्य द्रव्ययोर्वाभिधित्सितः ।
 रूपात् सामान्यवाचित्वं प्राग्वा वृत्तेरुदाहृतम् ॥ 427 ॥

sādrśyamātram, sāmānyam, dviṣṭham, kaiścīt pratiyate |
 guṇo bhede'pyabhedena dvivṛttirvā vivakṣitaḥ || 426 ||
 vyāpāro jātibhāgasya dravyayorvābhidhitsitaḥ |
 rūpāt sāmānyavācītvam, prāgvā vṛtterudāhṛtam || 427 ||

(426) By some, mere similarity is cognized as the general, residing in two; or the quality, though in difference, is intended as operating in two by non-difference. (427) Or the operation of the universal-portion, of the two substances, is what is meant to be expressed; or the expressing of the general from the form, prior to the derivation, has been illustrated.

Four answers to 3.14.425, and Bhartrhari lists them without choosing. (426): sadrsya-matram samanyam dvistham kaiscit pratiyate — by some, mere similarity is the general, residing in two: resemblance itself is the universal. Guno bhede 'py abhedena dvi-vṛttir va vivakṣitaḥ: or the quality, though in difference, is intended as operating in two by non-difference (3.14.362's asrita-ekatva). (427): vyaparo jati-bhagasya dravyayor va abhidhitsitaḥ — or the operation of the universal-portion, of the two substances (3.14.402-403). Rupert samanya-vacitvam prag va vṛtter udahrtam: or the expressing of the general from the form, prior to the derivation (3.14.137's samanya-visaya). So: similarity, intended oneness, the jati-portion, and the form — four ways to make the particular a general-expresser, all available, none refuted. This is the samuddesa's method at full extension (3.14.97).

Verse 3.14.428

व्याघ्रशब्दो यदा शौर्यात् पुरुषार्थोऽवतिष्ठते ।
 तदाधिकरणाभेदात् समासस्यास्ति सम्भवः ॥ 428 ॥

vyāghraśabdo yadā śauryāt puruṣārtho'vatiṣṭhate |
 tadādhikaraṇābhedaāt samāsasyāsti sambhavaḥ || 428 ||

When the word 'tiger', by reason of valour, comes to stand for the man-meaning — then, from non-difference of locus, the compound is possible.

Vyaghra-sabdo yada sauryat purusartha 'vatisthate: when the word 'tiger', by reason of valour, comes to stand for the man-meaning — the word has migrated: 'vyaghra' now means the man (3.14.347's the manca stating the people as its reality). Tada adhikarana-abhedat samasasya asti sambhavaḥ: then, from non-difference of locus, the compound is possible. So 'purusa-vyaghra' can compound because both words have come to sit in one place — the man. This is 3.14.417's requirement satisfied: shared locus, and the rules run. The migration is what makes the compound available.

Verse 3.14.429

शूरशब्दप्रयोगे तु व्याघ्रशब्दो मृगे स्थितः ।
भिन्नेऽधिकरणे वर्ततेऽत्र नैवास्ति सम्भवः ॥ 429 ॥

*śūraśabdaprayoge tu vyāghraśabdo mṛge sthitah |
bhinne'dhikaraṇe vṛttestatra naivāsti sambhavaḥ || 429 ||*

But when the word 'brave' is employed, the word 'tiger' stands in the animal; the locus being different, there is no possibility of derivation there.

The contrast, and it is exact. Sura-sabda-prayoge tu vyāghra-sabdo mṛge sthitah: when the word 'brave' is employed, the word 'tiger' stands in the animal — say 'brave as a tiger' and the tiger stays a tiger: the explicit quality-word holds it in place and blocks the migration of 3.14.428. Bhinne 'dhikarane vṛtteh tatra na eva asti sambhavaḥ: the locus being different, there is no possibility of derivation there. So 'sura-vyāghra' will not compound, and 'purusa-vyāghra' will — and the difference is whether the shared quality is said. Saying it keeps the terms apart; leaving it unsaid lets them fuse. This is the finest thing in the comparison-stretch: the simile compounds only when it does not explain itself.

Verse 3.14.430

उष्ट्रावयवतुल्येषु मुखेषूष्ट्रश्रुतिर्यथा ।
वर्तते गृहतुल्ये च प्रासादे मधुराश्रुतिः ॥ 430 ॥

*uṣṭrāvayavatulyeṣu mukheṣūṣṭraśrutiriyathā |
vartate gṛhatulye ca prāsāde madhurāśrutih || 430 ||*

As the word 'camel' operates in faces resembling a camel's part; and the word 'Madhura' in a palace resembling a house.

Two migrations, of the sort 3.14.428 licensed. Ustra-avayava-tulyesu mukhesu ustra-sruti: the word 'camel' operates in faces resembling a camel's part — one calls a man's face a camel, meaning the muzzle: the word travels from a part to a whole that is like the part. Vartate grha-tulye ca prasade madhura-srutiḥ: and the word 'Madhura' in a palace resembling a house — the city's name for a grand building. So words move to whatever resembles what they mean, and the resemblance need not be with the whole: a part will carry the word across (3.14.31's chatrin, whose designation covered his umbrella-less fellows — the samuddesa's opening case). The Vrtti-samuddesa began with names leaking across differences, and it is still tracking the leak four hundred verses later.

Verse 3.14.431

यथाध्ययनयोः साम्यमध्येत्रोरपदिश्यते ।
तथा क्रियागतैर्धर्मैरुच्यन्ते साधनाश्रयाः ॥ 431 ॥

yathādhyaṇanayoh sāmymadhyetrorapadiśyate |
tathā kriyāgatairdharmairucyante sādhanāśrayāḥ || 431 ||

As the similarity of two studyings is designated of the two students — so the substrata of the means are spoken of by properties belonging to the action.

The comparison of actions begins. *Yatha adhyayanayoh samyam adhyetror apadisyate*: as the similarity of two studyings is designated of the two students — the likeness is between the studyings and one says it of the studiers: 'he studies like a brahmin' (3.14.384). *Tatha kriya-gatair dharmair ucyante sadhana-asrayah*: so the substrata of the means are spoken of by properties belonging to the action. So the action's properties are predicated of the persons — the resemblance lives in the studying and is asserted of the student. Which is 3.14.383's inference-across, now running from action to agent.

Verse 3.14.432

इवार्थे यच्च वचनं पूर्वसूत्रे च यो विधिः ।
क्रियाशब्दश्रुतौ भेदो न कश्चित् विद्यते तयोः ॥ 432 ॥

ivārthe yacca vacanam pūrvasūtre ca yo vidhiḥ |
kriyāśabdaśrutau bhedo na kaścit vidyate tayoh || 432 ||

The statement in the sense of 'iva', and the rule in the previous sutra — in the hearing of an action-word there is no difference at all between those two.

Ivarthe yac ca vacanam purva-sutre ca yo vidhiḥ: the statement in the sense of 'iva', and the rule in the previous sutra — two of Panini's provisions for comparison. *Kriya-sabda-srutau bhedo na kascit vidyate tayoh*: in the hearing of an action-word there is no difference at all between those two — na kascit: none whatever. So where the compared thing is an action, the two rules coincide and one of them is idle. This is the samuddesa's standing audit (3.14.40-41, 3.14.106, 3.14.318): rules are checked for redundancy case by case, and the redundancy is reported without recommendation.

Verse 3.14.433

वत्यन्तावयवे वाक्ये यदौपम्यं प्रतीयते ।
तत्प्रत्ययविधौ सूत्रे निर्देशोऽयं विचार्यते ॥ 433 ॥

vatyantāvayave vākye yadaupamyam pratiyate |
tatpratyayavidhau sūtre nirdeśo'yam vicāryate || 433 ||

The comparison cognized in a sentence having a 'vati'-ending member — in the sutra prescribing that affix, this indication is what is considered.

Vaty-antavayave vakye yad aupamyam pratiyate: the comparison cognized in a sentence having a vati-ending member — 'brahmanavat', in the manner of a brahmin: the affix that makes an adverb

of likeness. Tat-pratyaya-vidhau sūtre nirdeśo 'yam vicaryate: in the *sūtra* prescribing that affix, *this indication* is what is *considered*. So the next stretch is an examination of the vati-rule's wording: what exactly does the *sūtra* pick out when it prescribes the comparison-affix? The question sounds technical and it is about what an action is.

Verse 3.14.434

क्रियेत्युपाधिः प्राथम्यात् प्रकृत्यर्थस्य यद्यपि ।
न प्रातिपदिकं तत्र क्रियावाच्युपपद्यते ॥ 434 ॥

kriyetyupādhiḥ prāthamyāt prakṛtyarthasya yadyapi |
na prātipadikam tatra kriyāvāc्यupapadyate || 434 ||

Although 'action' is an adjunct of the base-meaning by primacy — a nominal base expressing action is not possible there.

Kriyety upadhiḥ prathamyaṭ prakṛty-arthasya yady api: although 'action' is an *upadhi* — an adjunct, a qualifying condition (3.14.124's word) — of the *base-meaning*, by *primacy*. Na pratipadikam tatra kriya-vacy upapadyate: a *nominal base expressing action* is not possible there. So the rule requires an action and requires a nominal stem, and a nominal stem cannot express an action: verbs do that. The rule asks for something that cannot exist. This is the difficulty the following verses work over, and it is not verbal — it goes to the categorial gulf between *nama* and *akhyata* that 3.14.337 was already marking.

Verse 3.14.435

सत्त्वृत्तस्य शेषे वा तृतीया साधनेऽपि वा ।
तिङामसत्त्वाचित्वादुभयं तन्न विद्यते ॥ 435 ॥

sattvṛttasya śeṣe vā tṛtīyā sādhanē'pi vā |
tiṅāmasattvācitraḍubhayam tanna vidyate || 435 ||

Or the third case, of what operates in a substance, in the remainder or in the means — from the finite verbs' expressing non-substance, neither of those exists.

Sattva-vṛttasya sese va tṛtiya sadhane 'pi va: the *third case* — the instrumental — of what *operates in a substance*, in the *remainder* or in the *means*: two of the instrumental's uses, both requiring a substance. Tinam asattva-vacitraḍubhayam tan na vidyate: from the *finite verbs'* expressing *non-substance*, *neither* of those exists. Asattva-vacitra: expressing what is not a thing — the standing characterization of what verbs and particles mean (3.14.193). So a verb cannot take the instrumental in either use, because both need a thing and verbs do not supply one. The categorial gulf of 3.14.434 is now producing consequences in the case-system.

Verse 3.14.436

पाकादस्तृतीयान्ताः सत्त्वधर्मसमन्वयात् ।
न क्रियेत्यपदिश्यन्ते कृत्वोर्थप्रत्यये यथा ॥ 436 ॥

*pākādastrītyāntāḥ sattvadharmasamanvayāt |
na kriyetyapadiśyante kṛtvorthapratyaye yathā || 436 ||*

'Paka' and the rest, ending in the third case, are not designated as 'action', from their concomitance with substance-properties — as in the affix in the sense of 'krtvas'.

Pakadas trītyāntah sattva-dharma-samanvayat na kriyety apadisyante: 'paka' and the rest, ending in the *third* case, are not designated as 'action', from their *concomitance with substance-properties* — 'pakena', by cooking: the noun takes a case, and taking a case is a substance's behaviour (3.14.435). So the deverbal noun is not an action for the rule's purposes, however much cooking it names. Krtvo-rtha-pratyaye yatha: as in the *affix* in the sense of 'krtvas' — the frequency-suffix, where the same finding holds. So the rule's 'action' cannot mean deverbal nouns either: they have gone over to the substance side by taking endings.

Verse 3.14.437

ये चाव्ययकृतः केचित् क्रियाधर्मसमन्विताः ।
तेषामसत्त्वाचित्वं तिङन्तैर्न विशिष्यते ॥ 437 ॥

*ye cāvyayakṛtaḥ kecit kriyādharmasamānvitāḥ |
teṣāmasattvācitvam tiṅntairna viśiṣyate || 437 ||*

And those indeclinable krt-forms which are endowed with action-properties — their expressing of non-substance is not distinguished from that of the finite verbs.

Ye ca avyaya-kṛtah kecit kriya-dharma-samānvitah: those *indeclinable krt-forms* — gerunds and infinitives — which are *endowed with action-properties*: these do carry the action, and they take no endings. Tesam asattva-vacitvam tinantair na viśiṣyate: their *expressing of non-substance* is not distinguished from that of the *finite verbs*. So the avyaya-kṛts are on the verb's side of the gulf: they mean actions and they mean no thing, exactly as tin-forms do. Which closes the last door — the rule wanted a nominal stem expressing an action, and everything expressing an action is either a verb or verb-like, and everything nominal has become a substance.

Verse 3.14.438

कृत्वसुन्विषया यापि शयितव्यादिषु क्रिया ।
उपमानोपमेयत्व तत्राप्यन्तमसम्भवि ॥ 438 ॥

*kṛtvasuṇviṣayā yāpi śayitavyādiṣu kriyā |
upamānopameyatva tatrāpyantamasambhavi || 438 ||*

And that action which is the domain of 'krtvasuc', in 'sayitavya' and the rest — there too the comparans-comparandum relation is utterly impossible.

Krtvasuj-visaya yapi sayitavyadisū kriya: the action which is the domain of krtvasuc, in 'sayitavya' (to be slept) and the rest — the gerundives, which do name actions. Upamana-upameyatva tatrapya atyantam asambhavi: there too the comparans-comparandum relation is utterly impossible. So even the gerundive, which looks like a nominal expressing an action, cannot enter a comparison. The catalogue is complete: verb, deverbal noun, indeclinable krt, gerundive — none of them will serve, and 3.14.434's rule still asks for one.

[Contested: Pada d is transmitted as 'tatrapya antam asambhavi', in which 'antam' does not construe. We read 'atyantam' ('utterly'), which requires only the loss of a syllable in transmission and gives the emphatic sense the argument wants. Pada c's 'upamanopameyatva' is likewise metrically short for the expected 'upamanopameyatvam'.]

Verse 3.14.439

न केवलौ द्रव्यगुणौ तद्वान् वाप्युपमीयते ।
शयितव्यादिभिस्तेषु नोपमार्थोऽस्ति कश्चन ॥ 439 ॥

na kevalau dravyaguṇau tadvān vāpyupamīyate |
śayitavyādibhistēṣu nopamārtho'sti kaścana || 439 ||

Neither the bare substance and quality, nor their possessor, is compared; by 'sayitavya' and the rest there is no purpose of comparison in them.

Na kevalau dravya-guṇau tadvān vāpy upamīyate: neither the bare substance and quality, nor their possessor, is compared — the three candidates for what a comparison relates, all declined. Sayitavyadibhis tesu na upamārtho 'sti kaścana: by 'sayitavya' and the rest there is no purpose of comparison in them — na kaścana: none at all (3.14.364's phrase). So gerundives compare nothing to nothing: neither the substance, nor the quality, nor the qualified thing is in play. The failure is total and it is not a failure of the words — it is that actions do not stand still to be compared. 3.14.441-442 will say why.

Verse 3.14.440

उपमानोपमेयत्वे द्रव्ये चानुक्तधर्मिणि ।
निमित्तत्वेन गम्यन्ते रुढयोगाः क्रियागुणाः ॥ 440 ॥

upamānopameyatve dravye cānuktadharminī |
nimittatvena gamyante rūḍhayogāḥ kriyāguṇāḥ || 440 ||

In the comparans-comparandum relation, and in a substance whose property is unstated — the conventionally connected actions and qualities are understood as the cause.

Upamana-upameyatve dravye ca anukta-dharminī: in the comparans-comparandum relation, and in a substance whose property is unstated — anukta-dharminī: nothing said about what it is like (3.14.415's candra-vaktra, where no property was named). Nimittatvena gamyante rudha-yogah kriya-gunah: the conventionally connected actions and qualities are understood as the cause. Rudha-yoga: the connection that convention has settled (3.14.55's rudhi). So when nothing is said, what supplies the tertium is convention: the moon's beauty and not its eclipses, because that is what the moon is conventionally connected with. This is the answer 3.14.415 needed, and it took twenty-five verses to reach it: the selection is made by rudhi.

Verse 3.14.441

होतव्यसदृशो होतेत्यत्राप्यर्थो न विद्यते ।
विरोधात् क्रियया तस्मात् क्रियावान् नोपमीयते ॥ 441 ॥

hotavyasadrśo hotetyatrāpyartho na vidyate |
virodhāt kriyayā tasmāt kriyāvān nopamīyate || 441 ||

'The hotr is like what is to be offered' – here too there is no meaning; from contradiction with the action, therefore, an action-possessor is not compared.

Hotavya-sadrśo hota ity atrapy artho na vidyate: 'the hotr is like what is to be offered' – here too there is no meaning: the priest is not like the oblation, and the sentence is not merely false but empty. Vi-rodhat kriyaya: from contradiction with the action – the offerer and the offered are opposed within the action, and the action's own structure forbids their likeness. Tasmāt kriyavan na upamīyate: therefore an action-possessor is not compared. So the karakas of one action cannot be compared to each other: the action that relates them is what keeps them unlike (3.7's the sadhanas as distinguished capacities; 3.14.390's karmatvam karanatvam ca bhedenā eva asritam).

Verse 3.14.442

क्रिया समानजातीय तद्भावान्नोपमीयते ।
जातिभेदेऽपि पाकेन (वा केन) भिन्नाः पाकादयः क्रियाः ॥ 442 ॥

kriyā samānajātiyā tadbhāvēnnopamīyate |
jātibhede'pi pākena (vā kena) bhinnāḥ pākādayaḥ kriyāḥ || 442 ||

An action of the same class is not compared, from its being that; and even where the class differs, the actions 'cooking' and the rest are differentiated by 'cooking'.

The dilemma for action-comparison, and it is 3.14.363's in a new key. Kriya samana-jatiya tad-bhavan na upamīyate: an action of the same class is not compared, from its being that – identity again: cooking is not like cooking, it is cooking (3.14.394's the cause in the cognition 'cow' exists in another cow). Jati-bhede 'pi pakena bhinnah pakadayah kriyah: and even where the class differs, the actions 'paka' and the rest are differentiated by 'paka' – where the classes differ, the differentiator is the action itself, and there is no neutral ground. So: same class, nothing to compare; different class, nothing shared. Actions admit no comparison at all – which is why 3.14.438-439 failed.

[Contested: The source records a variant at pada d: 'pakena' ('by cooking') against 'va kena' ('or by what?'). We translate the former. On the variant the pada becomes a rhetorical question – 'by what, then, are the actions differentiated?' – which is also apt; the dilemma stands either way.]

Verse 3.14.443

आधारभेदाद् भिन्नायामुपमानस्य सम्भवः ।
अध्येतव्येन विप्राणां तुल्यमध्ययनं विशाम् ॥ 443 ॥

ādhārabhedād bhinnāyāmupamānasya sambhavaḥ |
adhyetavyena viprāṇām.tulyamadhyayanam.viśām || 443 ||

Where it is differentiated by difference of substratum, comparison is possible: 'the vaisyas' study is like the brahmins' studying'.

The exception, and it is the one that saves the whole apparatus. Adhara-bhedad bhinnayam upa-manasya sambhavaḥ: where the action is *differentiated by difference of substratum*, comparison is possible. Adhyetavyena vipranam tulyam adhyayanam visam: 'the study of the vaisyas is like the brahmins' studying'. So one action, two seats, and the seats' difference is what lets the two studyings be compared. 3.14.442's dilemma assumed the action alone; bring in the substrata and the middle ground appears — the studyings are one in kind and two in seat, which is exactly the structure 3.14.396 said a comparison needs. This is why 3.14.431 opened by locating the resemblance in the students.

Verse 3.14.444

अर्थात् प्रकरणाद् वापि यत्रोपेक्ष्यं प्रतीयते ।
सामर्थ्यादिनपेक्षस्य तस्य वृत्तिः प्रसज्यते ॥ 444 ॥

arthāt prakaraṇād vāpi yatropekṣyam.pratīyate |
sāmarthyādanapekṣasya tasya vṛttiḥ prasajyate || 444 ||

Where what is to be expected is cognized from the meaning or from the context — the derivation of that, being independent, follows from capacity.

Arthat prakaranad vapi yatra upekṣyam pratiyate: where what is to be expected is cognized from the meaning or from the context — prakarana: the situation of utterance, one of the meaning-fixing conditions (2.316's list). Samarthyad anapekṣasya tasya vṛttiḥ prasajyate: the derivation of that, being independent, follows from capacity — samarthyā (3.14.414's word). So where sense or context has already supplied what the form would have reached for, the form no longer reaches: it is anapekṣa, independent, and capacity carries the rest. Context makes a word self-sufficient, and self-sufficiency licenses compounding.

Verse 3.14.445

तैलापाकेन तुल्ये च धृतपाके विवक्षिते ।
क्रियावदपि कार्याणां दर्शनात् प्रत्ययो भवेत् ॥ 445 ॥

tailāpākena tulye ca dhṛtapāke vivakṣite |
kriyāvadapi kāryāṇām.darśanāt pratyayo bhavet || 445 ||

And when a ghee-cooking similar to an oil-cooking is intended — from the seeing of operations even as with an action, the affix would occur.

3.14.443's exception given a second instance. Taila-apakena tulye ca ghrta-pake vivaksite: when a ghee-cooking similar to an oil-cooking is intended — two cookings, different substrata, comparable (3.14.443's structure exactly). Kriyavad api karyanam darsanat pratyayo bhavet: from the seeing of operations even as with an action, the affix would occur. So the rules apply to the compared actions as they would to any action, and the vati-affix comes — which is what 3.14.434's difficulty seemed to forbid. The resolution: the rule's 'action' means an action seated, and seated actions behave like nominals because their seats do.

Verse 3.14.446

अतिङ्ग्रहणमेवं तु समासस्य निवर्तकम् ।
गमनं कारकस्येति ण्वुल्यन्यस्मिन्न संभवेत् ॥ 446 ॥

atiṅgrahaṇamevam tu samāsasya nivartakam |
gamanam.kāraṇasyeti ṇvulyanyasminna sambhavet || 446 ||

Thus the taking-up of 'atin' is what excludes the compound; 'the going of the agent' — 'nvul' would not be possible in another.

Atin-grahanam evam tu samasasya nivartakam: thus the taking-up of 'atin' — Panini's 'not a finite verb', in the relevant rule — is what excludes the compound. So the sutra's word 'atin' does the work 3.14.434-437 identified as needed: it keeps finite verbs out, since they are the one thing that cannot enter. Gamanam karakasyeti nvul anyasmin na sambhavet: 'the going of the agent' — 'nvul' would not be possible in another. So the affix is confined to its proper base and cannot migrate. Bhartrhari's habit again: a single word of Panini's turns out to encode a result the karikas take a dozen verses to establish (3.14.225's artha-grahanam krtam).

Verse 3.14.447

सर्वस्य परिहारार्थं समुदायत्वमाश्रितम् ।
शुद्धायाः संभवान्नस्यात् क्रियाया ब्राह्मणादिषु ॥ 447 ॥

sarvasya parihārārtham samudāyatvamāśritam |
śuddhāyāḥ sambhavānnasyāt kriyāyā brāhmaṇādiṣu || 447 ||

For the avoidance of all of it, aggregate-hood is resorted to; from the possibility of the pure action, it would not obtain in 'brahmana' and the rest.

Sarvasya pariharartham samudayatvam asritam: for the avoidance of all of it — every difficulty of 3.14.434-442 — aggregate-hood is resorted to: take the compound as an aggregate and the questions about which member expresses the action lapse (3.14.96's samudayas tv eka eva sah). Suddhayah sambhavan na syat kriyaya brahmanadisū: from the possibility of the pure action, it would not obtain in 'brahmana' and the rest. So the escape works only because a pure, seatless action is not available: if it were, the aggregate-reading would be unnecessary. The device is a last resort and the verse says so — parihara: an evasion, and Bhartrhari calls it one.

Verse 3.14.448

उपमानविवक्षायां स्वधर्मश्च निवर्तते ।
क्रियाया न श्रुताद् यस्मादुपमानं समाप्यते ॥ 448 ॥

upamānavivakṣāyām svadharmas̥ca nivartate |
kriyāyā na śrutād yasmād upamānam samāpyate || 448 ||

When the comparans is intended to be expressed, its own property withdraws; since comparison is not completed from the heard action.

Upamana-vivaksayam sva-dharmas ca nivartate: when the *comparans* is *intended* to be expressed, its *own property withdraws* – the standard's proper nature drops away when it is put to work as a standard (3.14.375's it operates by its own property for the measuring of another: the property is lent out and the thing behind it goes quiet). Kriyaya na srutad yasmad upamanam samapyate: since *comparison is not completed* from the *heard* action. Samapyate: is *finished* (3.14.382's asamapta-guna). So the audible action does not finish the comparison – nothing does (3.14.360) – and meanwhile the standard's own nature has withdrawn. The comparans gives everything and keeps nothing.

Verse 3.14.449

तृतीयाऽप्याश्रितो भेदो धर्मः साधारणो द्वयोः ।
व्यापारवान् न कृत्स्नस्य साम्यं कृत्स्नेन विद्यते ॥ 449 ॥

tr̥tīyā'pyāśrito bhedo dharmah sādharāṇo dvayoh |
vyāpāravān na kṛtsnasya sāmīyam kṛtsnena vidyate || 449 ||

The third case too – the difference resorted to, the property common to the two, engaged in operation; there is no similarity of the whole with the whole.

Trtiya apy asrito bhedah dharmah sadharano dvayoh vyaparavan: the *third case too* – the *difference resorted to*, the *property common to the two, engaged in operation* (3.14.424's sa-vyapara). Na kṛtsnasya samīyam kṛtsnena vidyate: there is *no similarity* of the *whole* with the *whole*. So a comparison never matches its terms entire: only a property, only under an aspect, only partly. Kṛtsnena kṛtsnasya: whole with whole – and if there were such a similarity it would be identity, and there would be no comparison (3.14.363). Every simile is partial by constitution, and the partiality is not a shortfall to be regretted.

Verse 3.14.450

द्रव्ये वापि क्रियायां वा निमित्तात् तत् प्रकल्पते ।
क्रियाणां विद्यमानत्वाद् वृत्तिर्न स्याद् गवादिषु ॥ 450 ॥

dravye vāpi kriyāyām vā nimittāt tat prakalpate |
kriyāṇām vidyamānatvād vṛttirna syād gavādiṣu || 450 ||

In a substance or in an action, that is conceivable from the cause; from the existence of actions, there would be no derivative formation in 'go' and the rest.

Dravye vapi kriyayam va nimittat tat prakalpate: in a substance or in an action, that is conceivable from the cause — the comparison can be lodged either place, so long as an occasioning cause is found. Kriyanam vidyamanatvad vrttir na syad gavadisu: from the existence of actions, there would be no derivative formation in 'go' and the rest. So if any action's mere existence licensed the comparison-affix, then 'go' — which has plenty of actions about it — would take it, and it does not. The cause must be more than the action's being there. This is 3.14.440's rudha-yoga argument in advance: what licenses is convention, not availability.

Verse 3.14.451

अभावात् केवलायास्तु तद्वानर्थः प्रतीयते ।
प्रधानासम्भवे युक्ता लक्षणार्था क्रियाश्रुतिः ॥ 451 ॥

abhāvāt kevalāyāstu tadvānarthah pratiyate |
pradhānāsambhave yuktā lakṣaṇārthā kriyāśrutiḥ || 451 ||

But from the absence of the pure action, the meaning possessing it is what is cognized; when the principal is impossible, the hearing of the action, having indication for its purpose, is proper.

Abhavat kevalayas tu tadvan arthah pratiyate: from the absence of the pure action, the meaning possessing it is what is cognized — there is no seatless action to be got at, so what one reaches is the possessor (3.14.447's the pure action is not available). Pradhana-asambhave yukta laksanartha kriya-srutih: when the principal is impossible, the hearing of the action, having indication for its purpose, is proper. Laksanartha: for the sake of indicating — the action-word becomes a pointer (3.14.170's upalaksana). So where the action cannot be principal, its word demotes itself to an indicator of the possessor — and that demotion is yukta, proper. The rule's 'kriya' means: use the action to point at whoever has it.

Verse 3.14.452

क्रियाधर्मन्तिरेषु सापेक्षाः क्रियाशब्दाः क्रियान्तरे ।
उपकाराय गृह्यन्ते यथैव ब्राह्मणादयः ॥ 452 ॥

kriyādharmāntareṣu sāpekṣāḥ kriyāśabdāḥ kriyāntare |
upakārāya grhyante yathaiva brāhmaṇādayaḥ || 452 ||

Action-words, dependent, in other action-properties, in another action — are taken up for assistance, just as 'brahmana' and the rest are.

Kriya-dharmantaresu sapekṣah kriya-sabdah kriyāntare: action-words, dependent — sapekṣa: reaching (3.14.47's the relatum-word is wholly dependent) — in other action-properties, in another action. Upakaraya grhyante yathaiva brahmanadayah: are taken up for assistance, just as 'brahmana' and the rest are. Upakara: help (3.14.333, 3.14.395). So an action-word in a comparison is an auxiliary, exactly as the base of a nan-compound was: it is brought in to help, and it is not what is meant. The parallel with 'brahmana' is the samuddesa recognizing its own pattern — the negative compound and the comparison-compound do the same thing with their bases.

[Contested: Padas a-b are metrically long in our source ('kriya-dharmantaresu sapekṣah kriya-sabdah

kriyantare”), apparently by dittography of a ’kriya’-element. The construction is not in doubt.]

Verse 3.14.453

यथा प्रकर्षः सर्वत्र निमित्तान्तरहेतुकः ।
द्रव्यवद् गुणशब्देऽपि स निमित्तमपेक्षते ॥ 453 ॥

yathā prakarṣaḥ sarvatra nimittāntarahetukah |
dravyavad guṇaśabde’pi sa nimittamapekṣate || 453 ||

As excellence everywhere is caused by some other cause — so, as in a substance, in a quality-word too it requires a cause.

Yatha prakarsah sarvatra nimittantara-hetukah: as *excellence everywhere* is caused by *some other cause* — prakarsa: superiority, the comparative’s content: nothing is superior in itself, only by reason of something else (3.14.162’s the excess is in the quality, in its own seat). Dravyavad guna-sabde ’pi sa nimittam apeksate: so, as in a substance, in a quality-word too it requires a cause. So the comparative needs its ground wherever it attaches, substance or quality alike. The verse ties the comparison-compound back to 3.14.159-162’s comparatives: both are about excess, and excess is always owed.

Verse 3.14.454

यो य उच्चार्यते शब्दः स स्वरूपनिबन्धनः ।
यथा तथोपमानेषु व्यपेक्षा न निवर्तते ॥ 454 ॥

yo ya uccāryate śabdaḥ sa svarūpanibandhanah |
yathā tathopamāneṣu vyapekṣā na nivartate || 454 ||

Whatever word is uttered, it is grounded in its own form; and since it is so, in the comparanda the mutual expectancy does not withdraw.

Yo ya uccaryate sabdah sa sva-rupa-nibandhanah: *whatever word is uttered, it is grounded in its own form* — sva-rupa-nibandhana: its own shape is what it rests on (3.14.137’s sabda-samskaraḥ rupat; and 1.68’s the word first means itself). Yatha tatha upamanesu vyapekṣa na nivartate: *since it is so, in the comparanda the mutual expectancy does not withdraw*. So because each word stands on its own form, the reaching between them survives compounding — against 3.14.46, where expectancy withdrew inside a compound. The comparison-compound is thus like the relatum-words of 3.14.47: its members go on reaching, because what they reach with is their own form and composition does not take that away.

Verse 3.14.455

कियावृत्तेस्तृतीयान्तस्यैतच्चासंगते सति ।
प्रसिद्धन्यायकरणो भाष्ये युजिरुदाहृतः ॥ 455 ॥

*kiyāvṛttestṛtīyāntasyaitaccāsamgate sati |
prasiddhanyāyakaraṇo bhāṣye yujirudāhṛtaḥ || 455 ||*

And this, of what ends in the third case operating in an action, there being non-connection — 'yuj', having the well-known reasoning for its instrument, is cited in the Bhasya.

Kriya-vrttes trtiyāntasya etac ca asaṁgate sati: this, of what ends in the *third case* operating in an action, there being *non-connection*. Prasiddha-nyaya-karaṇo bhāṣye yujir udāhṛtaḥ: 'yuj' — to join — *having the well-known reasoning for its instrument*, is cited in the Bhasya. So Patanjali's example is 'nyayena yuktaṁ', joined by reasoning: a verb of joining with an instrumental that is a nyaya. Bhartrhari cites the Bhasya rather than argue (3.14.34, 3.14.158, 3.14.166's habit), and the example is about to be used against itself in 3.14.456.

Verse 3.14.456

अन्तर्भूते तु करणे प्रयोगो न पुनर्भवित् ।
न्यायेनायुक्तमित्यत्र जीवतौ प्राणकर्मवत् ॥ 456 ॥

*antarbhūte tu karaṇe prayogo na punarbhavet |
nyāyenāyuktamityatra jīvatau prāṇakarmavat || 456 ||*

But when the instrument is included, the employment would not occur again — as in 'unjoined by reasoning', like the breath-object in 'lives'.

The samuddesa's own great example, returning four hundred verses later. Antarbhute tu karane prayogo na punar bhavet: when the *instrument* is *included*, the *employment* would not occur *again* — if 'yukta' already contains its instrument, one cannot say the instrument over. Nyayena ayuktam ity atra: in 'nyayena ayuktam' — unjoined by reasoning: and here the instrument is said again. Jivatau prana-karmavat: like the *breath-object* in 'jivati' — 3.14.70's decisive case: 'jivati' is glossed 'prana dharayati' and contains neither breaths nor holding, so nothing prevents saying them. Exactly so here: 'ayukta' does not contain its instrument, whatever the gloss says, and 'nyayena' is free to be said. The parallel is Bhartrhari's, it is exact, and it shows the karikas as a single argument.

Verse 3.14.457

शास्त्राभ्यासाय भेदोऽयमयुक्तमिति वर्ण्यते ।
अशोभनमसम्बद्धमिति रुढिर्व्यवस्थिता ॥ 457 ॥

*śāstrābhyāsāya bhedo'yamayuktamiti varṇyate |
aśobhanamasambaddhamiti rūḍhirvyavasthitā || 457 ||*

This distinction is described as 'ayuktam' for the practice of the science; the convention 'improper', 'unconnected' is what is settled.

Sastrabhyasaya bhedo 'yam ayuktam iti varnyate: this *distinction* is described as 'ayuktam' for the *practice of the science* — sastra-abhyasa: the exercise of grammar, its drill. The analysis into 'a-yukta' is a teaching-exercise. Asobhanam asambaddham iti rudhir vyavasthita: the *convention* — 'improper', 'unconnected' — is what is *settled*. Rudhi: what usage has grown into place (3.14.55, 3.14.440). So 'ayukta' means improper by convention, and the derivation from 'yuj' is drill. This is 3.14.267's conclusion for the nan-compound arriving for this word: what fixes the sense is settled usage, and the science's analysis is exercise.

Verse 3.14.458

विविभक्तिः प्रकृत्यर्थं प्रत्युपाधिः कथं भवेत् ।
विभक्तिपरिणामे च प्रकल्प्यं विषयान्तरम् ॥ 458 ॥

vivibhaktiḥ prakṛtyartham pratyupādhiḥ katham bhavet |
vibhaktipariṇāme ca prakalpyam viṣayāntaram || 458 ||

How could a case-ending be an adjunct with regard to the base-meaning? And in the transformation of the case-ending, another domain must be imagined.

Vibhaktiḥ prakṛty-artham praty upādhiḥ katham bhavet: *how* could a *case-ending* be an *upadhi* — an adjunct, a conditioning qualifier (3.14.124) — with regard to the *base-meaning*? The ending is outside the stem; it cannot condition what the stem means. Vibhakti-parinama ca prakalpyam viṣayāntaram: and in the *transformation* of the case-ending, *another domain* must be *imagined* — prakalpya: to be constructed. So a rule that makes the ending qualify the base needs both an impossible conditioning and an invented domain to change into. Katham: how — the question is not answered, and the following verses show what one has to build to answer it.

Verse 3.14.459-460

विभक्त्यन्तरयोगो हि यस्य तद्विषयान्तरे ।
विभक्त्यन्तरसम्बन्धः सामर्थ्यादिनुमीयते ॥ 459 ॥
सारूप्यात् तु तदेवेदमिति तत्रोपचर्यते ।
शब्दान्तरे विभक्त्या तु युक्तं शास्त्रे तदश्रुतम् ॥ 460 ॥

vibhaktyantarayogo hi yasya tadviṣayāntare |
vibhaktyantarasambandhaḥ sāmartyādanumīyate || 459 ||
sārūpyāt tu tadevedamiti tatropacaryate |
śabdāntare vibhaktyā tu yuktam śāstre tadaśrutam || 460 ||

(459) For that which has connection with another case-ending — in another domain of it, connection with another case-ending is inferred from capacity. (460) But from likeness of form, 'this is that very one' is there figuratively applied; whereas in another word, joined with a case-ending — that is not heard in the science.

(459): vibhakty-antara-yogo hi yasya tad-visayāntare vibhakty-antara-sambandhah samarthyad anumīyate — for what has connection with another case-ending, in another domain of it, a connection with another case-ending is inferred from capacity. So the invented domain of 3.14.458 gets its ending by inference, not by rule. (460): sarūpyat tu tad eva idam iti tatra upacaryate — but from likeness of

form, 'this is that very one' is there *figuratively applied* (3.14.391's *sa eva ayam*; 3.14.284's *upacaryate*). Sabdantare vibhaktya tu yuktam sastre tad asrutam: but in *another word*, joined with a *case-ending* — that is not heard in the science. Asrutam: not heard, i.e. Panini nowhere says it. So the whole construction rests on an inference, a figure, and something the grammar never states. Bhartrhari lays the scaffolding bare and leaves it standing.

Verse 3.14.461

प्रकृतिश्चेत् तृतीयान्ता तेनेत्यस्मात् प्रतीयते ।
क्रियेति प्रथमान्ता सा कथं भवितुमर्हति ॥ 461 ॥

prakṛtiścet tṛtīyāntā tenetyasmāt pratiyate |
kriyeti prathamāntā sā katham bhavitumarhati || 461 ||

If the base ends in the third case, it is cognized from 'tena'; how can that, being 'kriya' ending in the first case, be proper?

Prakṛtis cet tṛtīyanta tena ity asmat pratiyate: if the base ends in the *third* case, it is cognized from 'tena' — the sutra's word 'tena' shows an instrumental is wanted. Kriyeti prathamanta sa katham bhavitum arhati: how can *that*, being 'kriya' ending in the *first* case, be *proper*? — the sutra's other word, 'kriya', is a nominative. So the rule says 'tena' and 'kriya' and the two cases will not agree: one demands an instrumental base and the other supplies a nominative. Katham... arhati: how can it be right? The sutra appears to contradict itself, and 3.14.462 presses the point.

Verse 3.14.462

क्रियेति तृतीया च प्रयोगे कस्य कल्प्यताम् ।
तेनेत्यस्य हि सम्बन्धः सूत्रस्थेन न विद्यते ॥ 462 ॥

kriyayeti tṛtīyā ca prayoge kasya kalpyatām |
tenetyasya hi sambandhaḥ sūtrasthena na vidyate || 462 ||

And in the employment 'kriyaya', the third case — for whom is it to be imagined? For the connection of 'tena' with what stands in the sutra does not exist.

Kriyaya iti tṛtīya ca prayoge kasya kalpyatam: in the employment 'kriyaya' — the instrumental of 'kriya', which the rule seems to need — the *third case*: for whom is it to be *imagined*? Kalpyatam: let it be imagined — the imperative is 3.14.253's sardonic one. Tena ity asya hi sambandhaḥ sūtra-sthena na vidyate: for the *connection* of 'tena' with *what stands in the sutra* does not exist. So there is nothing in the rule for 'tena' to connect with, and the instrumental one must supply has no owner. The sutra as it stands does not construe. Bhartrhari has been reading Panini generously for four hundred verses; here he reports that a rule will not parse, and does not soften it.

Verse 3.14.463

सोपस्कारेषु सूत्रेषु वाक्ये शेषः समर्थ्यते ।
तेन यत् तत् तृतीयान्तं क्रिया चेत् सेति गम्यते ॥ 463 ॥

sopaskāreṣu sūtreṣu vākya śeṣaḥ samarthyate |
tena yat tat tṛtīyāntam kriyā cet seti gamyate || 463 ||

In sutras requiring supplementation, the remainder is justified in the sentence; therefore, of what ends in the third case — if it is an action, 'that one' is understood.

The answer to 3.14.461-462, and it is a concession dressed as a solution. Sopaskaresu sutresu vakye sesah samarthyate: in sutras *requiring supplementation* — sopaskara: needing to be filled out — the *remainder is justified in the sentence*: the missing words are supplied from the running context of the Astadhyayi. Tena yat tat tṛtīyāntam kriya cet sa iti gamyate: *therefore*, of what ends in the *third* case — if it is an action, 'that one' is understood. So the rule construes once one supplies a pronoun that Panini did not write. 3.14.462 said the connection does not exist; here it is manufactured. Sopaskara is the technical name for the manufacture, and the samuddesa uses it without pretending it is discovery.

Verse 3.14.464

उपाधेः कस्यचिद् वाक्ये प्रयोग उपलभ्यते ।
प्रतीयमानधर्मान् यो न कदाचित् प्रयुज्यते ॥ 464 ॥

upādheḥ kasyacid vākya prayoga upalabhyate |
pratīyamānadharmān yo na kadācit prayujyate || 464 ||

The employment of some adjunct is found in a sentence; that which has the cognized properties is never employed.

Upadheh kasyacid vakye prayoga upalabhyate: the *employment of some adjunct is found in a sentence* — some upadhis do get said. Pratiyamana-dharma yo na kadacit prayujyate: that which has the *cognized properties is never employed* — na kadacit: at no time. So there are two kinds of conditioning element: the ones that show up in the sentence, and the ones that carry what is actually understood and never show up at all. The second kind is the interesting one, and 3.14.465 gives the example that makes it undeniable.

[Contested: Pada c is transmitted as 'pratiyamana-dharman' (accusative plural), which will not construe with the relative 'yah' and the singular verb. We read a nominative singular 'pratiyamana-dharma' ('that which has the cognized properties'), a minimal correction.]

Verse 3.14.465

नीलमुत्पलमित्यत्र न विशेष्ये न भेदके ।
कश्चित् तद्धर्मवचनो वाक्ये शब्दः प्रयुज्यते ॥ 465 ॥

nīlamutpalamityatra na viśeṣye na bhedake |
kaścit taddharmavacano vākyaḥ śabdaḥ prayujyate || 465 ||

In 'blue lotus,' neither in the qualified nor in the differentiator is any word expressing that property employed in the sentence.

The example, and it is perfectly chosen. Nilam utpalam ity atra na viśeṣye na bhedake: in 'nilam utpalam' – the blue lotus – *neither* in the *qualified* nor in the *differentiator*. Kascit tad-dharma-vacano vakyē sabdah prayujyate: *is any word expressing that property employed in the sentence*. So: what makes 'nila' qualify 'utpala' rather than the reverse, what makes them co-refer at all – the relation itself – is said by neither word and by no third word. The sentence has two words and conveys three things. This is 3.14.9-11's kṛsnas tilah and 3.3's the unsayable relation, and here it is used to show that the sentence's most important element is always unemployed.

Verse 3.14.466

अत्यन्तानुगमात् तत्र न सूत्रे न च विग्रहे ।
विभक्तिपरिणामेन किञ्चिदस्ति प्रयोजनम् ॥ 466 ॥

atyantānugamāt tatra na sūtre na ca vighrahe |
vibhaktipariṇāmena kiñcidasti prayojanam || 466 ||

From the utter concomitance there, there is no purpose at all – neither in the sutra nor in the analysis – in a transformation of the case-ending.

Atyanta-anugamat tatra: from the *utter concomitance* there – atyanta-anugama: the two go together completely; blue and lotus are simply co-present in the cognition. Na sūtre na ca vighrahe vibhakti-parināmena kincid asti prayojanam: *there is no purpose at all – neither in the sutra nor in the analysis – in a transformation of the case-ending* (3.14.458's device). So where the concomitance is total, the elaborate machinery of case-transformation has nothing to do: nothing needs converting, because nothing was ever apart. This retires 3.14.458-460's whole construction for the cases that matter most – which is where 3.14.465 was heading.

Verse 3.14.467

तृतीयान्तं क्रियेत्येतद् विग्रहे न प्रयुज्यते ।
यथा दण्डः प्रहरणं क्रीडायामिति दृश्यते ॥ 467 ॥

tr̥tīyāntam kriyetyetad vighrahe na prayujyate |
yathā daṇḍaḥ praharaṇam kṛīḍāyāmiti dṛśyate || 467 ||

The third-case-ending 'kriya' is not employed in the analysis; as 'the staff is the weapon in the play' is seen.

Trtiyantam kriyety etad vighrahe na prayujyate: the *third-case* form of 'kriya' is not employed in the analysis — the instrumental 3.14.462 demanded never appears in any actual vighraha. Yatha dandah praharanam kridayam iti drsyate: as 'the staff is the weapon in the play' is seen — the analysis of 'danda-praharanam kridayam', a compound in Panini's play-and-livelihood class (3.14.40). And the analysis has no instrumental in it. So the rule's supposed requirement is contradicted by the analyses the grammar itself gives. Drsyate: it is seen — the argument is observation of practice, as always (3.14.114).

Verse 3.14.468

घविधौ घश्च संज्ञायामिति सूत्र उदाहृतम् ।
उपादानं प्रयोगेषु तस्यात्यन्तं न विद्यते ॥ 468 ॥

ghavidhau ghaśca samjñāyāmiti sūtra udāhṛtam |
upādānam.prayogeṣu tasyātyantam.na vidyate || 468 ||

In the rule for 'gha', 'and gha, in a name' is cited in the sutra; its taking-up is never found in usages.

Gha-vidhau ghas ca samjnayam iti sutra udahrtam: in the rule for 'gha', 'ghas ca samjnayam' is cited in the sutra. Upadanam prayogesu tasya atyantam na vidyate: its taking-up in usages is never found — atyantam na vidyate: not at all, ever. So the rule mentions a condition that no actual usage exhibits. This pairs with 3.14.467: there the analysis lacked what the rule demanded; here the usage lacks what the rule mentions. The grammar's apparatus and the language's practice are not in correspondence, and Bhartrhari has stopped treating each mismatch as a puzzle to solve (3.14.74's attitude).

Verse 3.14.469

यैरप्रयुक्तैः संस्कारः प्रधानेषु प्रतीयते ।
ते भेदेऽपि विभक्तीनां निर्दिश्यन्त उपाधयः ॥ 469 ॥

yairaprayuktaiḥ samśkāraḥ pradhāneṣu pratiyate |
te bhede'pi vibhaktīnām.nirdiśyanta upādhayaḥ || 469 ||

Those adjuncts by which, though unemployed, the formation is cognized in the principals — they are indicated, even where the case-endings differ.

Yair aprayuktaiḥ samskarah pradhanesu pratiyate: those by which, though unemployed, the formation is cognized in the principals — aprayukta: never said (3.14.464's na kadacit prayujyate). Te bhede 'pi vibhaktinam nirdisyanta upadhyayah: they are indicated, even where the case-endings differ — nirdisyante: they are pointed to, though not said. So the resolution: the sutra's 'kriya' and 'tena' are indications of unemployed adjuncts, not descriptions of forms that occur. The case-clash of 3.14.461 dissolves because the two words are not both describing the base — they are pointing at conditions that never appear. The rule is notation (3.14.78).

Verse 3.14.470

समुदायेषु वर्तन्ते भावानां सहचारिणाम् ।
शब्दास्तत्त्वाविवक्षायां समुच्चयविकल्पयोः ॥ 470 ॥

samudāyeṣu vartante bhāvānām saḥacāriṇām |
śabdāstattvāvivakṣāyām samuccayavikalpayoḥ || 470 ||

Words operate in the aggregates of accompanying states, when reality is not intended to be expressed — in accumulation and in alternation.

Samudayesu vartante bhavanam saḥacarinaṁ sabdah: words operate in the aggregates of accompanying states — saḥacarin: what goes along (3.14.31's bhīnesu saḥacarisu; 3.14.222's sambandha-saḥacarini). Tattva-avivaksayam: when reality is not intended to be expressed — tattva: the thing as it is; avivakṣa: not meant to be said. Samuccaya-vikalpayoḥ: in accumulation and in alternation (3.14.191's two of the particle's senses). So words never touch the states themselves — they operate on bundles of what accompanies them, and they do so precisely where reality is not what one means to say. Tattva-avivaksayam is the phrase to keep: speech works by not intending the thing.

Verse 3.14.471

मुच्चयस्तु क्रियते येषु प्रत्यर्थवृत्तिषु ।
भेदाधिष्ठानया योगस्तेषां भवति सङ्ख्यया ॥ 471 ॥

muccayastu kriyate yeṣu pratyarthavṛttiṣu |
bhedādhiṣṭhānayā yogasteṣāṁ bhavati saṅkhyayā || 471 ||

But those, operating in each meaning, in which accumulation is made — they have connection with a number based on difference.

Samuccayas tu kriyate yeṣu praty-ārtha-vṛttiṣu: those, operating in each meaning — praty-ārtha-vṛtti: distributively, one to each — in which accumulation is made. Bheda-adhiṣṭhānaya yogas tesam bhavati saṅkhyaya: they have connection with a number based on difference — bheda-adhiṣṭhāna: resting on difference. So where the words go one-to-one and are then heaped, the number that results is a difference-number: a plural in the ordinary sense, not 3.14.99's abheda-ekatva. The contrast is exact: fuse the members and get non-different unity; distribute and heap them and get a plural. Which one obtains depends on the mode of operation, not on the things.

Verse 3.14.472

सर्वैर्विशिष्टास्तैरर्थैर्जन्यन्ते सहचारिभिः ।
बुद्ध्यः प्रतिपत्तृणां शब्दार्थास्तानतो विदुः ॥ 472 ॥

sarvairviśiṣṭāstairarthairjanyante saḥacāribhiḥ |
buddhayaḥ pratipattṛṇām śabdārthāṁstānato viduḥ || 472 ||

The cognitions of comprehenders are produced as specified by all those accompanying meanings; therefore they know those to be the word-meanings.

Sarvair visistas tair arthair janyante saha-caribhiḥ buddhayah pratipattnam: the cognitions of comprehenders are produced as specified by all those accompanying meanings — every accompanying meaning shapes the cognition; none is left out. Sabdarthams tan ato viduh: therefore they know those to be the word-meanings. So what a word means is what shaped the cognition it produced — and since the accompaniers all shaped it, they are all the meaning. This is a striking criterion: the word-meaning is defined backwards from the cognition, and it is therefore as wide as the cognition's causes. Nothing is excluded for being merely contextual.

Verse 3.14.473

संस्पृष्टाः प्रत्ययेष्वर्थाः सर्व एवोपकारिणः ।
तेषां प्रत्ययरूपेण सर्वेषां शब्दवाच्यता ॥ 473 ॥

samśṛṣṭāḥ pratyayeṣv arthāḥ sarva evopakāriṇaḥ |
teṣāṃ pratyayarūpeṇa sarveṣāṃ śabdavācya-tā || 473 ||

In the cognitions the meanings are all conjoined, all assisting; of all of them there is expressibility by the word, in the form of the cognition.

Samsrstah pratyayesv arthah sarva eva upakarinah: in the cognitions the meanings are all conjoined, all assisting — samsrsta: mingled (3.14.92's samsrsteh; 3.14.367's vyatikirna). Tesam pratyaya-rupena sarvesam sabda-vacyata: of all of them there is expressibility by the word, in the form of the cognition — pratyaya-rupena: under the cognition's own shape. So everything mingled in the cognition is expressed — but only as the cognition has it, not as it is in itself. Sabda-vacyata is granted to all and qualified by pratyaya-rupena: words say everything, and say it all in the shape thought gave it. This is 3.14.470's tattva-avivaksa stated positively.

Verse 3.14.474

केवलानां तु भावानां न रूपमवधार्यते ।
अनिरूपितरूपेषु तेषु शब्दो न वर्तते ॥ 474 ॥

kevalānām tu bhāvānām na rūpamavadhāryate |
anirūpitarūpeṣu teṣu śabdo na vartate || 474 ||

But of bare states, the form is not determined; and in them, whose form is undetermined, the word does not operate.

The conclusion, and it is one of the work's central sentences. Kevalanam tu bhavanam na rupam avadharyate: of bare states, the form is not determined — kevala: alone, uncombined; avadharyate: is ascertained, fixed. A thing by itself has no determinate form, because determination is what its accompaniers do (3.14.350's the principal has no own-form, from non-determination). Anirupita-rupesu tesu sabdo na vartate: in them, whose form is undetermined, the word does not operate. So words cannot reach anything bare — not because words are weak but because bare things have no shape to be reached. Every word-meaning is a meaning-in-company (3.14.472), and there is no such thing as the thing itself for language to fail at.

Verse 3.14.475

पूर्वशब्दप्रयोगाच्च समूहान्न निवर्तते ।
वर्ततेऽवयवे वापि नोपात्तं त्यजति क्वचित् ॥ 475 ॥

*pūrvaśabdaprayogācca samūhānna nivartate |
vartate'vayave vāpi nopāttam.tyajati kvacit || 475 ||*

And from the employment of the earlier word, it does not withdraw from the aggregate; or else it operates in the member; it never abandons what has been taken up.

Purva-sabda-prayogac ca samuhan na nivartate: from the *employment of the earlier word*, it does not *withdraw* from the *aggregate*. Vartate 'vayave vapi: or else it operates in the *member*. Na upattam tyajati kvacit: it *never abandons* what has been *taken up* — kvacit: ever. So a word may sit on the whole or on the part, and whichever it took, it keeps: nothing it has once grasped is let go. This is the principle behind 3.14.264-266's paradox (the half-done thing is done and not done): an aggregate-word retains both applications, and the retention is what generates the contradiction. Here it is stated as a law: words do not release.

Verse 3.14.476

समुदायाभिधायी च यदि भेदं विशेषयेत् ।
तत्रातुल्यविभक्तित्वं पूर्वकायादिवद् भवेत् ॥ 476 ॥

*samudāyābhidhāyī ca yadi bhedaṁ viśeṣayet |
tatrātulyavibhaktitvam.pūrvakāyādivad bhavet || 476 ||*

And if what expresses the aggregate were to qualify the difference — there would be non-equal case-endings, as in 'the fore-body' and the rest.

Samudayabhidhayi ca yadi bhedaṁ viśeṣayet: if what *expresses the aggregate* were to *qualify the difference* — the whole-word made into a qualifier of a part. Tatra atulya-vibhaktitvam purva-kayadivad bhavet: there would be *non-equal case-endings*, as in '*purva-kaya*' (the fore-part of the body) and the rest — the class of compounds where the members take different cases in the analysis ('kayasya purvam'). So the qualification would force a case-mismatch and turn every aggregate-word into a purva-kaya. The consequence is formal and it blocks the reading. This is the samuddesa's habitual test: propose a semantics, run it through the case-system, see what breaks.

Verse 3.14.477

समूहे च प्रदेशे च पञ्चावा इति दृश्यते ।
तथा विशेषणं सर्वं इत्येतदुपपद्यते ॥ 477 ॥

*samūhe ca pradeśe ca pañcāvā iti dṛśyate |
tathā viśeṣaṇam.sarva ityetadupapadyate || 477 ||*

In the aggregate and in the specific instance alike, 'five sheep' is seen; thus the qualifier 'all' is proper.

Samuhe ca pradese ca pancava iti drsyate: in the *aggregate* and in the *specific instance* alike, 'five sheep' is *seen* – the phrase serves for the flock and for the individual beasts, indifferently: 3.14.475's the word does not abandon either. Tatha visesanam sarva ity etad upapadyate: *thus the qualifier 'all' is proper* – 'all five sheep' construes, and it construes because the phrase already holds both applications. So 'sarva' can qualify because there is a plurality in there to be totalized, and there is a plurality because the aggregate-word kept its distributive grip. The little word 'sarva' is evidence for the law of 3.14.475.

Verse 3.14.478

तथार्धपिप्पलीत्यत्र जात्यन्तरनिवृत्तये ।
अर्धं च पिप्पली चेति खण्डे शब्दः प्रयुज्यते ॥ 478 ॥

tathārdhapiplītyatra jātyantaranivṛttaye |
ardham.ca pippalī ceti khaṇḍe śabdaḥ prayujyate || 478 ||

So in 'half a pepper': for the exclusion of another class, 'a half, and a pepper', the word is employed for the piece.

Tatha ardha-pippali ity atra: so in 'ardha-pippali' – half a long-pepper. Jaty-antara-nivṛttaye: for the *exclusion of another class* – the half must still be pepper and not something else: cut a pepper in half and each half is pepper (against 3.14.298's dewlapless cow, which was a different animal). Ardham ca pippali ca iti khaṇḍe śabdaḥ prayujyate: 'a half, and a pepper' – the word is *employed for the piece*. So 'pippali' applies to the fragment, and the compound's analysis makes both members co-refer to it. The class survives the cutting, and it survives because 3.14.475's word does not release its grip on the member when the whole is broken.

Verse 3.14.479

मात्राणां हि तिरोभावे परिमाणं न विद्यते ।
कुमार्य इति तेन स्यात् कुमार्या भेदसम्भवात् ॥ 179 ॥

mātrāṇām.hi tirobhāve parimāṇam.na vidyate |
kumārya iti tena syāt kumāryām.bhedasambhavāt || 179 ||

For in the disappearance of the measures, the measure does not exist; therefore 'kumaryah' would come about, from the possibility of difference in 'kumari'.

This verse is identical to 3.14.179, and our source numbers it '179' here – the second such doubling in this samuddesa (see 3.14.421, which repeats 3.14.121). Its argument belongs to the number-analysis of 3.14.175-179, where it drew the consequence that on the universal-account the plural must come from the individual girls. It has no work to do among the aggregate-and-part verses that surround it here. We print it where the source prints it, and record the repetition.

[Contested: The doubling at 3.14.421/121 and here at 3.14.479/179 stands at an interval of 300 verses in both cases, which suggests a mechanical fault in the transmission – a repeated exemplar-page or a systematic mis-numbering – rather than two independent scribal slips. A reader with the critical editions to hand should establish whether either verse is attested at its second position.]

Verse 3.14.480

असिद्धास्तु विशेषेण समुदाये व्यवस्थिताः ।
प्रदेशे दर्शनं तेषामर्थप्रकरणादिभिः ॥ 480 ॥

asiddhāstu viśeṣeṇa samudāye vyavasthitāḥ |
pradeśe darśanam, teṣāmarthaprakaraṇādibhiḥ || 480 ||

But not being established specifically, they stand settled in the aggregate; their being seen in the specific instance is by meaning, context and the rest.

Asiddhas tu viśeṣeṇa samudāye vyavasthitāḥ: not established specifically, they stand settled in the aggregate — a word's default seat is the whole, and the particular application is not fixed by anything in the word. Pradeśe darśanam tesam artha-prakaranadibhiḥ: their being seen in the specific instance is by meaning, context and the rest — the meaning-fixing conditions (3.14.444's arthat prakaranad vapi; 2.316's classical list). So: aggregate by default, particular by context. This is the settled form of 3.14.475's the word never abandons what it took: it holds the whole always and the part when the situation asks.

Verse 3.14.481-482

यदुपव्यञ्जनं जातेः सहचारि च कर्मसु ।
तत्र वा रुढसम्बन्धं यत् प्रायेणापलक्षितम् ॥ 481 ॥
समुदायः प्रदेशो वेत्येवं तस्मिन्ननाश्रिते ।
अर्थात्मन्यविशेषेण वर्तन्ते ब्राह्मणादयः ॥ 482 ॥

yadupavyañjanam jāteḥ saha-cāri ca karmasu |
tatra vā rūḍhasambandham yat prāyeṇāpalakṣitam || 481 ||
samudāyaḥ pradeśo vetyevam tasminnanāśrite |
arthātmanyaviśeṣeṇa vartante brāhmaṇādayaḥ || 482 ||

(481) That indication of the universal, and the accompanier in the actions, or what has a conventional connection there, which is for the most part unmarked — (482) 'aggregate or specific instance': thus, when that is not resorted to, 'brahmana' and the rest operate in the meaning-self without specification.

(481): yad upavyañjanam jāteḥ saha-cāri ca karmasu — the indication of the universal (upavyañjana: 3.14.83's accompanying sign), and the accompanier in the actions. Tatra vā rūḍha-sambandham yat prayeṇa apalakṣitam: or what has a conventional connection there (3.14.440's rūḍha-yoga), which is for the most part unmarked — prayeṇa apalakṣita: mostly leaving no mark (3.14.140's alakṣitaḥ). (482): samudāyaḥ pradeśo va ity evam tasminnanāśrite — 'aggregate or specific instance': when that — the choice — is not resorted to. Arthatmanyaviśeṣeṇa vartante brāhmaṇādayaḥ: 'brahmana' and the rest operate in the meaning-self without specification. So where nothing forces the choice, the word does not make it: it sits on the meaning-self, unspecified. Aviseṣeṇa is the resting state of every word, and specification is always something done to it.

Verse 3.14.483

यश्च तुल्यश्रुतिर्दृष्टः समुदाये व्यवस्थितः ।
तेनोपचरितैकत्वं प्रदेशेऽप्युपलभ्यते ॥ 483 ॥

yaśca tulyaśrutirddāṣṭaḥ samudāye vyavasthitaḥ |
tenopacaritaikatvam.pradeśe'pyupalabhyate || 483 ||

And that which, being of like hearing, is seen settled in the aggregate — by it a figurative oneness is apprehended in the specific instance too.

Yas ca tulya-srutir drstah samudaye vyavasthitaḥ: that which, being of *like hearing* — the same audible word — is *seen settled* in the *aggregate*. Tena upacaritaikatvam pradese 'py upalabhyate: by it, a *figurative oneness* is *apprehended* in the *specific instance* too — upacarita-ekatva: a oneness by transfer (3.14.284's upacaryate). So because the word sounds the same on the whole and on the part, one takes the two to be one — figuratively. The identity of whole and part is an effect of the word's identity: the sound is one, and so the thing seems one. This is 3.14.325's reflection in a homelier setting — a likeness of form producing an apparent transfer.

Verse 3.14.484

संस्कारादुपघाताद् वा वृत्तोऽक्तपरिमाणके ।
तैलादौ जातिशब्दोऽत्र सामर्थ्यादवसीयते ॥ 484 ॥

samśkāradupaghātād vā vṛtto'ktaparimāṇake |
tailādaū jātiśabdo'tra sāmāthyādavasīyate || 484 ||

From preparation or from damage, operating in what has unstated measure — the universal-word in 'oil' and the rest is here determined from capacity.

Samskarad upaghatad va vṛtto 'kta-parimanake: from *preparation* or from *damage*, operating in what has *unstated measure* — akta-parimanaka: no quantity said. Tailadau jati-sabdo 'tra samarthyad avasiyate: the *universal-word* in 'oil' and the rest is *determined from capacity*. So 'oil' names a kind and no amount, and whether a given use means the pot of it or the drop is settled by capacity — by whether it was prepared or spoiled, which tells you how much was in question. Mass-terms have no built-in individuation and the context supplies it (3.14.480's artha-prakaranadibhiḥ). The verse is a small, exact observation about a class of nouns the grammar had no separate category for.

Verse 3.14.485

न जातिगुणशब्देषु मूर्तिभेदो विवक्षितः ।
ते जातिगुणसम्बन्धभेदमात्रनिबन्धनाः ॥ 485 ॥

na jātiguṇaśabdeṣu mūrtibhedo vivakṣitaḥ |
te jātiguṇasambandhabhedamātranibandhanāḥ || 485 ||

In universal-words and quality-words, difference of bodily form is not intended; they rest on mere difference of connection with universal and with quality.

Na jati-guna-sabdesu murti-bhedo vivaksitah: in *universal-words* and *quality-words*, *difference of bodily form* is *not intended* — murti: the shaped body; and it is avivaksita (3.14.176's device). Te jati-guna-sambandha-bheda-matra-nibandhanah: they rest on *mere difference of connection* with *universal* and with *quality*. Bheda-matra: nothing but the difference in the connecting. So 'cow' and 'white' do not care about bodies: what differentiates their applications is only how the kind or the quality is connected, and the physical individual is not in view. This is why 3.14.484's oil worked — a mass-term has no murti to be differentiated by, and none of these words needed one.

Verse 3.14.486

कृष्णादिव्यपदेशश्च सर्ववियववृत्तिभिः ।
गुणैस्तेऽप्येकदेशस्थाः पटादीनां विशेषकाः ॥ 486 ॥

krṣṇādivyapadeśaśca sarvāvayavavṛttibhiḥ |
guṇaiste'pyekadeśasthāḥ paṭādīnām viśeṣakāḥ || 486 ||

And the designation 'black' and the rest is by qualities operating in all the members; those too, residing in one part, are differentiators of cloths and the rest.

Kṛsnadi-vyapadesas ca sarva-avayava-vṛttibhiḥ gunaiḥ: the designation 'black' and the rest is by *qualities* operating in *all the members* — the cloth is black because every thread is. Te 'py ekadesa-sthah patadinam visesakah: those too, residing in *one part*, are *differentiators* of cloths and the rest — a quality in a single part still differentiates the whole cloth. So the quality qualifies from everywhere and from anywhere: total presence and partial presence both do the job. Which is 3.14.475's law again — the word does not release either application — now for quality-terms.

Verse 3.14.487

पटावयववृत्तास्तु यदा तत्र पटादयः ।
तदा तैलादिवत् तेषां जातिशब्दत्वमुच्यते ॥ 487 ॥

paṭāvayavavṛttāstu yadā tatra paṭādayaḥ |
tadā tailādivat teṣāṃ jātiśabdatvamucyate || 487 ||

But when 'cloth' and the rest operate in the cloth's members — then, like 'oil' and the rest, their being *universal-words* is stated.

Pata-avayava-vṛttas tu yadā tatra paṭādayaḥ: when 'pata' and the rest operate in the *cloth's members* — one calls a scrap of cloth 'cloth'. Tada tailadivat tesam jati-sabdatvam ucyate: then, like 'taila' and the rest, their being *universal-words* is stated. So 'cloth' behaves as a mass-term when it applies to its own fragments: any piece of cloth is cloth, as any drop of oil is oil (3.14.484). The parallel is sharp — a count-noun turns into a mass-noun when it distributes over parts, and the grammar registers the shift by calling it a jati-sabda. The observation is precise and modern-sounding, and it is 3.14.478's ardha-pippali generalized.

Verse 3.14.488

निवृत्त्यर्था श्रुतिर्येषां भेदस्तेष्वनपेक्षितः ।
प्रदेसे समुदाये वा गुणोऽन्येषां निवर्तकः ॥ 488 ॥

*nivṛttyarthā śrutiryeṣāṃ.bhedasteṣvanapekṣitaḥ |
pradese samudāye vā guṇo'nyeṣāṃ.nivartakaḥ || 488 ||*

Those whose hearing has exclusion for its purpose – in them difference is not required; in the specific instance or in the aggregate, the quality is the excluder of others.

Nivṛtty-artha srutir yesam bhedas tesv anapeksitah: those whose *hearing* has *exclusion* for its *purpose* – in them *difference* is *not required*: where a word is there to exclude, one need not settle which thing it applies to (3.14.142's yad yad asriyate tat tad anyasya vinivartakam). Pradese samudaye va guṇo 'nyesam nivartakah: in the *specific instance* or in the *aggregate*, the *quality* is the *excluder of others*. So the exclusion works either way – on the part or on the whole, indifferently – because excluding does not require knowing what one is excluding from. This is why 3.14.482's avisesena was tolerable: an unspecified word still excludes.

Verse 3.14.489

ब्राह्मणाध्ययेन तत्र वर्तते ब्राह्मणश्रुतिः ।
सादृश्यं तत्र दृष्टं हि क्षत्रियाध्ययनादिभिः ॥ 489 ॥

*brāhmaṇādhyayena tatra vartate brāhmaṇaśrutih |
sādrśyam.tatra drṣṭam.hi kṣatriyādhyayanādibhiḥ || 489 ||*

There, the word 'brahmana' operates by the brahmin's studying; for similarity is seen there with the ksatriya's studying and the rest.

The vati-comparison, resumed from 3.14.431. Brahmana-adhyayanena tatra vartate brahmana-srutih: the word '*brahmana*' – in '*brahmanavat*', in the brahmin's manner – operates *by the brahmin's studying*. Sadrśyam tatra drṣṭam hi ksatriya-adhyayanadibhiḥ: for *similarity* is *seen* there with the *ksatriya's studying* and the rest. So the word reaches the brahmin's studying and the comparison is between the two studyings. This is 3.14.443's structure – one action, two seats – and the question 3.14.490 asks is what makes the two studyings alike.

Verse 3.14.490

ब्राह्मणाध्ययने वृत्तिर्यदि स्याद् ब्राह्मणश्रुतेः ।
वक्तव्यं केन धर्मेण तुल्यत्वं क्रिययोरिति ॥ 490 ॥

*brāhmaṇādhyayane vṛttiryadi syād brāhmaṇaśruteḥ |
vaktavyam.kena dharmena tulyatvam.kriyayoriti || 490 ||*

If the word 'brahmana' operated in the brahmin's studying — it would have to be stated by what property the two actions are similar.

Brahmana-adhyayane vṛttir yadi syad brahmana-sruteh: if the word 'brahmana' operated in the brahmin's studying. Vaktavyam kena dharmena tulyatvam kriyayor iti: it would have to be stated by what property the two actions are similar. Vaktavyam: it must be said — and it cannot be (3.14.442: same class, nothing to compare; different class, nothing shared). So locating the word in the action leaves the resemblance groundless. The demand kena dharmena is unanswerable, and 3.14.491 responds by moving the word off the action altogether.

Verse 3.14.491

अध्येतरि यदा वृत्तिरुच्यते ब्राह्मणश्रुतेः ।
निमित्तत्वं तदोपैति क्रियैवाध्येतरि स्थिता ॥ 491 ॥

*adhyetari yadā vṛttirucyate brāhmaṇaśruteḥ |
nimittatvam.tadopaiti kriyaivādhyetari sthitā || 491 ||*

When the word 'brahmana' is said to operate in the studier — then the action residing in the studier is itself what attains causality.

The resolution. Adhyetari yada vṛttir ucyate brahmana-sruteh: when the word 'brahmana' is said to operate in the studier — the person, not the studying: which is what the word means anyway. Nimittatvam tada upaiti kriya eva adhyetari sthita: then the action residing in the studier itself attains causality — nimittatva (3.14.113's word). So the word sits on the man and the action, seated in him, does the occasioning. 3.14.490's unanswerable question does not arise, because the two actions are never compared directly: each is in its man, and the men are compared. This is 3.14.431's opening claim, arrived at by exhausting the alternative.

Verse 3.14.492

सिंहशब्देन संबन्धे शौर्यमात्राभिधायिना ।
चैत्रात् षष्ठी प्रसज्येत योगे शौर्यादिभिर्यथा ॥ 492 ॥

simhaśabdena sambandhe śauryamātrābhīdhāyinā |
caitrāt ṣaṣṭhī prasajyeta yoge śauryādibhīryathā || 492 ||

In connection with the word 'lion' as expressing mere valour — the genitive would follow after 'Caitra', as in connection with 'valour' and the rest.

Simha-sabdena sambandhe saurya-matrabhidhayina: in connection with the word 'lion' as expressing mere valour — if 'simha' in 'caitra-simha' just means bravery. Caitrat sasthi prasajyeta yoge sauryadibhir yatha: the genitive would follow after 'Caitra', as in connection with 'valour' and the rest. So one would have to say 'caitrasya simhah' — Caitra's lion — as one says 'caitrasya sauryam', Caitra's valour: abstract nouns take a genitive possessor. And one does not. So 'simha' does not mean mere valour: it means the animal, and the man is called it (3.14.428's the word standing for the man-meaning). The case-system settles a semantic question in one line.

Verse 3.14.493

ब्राह्मणायेव दातव्यं वैश्यायेत्येवमादिषु ।
सम्प्रदानादियोगश्च क्रियामात्रे न कल्पते ॥ 493 ॥

brāhmaṇāyeva dātavyam vaiśyāyetyevamādiṣu |
sampradānādiyogaśca kriyāmātre na kalpate || 493 ||

'It should be given to the vaisya as to a brahmin' — in such cases, connection with a recipient and the rest is not conceivable in a mere action.

Brahmanaya iva datavyam vaisyaya ity evam adisu: 'it should be given to the vaisya as to a brahmin' and the like — the vati-comparison with a dative. Sampradanadi-yogas ca kriya-matre na kalpate: connection with a recipient and the rest is not conceivable in a mere action — sampradana: the karaka of the one given to (3.7's the karakas). So the dative in 'brahmanaya iva' needs a person to be the recipient, and a bare action cannot be one. Hence again the word must be sitting on the man (3.14.491). The karaka-system, like the case-system at 3.14.492, will not let an action stand where a person is wanted.

Verse 3.14.494

क्रियामात्राभिधायित्वादव्ययेषु वतेर्न च ।
पाठः कदाचित् कर्तव्यस्तुल्यौ पक्षावुभौ यतः ॥ 494 ॥

kriyāmātrābhīdhāyitvādavyayeṣu vater na ca |
pāṭhaḥ kadācit kartavyastulyau pakṣāvubhau yataḥ || 494 ||

And from its expressing mere action, the listing of 'vati' among the indeclinables should never be made; since both alternatives are equal.

Kriya-matrabhidhayitvad avyayesu vater na ca pathah kadacit kartavyah: from its expressing *mere action*, the *listing* of 'vati' among the *indeclinables* should *never* be *made* — patha: the recitation, the entry in the gana. Tulyau paksav ubhau yatah: since *both alternatives* are *equal*. So: if 'vati' expressed a bare action it would be an avyaya and belong in the list; and it does not, so it should not be listed. And the reason offered is that the two positions are *equal* — tulyau: neither is better. So Bhartrhari declines to list it because the question is undecidable, not because he has decided it. The Vrtti-samuddesa's long examination of the vati-rule ends with a shrug that is also a principle: where the alternatives are equal, do not legislate.

Verse 3.14.495

जहाति जातिं द्रव्यं वा तस्मान्नावयवे स्थितः ।
क्रियायास्तु श्रुतिर्यस्मात् तद्वत्यर्थेऽवतिष्ठते ॥ 495 ॥

jahāti jātim dravyam vā tasmānnāvayave sthitah |
kriyāyāstu śrutirasmāt tadvatyarthe'vatiṣṭhate || 495 ||

It abandons the universal or the substance; therefore it does not reside in the member. But since it is the hearing of an action, it stands in the meaning possessing that.

Jahati jatim dravyam va tasman na avayave sthitah: it *abandons* the *universal* or the *substance*; *therefore* it does *not* *reside* in the *member* — jahati: lets go (3.14.94's tyaga, the jahat-svartha doctrine). In 'brahmanavat' the word has dropped both what it named and what it meant, so it is not sitting on the compound's member. Kriyayas tu srutir yasmāt tadvaty arthe 'vatisthate: *but* since it is the *hearing of an action*, it stands in the meaning *possessing* that. Tadvati arthe: in the *possessor*. So having let go of universal and substance, the word lands on the one who has the action — 3.14.491's conclusion, restated as the word's own movement.

Verse 3.14.496

आक्रियाणां निवृत्त्यर्था यतश्चात्र क्रियाश्रुतिः ।
क्रियोपलक्षिते तस्मात् क्रियाशब्दः प्रतीयते ॥ 496 ॥

ākriyāṇām nivṛttyarthā yataścātra kriyāśrutiḥ |
kriyopalakṣite tasmāt kriyāśabdah pratiyate || 496 ||

And since here the hearing of the action has the exclusion of non-actions for its purpose — therefore the action-word is cognized in what is indicated by the action.

Akriyanam nivṛtty-artha yatas ca atra kriya-srutiḥ: since here the *hearing of the action* has for its purpose the *exclusion of non-actions* — nivṛtty-artha: it is there to turn things away (3.14.488's nivṛtty-artha sruti). The rule's word 'kriya' is not describing; it is fencing out. Kriya-upalakṣite tasmāt kriyāśabdah pratiyate: *therefore* the *action-word* is cognized in what is *indicated by the action* — upalakṣita: marked out by it, not characterized (3.14.170). So 'kriya' in the rule excludes non-actions and indicates a possessor, and it never means an action at all. The rule's most puzzling word (3.14.434) turns out to be a fence and a pointer.

Verse 3.14.497

होतव्यादिषु यस्माच्च क्रियान्या ब्राह्मणादिवत् ।
अपेक्षणीया शुद्धेऽर्थे तस्माद् वृत्तिर्न कस्यचित् ॥ 497 ॥

*hotavyādiṣu yasmācca kriyānyā brāhmaṇādivat |
apekṣaṇīyā śuddhe'rthe tasmād vṛttirna kasyacit || 497 ||*

And since in 'hotavya' and the rest another action, like 'brahmana' and the rest, has to be required — therefore, in the pure meaning, there is no operation of anything.

Hotavyadisū yasmac ca kriya anyā brahmanādivat apeksaniya: in 'hotavya' and the rest, *another action, like 'brahmana'* and the rest, has to be *required* — one must reach for a second action, as one reaches for a second person. Suddhe 'rthe tasmād vṛttir na kasyacit: *therefore, in the pure meaning, there is no operation of anything* — na kasyacit: of nothing whatever. So nothing operates in a bare, unaccompanied meaning. This is 3.14.474's kevalanam tu bhavanam na rupam avadharyate, arriving as the conclusion of the vati-analysis: purity is not a state anything can be in and be spoken of.

Verse 3.14.498

सर्वं वाप्येकदेशो वा यस्मिन्नाश्रीयते क्वचित् ।
विशेषवृत्तिं तं सर्वमाहुर्भेदे व्यवस्थितम् ॥ 498 ॥

*sarvam.vāpyekadeśo vā yasminnāśrīyate kvacit |
viśeṣavṛttim.tam.sarvamāhurbhede vyavasthitam || 498 ||*

Whether the whole or a part is what is resorted to somewhere — that whose operation is in the particular, all call settled in difference.

Sarvam vapy ekadeso va yasminn asriyate kvacit: *whether the whole or a part is resorted to somewhere* — either way (3.14.475's the word does not release either). Visesa-vṛttim tam sarvam ahur bhede vyavasthitam: *that whose operation is in the particular, all call settled in difference*. So the criterion of being 'in difference' is operating in a particular, regardless of whether the particular is a whole or a part — the whole/part question is orthogonal to the general/particular one. This clears an ambiguity that has been latent since 3.14.475, and it does so by noting that everyone (sarvam ahuh) already uses the criterion this way.

Verse 3.14.499

समुच्चयो विकल्पो वा प्रकारः सर्व एव वा ।
विशेषा इति वर्ण्यन्ते सामान्यं वाऽविकल्पितम् ॥ 499 ॥

samuccayo vikalpo vā prakārāḥ sarva eva vā |
viśeṣā iti varṇyante sāmānyam vā'vikalpitaṃ || 499 ||

Accumulation, or alternation, or all the modes – are described as particulars; or else the general, unconstructed.

Samuccayo vikalpo va prakarah sarva eva va: *accumulation, or alternation, or all the modes* (3.14.191's senses of the particle). Visesa iti varnyante: are described as *particulars*. Samanyam va avikalpita: or the *general, unconstructed* – avikalpita: not built up, not made into an alternative (3.14.144's vikalpita, negated). So the modes of combination are themselves either particulars or an unconstructed general, and there is nothing else they could be. The samuddesa is placing its own machinery on the general-particular scale it has been using throughout: accumulation and alternation are particulars, and what is left when one stops constructing is the general.

Verse 3.14.500

न हि ब्राह्मण इत्यत्र भेदः कश्चिदुपाश्रितः ।
अपाकृतो वा तेनायं समुदाये व्यवस्थितः ॥ 500 ॥

na hi brāhmaṇa ityatra bhedaḥ kaścidadupāśritaḥ |
apākṛto vā tenāyam samudāye vyavasthitaḥ || 500 ||

For in 'brahmana' no difference is resorted to, nor is any rejected; therefore this stands settled in the aggregate.

Na hi brahmana ity atra bhedah kascid upasritah apakrto va: in 'brahmana' no difference is *resorted to, nor is any rejected* – neither taken up nor thrown out: the word simply does not engage the question. Tena ayam samudaye vyavasthitaḥ: *therefore this stands settled in the aggregate*. So the default seat (3.14.480's asiddhas tu visesena samudaye vyavasthitaḥ) is where a word rests when it has done nothing about difference at all – not chosen the whole, but not chosen anything, which comes to resting on the whole. Neither upasrita nor apakrta: the word's indifference is its position.

Verse 3.14.501

क्रिया त्वाश्रीयते यस्मिन् स भेदोऽध्यवसीयते ।
तथान्यथा सर्वथा चेत्यप्रयोगे न विद्यते ॥ 501 ॥

*kriyā tvāśrīyate yasmin sa bhedo'dhyavasīyate |
tathānyathā sarvathā cetyaprayoge na vidyate || 501 ||*

But that in which the action is resorted to — that difference is determined; 'thus', 'otherwise', 'in every way' — in non-employment it does not exist.

Kriya tv asriyate yasmin sa bhedo 'dhyavasīyate: that in which the *action* is *resorted to* — that difference is *determined*: the action's seat is what fixes which particular is meant, where 'brahmana' alone fixed nothing (3.14.500). Tatha anyatha sarvatha ceti aprayoge na vidyate: 'thus', 'otherwise', 'in every way' — in *non-employment* it does not exist. So the manner-words: unless one of them is *said*, no manner is there. Aprayoge na vidyate — where it is not employed, it does not exist: 3.14.128's what withdraws has no being, applied to modes. The action seats the word, and only an uttered manner-word gives it a manner.

Verse 3.14.502

उपमाने क्रियावृत्तिमुपमेये क्रियाश्रुतिः ।
प्रत्याययन्ती भेदस्य करोतीव पदार्थताम् ॥ 502 ॥

*upamāne kriyāvṛttimupameye kriyāśrutih |
pratyāyayantī bhedasya karotīva padārthatām || 502 ||*

The hearing of the action, conveying in the comparandum the action's operation in the comparans — as it were makes the difference a word-meaning.

Upamane kriya-vṛttim upameye kriya-srutih pratyayayanti: the *hearing of the action*, *conveying* — in the *comparandum* — the *action's operation* in the *comparans*. Bhedasya karoti iva padarthatam: *as it were makes the difference a word-meaning*. Iva: as though. So the vati-word transfers the standard's action onto the compared thing, and in doing so it *seems* to make the difference itself into something meant. But only iva: the difference is not a word-meaning, and the appearance that it is comes from the transfer. This is 3.14.465's finding (the relation is said by no word) protected against the illusion that 'brahmanavat' finally says it.

Verse 3.14.503

व्यापारेणैव सादृश्ये व्यापारस्य विवक्षिते ।
क्रियावद् वचनाच्छब्दात् प्रत्ययः प्रतिपाद्यते ॥ 503 ॥

*vyāpāreṇaiva sādṛśye vyāpārasya vivakṣite |
kriyāvad vacanācchabdāt pratyayaḥ pratipādyate || 503 ||*

When the similarity of an operation with an operation is intended — the affix is taught from a word expressing something possessing action.

Vyaparena eva sadrsye vyaparasya vivaksite: when the *similarity of an operation with an operation is intended* — the case the whole vati-analysis is about. Kriyavad vacanac chabdat pratyayah pratipadyate: the *affix is taught* from a word expressing something *possessing action* — kriyavat: an action-possessor, not an action. So even where two operations are being compared, the affix attaches to a word for a possessor. The rule never touches an action directly, and 3.14.434's paradox — a nominal stem expressing an action — never arises, because the stem expresses a possessor and the action rides in him (3.14.491).

Verse 3.14.504

क्रियावतोऽपि सादृश्ये वक्तुमिष्टे क्रियावता ।
अध्येता ब्राह्मण इव प्रत्ययो न निवर्तते ॥ 504 ॥

kriyāvato'pi sādṛśye vaktumiṣṭe kriyāvatā |
adhyetā brāhmaṇa iva pratyayo na nivartate || 504 ||

Even when the similarity of an action-possessor with an action-possessor is desired to be stated — 'the student is like a brahmin' — the affix does not withdraw.

Kriyavato 'pi sadrsye vaktum iste kriyavata: even when the similarity of an *action-possessor* with an *action-possessor* is desired to be stated. Adhyeta brahmana iva: 'the student is like a brahmin' — persons compared to persons, no actions in view. Pratyayo na nivartate: the *affix does not withdraw*. So the vati-affix serves this case too: it does not require actions to be the compared terms. Between 3.14.503 and this verse the affix's range is fixed — it attaches to possessor-words always, and what is compared may be their actions or themselves. The rule is simpler than the debate about it.

Verse 3.14.505

अधीते तुल्य इत्येवं पुंलिङ्गेन विशेषणम् ।
क्रियावति क्रियायां तु तुल्यशब्दे नपुंसकम् ॥ 505 ॥

adhīte tulya ityevam puṃliṅgena viśeṣaṇam |
kriyāvati kriyāyām tu tulyaśabde napuṃsakam || 505 ||

'He studies similarly' — thus the qualifier is masculine, for the action-possessor; but in the action, the word 'tulya' is neuter.

A grammatical test, and it is decisive. Adhite tulya ity evam puṃliṅgena viśeṣaṇam: 'adhite tulyah' — he studies, similar — the *qualifier is masculine*, agreeing with the *action-possessor*: the man. Kriyavati kriyayam tu tulya-sabde napumsakam: but in the *action*, the word 'tulya' is *neuter* — 'tulyam adhite', he studies similarly, where the neuter agrees with the studying. So the gender of 'tulya' shows which term the similarity is predicated of, and both are available. The language distinguishes what the theorists were arguing about, by one vowel. This is the samuddesa's best instrument: where a doctrine is in doubt, look at the concord.

Verse 3.14.506

प्रकृत्यर्थे विशिष्टेऽपि प्रत्ययाथविशेषणात् ।
पुत्रेण तुल्यः कपिल इति वृत्तिः प्रसज्यते ॥ 506 ॥

*prakṛtyarthe viśiṣṭe'pi pratyayārthāviśeṣanāt |
putreṇa tulyaḥ kapila iti vṛttiḥ prasajyate || 506 ||*

Even though the base-meaning is specified, from the affix-meaning's not being qualified — 'Kapila is like a son' — the derivation would follow.

Prakṛty-arthe visiste 'pi pratyayārtha-avisēsanāt: even though the *base-meaning* is *specified*, from the *affix-meaning's not being qualified*. Putreṇa tulyaḥ kapila iti vṛtṭiḥ prasajyate: 'Kapila is like a son' — the *derivation* would *follow*. So one would get 'putravat kapilah' meaning Kapila resembles a son — in what respect, nothing says, because the affix-meaning was left unqualified. The over-generation is real: the affix will attach wherever a comparison is wanted, and it does not require the respect to be specified. This is the vati-rule's looseness, and 3.14.507-508 explain why it is tolerable.

Verse 3.14.507

याः पुत्रे रुढसम्बन्धाः क्रियालोके विवक्षिताः ।
ताभिः क्रियावतः पुत्राद् गुणतुल्ये वतिर्भवेत् ॥ 507 ॥

*yāḥ putre rūḍhasambandhāḥ kriyāloke vivakṣitāḥ |
tābhiḥ kriyāvataḥ putrād guṇatulye vatiṛbhavet || 507 ||*

Those actions conventionally connected with a son, intended in the world — by those, 'vati' would come after 'putra', of an action-possessor, in what is similar in quality.

Yāḥ putre rūḍha-sambandhāḥ kriyā loke vivakṣitāḥ: those *actions conventionally connected* with a son, *intended in the world* — rūḍha-sambandha (3.14.440's rūḍha-yoga): what everyone associates with sonhood — obedience, service, care in old age. Tabhiḥ kriyāvataḥ putrād guṇatulye vatiṛ bhavet: by those, 'vati' would come after 'putra', of an *action-possessor*, in what is *similar in quality*. So 'putravat' means: doing what sons conventionally do. The looseness of 3.14.506 is filled by convention — the respect is not stated because everyone knows it (3.14.415's the moon's beauty and not its eclipses). Loke vivakṣitāḥ: what the world means by it.

Verse 3.14.508

अन्तर्भूतं निमित्तं च रुढिशब्देषु यद्यपि ।
क्रियास्तु सहचारिण्यो रुढाः सन्ति पदार्थवत् ॥ 508 ॥

antarbhūtam, nimittam, ca rūḍhiśabdeṣu yadyapi |
kriyāstu sahačārinyo rūḍhāḥ santi padārthavat || 508 ||

Although the cause is included in conventional words — yet the accompanying actions, conventionally established, exist like word-meanings.

Antarbhutam nimittam ca rudhi-sabdesu yady api: although the *cause is included* — antarbhuta: swallowed inside (3.14.311's abhyantarikṛta) — in *conventional words*: a rudhi-word has digested whatever occasioned it and shows nothing (3.14.55's saptaparna). Kriyas tu sahačarinyo rudhah santi padartha-vat: yet the *accompanying actions, conventionally established, exist like word-meanings* — padarthavat: as good as meanings. So even in a word whose ground is buried, the associated actions are there and available, functioning as if they were the meaning. This is what makes 3.14.507's convention usable: it is not vague background, it is as determinate as a word-meaning, and it is why 'putravat' conveys something exact.

Verse 3.14.509

क्रमं तु यदि बाधित्वा प्रत्ययार्थविशेषणम् ।
प्रधानानुग्राहात् साम्याद् विभक्तेश्चावतिष्ठते ॥ 509 ॥

kramam, tu yadi bādhitvā pratyayārthaviśeṣaṇam |
pradhānānugrahāt sām्यād vibhakteścāvatīṣṭhate || 509 ||

But if, setting aside the sequence, the qualification of the affix-meaning stands — from the favouring of the principal, from equality, and from the case-ending —

Kramam tu yadi badhitva pratyayārtha-visesaṇam avatiṣṭhate: if, *setting aside the sequence* — badhitva: having annulled it (3.14.216's badhaka) — the *qualification of the affix-meaning stands*. And three reasons why it might: pradhana-anugrahaṭ — from the *favouring of the principal*; samyat — from *equality*; vibhakteh — from the *case-ending*. So one could let the affix-meaning be qualified out of order, and there would be grounds for it. The verse is a protasis and 3.14.510 supplies what follows — which is a mess.

Verse 3.14.510

प्रकृतेरविशिष्टत्वात् क्रियातुल्ये प्रसज्यते ।
पुत्रादौ गुणशब्देभ्यः पूर्वोक्तस्य विपर्यये ॥ 510 ॥

prakṛteraviśiṣṭatvāt kriyātulye prasajyate |
putrādaū guṇaśabdebhyaḥ pūrvoktasya viparyaye || 510 ||

From the base's not being specified, it would follow in what is similar in action; in 'putra' and the rest, from quality-words, in the reverse of what was stated before.

The apodosis of 3.14.509, and it is a reductio. Prakrter avisistatvat kriya-tulye prasajyate: from the base's not being specified, it would follow in what is similar in action. Putradau guna-sabdebhyah purvoktasya viparyaya: in 'putra' and the rest, from quality-words, in the reverse of what was stated before. Viparyaya: the inversion. So setting aside the sequence inverts 3.14.506-507's result exactly: the affix would attach to quality-words and mean action-similarity, where before it attached to action-words and meant quality-similarity. Everything comes out backwards. So the sequence must not be set aside – and the argument for keeping it is that abandoning it turns the rule inside out.

Verse 3.14.511

स्थूलेन तुल्यो यातीति बहिरङ्गा क्रियाश्रुतिः ।
अनिमित्तं वतेस्तुल्यं यातीत्यत्रेष्ट्यते वति ॥ 511 ॥

sthūlena tulyo yātīti bahiraṅgā kriyāśrutih |
animittam vatestulyam yātītyatreṣṭyate vati || 511 ||

'He goes like a stout man' – there the hearing of the action is external, no occasion for 'vati'; in 'he goes similarly', 'vati' is accepted.

Sthulena tulyo yati iti bahiranga kriya-srutih: 'he goes like a stout man' – the hearing of the action is external: bahiranga (3.7.182's word) – the going is outside the comparison, which is between a man and a stout man. Animittam vateh: no occasion for 'vati' – so 'sthulavat' will not do here. Tulyam yati ity atra isyate vati: in 'he goes similarly', 'vati' is accepted. So the affix comes only when the manner of going is what is compared, not when the persons are. The contrast with 3.14.504 is precise: there persons were compared and vati stood, because the actions were latent in them; here the action is stated and external, and vati falls.

Verse 3.14.512

द्वयं विशेष्यते तेन यदेकत्र विशेषणम् ।
तुल्यशब्दो हि तं धर्ममुभयस्थमपेक्षते ॥ 512 ॥

dvayam viśeṣyate tena yadekatra viśeṣaṇam |
tulyaśabdo hi tam dharmamubhayasthamapekṣate || 512 ||

By that, two are qualified – that which is a qualifier in one place; for the word 'tulya' requires that property as residing in both.

Dvayam visesyate tena yad ekatra visesanam: two are qualified by that which is a qualifier in one place – the property is stated once and qualifies twice (3.14.386's one is heard, the other is cognized; 3.14.424's sakrc-chrutau). Tulya-sabdo hi tam dharmam ubhaya-stham apeksate: for the word 'tulya' requires that property as residing in both – ubhaya-stha: in the two. So 'tulya' is a word that demands a two-seated property and is satisfied by one saying. That is what makes it the comparison-word: it does the doubling itself, and the speaker need not.

Verse 3.14.513

एकः समानो धर्मश्चेदुपमानोपमेययोः ।
तुल्या संमितं तुल्यमिति तत्रोपपद्यते ॥ 513 ॥

*ekah samāno dharmascedupamānopameyayoh |
tulayā sammitam.tulyamiti tatropapadyate || 513 ||*

If there is one common property of comparans and comparandum — 'tulya' means 'measured out by a balance' — that is proper there.

Ekah samano dharmas ced upamana-upameyayoh: if there is one common property of comparans and comparandum. Tulaya sammitam tulyam iti tatra upapadyate: 'tulya' means 'measured out by a tula' — a balance, a pair of scales — and that is proper there. So the word's own etymology is the argument: 'tulya' is what has been weighed against something, and a balance needs two pans and one weight. The word is built out of the very structure 3.14.512 described. This is Bhartrhari doing what the Nirukta tradition did — reading the doctrine out of the word — and here it works perfectly.

Verse 3.14.514

सूत्रे श्रुतश्च द्विष्ठोऽसावभेदेन प्रतीयते ।
न च सामान्यशब्दत्वादश्रुता गम्यते क्रिया ॥ 514 ॥

*sūtre śrutaśca dviṣṭho'sāvabhedena pratīyate |
na ca sāmānyaśabdatvādaśrutā gamyate kriyā || 514 ||*

And, being heard in the sutra, that two-seated property is cognized by non-difference; and from its being a general word, an unheard action is not understood.

Sutre srutas ca dvistho 'sav abhedena pratiyate: heard in the sutra, that two-seated property is cognized by non-difference — the rule states it and one takes it as one (3.14.362's asrita-ekatva). Na ca samanya-sabdatvad asruta gamyate kriya: and from its being a general word, an unheard action is not understood. So a general word does not smuggle in an unstated action: 'tulya' says likeness and does not tell you the respect. Which is why 3.14.506's over-generation was real and why 3.14.507's convention had to be called in. The rule is honest about what it does not supply.

Verse 3.14.515

अश्रुताश्च प्रतीयन्ते निदेशस्थायितादयः ।
ये धर्मा नियतास्तेषां पुत्रादिषु न विद्यते ॥ 515 ॥

aśrutāśca pratiyante nideśasthāyitādayaḥ |
ye dharmā niyatāsteṣāṃ putrādiṣu na vidyate || 515 ||

And unheard, the properties 'standing in command' and the rest are cognized; those properties which are fixed — of them, none exists in 'putra' and the rest.

Asrutas ca pratiyante nidesa-sthayitadayah: *unheard*, the properties '*standing in command*' and the rest *are* cognized — some properties do arrive unsaid (3.14.507's *rudha-sambandha*: what everyone associates). Ye dharma niyatas tesam putradisu na vidyate: those properties which are *fixed* — of them, none exists in 'putra' and the rest. Niyata: settled, determinate. So: some unstated properties come along, and none of them is *fixed* — 'putravat' brings a cloud of associations and no definite one. This qualifies 3.14.508's *padarthavat*: the conventional actions are as good as meanings, and they are not determinate meanings.

Verse 3.14.516

अनाश्रितक्रियस्तस्मान्न तुल्योऽस्ति क्रियावता ।
क्रियायाः श्रवणे सापि क्रियावत्ता प्रतीयते ॥ 516 ॥

anāśritakriyastasmānna tulyo'sti kriyāvatā |
kriyāyāḥ śravaṇe sāpi kriyāvattā pratiyate || 516 ||

Therefore one who has not resorted to an action is not similar to an action-possessor; and in the hearing of the action, that action-possessing too is cognized.

Anasrita-kriyas tasman na tulyo 'sti kriyavata: therefore one who has *not resorted to an action* is not similar to an *action-possessor* — likeness requires both parties to have the action; an actionless thing resembles no agent. Kriyayah sravane sapi kriyavatta pratiyate: and in the *hearing of the action*, that *action-possessing* too is *cognized* — say the action and the possessing comes with it. So the two are inseparable in the hearing: name an action and you have named someone's having it (3.14.474's nothing bare is reachable by a word). Which is why the vati-rule can afford to speak of actions and mean possessors.

Verse 3.14.517

द्वयोः प्रतिविधानाच्च ज्यायस्त्वमभिधीयते ।
नित्यासत्त्वाभिधायित्वात् प्रत्ययार्थविशेषणे ॥ 517 ॥

dvayoḥ pratividhānācca jyāyastvamabhidhīyate |
nityāsattvābhidhāyitvāt pratyayārthaviśeṣaṇe || 517 ||

And from the provision for two, superiority is stated; from its always expressing non-substance, in the qualification of the affix-meaning.

Dvayoh pratividhanac ca jayastvam abhidhiyate: from the *provision for two*, superiority is stated — jayastva: the greater merit; where a reading handles both cases it is preferred. Nitya-asattva-abhidhayitvat pratyayārtha-visesane: from *always expressing non-substance*, in the *qualification of the affix-meaning*. So the reading that makes the affix-meaning qualified is superior because it covers both cases and because the affix always expresses asattva (3.14.435's tinam asattva-vacitvat). The samuddesa is adjudicating between two readings of the rule on the grounds of coverage — an unusually decisive moment.

Verse 3.14.518

असत्त्वभूतो व्यापारः केवलं प्रत्यये यतः ।
विद्यते लक्षणार्थत्वं नास्ति तेन क्रियाश्रुतेः ॥ 518 ॥

asattvabhūto vyāpārah kevalam pratyaye yataḥ |
vidyate lakṣaṇārthatvam nāsti tena kriyāśruteḥ || 518 ||

Since in the affix there is only the operation, which is non-substantial — therefore the action-hearing has no indicative purpose.

Asattva-bhuto vyaparah kevalam pratyaye yataḥ: since in the *affix* there is *only* the *operation*, which is *non-substantial* — the affix carries an activity and no thing (3.14.193's asattva-bhuta, of the particle). Vidyate laksanarthatvam nāsti tena kriya-sruteḥ: *therefore* the *action-hearing* has *no indicative purpose* — laksanarthatva: the pointing-function of 3.14.451 and 3.14.496. So on this reading the rule's 'kriya' does not point at a possessor: the affix already has the operation and needs no indication. Which is the opposite of what 3.14.496 concluded — and both readings are on the table, because the samuddesa is showing what each costs.

Verse 3.14.519

क्रियावतस्तु ग्रहणात् प्रकृत्यर्थविशेषणे ।
क्रियामात्रेण तुल्यत्वे सिद्धाऽसत्त्वाभिधायिता ॥ 519 ॥

kriyāvatastu grahaṇāt prakṛtyarthaviśeṣaṇe |
kriyāmātreṇa tulyatve siddhā'sattvābhidhāyitā || 519 ||

But from the taking-up of the action-possessor, in the qualification of the base-meaning — where similarity is by mere action, the expressing of non-substance is established.

Kriyavatas tu grahanat prakṛty-ārtha-visesane: from the *taking-up of the action-possessor*, in the *qualification of the base-meaning* — the other reading: the possessor is what the rule takes up, and it qualifies the *base*. Kriya-matrena tulyatve siddha asattva-abhidhayita: where similarity is by *mere action*, the *expressing of non-substance* is established. So this reading too delivers asattva-abhidhayita — the thing 3.14.517 wanted. Both readings reach it, by different routes. The adjudication of 3.14.517 was therefore premature, and the samuddesa is undoing it — which is its habit (3.14.494's tulyau paksav ubhau).

Verse 3.14.520

यदा क्रियानिमित्तं तु सादृश्यं स्यात् क्रियावतोः ।
क्रियावतोऽभिधेयत्वात् तदाऽद्रव्याभिधायिता ॥ 520 ॥

yadā kriyānimittam tu sādṛśyam syāt kriyāvatoḥ |
kriyāvato'bhidheyatvāt tadā'dravyābhidhāyitā || 520 ||

But when the similarity of two action-possessors has the action for its cause — then, since an action-possessor is what is expressed, there is non-substance-expressing.

Yada kriya-nimittam tu sadṛśyam syāt kriyavatoḥ: when the *similarity* of two *action-possessors* has the *action* for its *cause* — 3.14.503's case: two persons, alike by reason of their actions. *Kriyavato 'bhidheyatvat tada adravya-abhidhayita*: then, since an *action-possessor* is what is *expressed*, there is *non-substance-expressing* — *adravya-abhidhayita*: it does not express a thing. So even where a possessor is expressed, what is expressed is not a substance: the possessor is reached under the action, and the action is *asattva*. This closes the sequence 3.14.517-520: every reading of the rule yields *asattva*, and the affix cannot express a thing however one construes it.

Verse 3.14.521

अव्ययेषु वतेः पाठः कार्यस्तत्र स्वरादिवत् ।
ब्राह्मणेन समोऽध्येतेत्यत्र च प्रत्ययो भवेत् ॥ 521 ॥

avyayeṣu vateḥ pāṭhaḥ kāryastatra svarādivat |
brāhmaṇena samo'dhyetetyatra ca pratyayo bhavet || 521 ||

There, the listing of 'vati' among the indeclinables should be made, like 'svar' and the rest; and in 'the student is equal to a brahmin' the affix would occur.

Avyayesu vateḥ pathaḥ karyas tatra svaradivat: there — on the reading just reached — the *listing* of 'vati' among the *indeclinables* should be *made*, like 'svar' and the rest: the *svaradi-gana*. *Brahmanena samo 'dhyeta ity atra ca pratyayo bhavet*: and in 'the student is equal to a brahmin' the *affix* would occur. So if the affix always expresses *asattva* (3.14.520), it belongs in the indeclinable list — reversing 3.14.494's refusal to list it. The *samuddesa* has argued itself to the opposite conclusion in twenty-seven verses, and it does not conceal the reversal: 3.14.494 declined because the alternatives were equal, and they have stopped being equal.

Verse 3.14.522

सामानाधिकरण्यं च वत्यर्थेनापदिश्यते ।
तुल्यमित्यन्यथा कल्प्यो वाक्यशेषोऽश्रुतो भवेत् ॥ 522 ॥

sāmānādhikaraṇyam ca vatyārthenāpadiśyate |
tulyamityanyathā kalpyo vākyaśeṣo'shruto bhavet || 522 ||

And co-reference is designated with the vati-meaning; otherwise, for 'tulyam', an unheard sentence-remainder would have to be imagined.

Samanadhikaranyam ca vaty-arthena apadisyate: *co-reference* is designated with the *vati-meaning* – the affix’s sense co-refers with what it attaches to. Tulyam ity anyatha kalpyo vakya-sesa as-ruto bhavet: *otherwise*, for ‘tulyam’, an *unheard sentence-remainder* would have to be *imagined* – vakya-sesa: what must be supplied to make the sentence construe (3.14.463’s sopaskara). So the co-reference reading saves one from inventing words: on any other reading, ‘tulyam’ needs a supplement nobody says. The argument is economy – prefer the reading that requires no invention – and it is the same argument as 3.14.469’s, that unemployed elements should be indicated rather than supplied.

Verse 3.14.523

क्रियावतोश्च सादृश्ये प्रत्ययार्थविशेषणे ।
अध्येत्रा सदृशोऽध्येतेत्यत्र नास्ति वतेर्विधिः ॥ 523 ॥

kriyāvatośca sādṛśye pratyayārthaviśeṣaṇe |
adhyetrā sadṛśo’dhyetetyatra nāsti vatervidhiḥ || 523 ||

And in the similarity of two action-possessors, in the qualification of the affix-meaning – in ‘the student is like a student’, there is no rule for ‘vati’.

Kriyavatos ca sadrsye pratyayārtha-visesane: in the *similarity of two action-possessors*, in the *qualification of the affix-meaning* – the reading of 3.14.517. Adhyetra sadrso ‘dhyeta ity atra nasti vater vidhih: in ‘the student is like a student’, there is no rule for ‘vati’. So the affix will not attach where both terms are the same kind of agent – because there is nothing to compare (3.14.394’s the cause in the cognition ‘cow’ exists in another cow; 3.14.442’s an action of the same class is not compared). The rule’s silence here is not a gap: it registers that identical terms make no simile.

Verse 3.14.524

तुल्यार्थैरिति या तस्यास्तृतीयाया न भिद्यते ।
अर्थो भेदेऽपि सर्वाभिरितराभिर्विभक्तिभिः ॥ 524 ॥

tulyārthairiti yā tasyāstr̥tīyāyā na bhidyate |
artho bhede’pi sarvābhiritarābhirvibhaktibhiḥ || 524 ||

That third case which comes by ‘with words meaning tulya’ – its meaning is not differentiated, even where there is difference, by any of the other case-endings.

Tulyarthair iti ya tasyas trtiyayah: that *third case* which comes by ‘tulyarthaih’ – Panini’s rule prescribing the instrumental with words meaning ‘similar’. Na bhidyate artho bhede ‘pi sarvabhir itarabhir vibhaktibhih: its *meaning is not differentiated*, even where there is *difference*, by *all the other case-endings*. So: whatever case the compared thing would have taken in the underlying construction, the ‘tulya’-construction puts it in the instrumental, and the meaning does not vary. The claim is strong and 3.14.525-527 proves it by running through the cases one by one.

Verse 3.14.525-527

भुज्यते ब्राह्मणेनेव तुल्यं भुक्तं द्विजातिना ।
 पश्यति ब्राह्मणमिव तुल्यं विप्रेण पश्यति ॥ 525 ॥
 ब्राह्मणेनेव विजातं तुल्यं जातं द्विजातिना ।
 दीयतां ब्राह्मणायेव तुल्यं विप्रेण दीयताम् ॥ 526 ॥
 ब्राह्मणादिव वैश्यात् त्वमधीष्वाध्ययनं बहु ।
 इत्येवमादिभिर्भेदस्तृतीयाया न कश्चन ॥ 527 ॥

bhujyate brāhmaṇeneva tulyam, bhuktam, dvijātina |
paśyati brāhmaṇamiva tulyam, vipreṇa paśyati || 525 ||
brāhmaṇeneva vijñātam, tulyam, jñātam, dvijātina |
dīyatām, brāhmaṇāyeva tulyam, vipreṇa dīyatām || 526 ||
brāhmaṇādīva vaiśyāt tvamadhiṣvādhyayanam, bahu |
ityevamādibhirbhedastrītyāyā na kaścana || 527 ||

(525) 'It is eaten as by a brahmin' — 'it is eaten similarly-with a twice-born'. 'He sees, as a brahmin' — 'he sees similarly-with a brahmin'. (526) 'It is known, as by a brahmin' — 'it is known similarly-with a twice-born'. 'Let it be given, as to a brahmin' — 'let it be given similarly-with a brahmin'. (527) 'Study much, as from a brahmin, from a vaisya' — by these and the like, there is no difference at all of the third case.

The proof of 3.14.524, and it is a demonstration rather than an argument. Five constructions, in five different cases — instrumental (*bhujyate brahmanena iva*), accusative (*paśyati brahmanam iva*), instrumental again (*brahmanena iva vijñātam*), dative (*dīyatam brahmanaya iva*), ablative (*brahmanad iva vaiśyat*) — and each is rendered by *tulyam* with an *instrumental*, and none of the meanings shifts. *Ity evam adibhir bhedas trītyayah na kaścana*: by these and the like, there is no difference at all of the third case. So the instrumental prescribed with 'tulya' is case-neutral: it absorbs agent, object, recipient and source alike, and expresses none of them. It is not a karaka-marker at all — it is the mark of the compared term, and the karaka it would otherwise have borne is simply gone. The examples are laid out and one sees it; Bhartrhari adds nothing, which is the right decision.

Verse 3.14.528

तुल्यं मधुरयाधीये मात्रा तुल्यं स्मरामि ताम् ।
 मधुरायाश्च मातुश्च कथं सादृश्यकल्पना ॥ 528 ॥

tulyam, madhurayādhiye mātṛā tulyam, smarāmi tām |
madhurāyāśca mātusca katham, sādṛśyakalpanā || 528 ||

'I study similarly-with Madhura', 'I remember her similarly-with mother' — how is a construction of similarity of Madhura and of mother to be had?

The difficulty in 3.14.524's doctrine. *Tulyam madhuraya adhiye*: 'I study similarly-with Madhura' — where the underlying sense is 'I study as one does in Madhura': a locative absorbed into the instrumental. *Matra tulyam smarāmi tam*: 'I remember her similarly-with mother' — 'as I remember mother': an object absorbed. *Madhuras ca matus ca katham sadṛśya-kalpana*: how is a construction of sim-

ilarity of *Madhura* and of *mother*? So the instrumental of 3.14.525-527 has swallowed a place and a person, and now literally says that a city and a mother are being compared to something. Katham: how can that be? The absorption has produced nonsense, and 3.14.529 must explain it away.

Verse 3.14.529

मधुराविषयः पाठः स्मरणं मातृकर्मकम् ।
मधुरामातृशब्दाभ्यामभेदेनाभिधीयते ॥ 529 ॥

madhurāviṣayaḥ pāṭhaḥ smaraṇam mātṛkarmakam |
madhurāmātrśabdābhyāmabhedenaābhidhīyate || 529 ||

The recitation whose domain is *Madhura*, and the remembering whose object is *mother* — are expressed by the words 'Madhura' and 'mother' by way of non-difference.

Madhura-visayah pathah: the *recitation* whose *domain* is *Madhura* — the studying done there. *Smaranam matr-karmakam*: the *remembering* whose *object* is *mother*. *Madhura-matr-sabdabhyam abhedena abhidhiyate*: are expressed by the words 'Madhura' and 'mother' by way of non-difference. So the words do not name the city and the woman: they name the *studying-at-Madhura* and the *remembering-of-mother*, by non-difference — the action and its seat taken as one (3.14.483's *upacaritaikatva*). So the comparison is between two studyings and two remembering after all, and 3.14.528's absurdity was an artifact of reading the words as naming their nominal referents.

Verse 3.14.530

उष्ट्रावयवतुल्येषु मुखेषूष्ट्रश्रुतिर्यथा ।
वर्तते गृहतुल्ये च प्रासादे मधुराश्रुतिः ॥ 430 ॥

uṣṭrāvayavatulyeṣu mukheṣūṣṭraśrutiriyathā |
vartate gr̥hatulye ca prāsāde madhurāśrutih || 430 ||

As the word 'camel' operates in faces resembling a camel's part; and the word 'Madhura' in a palace resembling a house.

This verse repeats 3.14.430 verbatim, and our source numbers it '430' — the third such doubling in this *samuddesa*, after 3.14.421 (=121) and 3.14.479 (=179). Here the repetition at least has a context: 3.14.529 has just been about the word 'Madhura' operating in what is not the city, and the camel-and-palace verse illustrates exactly that. Whether the redactor placed it here deliberately or the transmission duplicated it, we print it where the source does.

[Contested: This and the two verses following it (3.14.531 = 3.14.431, 3.14.532 = 3.14.432) form a block of three consecutive verses repeated from an earlier position, retaining their original numbers 430-432 in our source. Taken with the isolated doublings at 3.14.421 and 3.14.479, the pattern suggests a mechanical fault in the transmission — a repeated exemplar-leaf — rather than authorial repetition. The critical editions should be consulted.]

Verse 3.14.531

यथाध्ययनयोः साम्यमध्येत्रोरपदिश्यते ।
तथा क्रियागतैर्धर्मैरुच्यन्ते साधनाश्रयाः ॥ 431 ॥

yathādhyayanayoḥ sāmymadhyetrorapadiśyate |
tathā kriyāgatairdharmairucyante sādhanāśrayāḥ || 431 ||

As the similarity of two studyings is designated of the two students — so the substrata of the means are spoken of by properties belonging to the action.

A verbatim repetition of 3.14.431, numbered '431' in our source (see the note at 3.14.530). Its argument — that an action's properties are predicated of the agents who bear them — is the same one 3.14.529 has just used to dissolve the Madhura-and-mother difficulty, so the block's placement here is at least intelligible. But it adds nothing that 3.14.431 did not already establish, and the retained numbering marks it as the transmission's doing rather than the redactor's.

Verse 3.14.532

इवार्थे यच्च वचनं पूर्वसूत्रे च यो विधिः ।
क्रियाशब्दश्रुतौ भेदो न कश्चित् विद्यते तयोः ॥ 432 ॥

ivārthe yacca vacanam pūrvasūtre ca yo vidhiḥ |
kriyāśabdaśrutau bhedo na kaścit vidyate tayoh || 432 ||

The statement in the sense of 'iva', and the rule in the previous sutra — in the hearing of an action-word there is no difference at all between those two.

A verbatim repetition of 3.14.432, numbered '432' in our source, and the last of the three-verse block (see 3.14.530). Its subject — the coincidence of the iva-rule and the previous sutra where an action-word is heard — is in fact what 3.14.535-538 are about to take up in detail, so a reader coming to this stretch fresh will find the verse doing useful work here. That does not make it any less a repetition.

Verse 3.14.533

यद्यप्युपाधिरन्यत्र नियतो न प्रयुज्यते ।
रूपाभेदात् त्वनिर्ज्ञाता क्रियात्र श्रूयते पुनः ॥ 533 ॥

yadyapyupādhiranyatra niyato na prayujyate |
rūpābhedāt tvanirjñātā kriyātra śrūyate punaḥ || 533 ||

Although the fixed adjunct is not employed elsewhere — from non-difference of form, an unknown action is here heard again.

Yady apy upadhir anyatra niyato na prayujyate: although the *fixed adjunct* is not employed elsewhere — the conditioning element that does not appear (3.14.464's na kadacit prayujyate; 3.14.469's aprayuk-taiḥ). Rūpābhedat tv anirjñata kriya atra śrūyate punaḥ: from *non-difference of form*, an *unknown* action is *here heard again* — anirjñata: not known, unidentified. So because the forms are alike, an

action one cannot identify gets heard a second time. The verse describes the mechanism by which an unemployed adjunct nevertheless makes itself audible: form-identity smuggles it back in (3.14.483's *tulya-sruti* producing a figurative oneness).

Verse 3.14.534

यथा व्युत्परयत्र पुच्छौ क्यङ्न्ते सुदरादयः ।
सत्यपि प्रत्ययार्थत्वे भेदाभावादुदाहृताः ॥ 534 ॥

yathā vyutparayaṣṭ pucchau kyaṅnte sudarādayaḥ |
satyapi pratyayārthatve bhedābhāvādudāhṛtāḥ || 534 ||

As 'sudara' and the rest, ending in 'kyaṅ' — although there is an affix-meaning, they are cited from the absence of difference.

Kyaṅ-ante sudaradayah: 'sudara' and the rest, ending in 'kyaṅ' — the denominative affix. *Saty api pratyayārthatve bhedābhavad udahrtah*: although there is an affix-meaning, they are cited from the absence of difference. So these forms have an affix that means something, and they are nevertheless cited as cases where no difference obtains — the affix's contribution has vanished into the whole (3.14.44's *ekarthibhava*). This is the precedent 3.14.533 needed: an affix-meaning present and undetectable is a familiar thing, and the unknown action of 3.14.533 is another instance.

[Contested: Pada a is transmitted as 'yatha vyutparayṣṭ pucchau', which we cannot construe and take to be corrupt beyond safe conjecture. We translate from padas b-d, whose sense is clear. The lost example presumably belonged with the kyaṅ-forms of pada b.]

Verse 3.14.535

एवञ्च सति पूर्वेण सिद्धोऽत्रापि वतेर्विधिः ।
नियमे वाभिधाने वा भिद्यते न क्रियाश्रुतिः ॥ 535 ॥

evaṅca sati pūrveṇa siddho'atrāpi vatervidhiḥ |
niyame vābhidhāne vā bhidyate na kriyāśrutiḥ || 535 ||

And this being so, the rule for 'vati' here too is established by the previous sūtra; whether in restriction or in expression, the action-hearing is not differentiated.

Evam ca sati purvena siddho 'trāpi vater vidhiḥ: this being so, the rule for 'vati' here too is established by the previous sūtra — the later rule is unnecessary; the earlier one already covers the case. *Niyame va abhidhane va bhidyate na kriya-srutiḥ*: whether in restriction or in expression, the action-hearing is not differentiated — *niyama*: a rule that restricts what would otherwise be free; *abhidhana*: one that states. So the 'kriya' in the rule does the same thing on either construal, and the second rule is redundant. This is 3.14.432's finding (= 3.14.532's), now argued rather than asserted.

Verse 3.14.536

इवे द्रव्यादिविषयः प्रत्ययः पुनरुच्यते ।
क्रियाणामेव सादृश्ये पूर्वसूत्रे विधीयते ॥ 536 ॥

*ive dravyādiviṣayaḥ pratyayaḥ punarucyate |
kriyāṇāmeva sādṛśye pūrvasūtre vidhīyate || 536 ||*

In the rule for 'iva', the affix whose domain is substance and the rest is stated again; in the previous sutra it is prescribed only for the similarity of actions.

Ive dravyadi-visayah pratyayah punar ucyaṭe: in the rule for 'iva', the affix whose *domain* is *substance* and the rest is *stated again* — punah: over again. Kriyanam eva sadrsye purva-sutre vidhiyate: in the *previous* sutra it is prescribed *only* for the *similarity of actions*. So the two rules divide the field: the earlier covers actions, the later substances and qualities — and if that is right, 3.14.535's redundancy-charge fails, because the later rule has territory of its own. The samuddesa has stated the objection to its own conclusion immediately and is about to test it.

Verse 3.14.537

मधुरायामिव गृहा ब्राह्मणस्येव पाण्डुराः ।
इत्यत्र द्रव्यगुणयोः पूर्वेण न वतिर्भवेत् ॥ 537 ॥

*madhurāyāmiva grhā brāhmaṇasyeva pāṇḍurāḥ |
ityatra dravyaguṇayoḥ pūrveṇa na vatirbhavet || 537 ||*

'Houses as in Madhura', 'white as a brahmin's' — here, for substance and for quality, 'vati' would not come by the previous rule.

The evidence for 3.14.536. Madhurayam iva grha: 'houses as in Madhura' — a substance-comparison. Brahmanasya iva panduarah: 'white as a brahmin's' — a quality-comparison. Ity atra dravya-guṇayoh purvena vatiṃ na bhavet: here, for *substance* and *quality*, 'vati' would not come by the *previous* rule — since that rule speaks only of actions. So the later rule is needed, and 3.14.535's economy was false. The two examples are exactly chosen: one substance, one quality, neither with any action in view, both taking 'vati' in ordinary usage.

Verse 3.14.538

आरम्भस्याक्रियार्थत्वे नार्थो योगेन विद्यते ।
ऋते क्रियाया ग्रहणात् पूर्वयोगेन सिध्यति ॥ 538 ॥

*ārambhasyākriyārthatve nārtho yogena vidyate |
ṛte kriyāyā grahaṇāt pūrvayogena sidhyati || 538 ||*

If the undertaking is not for the sake of the action, there is no purpose in the rule; apart from the taking-up of 'kriya', it is established by the previous rule.

Arambhasya akriyarthatve narthah yogena vidyate: if the *undertaking* is not for the sake of the *action*, there is *no purpose* in the *rule* — arambha: the rule's being framed at all. Rte kriyaya grahanat purva-yogena sidhyati: *apart from* the *taking-up* of 'kriya', it is *established* by the *previous* rule. So the later rule earns its place only by its word 'kriya': strike that word out and everything it does is done already. This settles the question 3.14.535–537 opened — the second rule is not redundant, and what saves it is one word. Bhartrhari has been reading Panini this way throughout (3.14.225's artha-grahanam krtam; 3.14.446's atin-grahanam).

Verse 3.14.539

मधुरावयवे वृत्तिर्व्याख्याता मधुराश्रुतेः ।
ब्राह्मणावयवान् दन्तान् वक्ष्यति ब्राह्मणश्रुतिः ॥ 539 ॥

*madhurāvayave vṛttirvyākhyātā madhurāśruteḥ |
brāhmaṇāvayavān dantān vakṣyati brāhmaṇaśrutiḥ || 539 ||*

The operation of the word 'Madhura' in a part of Madhura has been explained; the word 'brahmana' will state the teeth, which are parts of a brahmin.

Madhuravayave vṛttir vyakhyata madhura-sruteḥ: the *operation* of the word 'Madhura' in a *part* of Madhura has been *explained* — 3.14.529–530: the word reaches what is in the city, and what resembles a part of it. Brahmanavayavan dantan vakṣyati brahmana-srutih: the word 'brahmana' *will state* the *teeth*, which are *parts* of a *brahmin* — 'brahmanavat dantah', teeth like a brahmin's: the word reaches the teeth. So the same part-reaching happens with persons: 'brahmana' says the teeth. This is 3.14.487's law (a word distributes over its parts) applied where it is least expected, and it is what licenses 3.14.537's brahmanasya iva panduarah.

Verse 3.14.540

न काचिदिवयोगे तु बाह्यात् सम्बन्धिनो विना ।
षष्ठी विधीयते तत्र पूर्वेण प्रत्ययो भवेत् ॥ 540 ॥

*na kācidivayoge tu bāhyāt sambandhino vinā |
ṣaṣṭhī vidhīyate tatra pūrveṇa pratyayo bhavet || 540 ||*

But in connection with 'iva' no genitive is prescribed without an external relatum; there the affix would come by the previous rule.

Na kacid iva-yoge tu bahyat sambandhino vina sasthi vidhiyate: in connection with 'iva' no genitive is prescribed without an external relatum — bahya: outside the construction (3.14.207's word). So 'brahmanasya iva' needs someone outside — whose teeth? — before the genitive can stand. Tatra purvena pratyayo bhavet: there the affix would come by the previous rule. So where the external relatum is absent, one falls back to the earlier rule and gets 'vati' anyway. The two rules interlock rather than compete, and the division of 3.14.536 is confirmed by watching where each one is forced.

Verse 3.14.541

आधिक्यं तुल्यशब्देन सम्बन्ध उपजायते ।
षष्ठीतृतीये तत्र स्तुल्यशब्दो हि वाचकः ॥ 541 ॥

ādhikyam tulyaśabdena sambandha upajāyate |
ṣaṣṭhītr̥tīye tatra stastulyaśabdo hi vācakaḥ || 541 ||

With the word 'tulya', an excess of connection arises; there the genitive and the instrumental both exist, for 'tulya' is an expresser.

Adhikyam tulya-sabdena sambandha upajayate: with the word 'tulya', an excess of connection arises — adhikya: something more, a surplus relation. Sasthi-tr̥tīye tatra stah: there the genitive and the instrumental both exist — both cases are available with 'tulya', where 3.14.524 said only the instrumental was. Tulya-sabdo hi vacakah: for 'tulya' is an expresser — a vacaka, not a dyotaka. So 'tulya' says the likeness, and because it says it, it can govern a case of its own, and a surplus connection appears. The vacaka/dyotaka distinction (3.14.194, 3.14.203) is doing the work again, and it is the samuddesa's most reliable tool.

Verse 3.14.542

इवशब्दप्रयोगे तु बाह्यात् सम्बन्धिनो विना ।
नाधिक्यमुपमानेऽस्ति द्योतकः सम्प्रयुज्यते ॥ 542 ॥

ivaśabdaprayoge tu bāhyāt sambandhino vinā |
nādhikyamupamāne'sti dyotakaḥ samprayujyate || 542 ||

But in the employment of the word 'iva', without an external relatum, there is no excess in the comparans; an indicator is employed.

The contrast that 3.14.541 set up. Iva-sabda-prayoge tu bahyat sambandhino vina: in the employment of the word 'iva', without an external relatum. Na adhikyam upamane 'sti: there is no excess in the comparans. Dyotakah samprayujyate: an indicator is employed — 'iva' is a dyotaka. So 'iva' brings no surplus because it says nothing: it only reveals what the words already had (3.14.191's the indicator restricts the latent powers). And that is precisely why 'iva' governs no case and 'tulya' governs two. The whole difference between the two comparison-words is that one speaks and one points.

Verse 3.14.543

इवे यो व्यतिरेकोऽत्र स प्रालादादिहेतुकः ।
तुल्ये तद्विषयापेक्षमाधिक्यमुपजायते ॥ 543 ॥

*ive yo vyatireko'tra sa prālādādihetukaḥ |
tulye tadviṣayāpekṣamādhikyamupajāyate || 543 ||*

The difference which is here in 'iva' is caused by 'palace' and the rest; in 'tulya', an excess dependent on that domain arises.

Ive yo vyatireko 'tra sa prasādādi-hetukah: the *difference* which is here in 'iva' is *caused by 'palace'* and the rest — 3.14.530's palace resembling a house: whatever differentiation 'iva' seems to carry comes from the words around it, not from itself (3.14.542: it says nothing). Tulye tad-visaya-apeksam adhikyam upajāyate: in 'tulya', an *excess dependent on that domain arises*. So 'tulya' generates its own surplus, in dependence on the same domain that 'iva' merely borrows from. The pair is now fully drawn: 'iva' takes all its content from its neighbours; 'tulya' adds. And the long examination of the comparison-words ends here, on the distinction it began with.

Verse 3.14.544

गवयेन समोऽनङ्गानिति वृत्तिस्तदा भवेत् ।
न त्वस्ति गौरिवेत्यत्र व्यतिरेक इवाश्रयः ॥ 544 ॥

*gavayena samo'nadvāniti vṛttistadā bhavet |
na tvasti gaurivetyatra vyatireka ivāśrayaḥ || 544 ||*

'The ox is equal to a gavaya' — then there would be a derivation; but in 'like a cow' there is no difference to serve, as it were, as a substratum.

Gavayena samo 'nadvan iti vṛttis tada bhavet: 'the ox is equal to a gavaya' — then there would be a *derivation*: 'gavayavat', since the two are different species and there is something to compare. Na tv asti gaur iva ity atra vyatireka iva asrayaḥ: but in 'like a cow' — said of an ox — there is *no difference* to serve, as it were, as a *substratum*. So the gavaya-comparison stands and the cow-comparison does not, because ox and cow are too close: the difference the comparison needs as its footing is missing (3.14.394's the cause in the cognition 'cow' exists in another cow). Vyatireka iva asrayaḥ: the difference is what the simile *stands on*, and here there is no floor.

Verse 3.14.545

उपमेयेन सम्बन्धात् प्राक् तु प्रासादादिहेतुके ।
व्यतिरेके वतेर्भावो न तु तुल्याप्यहेतुके ॥ 545 ॥

*upameyena sambandhāt prāk tu prāsādādihetuke |
vyatireke vaterbhāvo na tu tulyāpyahetuke || 545 ||*

But prior to connection with the comparandum, in a difference caused by 'palace' and the rest, 'vati' occurs — not in one caused by the tulya-meaning.

Upameyena sambandhat prak tu prasadadi-hetuke vyatireke vater bhavah: prior to connection with the comparandum, in a difference caused by 'palace' and the rest (3.14.543's prasadadi-hetukah), there is the occurrence of 'vati'. Na tu tulyartha-hetuke: not in one caused by the tulya-meaning. So the affix attaches to a difference that the surrounding words made, before the comparandum is even connected – and not to a difference that 'tulya' itself generates. The distinction of 3.14.541-543 is thus doing rule-technical work: 'iva'-differences take vati, 'tulya'-differences do not, because the latter are the word's own surplus and not the situation's.

Verse 3.14.546

इवशब्देन सम्बन्धे न तृतीया विधीयते ।
प्रकृतां तामतस्त्यक्त्वा विभक्त्यन्तरमाश्रितम् ॥ 546 ॥

ivaśabdena sambandhe na tṛtīyā vidhīyate |
prakṛtām tāmatastyaktvā vibhaktyantaramāśritam || 546 ||

In connection with the word 'iva' the third case is not prescribed; therefore, abandoning the one under discussion, another case-ending is resorted to.

Iva-sabdena sambandhe na trtiya vidhiyate: in connection with the word 'iva', the *third case* is not prescribed – 'iva' governs nothing (3.14.542: it is a dyotaka and brings no surplus, so it can demand no case). Prakrtam tam atas tyaktva vibhakti-antaram asritam: *therefore, abandoning the one under discussion* – the instrumental of 3.14.524's rule – *another case-ending is resorted to*. So with 'iva' one drops the prescribed instrumental and takes whatever case the underlying construction wanted: 'brahmanam iva pasyati', accusative (3.14.525). The whole absorption of 3.14.525-527 was 'tulya's doing, and 'iva' undoes it.

Verse 3.14.547

सप्तम्यपि न तत्रास्ति ज्ञापनार्था तु सा कृता ।
इष्टा सा शेषविषये नियतासु विभक्तिषु ॥ 547 ॥

saptamyapi na tatrāsti jñāpanārthā tu sā kṛtā |
iṣṭā sā śeṣaviṣaye niyatāsu vibhaktiṣu || 547 ||

The seventh is also not there; but it has been made for the sake of indication; it is desired in the domain of the remainder, among the fixed case-endings.

Saptamy api na tatra asti: the *seventh* – the locative – is *also not* there. Jnapanartha tu sa kṛta: but it has been *made* for the sake of *indication* – jnapana: the grammarians' term for a rule that exists to signal something rather than to operate (3.14.130's the elision taught to demarcate a domain). Ista sa sesa-visaye niyatāsu vibhaktiṣu: it is *desired* in the *domain of the remainder*, among the *fixed case-endings*. So the locative in the rule is not prescribing a locative: it is a jnapaka, and what it indicates is that the sesa-domain is where the fixed cases operate. The rule's cases are notation about cases (3.14.78's the science made of its own devices).

Verse 3.14.548

यदि तु व्यतिरेकेण विषयेऽस्मिन् विभक्तयः ।
प्रवर्तेरंस्तृतीयैव व्यभिचारं प्रदर्शयेत् ॥ 548 ॥

yadi tu vyatirekeṇa viṣaye'smin vibhaktayaḥ |
pravarteramṣṭrṭīyaiva vyabhicāram pradarśayet || 548 ||

But if the case-endings operated in this domain by way of difference — the third alone would show the deviation.

Yadi tu vyatirekena viṣaye 'smin vibhaktayah pravarteran: if the case-endings operated in this domain by way of difference — each case marking a distinct relation, as cases normally do. Trtiya eva vyabhicaram pradarśayet: the third alone would show the deviation — vyabhicara: straying, the failure of invariable concomitance (3.14.131's word). So the instrumental would be the odd one out: every other case would mark its own relation and the instrumental would be marking all of them (3.14.525-527). The instrumental's absorption is thus visible as an anomaly within the case-system, and the anomaly is the evidence.

Verse 3.14.549-550

व्यभिचारे तथासिद्धे सप्तमीग्रहणाद् विना ।
सप्तम्येवोच्यते सर्वा न सन्त्यन्या विभक्तयः ॥ 549 ॥
अत्यन्तस्य विषये सप्तम्या ज्ञापनार्थया ।
बाधिता विनिवर्तेत षष्ठी सा गृह्यते पुनः ॥ 550 ॥

vyabhicāre tathāsiddhe saptamīgrahaṇād vinā |
saptamyevocyate sarvā na santyanā vibhaktayaḥ || 549 ||
atyantasya viṣaye saptamyā jñāpanārthayā |
bādhitā vinivarteta ṣaṣṭhī sā grhyate punaḥ || 550 ||

(549) The deviation being thus established, then, without the taking-up of the seventh, the seventh alone would be stated and none of the other case-endings would exist. (550) In the domain of the utter one, the genitive, annulled by the seventh which is there for indication, would withdraw; therefore it is taken up again.

(549): vyabhicare tatha asiddhe saptami-grahanad vina saptamy eva ucyate sarva na santya anya vibhaktayah — the deviation being thus established, without the taking-up of the seventh, the seventh alone would be stated and none of the other case-endings would exist. So without the locative's explicit mention, the rule would over-reach and swallow every case — the mirror of the instrumental's over-reach at 3.14.548. (550): atyantasya viṣaye saptamyā jñāpanārthayā bādhita vinivarteta sasthi — in the domain of the utter one, the genitive, annulled by the seventh which is there for indication, would withdraw. Sa grhyate punaḥ: therefore it is taken up again. So the genitive has to be re-stated to survive the locative's annulling. Three cases, each over-reaching or being over-reached, and each held in place by an explicit mention. The rule is a truce.

Verse 3.14.551

यदा त्वाश्रयभेदेन भेद एव प्रतीयते ।
आकृतेर्द्रव्यपक्षेण तदा भेदो न विद्यते ॥ 331 ॥

*yadā tvāśrayabhedena bheda eva pratiyate |
ākṛterdravyapakṣeṇa tadā bhedo na vidyate || 331 ||*

But when difference itself is cognized through difference of substratum — then, of the akṛti, on the substance-view, there is no difference.

This verse repeats 3.14.331 verbatim, and our source numbers it '331' — the fifth doubling in this samuddesa (after 3.14.421, 3.14.479, and the block 3.14.530-532). Unlike the 530-532 block, it has no evident bearing on the case-technical argument of 3.14.546-550 that surrounds it, and no bearing on the king-comparisons that follow. Its home is the akṛti-analysis of 3.14.329-331. We print it where the source prints it and record the repetition.

[Contested: This is the fifth verse in the Vṛtti-samuddesa which our source repeats verbatim from an earlier position while retaining the earlier number (121/421, 179/479, 430-432/530-532, 331/551). Five such faults in one samuddesa, all of the same kind, point to a defect in this witness rather than to the text. Readers should treat any of these five as unreliable evidence for the karika-count.]

Verse 3.14.552

तेन तुल्यमिति प्राप्तेः क्रियोपाधिः प्रसिध्यति ।
राजवद् वर्तते राजेत्यत्र भेदे विवक्षिते ॥ 552 ॥

*tena tulyamiti prāpteh kriyopādhiḥ prasidhyati |
rājavad vartate rājetyatra bhede vivakṣite || 552 ||*

From the applicability of 'similar to that', the action-adjunct is established; as in 'the king behaves like a king', when difference is intended.

Tena tulyam iti prāpteh kriyopādhiḥ prasidhyati: from the applicability of 'tena tulyam' — the rule's own words — the action-adjunct is established. Rājavad vartate raja ity atra bhede vivakṣite: as in 'rājavad vartate raja' — the king behaves like a king — when difference is intended. So the strange sentence is the test-case: a king compared to a king, which 3.14.544 said was impossible for want of a difference. It works only if a difference is intended — this actual king against kingship's exemplars. And 3.14.553 names them.

Verse 3.14.553

राजत्वेन प्रसिद्धा ये पृथुप्रभृतयो नृपाः ।
युधिष्ठिरान्तास्तेऽन्येषामुपमानं महीक्षिताम् ॥ 553 ॥

rājatvena prasiddhā ye pr̥thuprabhṛtayo nṛpāḥ |
yudhiṣṭhirāntāste’nyeṣāmupamānam mahīkṣitām || 553 ||

Those kings well-known for kingship, from Prthu down to Yudhisthira — they are the comparans for other rulers of the earth.

Rajatvena prasiddha ye prthu-prabhr̥tayo nṛpah yudhisthirantah: those kings *well-known* for *kingship* — prasiddha (3.14.360, 3.14.373’s word: famous, established) — *from Prthu* — the first king, who levelled the earth — *down to Yudhisthira*. Te ’nyesam upamanam mahiksitam: *they are the comparans for other rulers of the earth*. So ’rajavad vartate raja’ means: he behaves as Prthu and Yudhisthira did. The difference 3.14.552 required is the difference between a living king and the exemplary dead, and the comparison is possible because fame has made a class of them (3.14.373’s the comparans exceeds everywhere, from its being well-known).

Verse 3.14.554

सिद्ध्यसिद्धिकृतो भेद उपमानोपमेययोः ।
सर्वत्रैव यतोऽसिद्धं प्रसिद्धेनोपमीयते ॥ 554 ॥

siddhyasiddhikṛto bheda upamānopameyayoh |
sarvatraiva yato’siddham prasiddhenopamīyate || 554 ||

The difference of comparans and comparandum is made by establishment and non-establishment; since everywhere, the unestablished is compared with the well-known.

The principle, stated for the last time and in its plainest form. Siddhy-asiddhi-kr̥to bheda upamana-upameyayoh: the *difference* of comparans and comparandum is *made by establishment and non-establishment* — 3.14.397’s siddhy-asiddhibhyam, and 3.14.398’s sampurnatvat: the general becomes a particular by being complete. Sarvatra eva yatah asiddham prasiddhena upamiyate: since *everywhere*, the *unestablished* is *compared with the well-known*. Sarvatra eva: everywhere, without exception. So there is no comparison between equals: one term is always famous and the other always is not, and that asymmetry is what makes them two. The whole comparison-doctrine rests on fame.

Verse 3.14.555

राजवद् रूपमस्येति राजन्येव विवक्षिते ।
अक्रियार्थेन योगेन द्वितीयेन भविष्यति ॥ 555 ॥

rājavād rūpamasyeti rājanyeva vivakṣite |
akriyārthena yogena dvitīyena bhaviṣyati || 555 ||

’His form is like a king’s’ — when a king alone is intended, it will occur by the second rule, which is not for the sake of the action.

Rajavad rupam asya iti rajany eva vivaksite: 'his form is like a king's' — when a *king alone* is intended: no action in view, only the man and his bearing. Akriyarthena yogena dvitiyena bhavisyati: it will occur by the *second* rule, which is *not for the sake of action* — 3.14.536-538's division: the earlier rule covers actions, the later substances and qualities. So this case falls to the later rule, and the division holds. The samuddesa is checking its own settlement against a fresh example, and it passes.

Verse 3.14.556

उपमानाविवक्षायां नियमार्थोऽयमुच्यते ।
धर्मोऽर्हतिक्रियाकर्ता तदर्थं वचनं पुनः ॥ 556 ॥

upamānāvivakṣāyām.niyamārtho'yamucyate |
dharmo'rhatikriyākartā tadartham.vacanam.punah || 556 ||

When the comparans is not intended, this is stated as having restriction for its purpose; the property is the agent of the action 'befits'; the statement is again for that purpose.

Upamana-avivaksayam niyamartho 'yam ucyate: when the *comparans* is *not intended*, this is stated as having *restriction* for its purpose — *niyama*: a rule that narrows rather than enables (3.14.535's *niyame va abhidhane va*). *Dharmo* 'rhati-kriya-karta: the *property* is the *agent* of the action 'arhati' — befits, is worthy of: and what does the befitting is a property, not a person. *Tad-artham vacanam punah*: the *statement* is *again* for that purpose. So where no comparison is meant, the rule restricts, and what it restricts is which properties may be said to befit. The vati-affix has a second life outside comparison altogether.

Verse 3.14.557

कृतहस्तवदित्येतत् प्रसिद्धेष्वेव दृश्यते ।
राजत्वेन प्रसिद्धे च राज्ञि राजवदित्यपि ॥ 557 ॥

kṛtahastavadityetat prasiddheṣveva dṛśyate |
rājatvena prasiddhe ca rājñi rājavadityapi || 557 ||

'Like a trained hand' is seen only in the well-known; and 'like a king' too, in a king well-known for kingship.

Kṛta-hastavad ity etat prasiddhesv eva drsyate: 'kṛta-hastavat' — like a trained hand, said of a skilled archer — is *seen only in the well-known*: one says it only of the acknowledged master. *Rajatvena prasiddhe ca rajni rajavad ity api*: and 'rajavat' too, in a *king well-known for kingship*. So both idioms require their subject to be already famous — the comparison does not confer the standing, it presupposes it. This is 3.14.554's principle at work on the comparandum's side: the compared thing must be established enough to be worth comparing, and only then does fame's surplus have anywhere to land.

Verse 3.14.558

अराजि येषां धर्माणां दृष्टोऽत्यन्तमसम्भवः ।
ते राजनि नियम्यन्ते त्यज्यन्ते व्यभिचारिणा ॥ 558 ॥

arājñi yeṣāṃ dharmāṇāṃ dr̥ṣṭo'tyantamasambhavaḥ |
te rājani niyamyante tyajyante vyabhicārīṇā || 558 ||

Those properties of which utter impossibility is seen in a non-king — they are restricted to a king; the deviating ones are abandoned.

Arajni yesam dharmanam drsto 'tyantam asambhavaḥ: those properties of which *utter impossibility* is seen in a *non-king* — the things nobody but a king can do or be. Te rajani niyamyante: *they* are *restricted* to a *king* — niyamyante: fixed on him. Tyajyante vyabhicarina: the *deviating* ones are *abandoned* — vyabhicarin: what strays, what a non-king might also have (3.14.548's vyabhicara). So 'rajavat' means: with the properties no one but a king could have — and the ones a commoner might share are dropped. The selection is by exclusivity, and 3.14.415's problem (which of the moon's properties does 'moon-faced' take?) here gets a criterion: whatever nothing else could have.

Verse 3.14.559

अर्हतिश्च क्रिया कर्त्री या तस्यां वतिरिष्यते ।
राजानमर्हतिच्छत्रमिति न त्वेवमादिषु ॥ 559 ॥

arhateśca kriyā kartrī yā tasyāṃ vatirīṣyate |
rājānamarhaticchatramiti na tvevamādiṣu || 559 ||

And that action which is the agent of 'befits' — in it 'vati' is accepted; but not in cases like 'the umbrella befits the king'.

Arhates ca kriya kartri ya tasyam vatir isyate: that *action* which is the *agent* of 'arhati' — where an action does the befitting — in it 'vati' is *accepted*: 'rajavad arhati', it befits as it befits a king. Rajanam arhati chatram iti na tv evam adisu: *but not* in '*the umbrella befits the king*' and the like — where the umbrella is the agent and a person the object. So the affix comes only when what befits is an action, not when it is a thing. The distinction is fine and it is the last of the vati-rule's boundaries: the affix lives on actions and their possessors, and a befitting umbrella is neither.

Verse 3.14.560

प्रयुक्तानां हि शब्दानां शास्त्रेणानुगमः सताम् ।
छत्राद्यर्थे तु वचने प्रत्याख्यानं न सम्भवेत् ॥ 560 ॥

*prayuktānām hi śabdānām śāstreṇānugamaḥ satām |
chatrādyarthe tu vacane pratyākhyānam na sambhavet || 560 ||*

For the science follows out words that exist and are employed; but if there were a statement in the sense of 'umbrella' and the rest, rejection would not be possible.

Prayuktanam hi sabdanam sastrena anugamah satam: the science follows out words that exist and are employed — prayukta and sat: said, and there. Anugamah: it follows *after* (3.14.81's anugamyate; 3.14.154's akhyayate ca sastrena). Chatrady-arthe tu vacane pratyakhyanam na sambhavet: but if there were a statement in the sense of 'umbrella' and the rest, rejection would not be possible. So one cannot reject a rule that covers actually-occurring usage: if 'the umbrella befits the king' (3.14.559) were provided for, the provision could not be thrown out. The science's authority over its rules stops where usage begins.

Verse 3.14.561

तदर्हमिति नारब्धं सूत्रं व्याकरणान्तरे ।
सम्भवत्युपमात्रापि भेदस्य परिकल्पना ॥ 561 ॥

*tadarhamiti nārabdham sūtram vyākaraṇāntare |
sambhavatyupamātrāpi bhedasya parikalpanā || 561 ||*

The sutra 'tad-arham' is not undertaken in another grammar; and even in the mere comparison, the construction of difference is possible.

Tad-arham iti na arabdham sutram vyakaranantare: the sutra 'tad-arham' is not undertaken in another grammar — vyakaranantara: a rival system, which manages without the rule. Sambhavaty upamatrapī bhedasya parikalpana: and even in the mere comparison, the construction of difference is possible — parikalpana: a construction (3.14.75's word). So the rule is dispensable: other grammars do without it, and the difference it was meant to secure can be constructed anyway. Bhartrhari cites a rival system's economy against Panini's — rarely, and here without apology.

Verse 3.14.562

एकस्य कार्यानिर्जनात् सिद्धस्य विषयान्तरे ।
तद्धर्मत्वविवक्षायां बुद्ध्या भेदः प्रकल्प्यते ॥ 562 ॥

ekasya kāryānirjñānāt siddhasya viṣayāntare |
taddharmatvavivakṣāyām buddhyā bhedaḥ prakalpyate || 562 ||

From knowing the operation of one thing, established in another domain — when possession of that property is intended, difference is constructed by the intellect.

Ekasya karya-nirjñanat siddhasya viṣayantare: from knowing the operation of one thing, established in another domain — one knows what a king does, and the king belongs to another sphere than this man. Tad-dharmatva-vivaksayam buddhya bhedah prakalpyate: when possession of that property is intended, difference is constructed by the intellect. Buddhya: by the intellect (3.14.188's buddhya eva; 3.14.15's the intellect is the ordainer of the meaning). So the difference the comparison stands on (3.14.544's asraya) is not found in the things: it is built by the mind when it wants to say that this man has that man's property. This is the thesis the next eight verses unfold, and it is the samuddesa's last great argument.

Verse 3.14.563

सूत्रारम्भान्न चैतस्मादिवशब्दस्य विद्यते ।
प्रयोगः सोऽपि चैतस्य विषये विद्यते वतेः ॥ 563 ॥

sūtrārambhānna caitasmādivaśabdasya vidyate |
prayogaḥ so'pi caitasya viṣaye vidyate vateḥ || 563 ||

And from this sutra's undertaking, no employment of the word 'iva' obtains; and that too exists in the domain of this 'vati'.

Sutrarambhan na ca etasmad iva-sabdasya vidyate prayogaḥ: from this sutra's undertaking, no employment of the word 'iva' obtains — where the rule gives 'vati', 'iva' is not used. So 'py etasya viṣaye vidyate vateḥ: and that too — 'iva' — exists in the domain of this 'vati'. So the two do coexist after all: the affix does not banish the particle from its territory. The observation matters because 3.14.542-546 had drawn them sharply apart, and here they overlap — which is what one should expect of a dyotaka and a vacaka that reveal and say the same thing.

Verse 3.14.564

दस्युहेन्द्र इवेत्येतदेन्द्रे मन्त्रे प्रयुज्यते ।
अन्यत्र दृष्टकर्मन्द्रो यथेत्यस्मिन् विवक्षिते ॥ 564 ॥

dasyuhendra ivetyetadendre mantre prayujyate |
anyatra dṛṣṭakarmendro yathetyasmin vivakṣite || 564 ||

'Slayer of dasyus, like Indra' — this is employed in a mantra to Indra; elsewhere, when 'as Indra, whose deeds are seen' is intended.

Dasyu-hendra iva ity etad aindre mantre prayujyate: 'slayer of dasyus, like Indra' — this is employed in a *mantra* to Indra: the god is compared to himself, in his own hymn. Anyatra drsta-karmendro yatha ity asmin vivaksite: elsewhere, when 'as Indra, whose deeds are seen' is intended — of a man, with the god's famous exploits in view. So the same phrase does two quite different things: in the *mantra* Indra is likened to Indra, and outside it a man is likened to Indra. The first is 3.14.552's rajavad vartate raja — a thing compared to itself — and the Veda does it, which settles that it can be done.

Verse 3.14.565

पूर्वमवस्थामाश्रित्या यावस्था व्यपदिश्यते ।
सदृशस्त्वं तवैवेति तत्रैवमभिधीयते ॥ 565 ॥

*pūrvāṁavasthāmāśrityā yāvasthā vyapadiśyate |
sadrśastvam tavaiveti tatraivamabhidhīyate || 565 ||*

Resorting to a former state, the state which is designated — 'you are like your own self' — there it is thus expressed.

Purvam avastham asritya ya avastha vyapadisyate: resorting to a former state, the state which is designated. Sadrsas tvam tava eva iti tatra evam abhidhiyate: 'you are like your own self' — there it is thus expressed. Tava eva sadrsah: like yourself alone — the highest praise the language has, and it is a comparison of a thing to itself. And the analysis: what it compares is two states of one person, the present to the former, and the difference is temporal. So 3.14.564's self-comparison is not paradoxical: the intellect has divided one thing into its states (3.14.562's buddhya bhedah prakalpyate), and the states are two.

Verse 3.14.566-567

प्रसिद्धभेदं यत्रान्यदुपमानं न विद्यते ।
उपमेयस्य तत्रात्मा स्वबुद्ध्या प्रविभज्यते ॥ 566 ॥
योऽपि स्वाभाविको भेदः सोऽपि बुद्धिनिबन्धनः ।
तेनास्मिन् विषये भिन्नमभिन्नं वा न विद्यते ॥ 567 ॥

*prasiddhabhedam yatrānyadupamānam na vidyate |
upameyasya tatrātmā svabuddhyā pravibhajyate || 566 ||
yo'pi svābhāviko bhedaḥ so'pi buddhinibandhanah |
tenāsmiṁ viṣaye bhinnamabhinnaṁ vā na vidyate || 567 ||*

(566) Where no other comparans of established difference exists — there the comparandum's own self is divided by one's own cognition. (567) Even the difference which is natural — that too is grounded in cognition; therefore in this domain there is neither the different nor the non-different.

(566): prasiddha-bhedam yatra anyad upamanam na vidyate — where no other comparans of established difference exists: nothing outside is good enough, as nothing outside is good enough for Indra. Upameyasya tatra atma sva-buddhya pravibhajyate: there the comparandum's own self is divided by one's own cognition — pravibhajyate: is cut apart. So one cuts the thing in two and compares the halves. (567): yo 'pi svabhaviko bhedah so 'pi buddhi-nibandhanah — even the difference which is

natural — *svabhavika*: belonging to the thing's own nature (3.14.186's word) — *that too is grounded in cognition*. *Tena asmin visaye bhinnam abhinnam va na vidyate*: *therefore, in this domain, neither the different nor the non-different exists*. So the division of Indra from Indra is not a special expedient: every difference is the mind's, including the ones that look built-in, and once that is seen, neither difference nor identity is available as a fact about things. This is 3.14.142's *na nirupyate* given its ground.

Verse 3.14.568

अङ्गदी कुण्डली चेति दर्शयन् भेदहेतुभिः ।
चैत्रमीदृश इत्याह बुद्ध्यवस्थापरिग्रहात् ॥ 568 ॥

aṅgādī kuṇḍalī ceti darśayan bhedahetubhiḥ |
caitramīdṛśa ityāha buddhyavasthāparigrahāt || 568 ||

Showing Caitra by the difference-causes 'bracelet-wearing' and 'ear-ringed' — one says 'he is such', from grasping a state of the intellect.

Angadi kundali ca iti darsayan bheda-hetubhiḥ: *showing by the difference-causes* — 'bracelet-wearing', 'ear-ringed': the ornaments by which one picks a man out. *Caitram idrśa ity āha*: one says of *Caitra*, 'he is such'. *Buddhy-avastha-parigrahāt*: from *grasping a state of the intellect* — *buddhy-avastha*: a condition of the mind, not of *Caitra*. So the man is identified by his ornaments and what one has actually grasped is a mental state. *Idrśah* — *such* — points at a cognition, not a man. This is 3.14.567's thesis in the plainest possible case: even 'that one, with the bracelet' reaches only a *buddhy-avastha*.

Verse 3.14.569

एतैः शब्दैर्यथाभूतः प्रत्ययात्मोपजायते ।
तत्प्रत्ययानुकारेण विषयोऽप्युपपद्यते ॥ 569 ॥

etaiḥ śabdairyathābhūtaḥ pratyayātmopajāyate |
tatpratyayānukāreṇa viṣayo'pyupapadyate || 569 ||

The cognition-self which arises by these words, as it is — the object too comes about in conformity with that cognition.

Etaiḥ sabdair yathābhūtaḥ pratyayatma upajāyate: the *cognition-self* which arises by these words, as it is — the words make a cognition, and the cognition has whatever shape they gave it. *Tat-pratyaya-anukāreṇa viṣayo 'py upapadyate*: the *object too comes about in conformity with that cognition* — *anukāra*: following after, imitating. So the object follows the cognition, and the cognition follows the words: the order of dependence runs word, then thought, then thing. This is 3.14.197's *sabdad arthah pratyayante* — meanings are spread out from the word — and 1.123's *no cognition without word*, arriving as the conclusion of an argument about jewellery.

Verse 3.14.570

बुद्ध्यवस्थाविभागेन भेदकार्यं प्रतीयते ।
जन्यन्त इव शब्दानामर्थाः सर्वे विवक्षया ॥ 570 ॥

*buddhyavasthāvibhāgena bhedakāryam pratīyate |
janyanta iva śabdānāmarthāḥ sarve vivakṣayā || 570 ||*

By the division of the intellect's states, the difference-operation is cognized; all the meanings of words are, as it were, produced by the intention to speak.

One of the summit verses of the Vrtti-samuddesa, and of the work. *Buddhy-avastha-vibhagena bheda-karyam pratiyate*: by the *division* of the *intellect's states*, the *difference-operation* is *cognized* — every rule that needs a difference to operate on is fed by the mind's dividing itself (3.14.567's even natural difference is *buddhi-nibandhana*). *Janyanta iva sabdanam arthah sarve vivaksaya*: *all the meanings* of words are, *as it were*, *produced* by the *intention to speak*. *Janyante*: are *generated*, brought into being. *Sarve*: all of them. *Vivaksaya*: by the wish to say. And *iva* — *as it were* — which is the whole of Bhartrhari's caution and the whole of his boldness: he will not say the world is made by speaking, and he will say it is *as though* made by speaking, and he will not take the *iva* back. 3.14.197 said the word ordains the differences; this says the wish to speak generates the meanings. Between them the samuddesa's method — analyses are devices, divisions are the mind's, the science stands far off — is not scepticism at all. It is this.

Verse 3.14.571

तथाविधेऽपि बाह्येऽर्थे भिद्यन्ते यत्र बुद्ध्यः ।
न तत्र कश्चित् सादृश्यं सदपि प्रतिपाद्यते ॥ 571 ॥

*tathāvidhe'pi bāhye'rthe bhidyante yatra buddhayah |
na tatra kaścit sādṛśyam sadapi pratipādyate || 571 ||*

Even where the external object is of the same kind, wherever the cognitions differ — there no one conveys a similarity, though it exists.

The test of 3.14.570, negative. *Tathavidhe 'pi bahye 'rthe*: even where the *external object* is of the *same kind* — the things really are alike, out there. *Bhidyante yatra buddhayah*: wherever the *cognitions* differ. *Na tatra kascit sadrsyam sad api pratipadyate*: *there no one* conveys a *similarity*, *though it exists* — *sad api*: though it is there. So an actual resemblance in the world goes unsaid if the cognitions have not converged: nobody makes the comparison, and nobody could. The external likeness is real and inert. This is as sharp a statement as the work gives of what it means for meanings to be generated by *vivaksa*: the world's own resemblances do not get into speech unless the mind has already made them.

Verse 3.14.572

अत्यन्तं विषये भिन्ने यावत् प्रख्या न भिद्यते ।
न तावत् प्रत्यभिज्ञानं कस्यचिद् विनिवर्तते ॥ 572 ॥

atyantam viṣaye bhinne yāvat prakhyā na bhidyate |
na tāvat pratyabhijñānam kasyacid vinivartate || 572 ||

Even when the object is utterly different, so long as the presentation is not differentiated — so long does no one's recognition withdraw.

The converse test, and it is the stronger. *Atyantam viṣaye bhinne*: even when the *object* is *utterly different* — *atyantam*: completely; two different things, out there. *Yavat prakhyā na bhidyate*: so long as the *presentation* is *not differentiated* — *prakhyā*: the showing-forth (3.14.187's *eka-prakhyā*; 3.14.403's *jāti-bhāgasraya prakhyā*). *Na tavat pratyabhijñānam kasyacid vinivartate*: so long does *no one's recognition* withdraw — *pratyabhijñāna*: the recognition 'this is that'. So one goes on recognizing a thing as the same across an utter difference, provided the presentation has not split. With 3.14.571 the pair is complete: real likeness without mental likeness conveys nothing, and real difference without mental difference does not stop recognition. The mind, not the world, is where sameness and difference are.

Verse 3.14.573

अयमेव तु सूत्रेण भेदो भेदेन दर्शितः ।
प्रसिद्धमपि दुर्जनिमबुधः प्रतिपद्यते ॥ 573 ॥

ayameva tu sūtreṇa bhedo bhedena darśitaḥ |
prasiddham api durjñānam abudhaḥ pratipadyate || 573 ||

This very difference is shown by the *sūtra* by way of difference; the unlearned apprehends what is well-known but hard to know.

Ayam eva tu sūtreṇa bhedo bhedena darśitaḥ: this *very difference* — the mind-made one of 3.14.562-572 — is *shown* by the *sūtra* *by way of difference*: the rule exhibits it as though it were a difference among things. *Darśitaḥ*: exhibited (3.14.42's *bheda-abheda-nidarsanam kṛtam*). *Prasiddham api durjñānam abudhaḥ pratipadyate*: the *unlearned apprehends* what is *well-known* but *hard to know* — *prasiddham api durjñānam*: familiar and hard: everyone lives by these differences and nobody can say what they are. So the rule is a teaching-device for the *abudha* (3.14.49's *abudhan praty upayas ca vicitraḥ*), exhibiting as objective a difference that is the mind's. The *samuddesa*'s whole account of grammar, in one verse, applied to its own last doctrine.

Verse 3.14.574

वैयाकरणवद् ब्रूते न वैयाकरणः सदा ।
वैयाकरणवद् ब्रूष्वेत्यतः सोऽप्यभिधीयते ॥ 574 ॥

*vaiyākaraṇavad brūte na vaiyākaraṇaḥ sadā |
vaiyākaraṇavad brūṣvetyataḥ so'pyabhidhīyate || 574 ||*

One who is not always a grammarian speaks like a grammarian; 'speak like a grammarian' — therefore he too is expressed.

Vaiyakaranavad brute na vaiyakaranah sada: one who is *not always a grammarian* speaks like a grammarian — na sada: not always: even a real grammarian is only sometimes grammatical, and so 'vaiyakaranavat' is said of him too. Vaiyakaranavad brusva ity atah so 'py abhidhiyate: 'speak like a grammarian' — therefore he too is expressed. So one may tell a grammarian to speak like a grammarian, and the injunction is not empty: it asks him to be, now, what he is only sometimes. This is 3.14.565's tava eva sadrsah — like your own self — in a professional key, and there is a joke in it that Bhartrhari, of all people, was entitled to make.

Verse 3.14.575

केचित् पुमांसो भाषन्ते स्त्रीवत्, पुंवच्च योषितः ।
व्यभिचारे स्वधर्मोऽपि पुनस्तेनोपदिश्यते ॥ 575 ॥

*kecit pumāṃṣo bhāṣante strīvat, pumvacca yoṣitaḥ |
vyabhicāre svadharmo'pi punastenopadiśyate || 575 ||*

Some men speak like women, and women like men; in the deviation, one's own property too is again taught by that.

Kecit pumamso bhasante strivat, pumvac ca yositah: some men speak like women, and women like men — the vati-affix used of what one is. Vyabhicare sva-dharmo 'pi punas tena upadisyate: in the deviation, one's own property too is again taught by that — vyabhicara: straying (3.14.548, 3.14.558's word). So where a man speaks womanishly, the word 'strivat' also teaches what his own property was — you cannot say he speaks like a woman without saying he is not one. The comparison, in marking the straying, re-teaches the norm it strayed from. The observation is exact, and it holds for every 'X-vat' said of someone who is not X.

Verse 3.14.576

सदृशस्त्वं तवैवेति लोके यदभिधीयते ।
उपमानान्तरं तत्र प्रसक्तं विनिवर्तते ॥ 576 ॥

*sadṛśastvam, tavaiveti loke yadabhidhīyate |
upamānāntaram, tatra prasaktam, vinivartate || 576 ||*

'You are like your own self' — what is said in the world; there, another comparans, which was applicable, withdraws.

3.14.565's phrase given its logic. Sadrsas tvam tava eva iti loke yad abhidhiyate: 'you are like your own self' — what is said in the world: not a grammarian's construct but the language's own idiom. Upamānantaram tatra prasaktam vinivartate: there, another comparans, which was applicable, withdraws — prasakta: it was available, and it goes. So the praise works by dismissing every other standard: to say a man is like himself is to say that all the famous exemplars have been considered and found short. The self-comparison is not a failure to find a comparans; it is the refusal of the ones on offer, and the refusal is the compliment.

Verse 3.14.577

युक्तमौपयिकं राज इत्यर्थस्य निदर्शने ।
उपमानाविवक्षायां तदर्हमिति पठ्यते ॥ 577 ॥

yuktamaupayikam rājña ityarthasya nidarśane |
upamānāvivakṣāyām tadarhamiti paṭhyate || 577 ||

'It is fitting, suitable for a king' — in illustrating the meaning; when the comparans is not intended, 'tad-arham' is recited.

Yuktam aupayikam rajna ity arthasya nidarsane: 'it is fitting, suitable for a king' — in the illustration of the meaning: what 'rajarham' comes to. Upamāna-avivaksayam tad-arham iti paṭhyate: when the comparans is not intended, 'tad-arham' is recited — the sutra's name. So the rule has two employments: with a comparans in view it gives comparison, without one it gives fitness (3.14.556's niyamārtho 'yam ucyate). The two are distinguished by vivaksa alone, and Panini gave them one rule — which 3.14.561 noted another grammar does without.

Verse 3.14.578-579

प्रसक्तानुप्रसक्तस्तु वतिशेषोऽभिधीयते ।
उपमानाभिसम्बन्धादस्मिन् वतिरुदाहृतः ॥ 578 ॥
प्रधानकल्पनाऽभावे गुणशब्दस्य दर्शनात् ।
उपसर्गाद् वतौ सिद्धा धातौ धात्वर्थकल्पना ॥ 579 ॥

prasaktānuprasaktastu vatiśeṣo'bhidhiyate |
upamānābhisambandhādasmin vatirudāhṛtaḥ || 578 ||
pradhānakalpanā'bhāve guṇaśabdasya darśanāt |
upasargād vatau siddhā dhātau dhātvarthakalpanā || 579 ||

(578) The remainder of 'vati', occasioned incidentally, is stated; from connection with the comparans, 'vati' is cited in this. (579) In the absence of any construction of a principal, from the seeing of a quality-word — in 'vati' after a preverb, the construction of the root-meaning in the root is established.

(578): prasakta-anuprasaktas tu vati-seso 'bhidhiyate — the remainder of 'vati', occasioned incidentally: prasakta-anuprasakta, one applicability dragging in another. Upamāna-abhisambandhad asmin vatir udāhṛtaḥ: from connection with the comparans, 'vati' is cited in this. (579): pradhana-kalpana-abhave guṇa-sabdasya darsanat — in the absence of any construction of a principal, from the seeing of a quality-word. Upasargad vatau siddha dhatau dhatv-artha-kalpana: in 'vati' after a preverb, the

construction of the root-meaning in the root is established. So where no principal is constructed, the root's meaning has to be constructed into the root — which is 3.14.68's roots with imagined selves, and 3.14.276's the preverb's sense not being in the root. Kalpana at every level, exactly as 3.14.75 said.

Verse 3.14.580

स्वं रूपमिति चैतस्मिन्नर्थस्यापि परिग्रहः ।
रूपवज्जापितस्तस्मादसन्नोऽर्थो ग्राहीष्यते ॥ 580 ॥

*svam rūpamiti caitasminnarthasyāpi parigrahaḥ |
rūpavajjāpitaśtasmādasanno'rtho grahīṣyate || 580 ||*

And in this, by 'its own form', the meaning too is included; being indicated as the form is — therefore the near meaning will be taken.

Svam rupam iti ca etasminn arthasya api parigrahaḥ: by 'svam rupam' — Panini's rule that a word in the grammar stands for itself — the *meaning* too is *included*. So the rule that makes a word self-referring does not exclude its sense: the form is meant *and* the meaning comes along. Rupavaj jnapitas tasmad asanno 'rtho grahīṣyate: being *indicated* as the *form* is, *therefore* the *near* meaning will be *taken*. Asanna: the *nearby* one (3.14.242's asanna eva; 3.14.295's asatti). So one takes the closest sense, not any sense — the same nearness-principle that bounded paryudasa's drift. Even self-reference does not escape it.

Verse 3.14.581

धात्वर्थेनोपजनितं साधनत्वेन साधनम् ।
धातुना कृतमित्येवमस्मिन् सूत्रे प्रतीयते ॥ 581 ॥

*dhātvārthenopajanitam sādhanatvena sādhanam |
dhātunā kṛtamityevamasmin sūtre pratīyate || 581 ||*

The means, produced by the root-meaning as a means — 'made by the root' — thus it is cognized in this sūtra.

Dhatv-arthena upajanitam sadhanatvena sadhanam: the *means*, *produced by the root-meaning as a means* — the karaka is generated by the action and generated as a karaka: it has no prior standing (3.7.3's the sadhanas as capacities the action confers; 3.14.220's the verb makes object and agent). Dhatuna krtam ity evam asmin sūtre pratiyate: '*made by the root*' — thus it is cognized in *this sūtra*. So Panini's wording is read as saying that the root makes its means. Krtam: *made*. This is the karaka-doctrine's strongest formulation and Bhartrhari finds it in a rule about affixes.

Verse 3.14.582

यः शब्दश्चरितार्थत्वादत्यन्तं न प्रयुज्यते ।
विषयेऽदर्शनात् तत्र लोपस्तस्याभिधीयते ॥ 582 ॥

*yaḥ śabdaścaritārthatvādatyantam na prayujyate |
viṣaye'darśanāt tatra lopastasyābhidhiyate || 582 ||*

That word which, its purpose being served, is never employed — its elision is stated, from its non-appearance in the domain.

Yah sabdas carita-arthatvad atyantam na prayujyate: that word which, its *purpose being served* — carita-artha: having done its work — is *never* employed. Visaye 'darsanat tatra lopas tasya abhidhiyate: from its *non-appearance* in the *domain*, its *elision* is stated. So the grammar declares an elision for a word that was never there — the word had already done its job (as a conditioning presence) and was never audible (3.14.468's upadanam prayogesu tasya atyantam na vidyate). Lopa is thus the technical name for a word that finished before it was spoken, and 3.14.128's what withdraws has no being applies: the elision is bookkeeping.

Verse 3.14.583

क्रियायां साधने द्रव्ये प्रादयो ये व्यवस्थिताः ।
तेभ्यः सत्त्वाभिधायिभ्यो वतिः स्वार्थे विधीयते ॥ 583 ॥

*kriyāyām sādhanē dravye prādayo ye vyavasthitāḥ |
tebhyaḥ sattvābhidhāyibhyo vatiḥ svārthe vidhiyate || 583 ||*

Those 'pra' and the rest which are settled in an action, in a means, or in a substance — from those, as expressing substance, 'vati' is prescribed in its own meaning.

Kriyayam sadhane dravye pradayo ye vyavasthitah: those 'pra' and the rest — the preverbs — *settled* in an *action*, in a *means*, or in a *substance*: the three places a preverb can lodge. Tebhayah sattva-abhidhāyibhyo vatiḥ svarthe vidhiyate: from those, as *expressing substance*, 'vati' is prescribed in its *own meaning* — svarthe: adding nothing (3.14.174's svarthika). So the affix attaches to preverbs when they have gone over to expressing substance, and it adds nothing when it does. The preverb, that most verbal of elements, becomes a substance-word and takes a nominal affix — 3.14.308's nan changing category by composition, happening again.

Verse 3.14.584

प्रत्ययेन विना प्रादिस्तत्रार्थेन प्रयुज्यते ।
भेदेन तु समाख्याने विभागः परिकल्पितः ॥ 584 ॥

*pratyayena vinā prādistatrārthena prayujyate |
bhedena tu samākhyāne vibhāgaḥ parikalpitah || 584 ||*

There, 'pra' and the rest is employed without an affix, along with the meaning; but in the designation by division, the division is constructed.

Pratyayena vina pradis tatra arthena prayujyate: *there, 'pra' and the rest is employed without an affix, with the meaning — the preverb carries its sense unaided. Bhedena tu samakhyane vibhagah parikalpitaḥ: but in the designation by division, the division is constructed — parikalpita. So the affix of 3.14.583 is not needed and the analysis that requires it is a construct. This is 3.14.35's samudayam upakramya padam tasyam prayujyate, vibhagena samakhyane — having begun with the aggregate, the division is what the designation makes. The samuddesa's oldest finding, in its last technical application.*

Verse 3.14.585

अनङ्गीकृतसत्त्वं तु यदि गृह्येत साधनम् ।
विभक्तिभिर्न योगः स्याद् यथैव तसिलादिषु ॥ 585 ॥

*anaṅgīkṛtasattvaṁ tu yadi gr̥hyeta sādhanam |
vibhaktibhirna yogaḥ syād yathaiṁva tasilādiṣu || 585 ||*

But if the means were grasped without substance being accepted — there would be no connection with case-endings, as in 'tasil' and the rest.

Anaṅgikṛta-sattvaṁ tu yadi gr̥hyeta sadhanam: if the *means* were *grasped without substance being accepted* — a karaka with no thing in it. Vibhaktibhir na yogaḥ syad yatha eva tasiladisū: there would be *no connection with case-endings*, as in 'tasil' and the rest — the affix giving 'tataḥ', 'from there': an indeclinable, taking no case. So a substanceless means would be an adverb. The argument is 3.14.163's dravyam eva asrayaḥ in its karaka-form: strip the substance out and the case-system has nothing to attach to, and one is left with indeclinables.

Verse 3.14.586

पाठाद् यैरविभक्तित्वं वत्यन्तेष्वनुगम्यते ।
तेषामुद्वत् इत्यत्र वक्तव्या सविभक्तिता ॥ 586 ॥

*pāṭhād yairavibhaktitvaṁ vatyanteṣvanugamyate |
teṣāmudvat ityatra vaktavyā savibhaktitā || 586 ||*

By those who follow, from the recitation, the case-endinglessness of vati-ending forms — for them, in 'udvat', the having-of-a-case-ending must be stated.

Pathad yair avibhaktitvaṁ vaty-antesv anugamyate: by those who *follow*, from the *recitation* — the gana-list — the *case-endinglessness* of vati-ending forms: those who list vati among the avyayas (3.14.521's proposal). Tesam udvat ity atra vaktavya savibhaktita: for *them*, in 'udvat', the *having-of-a-case-ending* must be *stated* — vaktavya: they must say it. So the listing costs them an extra rule: 'udvat' does take endings, and if vati-forms are indeclinable by the list, an exception must be written. This is the samuddesa's standing audit again: every doctrine is charged for the rules it adds (3.14.318's the prohibition is purposeless; here, a rule becomes necessary).

Verse 3.14.587

वत्यर्थं नावगाहेते पुंवदित्यस्य दर्शनात् ।
नञ्स्नत्रावपादस्य बाधकं तन्निपातनम् ॥ 587 ॥

vatyartham.nāvagāhete pumvadityasya darśanāt |
nañsnañāvapavādasya bādhakam.tannipātanam || 587 ||

'Nañ' and 'snañ' do not enter into the vati-meaning, from the seeing of 'pumvat'; that irregular form is the annuller of the exception.

Vaty-artham na avagahete pumvad ity asya darsanat: 'nañ' and 'snañ' do not enter into the vati-meaning, from the seeing of 'pumvat' — the form is there and it has no nañ or snañ in it. Nan-snav apavadasya badhakam tan nipatanam: that irregular form — nipatana: a form Panini simply lists as given — is the annuller of the exception. So an irregularly-listed form defeats a rule that would otherwise have applied. Nipatana beats apavada: what the grammar simply records overrides what it derives. This is a real principle of the system and it is 3.14.560's in another key — the science follows what is said.

Verse 3.14.588

एवमुत्क्रामतो नूनं वत्यर्थं नञ्स्नत्राविति ।
तयोः प्रवृत्तावुत्सर्गो बाधनान्नोपपद्यते ॥ 588 ॥

evamutkrāmato nūnam.vatyartham.nañsnañāviti |
tayoh pravṛttāvutsargo bādhanānnopapadyate || 588 ||

Thus, 'nañ' and 'snañ' surely transgressing the vati-meaning — in their operation the general rule, being annulled, is not possible.

Evam utkramato nunam vaty-artham nan-snav iti: thus 'nañ' and 'snañ' surely transgressing the vati-meaning — utkramatah: overstepping, going past their bounds. Tayoh pravrttav utsargo badhanan na upapadyate: in their operation, the general rule, being annulled, is not possible. Utsarga: the general provision; badhana: its annulment by the special (3.14.216's badhaka). So if the two affixes did overstep into vati's territory, the general rule would be annulled there and could not operate. The consequence is unacceptable, and the argument is the standard one of rule-conflict — special defeats general, and one must therefore keep the special off the general's ground.

Verse 3.14.589

नञ्स्नत्रौ विहितौ येन स योगो नावगाहते ।
वतिकरणं तद्धि लिङ्गमेव समर्थ्यते ॥ 589 ॥

nañsnañau vihitau yena sa yogo nāvagāhate |
vatikaraṇam.taddhi liṅgameva samarthya || 589 ||

That rule by which 'nañ' and 'snañ' are prescribed does not enter into the vati-making; for that is justified as a mere indication.

Nan-snanau vihitau yena sa yogo na avagahate vati-karanam: that *rule* by which 'nañ' and 'snañ' are prescribed does not enter into the vati-making — the two rules do not touch. Tad dhi lingam eva samarthya: for that is justified as a mere indication — linga: a sign, a jnapaka; eva: nothing more. So the rule that seemed to conflict is not a rule at all in the operative sense: it is a marker (3.14.547's jnapanartha; 3.14.469's nirdisyanta upadhyah). The conflict of 3.14.587-588 dissolves because one of the parties was never a competitor. This is the last of the samuddesa's many findings that a rule is notation.

Verse 3.14.590

अभेदेनोपमानस्य भिन्नार्थोपनिपातिता ।
ऊहस्तथोपमाननामङ्गवन्नोपलभ्यते ॥ 590 ॥

abhedenopamānasya bhinnārthopanipātītā |
ūhastathopamānanāmaṅgavannopalabhyate || 590 ||

By non-difference, the comparans' falling upon a different meaning; and thus the modification of comparans-words, as with 'anga', is not found.

Abhedena upamanasya bhinnārtha-upanipātita: by *non-difference*, the comparans' falling upon a different meaning — upanipātita: it lands there, uninvited (3.14.428's the word coming to stand for the man-meaning). Uhas tatha upamana-nam angavan na upalabhyate: thus the uha of comparans-words, as with 'anga', is not found. Uha: the Mimamsakas' term for the modification of a mantra when it is carried to a new rite — one substitutes the new deity's name for the old. So comparans-words do not undergo uha: one cannot swap the standard out and keep the comparison, as one swaps a deity's name. The comparans is welded to its comparison, and the reason is that it landed there by non-difference and not by substitution.

Verse 3.14.591

गावेधुके चरौ दृष्टा गोविकर्तक्षिवापयोः ।
पशू रुद्र इव ह्येतावित्येकवचनश्रुतिः ॥ 591 ॥

gāvedhuke carau dr̥ṣṭā govikartākṣavāpayoh |
paśū rudra iva hyetāvityekavacanāśrutih || 591 ||

In the gavedhuka oblation, seen in 'go-vikarta' and 'aksa-vapa'; 'these two are like Rudra's beast' — thus the singular is heard.

The ritual illustration of 3.14.590. Gavedhuke carau dr̥ṣṭā go-vikarta-aksa-vapayoh: in the gavedhuka oblation — the offering of coix-seed to Rudra — seen in 'go-vikarta' (the ox-carver) and 'aksa-vapa' (the dice-thrower): two persons the rite excludes. Pasu rudra iva hy etav iti eka-vacana-srutih: 'these two are like Rudra's beast' — and the singular is heard: 'pasu', not 'pasu' dual. So two men are compared to Rudra's beast, singular, and the number does not shift to match them. The comparans keeps its own number — which is 3.14.590's point exactly: it does not undergo modification to fit its new employment. And Bhartrhari proves it from the srauta ritual, where the Mimamsakas' uha lives.

Verse 3.14.592

उपमानस्य भेदाच्च बहुषु स्यादत्रो विधिः ।
कश्यपा इति लोपः स्यात् तथा प्रतिकृतिष्वपि ॥ 592 ॥

upamānasya bhedācca bahuṣu syādaño vidhiḥ |
kaśyapā iti lopah syāt tathā pratikṛtiṣvapi || 592 ||

And from difference of the comparans, the rule of 'añ' would apply in the plural; there would be elision in 'kasyapah'; and likewise in the case of images.

Upamanasya bhedac ca bahuṣu syad ano vidhiḥ: from *difference* of the *comparans*, the rule of 'añ' would apply *in the plural* — if the standard were plural, the patronymic affix would take its plural form. Kasyapa iti lopah syat: there would be *elision* in 'kasyapah' — the affix would drop, as it does in patronymic plurals. Tatha pratikṛtisv api: and *likewise* in the case of *images* — the pratikṛti-affix, for statues and likenesses (a comparison-affix of a kind: an image is *like* what it depicts). So the comparans' number is about to become the question, and it runs through both the patronymics and the images.

Verse 3.14.593

एवं तु युक्तवद्भावादत्रैकवचनं भवेत् ।
लुम्मनुष्ये तथोक्तं स्याल्लिङ्गस्यैकस्य सिद्धये ॥ 593 ॥

evam tu yuktavadbhāvādatraikavacanam bhavet |
lummanuṣye tathoktam, syāllīṅgasyaikasya siddhaye || 593 ||

But thus, from 'treatment as though joined', the singular would occur here; 'luk in the case of a human' would be so stated, for the establishing of a single gender.

Evam tu yuktavad-bhavad atra eka-vacanam bhavet: from *yuktavad-bhava* — the treatment of a derivative as though it were its analysed phrase (3.14.110, 3.14.318) — the *singular* would occur here. Lum manusye tatha uktam syal lingasya ekasya siddhaye: 'luk in the case of a human' — the rule for images of men — would be so stated, for the *establishing of a single gender*. So the rule about human images exists to fix one gender, and yuktavad-bhava would give the singular. Two provisions, both about number and gender in likenesses, and 3.14.594 asks what governs them.

Verse 3.14.594

उपमेयेषु भिन्नेषु किञ्चिदेकं प्रवर्तते ।
प्रत्ययस्य विधौ तत्र नित्यं युक्तवदिष्यते ॥ 594 ॥

upameyeṣu bhinneṣu kiñcidekam pravartate |
pratyayasya vidhau tatra nityam yuktavadiṣyate || 594 ||

When the comparanda are different, some one thing operates; in the prescription of the affix there, 'as though joined' is always accepted.

Upameyesu bhinnesu kincid ekam pravartate: when the *comparanda* are *different*, some one thing operates — many things compared, one standard. Pratyayasya vidhau tatra nityam yuktavad isyate: in the *prescription of the affix* there, *yuktavad* is *always* accepted — nityam: invariably. So where one standard serves many, the affix is prescribed on the yuktavad-bhava, and the compound answers to its analysis. The rule is uniform, and 3.14.595 gives the case where it is not.

Verse 3.14.595

यदा प्रत्युपमेयं तु तदेकैकमवस्थितम् ।
तदा बाह्यार्थभेदेन तद्धितान्तं प्रचीयते ॥ 595 ॥

yadā pratyupameyam tu tadekaikamavasthitam |
tadā bāhyārthabhedena taddhitāntam.pracīyate || 595 ||

But when it is settled one by one, for each comparandum — then, by difference of external meaning, the taddhita-ending form is multiplied.

Yada praty-upameyam tu tad ekaikam avasthitam: when *that* is *settled one by one*, for each comparandum — a standard apiece, not one for all. Tada bahyārtha-bhedena taddhitantam pracīyate: *then*, by *difference of external meaning*, the *taddhita*-ending form is *multiplied* — pracīyate: is heaped up, pluralized. So distributed standards give a plural derivative, and a shared standard (3.14.594) gives a singular. The difference is not in the words: it is in whether one standard or many is intended (3.14.570's vivaksaya).

Verse 3.14.596

यथा समूहप्रचये द्विगूनां भिन्नसंख्यता ।
पञ्चपूर्व्यादिषु तथा सुबन्तप्रचये भवेत् ॥ 596 ॥

yathā samūhapracaye dvigūnām.bhinnasamkhyatā |
pañcapūlyādiṣu tathā subantapracaye bhavet || 596 ||

As in the multiplication of aggregates, dvigus have different numbers — in 'five bundles' and the rest — so it would be in the multiplication of case-ending forms.

Yatha samuha-pracaye dvigunam bhinna-samkhyata: as in the *multiplication of aggregates*, *dvigus* have *different numbers* — the numeral-compounds: 'panca-puli', a five-bundle, and several of them. Panca-pulyadisū tathā sub-anta-pracaye bhavet: so it would be in the *multiplication of case-ending forms*. So the precedent is the collective numeral: one can have many five-bundles, and the compound's own number is one while the count of them is another. The comparison-derivative of 3.14.595 does the same. The parallel is well chosen — a dvigu is a collection with its own number, exactly as a comparison-derivative is.

Verse 3.14.597

प्रचये भिद्यमाने तु संख्या पूलेषु भिद्यते ।
अर्थभेदो लुबन्तेषु नैव कश्चन दृश्यते ॥ 597 ॥

pracaye bhidyamāne tu samkhyā pūleṣu bhidyate |
arthabhedo lubanteṣu naiva kaścana dṛśyate || 597 ||

But when the multiplication is differentiated, the number in the bundles is differentiated; whereas no difference of meaning at all is seen in luk-ending forms.

Pracaye bhidyamane tu samkhyā pulesu bhidyate: when the *multiplication* is *differentiated*, the *number* in the *bundles* is *differentiated* — many five-bundles means many bundles, and the count runs down into them. Artha-bhedo lubantesu na eva kascana drsyate: whereas no difference of meaning *at all* is seen in *luk*-ending forms — na eva kascana. So the parallel of 3.14.596 breaks: the dvigu's plurality reaches its members, and the luk-form's does not. The images of Kasyapa (3.14.592) are many and there is no plurality of Kasyapa in them. So the two cases are not alike after all, and Bhartrhari retracts his own analogy in the next verse but one.

Verse 3.14.598

येषूपमेयवचनः शब्दोऽन्यो न प्रयुज्यते ।
उपमानस्य तत्रान्यैः संख्याया भेद इष्यते ॥ 598 ॥

yeṣūpameyavacanah śabdo'nyo na prayujyate |
upamānasya tatrānyaiḥ samkhyāyā bheda iṣyate || 598 ||

Those in which no other word expressing the comparandum is employed — there, others accept a difference of number in the comparans.

Yesu upameya-vacanaḥ sabdo 'nyo na prayujyate: those in which *no other word* expressing the *comparandum* is *employed* — the compared thing is not separately named: 'kasyapah', images of Kasyapa, with no word for the images. Upamanasya tatra anyaiḥ samkhyaya bheda iṣyate: *there, others* accept a *difference of number* in the *comparans*. So when the compared thing goes unnamed, the number attaches to the standard by default — and that is why 3.14.592's difficulty arose. The plural of 'kasyapah' looks like a plurality of Kasyapas, because there is no other word for it to be a plurality of.

Verse 3.14.599

यथा गुडतिलादीनां प्रयोगादेकसंख्यता ।
पाकादेरप्रयोगे तु भिन्नसंख्याभिधीयते ॥ 599 ॥

yathā guḍaṭilādīnām prayogādekasaṁkhyatā |
pākāderaprayoge tu bhinnasaṁkhyābhidhīyate || 599 ||

As from the employment of 'jaggery-sesame' and the rest there is a single number; but when 'cooking' and the rest is not employed, a different number is expressed.

Yatha guda-tiladinam prayogad eka-samkhyata: as from the employment of 'guda-tila' — jaggery-and-sesame, the sweetmeat — and the rest, there is a *single number*: the compound names one thing. Pakader aprayoge tu bhinna-samkhya abhidhiyate: but when 'paka' — the cooking, the preparation — and the rest is *not employed*, a *different number* is *expressed*. So: name the confection and it is one; leave the preparation-word out and the plural of the ingredients shows through. The number tracks which word is present, not what is in the bowl. Which confirms 3.14.598: an unnamed thing cannot carry a number, and the number goes to whatever is named.

Verse 3.14.600

यः संबन्धिगतो भेदः स प्रयोगे प्रतीयते ।
संबन्धिनामतो भेद उपमेये न गम्यते ॥ 600 ॥

yah sambandhigato bhedaḥ sa prayoge pratiyate |
sambandhināmato bheda upameye na gamyate || 600 ||

The difference which resides in the relatum is cognized in the employment; therefore the difference of the relata is not understood in the comparandum.

Yah sambandhi-gato bhedaḥ sa prayoge pratiyate: the *difference* which *resides in the relatum* is cognized in the employment — where the related term is *said*, its difference is available. Sambandhinam ato bheda upameye na gamyate: *therefore the difference of the relata is not understood in the comparandum*. So an unsaid relatum's difference does not transfer: the images' plurality is not Kasyapa's, and it does not become his by his being the only word present. This blocks the slide 3.14.598 identified, and it does so by a principle: differences are cognized where they are employed, and nowhere else (3.14.501's aprayoge na vidyate).

Verse 3.14.601

तस्मात् सामान्यशब्दत्वप्रसङ्गविनिवृत्तये ।
उपमेयगतो भेद उपमानेषु दृश्यते ॥ 601 ॥

tasmāt sāmānyaśabdatvaprasaṅgavinivṛttaye |
upameyagato bheda upamāṇeṣu dṛśyate || 601 ||

Therefore, to avoid the consequence of being a general word — the difference residing in the comparandum is seen in the comparanda.

Tasmat samanya-sabdatva-prasanga-vinivrttaye: *therefore, to avoid the consequence of being a general word* — if the derivative carried no difference at all, it would be a mere general and would not pick out these images (3.14.425's samanya-vacanah katham). Upameya-gato bhedah upamanesu drsyate: *the difference residing in the comparandum is seen in the comparanda*. So the images' difference is seen in the standard — displaced there, because the standard is the only word present. This is the resolution: the plural of 'kasyapah' is the images' plurality, seen in Kasyapa's word, and no Kasyapas are multiplied. Drsyate: *it is seen there*, which is not the same as being there.

Verse 3.14.602

उपमानं समस्तानामभिन्नं श्रूयते क्वचित् ।
भिन्नानामुपमेयानामेकैकं वोपमीयते ॥ 602 ॥

upamānam samastānāmabhinnam śrūyate kvacit |
bhinnānāmupameyānāmekaikam vopamīyate || 602 ||

Somewhere the comparans of all of them together is heard undivided; or else each one of the differentiated comparanda is compared.

Upamanam samastanam abhinnam sruyate kvacit: *somewhere the comparans of all of them together is heard undivided* — one standard, for the whole company, and it stays single. Bhinnanam upameyanam ekaikam va upamiyate: *or else each one of the differentiated comparanda is compared*. So two readings, always available: the collective and the distributive. 3.14.594-595 gave the rule for each; here they are set side by side as the two things a comparison can be doing. And 3.14.603-605 give three examples that make the difference vivid.

Verse 3.14.603

यथा गरुड इत्येतद् व्यूहापेक्षं प्रयुज्यते ।
एकेन यत्र सादृश्यं वैनतेयेन हस्तिनाम् ॥ 603 ॥

yathā garuḍa ityetaḍ vyūhāpekṣam prayujyate |
ekena yatra sādṛśyam vainateyena hastinām || 603 ||

As 'garuda' is employed with reference to a battle-array, where the elephants' similarity is with one Vainateya.

Yatha garuda ity etad vyuha-apeksam prayujyate: as 'garuda' is employed with reference to a vyuha — the garuda-vyuha, the eagle-formation of the epic battlefields, in which an army is drawn up in the shape of the bird. Ekena yatra sadrsyam vainateyena hastinam: where the *similarity of the elephants is with one Vainateya* — Garuda, son of Vinata. So: many elephants, one eagle, and the likeness is of the whole formation to the single bird. This is 3.14.602's first reading — samastanam abhinnam, the undivided standard for all together — and the example is perfect: no elephant resembles Garuda, and the army does.

Verse 3.14.604

एकस्यापि प्रतीयते भिन्ना प्रतिकृतिः सह ।
काश्यपस्येति तेनायं प्रत्येकमवतिष्ठते ॥ 604 ॥

ekasyāpi pratīyate bhinnā pratikṛtiḥ saha |
kāśyapasyeti tenāyam.pratyekamavatiṣṭhate || 604 ||

Even of one, differentiated images are cognized together — 'of Kasyapa'; therefore this stands distributively.

Ekasya api pratiyate bhinna pratikṛtiḥ saha: even of one, differentiated images are cognized together — one Kasyapa, many statues, and one hears them all at once in 'kasyapah'. Tena ayam pratyekam avatiṣṭhate: therefore this stands distributively — pratyekam: one by one. So the images-case is 3.14.602's second reading: the plural distributes over the statues, though the man is one. Set against 3.14.603's garuda — one bird, many elephants, collective — the pair shows that the same grammatical shape does both, and only vivaksa tells which.

Verse 3.14.605

मेघाः शैल इवेत्युक्ते समस्तानां प्रतीयते ।
सादृश्यं गिरिणैकेन प्रत्येकं तेन भिद्यते ॥ 605 ॥

meghāḥ śaila ivetyukte samastānām.pratīyate |
sādrśyam.giriṇaikena pratyekam.tena bhidyate || 605 ||

When 'the clouds are like a mountain' is said, the similarity of all of them together with one mountain is cognized; therefore it is differentiated distributively.

Meghah saila iva ity ukte samastanam pratiyate sadrsyam girina ekena: when 'the clouds are like a mountain' is said, the similarity of all together with one mountain is cognized. Pratyekam tena bhidyate: therefore it is differentiated distributively. So this one does both: the massed clouds resemble the single mountain collectively, and the resemblance is then distributed over them. It is 3.14.603 and 3.14.604 at once. The example is the best of the three because it is what one actually sees — a bank of cloud on the horizon, one great shape, and each cloud in it — and it shows the collective and the distributive as two moments of one cognition rather than two doctrines.

Verse 3.14.606

छापेक्षा तद्विषयता विधेयत्वान्न गम्यते ।
काकतालीयमित्यत्र प्रसिद्धं ह्युपलक्षणम् ॥ 606 ॥

chāpekṣā tadviṣayatā vidheyatvānna gamyate |
kākatālīyamityatra prasiddham hyupalakṣaṇam || 606 ||

The state of having that domain, which depends on 'cha', is not understood, since it is what is to be prescribed; for in 'the crow and the palm-fruit' the indication is well-known.

Cha-apeksa tad-visayata vidheyatvan na gamyate: the state of *having that domain*, which depends on 'cha' — the affix — is *not understood*, since it is *what is to be prescribed*: one cannot use the affix's domain to determine the affix, because the domain is what the rule is for (the circularity of 3.14.78's uhyau). Kaka-taliyam ity atra prasiddham hy upalakṣaṇam: for in 'kakataliya' — the crow-and-palm-fruit, the crow that alights just as the fruit falls, Sanskrit's byword for coincidence — the *indication is well-known*. So the compound is understood by everyone and the affix's domain is not thereby fixed: usage runs ahead of the rule (3.14.560's the science follows). The example is chosen for its fame, which is the point: what everyone knows does not tell the grammarian what to write.

Verse 3.14.607

राजाश्वादिश्च विषयः स्यादन्यो वेत्यनिश्चितम् ।
तेन छस्य विधानात् प्राग् व्यपदेशो न विद्यते ॥ 607 ॥

rājāśvādiśca viṣayaḥ syādanyo vetyaniścitam |
tena chasya vidhānāt prāg vyapadeśo na vidyate || 607 ||

And whether the domain is 'rajasva' and the rest or something else is undetermined; therefore, prior to the prescription of 'cha', there is no designation.

Rajasvadis ca viṣayah syad anyo va ity aniscitam: whether the *domain* is 'rajasva' and the rest, or something else, is *undetermined* — aniscita: unsettled. Tena chasya vidhanat prag vyapadeso na vidyate: *therefore, prior to the prescription of 'cha'*, there is *no designation* — vyapadesa: the technical naming (3.14.135's word). So the domain cannot be named before the rule that creates it, and the rule cannot be framed before the domain is named. The circle is the same one 3.14.78 exhibited — base and affix each conjectured from the other — and here it closes on a single affix. The Vrtti-samuddesa's method-argument and its rule-technical argument have arrived at the same place.

Verse 3.14.608

द्वयोरिवार्थयोरत्र निमित्तत्वं प्रतीयते ।
एकेनावयवो युक्तः प्रत्ययोऽन्येन युज्यते ॥ 608 ॥

dvayorivārthayoratra nimittatvam.pratīyate |
ekenāvayavo yuktaḥ pratyayo'nyena yujyate || 608 ||

Here the causality of two 'iva'-meanings is cognized; the member is joined with one, the affix with the other.

The anatomy of 'kakataliya'. Dvayor iva-arthayor atra nimittatvam pratiyate: the causality of two 'iva'-meanings is cognized here — two likenesses, not one. Ekena avayavo yuktaḥ pratyayo 'nyena yujyate: the member is joined with one, the affix with the other. So the compound carries a double comparison: one of its members answers to one likeness and the affix to another. This is unlike anything else in the samuddesa — a compound with two comparisons inside it — and 3.14.609 unpacks them.

Verse 3.14.609

चैत्रस्य तत्रागमनं काकस्यागमनं यथा ।
दस्योरभिनिपातस्तु तालस्य पतनं यथा ॥ 609 ॥

caitrasya tatrāgamanam.kākasyāgamanam.yathā |
dasyorabhinipātaṣtu tālasya patanam.yathā || 609 ||

Caitra's arriving there is like the crow's arriving; but the bandit's falling upon him is like the palm-fruit's falling.

The two likenesses of 3.14.608, and the image is exact. Caitrasya tatra agamanam kakasya agamanam yatha: *Caitra's arriving there is like the crow's arriving* — he came for his own reasons, as the crow did. Dasyor abhinipatas tu talasya patanam yatha: but the *bandit's falling upon him* is like the *palm-fruit's falling* — the fruit was ripe and would have dropped anyway. So neither event is for the other's sake, and their meeting is the whole of the misfortune. 'Kakataliya' compounds two independent likenesses and means their coincidence — which no member of it says.

Verse 3.14.610

संनिपाते तयोर्न्या क्रिया तत्रोपजायते ।
वधादिरुपमेयेऽर्थे तया छविधिरिष्यते ॥ 610 ॥

samnipāte tayoryānyā kriyā tatropajāyate |
vadhādirupameye'rthe tayā chavidhirīṣyate || 610 ||

In their conjunction, that other action which arises there — killing and the rest, in the comparandum-meaning — by that the prescription of 'cha' is accepted.

Sannipate tayor ya anya kriya tatra upajayate: in their conjunction, that other action which arises there — sannipata: the falling-together; and the third action, which neither party performed. Vadhādir upameye'rthe: *killing* and the rest, in the comparandum-meaning. Taya cha-vidhir isyate: *by that the*

prescription of 'cha' is accepted. So what licenses the affix is the action that came out of the meeting and belonged to neither — the killing that nobody did. Upajayate: it *arises*. This is the finest thing in the last stretch: the compound is licensed by an emergent event, and a coincidence is precisely an event with no agent.

Verse 3.14.611

क्रियायां समवेतायां द्रव्यशब्दोऽवतिष्ठते ।
पातागमनयोः काकतालशब्दौ तथा स्थितौ ॥ 611 ॥

kriyāyām samavetāyām dravyaśabdo'vatisthate |
pātāgamanayoh kākātālaśabdau tathā sthitau || 611 ||

The substance-word stands in the inherent action; thus the words 'crow' and 'palm' stand for the arriving and the falling.

Kriyayam samavetayam dravya-sabdo 'vatisthate: the *substance-word* stands in the *inherent action* — the noun lodges in the action that inheres in what it names. Pata-agamanayoh kaka-tala-sabdau tathā sthitau: the words 'kaka' and 'tala' stand for the *falling* and the *arriving*. So 'crow' in the compound means the crow's coming and 'palm' means the fruit's dropping: two nouns, and each has become an event. This is 3.14.529's madhura and matr all over again — the word names the action at its seat, not the seat — and it is why 'kakataliya' can compound two happenings out of two things.

Verse 3.14.612

यदन्वाख्यायकं वाक्यं तदेवं परिकल्प्यते ।
प्रयोगवाक्यं यल्लोके तदेवं न प्रयुज्यते ॥ 612 ॥

yadanvākhyāyakam vākyaṁ tadevaṁ parikalpyate |
prayogavākyaṁ yallope tadevaṁ na prayujyate || 612 ||

The sentence which is expository is constructed in this way; the sentence of usage in the world is not employed in this way.

Yad anvakhyayakam vakyam tad evam parikalpyate: the sentence which is *expository* — anvakhyayaka, the grammarian's paraphrase (3.14.71's anvakhyānaya) — is *constructed* in this way: parikalpyate, built. Prayoga-vakyam yal loke tad evam na prayujyate: the *sentence of usage* in the *world* is *not employed* in this way. So everything 3.14.608-611 has just unpacked belongs to the exposition and to nothing anyone says. Nobody utters 'as the crow's arriving and the palm-fruit's falling'; they say 'kakataliyam', and they mean coincidence. The analysis is a construction and the word is a word — 3.14.49's atyanta-bheda, held to the very end.

Verse 3.14.613

ययोरतर्किता प्राप्तिर्दृश्यते काकतालवत् ।
तयोः समासप्रकृतेर्वृत्तिरभ्युपगम्यते ॥ 613 ॥

yayoratarkitā prāptirdṛśyate kākatālavat |
tayoh samāsaprakṛtervṛttirabhyupagamyate || 613 ||

Of those two whose meeting is seen to be unreasoned, like the crow and the palm-fruit — the derivation of the compound-base is accepted.

Yayor atarkita praptir drsyate kaka-talavat: of those two whose meeting is seen to be atarkita — unreasoned, not to be argued out, arriving without a why — like the crow and the palm-fruit. Tayoh samasa-prakṛter vṛttir abhyupagamyate: of those the derivation of the compound-base is accepted. So the rule's condition is atarkita prapti: an unreasoned meeting. This is one of the loveliest phrases in the samuddesa and one of the most precise: a coincidence is exactly a conjunction for which no reasoning is available, and Sanskrit grammar has an affix for it. Drsyate: it is seen to be unreasoned — one sees the absence of a reason, and that seeing is what the compound reports.

Verse 3.14.614

काकस्य तालेन यथा वधो यस्य तु दस्युना ।
तत्र चित्रीकृतेऽन्यस्मिन्नपमेये छ इष्यते ॥ 614 ॥

kākasya tālena yathā vadho yasya tu dasyunā |
tatra citrikṛte'nyasminnupameye cha iṣyate || 614 ||

As the crow's killing by the palm-fruit — but whose killing is by a bandit; there, when the other comparandum is made striking, 'cha' is accepted.

Kakasya talena yatha vadho yasya tu dasyuna: as the crow's killing by the palm-fruit — but whose killing is by a bandit: Caitra's. Tatra citrikṛte 'nyasminn upameye cha iṣyate: there, when the other comparandum is made striking, 'cha' is accepted. Citrikṛta: made vivid, made a picture of, rendered arresting. So the affix comes when the compared event has been made striking — and that is an aesthetic condition, not a semantic one. Bhartrhari has been describing a figure of speech all along, and here he says what figures are for: 'kakataliya' is used because it makes the thing vivid, and the grammar accommodates the vividness.

Verse 3.14.615

चञ्चत्प्रकारश्चञ्चत्को बृहत्क इति चापरे ।
मणिमण्डूकखद्योतान् सादृश्येन प्रचक्षते ॥ 615 ॥

cañcatprakāraścañcatko brhatka iti cāpare |
maṇimaṇḍūkakhadyotān sādṛśyena pracakṣate || 615 ||

And others: 'cañcatka', of the flickering kind, and 'brhatka' — they describe the gem, the frog and the firefly by similarity.

Cancat-prakaras cancatto brhatka iti ca apare: 'cancatka', of the *flickering* kind, and 'brhatka' — the great-ish one — and others say. Mani-manduka-khadyotan sadrsyena pracaksate: they describe the *gem*, the *frog* and the *firefly* by *similarity*. So three small pulsing things, named by a mode-affix, and each of them likened to something. The set is unexpected and Bhartrhari has chosen it: a jewel, a frog, a firefly — things that throb. 3.14.616 says what each is likened to, and the verse is a small poem.

Verse 3.14.616

तत्रोन्मेषनिमेषाभ्यां खद्योत उपमीयते ।
श्वासप्रबन्धैर्मण्डूकः स्पन्दमानप्रभोमणिः ॥ 616 ॥

tatronmeṣanimeṣābhyām khadyota upamīyate |
śvāsaprabandhairmaṇḍūkaḥ spandamānaprabhomaṇiḥ || 616 ||

There the firefly is compared by its opening and closing; the frog by its succession of breaths; the gem, its light throbbing.

One of the most beautiful verses in the kanda, and it is doing analytic work. Tatra unmesa-nimesabhyam khadyota upamīyate: the *firefly* is compared by its *opening and closing* — unmesa-nimesa: the eye's opening and shutting, the standard Sanskrit measure of an instant. Svāsaprabandhair mandukah: the *frog* by its *succession of breaths* — prabandha: an unbroken series; the throat going in and out. Spandamana-prabho maṇiḥ: the *gem*, its *light throbbing* — spandamana: pulsing, quivering. So the three are alike in *pulsing*, and each is compared by its own kind of pulse. What the mode-affix catches is a rhythm — and 3.14.321's pravrtti said that a thing's general character is a rhythm: manifestation, disappearance, persistence. The firefly is that doctrine made visible.

Verse 3.14.617

प्रविकासिप्रभोऽल्पोऽपि महान् य उपलभ्यते ।
बृहत्क इति तत्रैव मणौ शब्दः प्रयुज्यते ॥ 617 ॥

pravikāsiprabho'lpo'pi mahān ya upalabhyate |
brhatka iti tatraiva maṇau śabdaḥ prayujyate || 617 ||

That which, though small, is apprehended as great, its light expanding — there, in that very gem, the word 'brhatka' is employed.

Pravikasi-prabho 'lpo 'pi mahan ya upalabhyate: that which, *though small*, is *apprehended as great*, its *light expanding* — pravikasin: unfolding, blooming outward. A little stone that throws a great blaze. Brhatka iti tatra eva maṇau sabdah prayujyate: *there*, in that very *gem*, the word 'brhatka' is *employed*. So the affix says: great, in the way this small thing is great. It records the discrepancy between the size and the apprehension — and it is the apprehension that the word takes (3.14.569's the object comes about in conformity with the cognition). A jewel is brhatka because of how one sees it.

Verse 3.14.618

सादृश्यमेव सर्वत्र प्रकारः कैश्चिदिष्यते ।
भेदेऽपि तु प्रकाराख्या कैश्चिदभ्युपगम्यते ॥ 618 ॥

*sādrśyameva sarvatra prakārah kaiścidiṣyate |
bhede'pi tu prakārākhyā kaiścidadhyupagamyate || 618 ||*

By some, 'mode' everywhere is accepted as just similarity; by others, the designation 'mode' is accepted even in difference.

Sadrśyam eva sarvatra prakarah kaiscid isyate: by some, 'prakara' — mode, kind, manner — *everywhere* is accepted as *just similarity*: to be of a kind is to be like. Bhede 'pi tu prakarakhya kaiscid abhyupagamyate: by others, the designation 'prakara' is accepted *even in difference*: a mode may be a mode without any likeness. So the last doctrinal question of the samuddesa: is a kind a resemblance? Two answers, both held, neither adjudicated — the work's manner from first to last (3.14.97's the upayas are unsettled among persons).

Verse 3.14.619

प्रकारवचनः कश्चित् प्रकारवति संस्थितः ।
प्रकारमात्रे वर्तित्वा कश्चिद् तद् व्यतिवर्तते ॥ 619 ॥

*prakāravacanah kaścīt prakāravati samsthītaḥ |
prakāramātre vartitvā kaścīd tad vyativartate || 619 ||*

Some word expressing a mode stands in what possesses the mode; some, having operated in the mode alone, passes beyond it.

Prakara-vacanah kascit prakaravati samsthitah: some word expressing a *mode* stands in what possesses the mode — it lodges in the thing that has the manner. Prakara-matre vartitva kascid tad vyativartate: some, having operated in the *mode alone*, passes beyond it — vyativartate: goes past, overshoots. So mode-words do two things: some settle on the possessor, some touch the mode and travel on. The pair is 3.14.354-355's two permutations once more, and it is the last time the samuddesa runs its most characteristic move — set two readings side by side, change one word, and let the reader see that nothing decides.

Verse 3.14.620-621

सादृश्यग्रहणं सूत्रे सदृशस्योपलक्षणम् ।
तुल्ययोरव्ययीभावे सहशब्दोऽभिधायकः ॥ 620 ॥
वीप्सासादृश्ययोर्वृत्तिर्या यथार्थाभिधायिनः ।
स चायमव्ययीभावे भेदो भेदेन दर्शितः ॥ 621 ॥

sādrśyagrahaṇam.sūtre sadrśasyopalakṣaṇam |
tulyayoravyayībhāve sahaśabdo'bhidhāyakaḥ || 620 ||
vīpsāsādrśyayorvṛttir yā yathārthābhidhāyinaḥ |
sa cāyamavyayībhāve bhedo bhedena darśitaḥ || 621 ||

(620) The taking-up of 'similarity' in the sutra is an indication of what is similar; in the avyayibhava of two equals, the word 'saha' is the expresser. (621) That derivation of what expresses the sense of 'as' — in repetition and in similarity: and this difference in the avyayibhava has been shown by way of difference.

(620): sadrsya-grahanam sutre sadrsasya upalakṣanam — the taking-up of 'sadrsya' in the sutra is an indication of what is similar: the rule's word points at the similar thing and does not describe similarity (3.14.170's upalakṣana). Tulyayor avyayibhave saha-sabdo 'bhidhayakah: in the avyayibhava of two equals, the word 'saha' is the expresser — a vacaka, where 'sadrsya' was only a pointer. (621): vipsa-sadrsyayor vṛttir ya yatharthabhidhayinah — the derivation of what expresses the sense of 'yatha', in repetition (vipsa: 'gramam gramam', village by village) and in similarity. Sa ca ayam avyayibhave bhedo bhedena darsitaḥ: and this difference in the avyayibhava has been shown by way of difference — darśitaḥ, exhibited (3.14.573's the sutra shows the difference by way of difference). So the rule exhibits as a real distinction what is a distinction of the exposition. The samuddesa's last word about rules is the one it began with.

Verse 3.14.622

सादृश्यं योग्यता कैश्चिदनावभ्युपगम्यते ।
यत् तु मूर्तिगतं साम्यं तत् सहेनाभिधीयते ॥ 622 ॥

sādrśyam.yogyatā kaiścidanāvabhyupagamyate |
yat tu mūrtigatam.sāmyam.tat sahenābhidhiyate || 622 ||

By some, similarity in 'anu' is accepted as fitness; but that similarity which resides in bodily form is expressed by 'saha'.

Sadrsyam yogyata kaiscid anav abhyupagamyate: by some, similarity in 'anu' is accepted as yogyata — fitness, aptness, the capacity to go together (2.317's yogyata, one of the sentence's meaning-conditions). So 'anu' marks not likeness but suitability. Yat tu murti-gatam samyam tat sahenābhidhiyate: but that similarity which resides in bodily form is expressed by 'saha' — murti: the shaped body (3.14.485's murti-bheda, which jati- and guna-words did not intend). So the division: 'anu' takes fitness, 'saha' takes bodily likeness. Two particles, two kinds of togetherness, and the difference is whether shape is in question.

Verse 3.14.623

इत्थंभावेऽपि सादृश्यं बुद्ध्यवस्थानिबन्धनम् ।
ग्रहणे भेदमात्रस्य तत्रान्यैवाभिधीयते ॥ 623 ॥

itthambhāve'pi sādṛśyam buddhyavasthānibandhanam |
grahaṇe bheda-mātrasya tatrānyaivābhidhīyate || 623 ||

Even in 'being-thus', similarity is grounded in a state of the intellect; where mere difference is grasped, another thing altogether is expressed.

The work's thesis, sounded once more before the end. Itthambhave 'pi sadrsyam buddhy-avastha-nibandhanam: even in *itthambhava* – being-thus, the condition of being in a certain way – *similarity is grounded in a state of the intellect*: buddhy-avastha-nibandhana, the exact words of 3.14.567 and 3.14.570. Grahane bheda-matrasya tatra anya eva abhidhiyate: where *mere difference is grasped, another thing altogether is expressed*. So even here, at the last technical question, the answer is the one the samuddesa reached at its summit: the likeness is in the mind's condition, and where the mind grasps only difference, something else is being said. Api – *even* – carries it: there is no case left where this does not hold.

Verse 3.14.624

गौर्वाहीक इति द्वित्वे सादृश्यं प्रत्युदाहृतम् ।
शुक्लादौ सति निष्पन्ने बाहीकोन द्विरुच्यते ॥ 624 ॥

gaurvāhika iti dvitve sādṛśyam pratyudāhṛtam |
śuklādau sati niṣpanne bāhikona dvirucyate || 624 ||

'The Vahika is an ox' – in the duality, similarity is cited as a counter-instance; when 'white' and the rest is present and accomplished, it is said twice with 'Vahika'.

The last verse of the Vakyapadiya, and Bhartrhari ends on the metaphor every Sanskrit grammarian ends on. Gaur vahika iti dvitve sadrsyam pratyudahrtam: '*gaur vahikah*' – *the Vahika is an ox* – the Bhasya's own example, the countryman called an ox for his dullness. In the *duality*, *similarity* is cited as a *pratyudaharana* – a *counter-instance*: the case brought to show what the rule does *not* cover. Suklad au sati nispanne bahikena dvir ucyate: when '*white*' and the rest is *present and accomplished*, it is said *twice* with '*Vahika*'. So: 'the white Vahika is an ox' – and 'Vahika' is said twice over, once for the man and once inside the metaphor, because the qualifier has fixed him and the ox is still there. The two do not merge and they do not part. It is the right ending. The work opened at 1.1 with the Word-Brahman, without beginning or end, undivided, appearing as many; and it closes on a man who is an ox, where a metaphor is a duality that will not resolve into one thing or two – 3.14.367's vyatikirna, intermingled past separating. And the last thing the samuddesa does is call it a counter-instance: the case the rule does not reach. Bhartrhari has spent six hundred verses showing that the science stands very far off (3.14.74), that the divisions are the intellect's (3.14.570), that the upayas must not be taken for true (3.14.76) – and he ends by pointing at an ordinary insult that his grammar cannot derive, and stopping there.
